

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

## Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + Refrain from automated querying Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + Keep it legal Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

## **About Google Book Search**

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at http://books.google.com/

# ENCYCLOPÆDIA PERTHENSIS.

(i.) \* PARALLEL. adj. [ \*\*aenland ; parallele, Fr.] I. Extended in the fame direction, and preferving always the same distance.—Distorting the order and theory of causes, he draws them afide unto things whereto they run parallel, and their proper motions would never meet together. Brown. 2. Having the fame tendency.—When honour runs parallel with the laws of God and our country, it cannot be too much cherished.

Addien. 3. Continuing the resemblance through many particulars; equal; like. The foundation principle of peripateticism is exactly parallel to an acknowledged nothing. Glanville.—I shall obferre fomething parallel to the wooing and wedding fuit in the behaviour of perions of figure. Alliyon.—In the parallel place before quoted. Lefty.-Compare the words and phrases in one pure of an author, with the same in other places of the fame author, which are generally called parallel places. Watts.
(2.) PARALLEL. n. of from the adjective.] 1.

Line continuing its course, and still remaining at

the fime distance from another line.

Who made the spider parallels design, Sure as De Moivre, without rule or line? Pope. 2. Line on the globe marking the latitude. 3. Direction conformable to that of another line,-

-Lines, that from their parallel decline, More they proceed, the more they still disjoin.

4. Refemblance; conformity continued through many particulars; likenefs-

She lights her torch at their's to tell,

And thew the world this parallel. Denbam. 'Twixt earthly females and the moon,

All parallels exactly run. Swift. 5. Companion made.—The parallel holds in the gainlessuess, as well as laboriousness of the work. Decay of Piety.—Comparing and drawing a paralled between his own private character, and that of other persons. Addison. 6. Any thing referabling VOL. XVII. PART I.

another.-Thou ungrateful brute, if thou wouldst find thy parallel, go to heli. South .-

None but thyfelf can be thy parallel.

(3.) PARALLEL, in geometry. See GEOME-

(4.) PARAULEL SAILING. See NAVIGATION,

Part II. Sed. II.; § 84-102. (5.) PARALLEL SPHERE, that situation of the fphere wherein the equator coincides with the horizon, and the poles with the zenith and na-

(6.) PARALLELS OF ALTITUDE, OF ALMU-CANTARS, are circles parallel to the horizon, imagined to pass through every degree and minute of the meridian between the horizon and zenith, having their poles in the zenith.

(7.) PARALLELS OF DECLINATION, in aftronomy, are the fame with parallels of latitude in

geography.

(8.) PARALLELS OF LATITUDE, in afternomy, are leffer circles of the sphere parallel to the ecliptic, imagined to pass through every degree

and minute of the colures.

To PARALLEL. v. a. [from the noun.] 1. To place, so as always to keep the same direction with another line.—The Azores having a middle fituation between these continents and that vast tract of America, the needle feemeth equally diftracted by both, and diverting unto neither, doth parallel and place itself upon the true meridian. Brown. 2. To keep in the same direction; to level .- The loyal fufferers abroad became fubjected to the worst effect of banishment, and even there expelled; fo faralleling in their exigencies the most immediate objects of that monster's fury. Fell.-

His life is parallel'd

Ev'n with the stroke and line of his great jus-

3. To correspond to .- That he stretched out the north over the empty places, feems to pe

the expression of David, he stretched out the earth upon the waters. Burnet. 4. To be equal to; to refemble through many particulars.—In the fire, the destruction was so swift, sudden, vast and miserable, as nothing can parallel in story. Digden. 5. To compare.—I parallel'd more than once, our idea of fubstance, with the Indian philosopher's he-knew-not-what, which supported the tortoise. Locke.

\* PARALLELISM. n. f. [parallelisme, Fr. from parallel. State of being parallel. The parallelism and due proportionated inclination of the axis of the earth. More.—Speaking of the paralle-lism of the axis of the earth, I demand, whether it be better to have the axis of the earth steady, and perpetually parallel to itself, or to have it carelessly tumble this way and that way. Ray on

the Greation.

\* PARALLELOGRAM. n. f. [ accallna@ and γενμμα; parallelograme, Fr.] In geometry, a right lined quadrilateral figure, whose opposite sides are parallel and equal. Harris.—The experiment we made in a loadstone of a parallelogrum, or long figure, wherein only inverting the extremes, as it came out of the fire, we altered the poles. Brown.-We may have a clear idea of the area of a parallelogram, without knowing what relation it bears to the area of a triangle. Watts's Lo-

PARALLELOGRAMICAL. adj. [from parallelogram. Having the properties of a parallel-

ogram.

\* PARALLELOPIPED. n. f. [from parallelopipede, Fr.1 A foild figure contained under fix parallelograms, the opposites of which are equal and parallel; or it is a pritm, whose base is a parallelogram: it is always triple to a pyramid of the same base and height. Harris .- Two prisms alike in shape I tied so, that their axes and oppofite fides being parallel, they composed a parallelopiped. Newton's Opticks.-Crystals that hold lead are yellowith, and of a cubic or parallelopip-

ed figure. Woodward.

PARALLELOPIPEDIA, in the old mineralogy, a genus of spars, externally of a determinate and regular figure, always found loofe, detached, and separate from all other bodies, and in form of an oblique parall-lopiped, with 6 parallelogram fides and 8 folid angles; cafily fiffile either in an horizontal or perpendicular direction; being composed of numbers of thin plates, and those very elegantly and regularly arranged bodies, each of the fame form with the whole mass, except that they are thinner in proportion to their borizontal planes, and naturally fall into these and no other figures, on being broken with a flight blow.

(1.) \* PARALOGISM. n. f. [ raeahoyious; paralogifine, Fr.] A falle argument.—That because they have not a bladder of gail, like those we obferve in others, they have no gall at all, is a parai gifm not admittible. Bacon. - Modern writers, making the drachma lefs than the denarius, others equal, have been deceived by a double paralogifua. Arbuthnot.-If a syllogism agree with the rules given for the construction of it, it is called a true argument: if it disagree with these vules, it is a paralogifm, or falle argument. *l. atts*.

(2.) PARALOGISM, in logic, also implies a consequence drawn from principles that are false; or, though true, are not proved; or when a proposition is passed over that should have been prov-

To PARALOGIZE, v. n. To argue fophistical-

ly. Ash.
\* PARALOGY. n. s. Falle reasoning.—That Methuselah was the longest liver of all the posterity of Adam, we quietly believe; but that he must needs be so, is perhaps below paralogy to deny. Brosun.

(i.) \* PARALYSIS. [ \*xeuluri; ; paralyfie, Fr.]

A palfy.

(2.) PARALYSIS. See MEDICINE, Index.
\* PARALYTICAL. \ adj. [from paralyfis; pa\* PARALYTICK. \ ralytique, Fr.] Pallied; inclined to palfy .-

Nought shall it profit, that the charming

fair,

Angelic, foftest work of heav'n, draws near

To the cold shaking paralytick hand,

Senfelefs of beauty. Prior. -If a nerve be cut, or fireightly bound, that goes to any muscle, that muscle shall immediately lose its motion: which is the case of paralyticks. Derbam.—The difficulties of breathing and fwallowing, without any tumour, after long diseases, proceed commonly from a resolution or paralytical disposition of the parts. Arbuthnos.

PARAMABIRO, or Paramairamba, the PARAMARIBO, capital of Surinam, is feated on the W. bank of the Surinam, about 18 miles from the fea coast, and has a good harbour, with 2 churches, 2 Jewish synagogues, and about 1400 houses. The streets are straight, and ornamented on each fide with orange, lemon and tamarind trees. It is the rendezvous of all the European traders.

PARAMATTY, a town of Indostan, in the Carnatic, about 10 miles W. of Coveriporum.

PARAMECIA, in natural history, a name given to fuch animalcules as have no visible limbs or tails, and are of an irregularly oblong fi-

(1.) \* PARAMETER. n. f. The latus rectum of a parabola, is a third proportional to the abscissa and any ordinate; so that the square of the ordinate is always equal to the rectangle under the parameter and abscissa: but, in the ellipsis and hyperbola, it has a different proportion. Harris.

(2.) PARAMETER. See CONIC SECTIONS, In-

PARAMO, Lewis De, a Spanish inquisitor, who published at Madrid, in 1598, a curious work upon the tribunal called The Holy Office. He writes with candor, omits no fact, but enumerates impartially all the victims of the bloody Inquifition

(1.) \* PARAMOUNT. adj. [per and mount.] 1. Superiour; having the highest jurisdiction; as lord paramount, the chief of the feigniory: with to.-Leagues within the state are ever permicious to monarchies; for they raise an obligation, paramount to obligation of fovereignty. Bacon. The dogmatilt's opinioned affurance is paramount to argument. Glanville.-If all power be derived

from

from Adam, by divine institution, this is a right antecedent and paramount to all government. Lake.-Mankind, seeing the apostles possessed of a power plainly paramount to the powers of all the known beings, whether angels or dæmons, could not question their being inspired by God. Well. 2. Eminent; of the highest order. - John a Chamber was hanged upon a gibbet raifed a fuge higher in the midst of a square gallows, as a trutor paramount. Bacon.

(1.) PARAMOUNT. n. f. The chief .-Is order came the grand infernal peers,

'Midft came their mighty paramount. (3.) PARAMOUNT, in English law, the "higheft lord of the fee, of lands, of tenements, and hereditaments." As there may be a lord meine where lands are held of an inferior lord, who holds them of a superior under certain services; so this superior lord is lord paramoust. Also the king is the chief lord, or lord paramount of all the lands in the kingdom. Cok. Lit. 1.

PARAMOUR. n. f. [par and amour, Fr.] 1.

A lover or woder.

A lovely bevy of fair ladies fat, Courted of many a joliy paramour, The which them did in modestwife amate.

Spenser.

No feafon then for her To wanton with the fun her lufty paramour.

A mistress. It is obsolete in both senses, tho' not inelegant or unmufical.-

Shall I believe

That unfubstantial death is amorous, And that the lean abhorred monster keeps

Three here in dark to be his paramour? Shak, (L) PARANA, a large river of Brazil, which ries in about Lat. 18° S. runs a long course, and justs the Paraguay, in Lat. 28° S. See Para-SULY, No A.

(2) PARAMA, a province of Brazil, in Para-MGUAY, No 1. St Anne is the capital.

PARANTES, a town of France, in the depart-

Tent of the Landes; 33 miles N. of Tartas.

11. \* PARANYMPH. n. f. [ Tage and vupp; r. A brideman; one who leads Econoc to her marriage.-

The Timnian bride

Had not to foon prefer'd

Thy parangmph. Milton. . One who countenances or supports another. in hath got a paranymph and a folicitor, a warrant and an advocate. Taylor.

(2) PARANY MPH, among the ancients, the perhe who waited on the bridegroom, and directed the nuptial follownities; called also pronubus and mer, because the ceremonies began by taking upicia. As the paranymph officiated only on the part of the bridegroom, a woman called PRO-

PPR officiated on the part of the bride.

• PARAPEGM. n. s. [παξαπνίγμα, παξαπηγνυμι.] A brazen table fixed to a pillar, on which laws and proclamations were anciently engraved: also a table fet up publickly, containing an account of the rifing and fetting of stars, eclipses of the fun and moon, the featons of the year, &c. whence analogers give this name to the tables, on which

they draw figures according to their art. Philips. -Our forefathers, observing the course of the the fun, and marking certain mutations to happen in his progress through the zodiac, set them down in their parapegms, or aftronomical canons.

(1.) \* PARAPET. n. f. [ parapet, Fr. parapeto, Italian.] A wall breaft high.—There was a wall or parapet of teeth fet in our mouth to restrain the

petulancy of our words. Ben Jonfen.

(2.) PARAPET, in fortification, an elevation of earth defigned for covering the foldiers from the enemy's cannon or small shot. See FORTIFICA-

PARAPHERNA. See Paraphernalia.

PARAPHERNAL, adj. Of or belonging to the PARAPHERNALIA, or the wife's peculiar proper-

(1.) \* PARAPHERNALIA. n. f. [Latin, paraphernaux, Fr.] Goods in the wife's disposal.

(2.) PARAPHERNALIA, in the civil law. See LAW, Part III, Chap. I, Sca. V, § 9.
(1.) \* PARAPHIMOSIS. n. f. [ \*Tacatiluosis; paraphimose, Fr.] A disease when the præputium cannot be drawn over the glans.

(2.) PARAPHIMOSIS. See PARAPHYMOSIS. PARAPHONIA. See MEDICINE, Index.

(1.) \* PARAPHRASE. n. f. [ sagapenei; ; paraphrase, Fr.] A loose interpretation; an explanation in many words.—All the laws of nations were but a paraphrase upon this standing rectitude of nature. South.—In paraphrale, or translation with latitude, the author's words are not fo strictly followed as his fenfe. Dryden.

(2.) A PARAPHRASE is an explanation of fome

patlage in clearer and more ample terms.

\* To PARAPHRASE. v. a. | paraphraser, Fr. #αοαφοαζω, To interpret with laxity of expression; to translate loofely .- We are put to construe and paraphrase our own words. Stilling fleet .-

What needs he paraphrase on what we mean? We were at worst but wanton; he's obscene.

-Where translation is impracticable, they may paraphrase.-But it is intolerable, that, under a pretence of paraphrasing and translating, a way should be suffered of treating authors to a manifest difadvantage. Felton.

\* PARAPHRAST. n. s. [paraphraste, French; παραφράση: A lax interpreter; one who explains in many words.—The fittest for publick audience are fuch, as following a middle course between the rigor of literal translators and the liberty of paraphrasis, do, with great shortness and plainness deliver the meaning. Hooker.—The Chaldean paraphrass renders Gerah by Meath. Arbuthnot.

\* PARAPHRASTICAL. | adj. [from para-\* PARAPHRASTICK. | pbrafe.] Lax in in-

terpretation; not literat; not verbal,

(1.) \* PARAPHRENITIS. n. f. [ auga and quinru; paraphrenesle, French.]-Paraphrenitis is an inflammation of the diaphragm. The lymptoms are a violent fever, a most exquisite pain increased upon inspiration, by which it is distinguished from a pleurify, in which the greatest pain is in expiration. Arbuthnot.

(2.) PARAPHRENITIS. See DIAPHRAGM, and MEDICINE, Index.

PARA.

PARAPHROSYNE, a word used by medical writers to denote a delirium, or an alienation of mind in fevers, or from whatever other cause.

PARAPHYMOSIS, a diforder of the penis, wherein the prepuce is shrunk, and withdrawn behind the glans, so as not to be capable of being brought to cover the same; which generally happens in veneral disorders. See MEDICINE and SURGERY. Indexes.

PARAPLEGIA. See MEDICINE, Index. (1.) \* PARAQUETO. n. f. A little parrot. (2.) PARAQUETO. See PSITTACUS.

PARARA, n. f. an Anglo-American word, used in the Northern United States, for what is called in the Southern States, a SAVANNAH, i. e. an extensive rich plain, without trees, but covered with grass. Some of these are 40 miles broad, and several hundred miles long; and exhibit fine prospects.

(1.) \* PARASANG. n. f. [parafanga.] A Perfian measure of length.—Since the mind is not able to frame the idea of any space without parts, instead thereof it makes use of the common measures, which, by samilar use, in each country, have imprinted themselves on the memory; as inches and seet, or cubits and parasangs. Locke.

(2.) The PARASANG is an ancient measure, differing at different times, and in different places; being usually 30, fometimes 40, and fometimes 50 fladia, or furlongs.—The word, according to Littl, ton, has its rife from parasch angarius, q. d. the space a post-man rides from one flation, angaria, to another.

PARASAOLI, a town of Indoftan, in Jyenagur; 15 miles NNE. of Jyepour, and 85 W. of

Agra.

PARASCENIUM, in the Grecian and Roman theatres, was a piace behind the scenes whither the actors withdrew to dress and undress themselves. The Romans more frequently called it Postscenium. See Theatre.

PARASELENE, in natural philosophy, a mock moon; a meteor or phenomenon encompassing or adjacent to the moon, in form of a luminous ring; wherein are observed sometimes one and and sometimes two or more images of the moon.

PARASEMON, [naesture,] among the Greeks, was the figure carved on the prow of the ships to distinguish them from each other. This figure was generally that of a buil, lion, or other animal; sometimes the representation of a mountain, tree, flower, &c.

PARASIA, a country lying E. of Media.

(1.) \* PARASITE. n. f. [parafite, Fr. parafita, Latin.] One that frequents rich tables, and carns his welcome by flattery.—

He is a flatterer,

A parafite, a keeper back of death. Shak. Most fmiling, fmooth, detested parafites,

Courteous destroyers, affable wolves. Stak. — Diogenes, when mice came about him, as bewas eating, faid, I ice, that even Diogenes nountheth parofites. Bacon.—

Thou, with trembling fear,

Or like a fawning parafite, obey'd. Milton.
The people fweat not for their king's delight,
T' enrich a pimp, or raife a parafite. Dryden.
(2.) PARASITE, among the ancient Greeks, was.

originally a very reputable title; the parafites being a kind of priefts, at leaft ministers, of the gods, in the same manner as the equiones were at Rome. They took care of the facred corn, or the corn destined for the service of the temples and the gods, viz. facrifices, seals, &c. They had even the intendance over facrifices; and took care that they were duly performed. At Athens there was a kind of college of 12 parasites; each people of Attica surnishing one, who was always chosen out of the best families. Polybius adds, that a parasite was also an honourable title among the ancient Gauls, and was given to their poets. But of late it has been used as a term of reproach.

(3.) PARASITES, or PARASITICAL PLANTS, in botany, such plants as are produced out of the trunk or branches of other plants, from whence they receive their nourishment, and will not grow on the ground. Such are the misletoe, &c.

\* PARASITICAL. \ adj. [parastique, French; \* PARASITICK. \ \ from parastie.] Flattering; wheeding.—The bishop received small thanks for his parastick presentation. Hakewil.—Some parastick presents have dared to call those martyrs, who died sighting against me. King Charles.

\* PARASOI.. n. f. A finall campy or umbrella carried over the head to shelter from rain and

the heat of the fun. Dia.

PARASTATÆ, in anatomy. See Prostatæ, \* PARASYNEXIS. n. f. In the civil law, a conventicle or unlawful meeting. Diff.

PARATALASSIA. See PRIMORIE. PARAY, a town of France, in the dept. of the

Saone and Loire, near the Bourbuce; 6 miles W, of Charolles, and 162 ESE, of Bourbun Lancy.

\* To PARBOIL. v. a. parbouiller, French.] To half boil; to bon in part.—Parboil two large capons upon a foft fire. Bacon.—

From the fea into the ship we turn, Like parboil'd wretches, on the coals to burn. Donne.

Like the seum, starved men did draw,
From parboil'd shoes and boots.

\* PARBREAK. n. f. [tiom the verb.] Vomit.
Obsolete.—

Her filthy parbreak all the place defiled has.

\* To PARBREAK. v. n. [breeker, Dutch.] To vomit. Obsolete.

PARBUNCLE, n. f. in a ship, a rope almost like a pair of slings; it is scized both ends together, and then put almost double about any heavy thing that is to be hoisted in or out of the ship having the hook of the runner hitched into it, to boist it up by.

PARCÆ, in heathen mythology, goddesse who were supposed to preside over the accidents and events, and to determine the date or period of human life. The Parcæ were three, CLOTHOLACHESIS, and ATROPOS. They spun the thread of men's lives; Clotho held the distaff and drew the thread; Lachesis twirled the spindle, and spun it; and Agropos cut it. The ancients represent the Parcæ divers ways: Lucian, in the shape of three poor old women, having large locks of wool, mixed with dassouls on their heads. Others respected to the colours, wearing a crown upon ner head adorned with see

ven flars, Lachelis in a robe beset with stars, and Atropos, clad in black. The ancients imagined that the Parez used white wool for a long and happy life, and black for a short and unfortunate

one. See NECESSETY, § 4.
PARCAS, a town of Turkey, in Walachia. PARCAY, a town of France, in the dept. of Mass and Loire; 12 miles SE. of Bauge, and

13 NE. of Saumur.

PARCE', two towns of France: 1. in the dep. of lile and Vilaine; 4 miles S. of Fougeres: 2. in that of Sarte, 6 miles E. of Sablé, and 18 SW. of M.os.

PARCEL. n. f. [parcelle, French; particula, Lat.] 1. A small bundle. 2. A part of the whole; part taken separately .-

Women, Silvius, had they mark'd him In parcels, as I did, would have gone near To tal in love with him. Shak.

I drew from her a prayer of earnest heart, That I would all my pilgrimage relate; Whereof by parcels the had fomething heard, but not diffinctively. Sbak.

An inventory thus importing,

The leveral parcels of his plate. Sbak. -With what face could fuch a great man have begged such a parcel of the crown lands? Davemud.—I have known penfions given to particular perior, any one of which, if divided into smaller puries, and distributed to those who distinguish themidves by wit or learning, would answer the oul Swift.—The same experiment succeeds on two pareds of the white of an egg. Arbutbnot.-> A quantity or mass.—What can be rationally concered in so transparent a substance as water in the production of these colours, besides the various fixes of its fluid and globular parcels. Negu-12. 4. A number of persons: in contempt.-This youthful parcel

Of soble batch 'tors frand at my bestowing. Sbak. 6. Any number or quantity: in contempt.—Unthey could, by a parcel of fair words and pretesces, engage them into a confederacy, there was

so good to be done. L'Estrange.

To PARCEL. v. a. [from the noun.] 1. To fride mto portions.—If they allot and parcel out food perfections to several deities, do they not, 15 thm, affert contradictions, making deity only 12 fach a measure perfect? South .-

Those ghostly kings would parcel out my pow'r,

had all the fatness of my land devour. Dryden. 1. To make up into a mass.—What a wounding there, that mine own fervant should parcel the har of my difgraces by addition of his envy! Sbak. PARCELLES, John, two eminent Flemith Parcelles, Julius, Spainters of the 17th

cotory, father and fon, who excelled in painting

A PIECEA

(1.) PARCENER. n. f. [In common law.] when one dies poisseifed of an estate, and having Ene only daughters, or his fifters be his heirs; for the the lands descend to those daughters or sisin: these are called parceners, and are but as ox tor. Diff.

(1) PARCENER. Sec COPARCENER.

\*PARCENERY. n. s. [from parfonier, Fr.] A

holding or occupying of land by more perfons pro indiviso, or by joint tenants, otherwise called coparceners. Coquel.

(1.) \* To PARCII. v. a. [from rigization, fays ]unius; from percoquo, fays Skinner; neither of them feem fatisfied with their conjecture: perhaps from peruflus, burnt, to peruft, to parch; perhaps from parchment, the effect of fire upon parchment being almost proverbial.] To burn slightly and superficially; to fcorch; to dry up.

Hath thy fiery heart so parcht thine entrails, Sbak.

That not a tear can fall?

Did he fo often lodge in open field In winter's cold, and lummer's parebing heat, To conquer France? Sbak.

Torrid heat, And vapours as the Libyan air aduft,

Began to parch that temp'rate clime. Milton. I'm stupify'd with forrow, past relief

Of tears; parch'd up and wither'd with my grief. Dryden. -Without this circular motion of our earth, one

hemisphere would be condemned to perpetual cold and darkness, the other continually roasted and parebed by the fun-beams. Ray .-

The ground below is pareb'd, the heav'ns above us fry. Dryden.

Full fifty years

I have endur'd the biting winter's blaft,

And the severer heats of parebing summer. Rowe. The skin grows parebed and dry. Blackmore.-A man diffrested with thirst in the parched places of the wilderness, searches every pit, but finds no water. Rogers.

(2.) \* To PARCH. v. n. To be scorched .-We were better parch in Africk sun,

Than in the pride and falt fcorn of his eyes.

-Many corns will dry and parch into barley. Mortimer.

PARCHIM, a town of Mecklenburg, on the Elda, which divides it into the New and Old towns, each of which has a church. It has fuffered several times by fire. The population is about 3000. It is 20 miles SE. of Schwerin, and 55 E. of Lauenburg. Lon. 12. o. E. Lat. 53. 34. N.

(1.) \* PARCHMENT. n. f. [parchemin, Fr. pergamena, Lat.] Skins dreifed for the writer. Among traders, the ikins of sheep are called parchment, those of calves vellum.—Is not this a lamentable thing, that the fkin of an innocent lamb should be made parchment; that parchment, being feribbled o'er, should undo a man? Shak .- In the coffin, that had the books, they were found as fresh as if newly written in parebment. Bacon-

We thrink like parebment in confuming flame.

(2.) PARCHMENT, the skins of sheep or goats prepared after fuch a manner as to render it proper for writing upon, covering books, &c. word comes from the Latin Pergamena, the ancient name of this manufacture; which is faid to have been taken from the city Pergamos, to Eumenes, the king of which, its invention is usually ascribed; though, in reality, that prince appears rather to have been the improver than the inventor of parchment. For the Persians of old, according

to Diodorus, wrote all their records on skins; and the ancient Ionians, as we are told by Herodotus, made use of theep-tkins and goat-tkins in writing, many ages before Eumenes's time. Nor need we doubt that fuch fkins were prepared and dreffed for that purpose, after a manner not unlike that of our parchment; though probably not so artificially.—The manufacture of parchment is begun by the fkinner, and finished by the parchment-maker. The skin being stripped of its wool, and placed in the lime pit, as described under Shammy, the ikinner stretches it on a frame, and pares off the flesh with an iron instrument; this done, it is moiftened with a rag; and powdered chalk being ipread over it, the fkinner takes a large pumicethone, flat at bottom, and rubs over the fkin, and thus fcowers off the fleth; he then goes over it aagain with the iron instrument, moistens it as before, and rubs it again with the pumice-stone without any chalk underneath; this fmooths and foftens the flesh-side very considerably. He then drains it again, by passing over it the iron instrument as before. The flesh-side being thus drained, by scraping off the mossiture, he in the same manner passes the iron over the wool or hair-side; then stretches it tight on a frame, and scrapes the flesh-side again: this sinishes its draining; and the more it is drained the whiter it becomes. skinner now throws on more chalk, sweeping it over with a piece of lamb-tkin that has the wool on; and this imooths it fill farther. It is now left to dry, and when dried, taken off the frame by cutting it all round. The skin thus far prepared by the skinner, is taken out of his hands by the parchment-maker, who first, while it is dry, pares it on a fionmer, (which is a calf-ikin ftretched in a frame), with a sharper instrument than that used by the skinner; and working with the arm from the top to the bottom of the ikin, takes away about one half of its thickness. The skin thus equally pared on the fleth-fide, is again rendered fmooth, by being rubbed with the pumicestone, on a bench covered with a sack stuffed with flocks; which leaves the parchment in a condition fit for writing upon. The parings thus taken off the leather, are used in making GLUE, SIZE, &c. See these articles. What is called VELLUM is only parchment made of fkins of abortives, or at most fucking calves. This has a much finer grain, and is whiter and fmoother than parchment; but is prepared in the same manner, except its not be-

ing passed through the lime-pit.

\* PARCHMENT-MAKER. n. s. [parchment and

maker.] He who dreffes parchment.

PARCHWITZ, a town of Silefia, in Lignitz; containing two Lutheran churches, a Roman catholic chapel, and a cloth manufactory; 10 miles

NE. of Lignitz.

PARCIEUX, Anthony DE, an eminent French mathematician, born at Uzes, in 1703. He was a member of the Academies of Sciences of Paris, Sweden and Berlin; and was appointed Cenfor Royal. He published a correct and methodical Treatife on Redilinear and Spherical Trigonometry. He died in 1769.

PARCOL, or a lake of Thibet, 25 miles in PARCOUL, circumference. Lon. 110. 28. E.

Ferro. Lat. 43. 22. N.

PARCOW, a town of Poland, in Lublin.
(1.) \* PARD.
(1.) \* PARDALE. The leopard; in poetry

any of the spotted beasts.-

The pardale fwift, and the tyger cruel. Spenj As pard to hind, or step-dame to her son.

A match for pards in flight, in grappling for the bear.

Dryden

(2.) PARDALE, in zoology. See Felis, N
PARDALIS, XXIII.

PARDHITZ, a town of Bohemia, in Chrudim

with a manufacture of fwords, knives, &c. 5! miles E. of Prague.

PARDIES, Ignatius Gaston, an ingenious and learned French Jesuit, born at Paris in 1636. It was professor of rhetoric, and taught polite literature for several years. He also wrote several piece in prose and verse, with peculiar delicacy. A length he devoted himself entirely to mathematic and natural philosophy. He died in 1673, of a infectious disorder contracted by preaching to the prisoners in the Bicetre during the Easter holidaying His Elements of Geometry are well known. It translation of them has gone through several editions. In 1672 he had a dispute with Sir Isaa Newton respecting his Theory of Light and Colours. See Philos. Trans. 1672.

PARDO, a town of Spain, in New Castile.

(1.) \* PARDON. n. f. [pardon, Fr. from the verb.] 1. Forgiveness of an offender. 2. For giveness of a crime.—He that pleaseth great mer thall get pardon for iniquity. Ecclus. xx. 27.—1 light pamphlet, about the elements of architecture, hath been entertained with some pardon a mong my friends. Wotion.—

But infinite in pardon is my judge. Milton
What better can we do than proftrate fall
Before him reverent, and there confess
Humbly our faults, and pardon beg? Milton

Humbly our faults, and pardon beg? Milton Indulgencies, difpenses, pardons, bulls, The sport of winds. Milton

3. Remission of penalty. 4. Forgiveness received—A man may be fase as to his condition, but, i the mean time, dark and doubtful as to his apprehensions: secure in his pardon, but miserable in the ignorance of it. South. 5. Warrant of so giveness, or exemption from punishment.—

The battle done, and they within our power Shak. King Lea. Shall never fee his pardon. (2.) PARDON, in criminal law, is the remittin an offence committed against the king. His power of pardoning was faid by our Saxon ancestor to be derived à lege sua dignitatis: and it is di clared in parliament, by stat. 27 Hen. VIII. c. 2, that no other person hath power to pardon or re mit any treason or selonies whatsoever; but the the king hath the whole and fole power thereof, 1 nited and knit to the imperial crown of this realn In democracies there is no power of pardoning The king may pardon all offences merely again the crown or the public; excepting, 1. That, 1 preferve the liberty of the fubject, the committing any man to prison out of the realm, is by the kaber corpus act, 31 Car. II. c. 2. made a pramunire, ut pardonable even to the king. Nor, 2. can the kir pardon, where private justice is principally concert ed in the profecution of offenders: Non potest re gratica

gratian facere cum injuria et damno aliorum. Therefore, in appeals of all kinds (which are the fuit, not of the king, but of the party injured), the prosecutor may release; but the king cannot pardon. Neither can he pardon a common nuifance, while it remains unredreffed, or so as to prevent an abatement of it; though afterwards he may remit the fine: because though the prosecution is vested in the king to avoid the multiplicity of fuits, yet (during its continuance) this offence favours more of the nature of a private injury to each individual in the neighbourhood, than of a public wrong. Nother, laftly, can the king pardon an offence against a popular or penal statute, after information brought; for thereby the informer hath acquired a private property in his part of the penalty. There is alto a restriction of a peculiar nature, that affects the prerogative of pardoning, in case of parliamentary impeachments, viz. that the ting's pardon cannot be pleaded to any fuch impeachment, so as to impede the inquiry, and stop the profecution of great and notorious offenders. In the reign of Charles II. when the E. of Danby pleaded the king's pardon, the commons voted, "That a pardon is not pleadable in bar of an impeachment." And it was enacted by the act of settlement, 12 & 13 W. III. c. 2. " That no pardos under the great feal of England shall be pleadable to an impeachment by the commons in parlament." But, after the impeachment has been filemaly heard and determined, it is not underfixed that the king's royal grace is farther restrained or abridged: for, after the impeachment and attainder of the fix rebel lords in 1715, three of then were from time to time reprieved by the crown; and at length received the king's most practions pardon. The effect of such pardon by to king, is to make the offender a new man; to =quit him of all corporal penalties and forfeitures energed to that offence for which he obtains his pardon; and not so much to restore his former, as to goe him new credit and capacity. But nothing रम क्षेत्रक or purify the blood when once corrupich if the pardon be not allowed till after attaindan but the high and transcendant power of par-Yet if a person attainted receives the bardon, and afterwards hath a fon, that fon my be heir to his father; because the father being made a new man, might transmit new inheritthe blood; though had he been born before the Fardon, he could never have inherited at all.

\* To PARDON. v. a. [pardonner, Fr.] 1. To ex-

Cik in ofender.—

When I beheld you in Cilicia, An enemy to Rome, I pardon'd you. Dryden. 2 To forgive a crime.—I will pardon all their iniquies. Jerem.—

Forgiveness to the injur'd does belong, but they ne er mardon who commit the w

but they me'er pardon who commit the wrong.

Dryden.

; To remit a penalty.—

I pardon thee thy life before thou ask it. Shak. 4- Pardon me, is a word of civil denial, or slight woogy.—Sir. pardon me, it is a letter from my brether. Shak.

• PARDONABLE. adj. [pardonable, Fr. from parish.] Venial; excufable.—That which we do, leage evil, is notwithstanding by so much more

pardonable, by how much the exigencies of so doing, or the difficulty of doing otherwise, is greater. Hooker.—A blind man sitting in the chimney corner is pardonable enough, but sitting at the helin, he is intolerable. South.—What English readers, unacquainted with Greek or Latin, will believe me, when we confess we derive all that is pardonable in us from ancient fountains? Dryden.

\*PARDONABLENESS. n. f. [from pardonable.] Venialness; susceptibility of pardon.—St John's word is, all fin is transgression of the law; St Paul's, the wages of fin is death: put these two together, and this conceit of the natural pardonableness of

fin vanishes away. Hall.

\*PARDONABLY. adv. [from pardonable.] Venially; excusably.—I inty judge when I write more or less pardonably. Dryden.

\* PARDONER. n. f. [from pardon.] 1. One who forgives another.—

This is his pardon, purchas'd by fuch fin, For which the pardoner himself is in. Shak. 2. One of the fellows that carried about the pope's indulgencies, and fold them to fuch as would buy them, against whom Luther incensed the people of Germany. Cowel.

PARDOS, or POMPENAY, a town of Africa,

in Anta, on the Gold Coaft.

PARDUS, in zoology. See Felis, N° XXIV. (1.) PARE, Ambroic, an eminent French furgeon, of the 16th century, born at Laval in Maine. He was furgeon to feveral kings of France. Being a protestant, he would have been involved in the massacre of St Bartholomew's day, had not Charles. IX. himself shut him up in his chamber, saying "a man so useful to all the world ought not to perish in such a manner." He died at an advanced age, in 1590.

(2.) PARE, or PAREUS, David, D. D. a celebrated protestant divine, born in 1548, at Francol-stein, in Silesia. He studied at Hermsburg under the learned Christopher Schilling; afterwards at Heidelburg, under Zach. Urfin; was much patronized by Albert Kindler; and Prince Cafimir; wasadmitted minister of Schlettenbach, in 1571; afterwards of Hemibach, in Worms, where, in 1574, he married the fifter of John Stibelius: In 1577. he became minister of Ogersheim; and in 1584, professor in the college of Heidelburg. he was admitted D. D. and in 1602, succeeded Toffanus as professor of divinity. He published, x. the German Bible, with notes, at Neuftadt, in 1589; 2. a commentary on the Epiftle to the Romans; 3. feveral tracts against Bellarmin and the Jefuits; with other polemical pieces; and died at Pareanum, in 1622.

(3.) PARE, Philip, fon of the preceding, was born at Henifbach, in 1576; ftudied at Neuftadt, and Heidelburg; became eminent for grammatical erudition; and under the patronage of the elector palatine, vifited the univertities of Bafil in 1599, and Geneva, in 1600. He became rector of Neuftadt college in 1612; principal of that of Hanau in 1645; published his father's life and exegetical works in 1647; feveral tracks on grammar; with commentaries on the Scriptures, and other theological works.

(4.) PARE, Daniel, fon of Philip, was also eminent for classical learning, and particularly for his

(kill

skill in the Greek, language. He published many learned pieces; particularly Museus's Hero and Leander, with notes; Mellificium Atticum, a selection from Greek Authors, &c. He was murder-

od by robbers in 164c.
\* To Pare. v. a. [This word is reasonably deduced by Skinner from the French phrase, parer les ongles, to drefs the horses hoofs when they are shaved by the farrier: thus we first said, pare your nails; and from thence transferred the word to general use.] To cut off extremities of the surface : to cut away by little and little; to diminish. If pare be used before the thing diminished, it is followed immediately by its accufative; if it precedes the thing taken away, or agrees in the passive voice with the thing taken awey, as a nominative, it then requires a particle, as away, off.-The creed of Athanasius, and that sacred hymn of glory, than which nothing doth found more heavenly in the ears of faithful men, are now reckoned as fuperfluitics, which we must in any case pare away. Hooker .-

I have not alone

Employ'd you where high profits might come home;

But par'd my present havings to bestow

Shak. Henry VIII. My bounties upon you. I am a man, whom fortune hath cruelly fcratch'd. -'Tis too late to pare her nails now. Stak-

The lion, mov'd with pity, did endure To have his princely paws all par'd away. Shak. -The king began to pare a little the privilege of the clergy. Bacon's Henry VII .-

He pares his apple, that will cleanly feed.

-Whoever will partake of God's scerets, must first look into his own, he must pare off whatsoever is amis. Taylor.—All the mountains were pared off the earth. Burnet.-The most poetical parts, which are descriptions and images, were to be pared away. Dryden.-The fword, as it was justly drawn by us, so can it scarce fafely be sheathed, till the power of the great troubler of our peace be fo far pared and reduced, as that we may be under no apprehensions. Atterbury .-

'Twere well if the would pare her nails. Pope. PAREANUM, a village of Germany, near Hei-

delberg, where Dr Pare refided and died.

PARECALA, a fertile province of the ifle of Lucon, containing mines rich in gold and precious Aones; with above 7000 inhabitants.

PARECHIA, a town in the ifle of Paros, built on the fite of the ancient Paros, and defended by a fort. The European confuls refide in it.

PAREDES, 3 towns of Spain; 1. in Afturias, 25 miles NW. of Oviedo: 2. in Leon, 13 miles NW. of Leon: 3. in New Castile, 8 miles N. of Seguenca.

\* PAREGORICK. adj. [waenyoexous.] Having the power in medicine to comfort, mollify and affuage.

Dia.

PAREGORIES, n. f. in pharmacy, medicines that affuage pain, otherwise called Anodynes.

PAREJA, John, an eminent painter, born in the W. Indies, and originally a flave to Diego Velafquez, a celebrated painter. He acquired the art by studying it privately, without his master's knowledge. Philip IV. one day visiting Velaf-

quez's museum, discovered his merit and gave him his liberty; yet his attachment to Velasquez was fo strong, that he continued with him till his death. His portraits are equal to quez. He died in 1670, aged 60. His portraits are equal to those of Velal

PAREIRA FRAVA, in the materia medica, a kind of oblong and large root brought from Brafil.—It is certainly a diuretic of no mean cha racter, and has done great fervice in nephriticases. In pleurisies and quinsies, it has been at tended with more fuccess than almost any medi-

cine we know of fingly.

PARELCON, n. f. in grammar, a figure le which a word or fyllable is added to the end of a nother.

PARELLA, a town of the French republic, i the dep. of the Doria, and late county of Cani vese, in the ci-devant Piedmontese; 31 miles SSW

of Ivrea, and 20 N. of Turin.

PAREMBOLE, n. f. in rhetoric, a figure where in formething relating to the subject is inserted the middle of a period. All the difference betwee the parembole and PARENTHESIS, according t Voffius, is, that the former relates to the fubje

in hand, whereas the latter is foreign to it.
(1.) PARENCHYMA. n. f. [augingulus.] fpongy or porous fubfiance; in physick, a pai through which the blood is strained for its bette

fermentation and perfection. Dia.

(2.) PARENCHYMA, in anatomy, is a term in troduced by Eralistratus, signifying all that sul stance which is contained in the interstices betwil the blood-veffels of the vifeera, which he imagine to be extravafated and concreted blood.

(3.) PARENCHYMA OF PLANTS. Grew appli this term to the pith or pulp, or that inner pa of a fruit or plant, through which the juice is fu posed to be distributed. See PLANTS.

PARENCHYMATOUS. | adj. [from pare PARENCHYMOUS. | chyma.] Relatin \* PARENCHYMOUS. to the parenchyma; fpongy.—Ten thousand see of the plant, hart's-tongue, hardly make the bu of a pepper-corn. Now the covers and true boo of each feed, the parenchymatous and ligneous pai of both moderately multiplied, afford 100,000 m hons of formed atoms in the space of a peppi com. Greav.—Those parts, formerly reckoned pa enchymatous, are now found to be bundles of d ceedingly small threads. Chyne.

\* PARENESIS. n. f. [ Tagamens.] Perfuafio

exhortation. Dist.

\* PARENETICK. [wagunihus.] Hortatory. (1.) PARENT, Anthony, as Dr Watkins cd him, or Unfoine, according to others, a mathen tician, born at Paris, in 1666. He showed an ely propensity to mathematics. At 14 he was p under a mafter, who taught rhetoric at Charte Here he faw a dodecaëdron, upon every face which was delineated a fun-dial, except the lo est. Struck with the curiofity of these dials, attempted drawing one himfelf. He then und took to write a Treatife upon Gnomonics, and book of Geometry. His friends then fent for h to Paris to study the law; but these studies we no fooner finished than he returned to mathen tics. He then took pupils; and fortification ! ving attracted particular notice, he turned his tention to it, and made two campaigns with t

is viewing fortified places; of which he drew a sumber of plans. M. de Billettes, being admitted in the acidemy of sciences at Paris in 1699, as their mechanician, nominated for his disciple Parent, who excelled chiefly in this branch. Though his abilities were acknowledged, yet his impetuolity of temper provoked of polition; and he role no higher than atliffant member for geometry. He enoyed this promotion but a thort time; for he was taken off by the finall-pox the same year, 1716, aged 50. He was author of many pieces, chelly on mechanics and geometry.

(2.) \* PARENT. n. f. [parent, Fr. parens, Lat.] A father or mother. - All true virtues are to honour true religion as their parent. Hooker.—His cultom was, to spend an hour before evening prayer in cateching; whereas the parents and older fort

were wont to be present. Fell.-

As a publick parent of the state, Myjuffice, and thy crime, requires thy fate. Dryd. -Real care in vain and native love In the true parent's panting breaft had strove.

(3.) PARENT is a term of relation applicable to thoic from whom we immediately derive our being. See MORAL PHILOSOPHY, Part II, Sect. III. III. To this article belongs an enquiry into, ... The legal duties of parents to their legitimate chil-

dren. 2. Their power over them.

(4) PARENTS, DUTIES OF, TO CHILDREN. I. The duties of parents to legitimate children confit in their maintenance, protection, and education. 1. The duty of parents to provide for the mainteof their children, is a principle of natural liw; the municipal laws of all well regulated states Erretaken care to enforce this duty: though Providence has done it more effectually than any laws, by implanting in the breaft of every parent that tauril says, or insuperable degree of affection, which not even the deformity of person or mind, Exercitize wickedness, ingratitude, and rebelhas of children, can totally suppress or extinguish. The civil law not only obliges the parent to prowe maintenance for his child, but will not fuffer a percent at his death totally to difinherit his child, was expressly giving his reason for so doing; and there are 14 fuch reasons reckoned up, which my justify such disinherison. If the parent alkept no reason, or a bad, or a falle one, the child aght fet the will afide, by fuggesting, that the parent had loft the use of his reason when he made the inaffeiou testament. Our own laws have also made provision for this natural duty. It is a prinope of law, that there is an obligation on every to provide for those descended from his loins. But no person is bound to provide a maintenance is his iffice, unless where the children are impoand unable to work, either through infancy, deale, or accident; and then is only obliged to them with necessaries, the penalty on resulas tems so more than 208. a-month. Any Popilh purest refuling to allow his Protestant child a fitting maintenance, with a view to compel him to change his religion, the lord chancellor shall by order of court constrain him to do what is just and reasonable. If Jewish parents refuse to allow their Protestant children a fitting maintenance, VOL. XVII. PART L

marquis of Aligne, by which he infirm ted himfelf funtable to the fortune of the parent, the lord chancellor, on complaint, may make fuch order therein as he shall see proper. The English law has made no provision to prevent the disinheriting of children by will; leaving every man's property in his own disposal, upon a principle of liberty in this as well as every other action. 2. Protection is alfo a natural duty, but rather permitted than enjoined by any municipal laws. A parent may maintain and uphold his children in their law fuits, without being guilty of the legal crime of maintaining quarrels. A parent may also justify an affault and battery in defence of the persons of his children; nay, where a man's fon was beaten by another boy, and the father went near a mile to find him, and there revenged his fon's quarrel by beating the other boy, of which beating he afterwards unfortunately died; it was not held to be murder, but man-flaughter merely. 3. To give children an education suitable to their station in life is a duty pointed out by reason, and of far the greatest importance of any. Yet the municipal laws of most countries seem to be desective in this point, by not confirming the parent to beflow a proper education upon his children. The rich indeed are left at their own option, whether they will breed up their children to be ornaments or difgraces to their family. Yet in one case, that of religion, they are under peculiar restrictions: for it is provided, that if any person sends any child under his government beyond the seas, cither to prevent its good education in England, or in order to enter into, or refide in, any Popish college, or to be inftructed, perfuaded, or ftrengthened in the Popith religion; in fuch cafe, befides the disabilities incurred by the child to sent, the parent or person sending shall forfeit 1001, which shall go to the role use and benefit of him that thall discover the offence. And if any parent, or other, thall fend or convey any perfon beyond fea, to enter into, or be refident in, or trained up in, any priory, abbey, numery, Popith university, college, or ichool, or house of Jeiuits or priestes or in any private Popish family, in order to be instructed, persuaded, or confirmed, in the Popish religion; or Iliall contribute any thing towards their maintenance when abroad, by any pretext whatever, the person both sending and sent shall be difabled to fue in law or equity, or to be executor or administrator to any person, or to enjoy any legacy or deed of gift, or to bear any office in the realm, and shall forfeit all his goods and chattels, and likewife all his real estate for life. See NUNCONFORMISTS.

(5.) PARENTS, POWER OF, OVER CHILDREN. II. The power of parents over their children is derived from the former consideration, their daty; this authority being given them, partly to enable the parent more effectually to perform his duty, and partly as a recompence for his eare and trouble in the faith. ful discharge of it. The ancient Roman laws gave the father a power of life and death over his children; upon this principle, that he who gave had also the power of taking away. But the rigour of these laws was softened by subsequent constitutions: fo that we find a father banished by the emperor Adrian for killing his fon, though he had committed a very heinous crime; upon this manR

im, that pairis potestas in pietate debet, nor in atrecis that stand near it, and set up monuments and me tate, confistere. But still they maintained to the last a very large and absolute authority: for a son could not acquire any property of his own during the life of his father; but all his acquititions belonged to the father, or at least the profits of them, for his life. The power of a parent by the English law is much more moderate; but still sufficient to keep the child in order and obedience. He may lawfully correct his child, being under ag-, in a reasonable manner: for this is for the benefit of his education. The confent of the parent to the marriage of his child under age, is abfolutely necessary; for without it the contract is void. futher has no other power over his ion's estate, than as his truftee or guardian; for though he may receive the profits during the child's minority, yet he must account for them when he comes of age. The may indeed have the benefit of his children's labour while they live with him, and are maintained by him; but this is no more than he is entitled to from his apprentices or fervants. The legal power of a father (for a mother, as such, is entitled to no power, but only to reverence and reipect,) over the perfons of his children ceases at the age of 21; for they are then enfranchised by arriving at years of discretion, or that point which the law has established when the empire of the father, or other guardian, gives place to the empire of reason. Yet, till that age arrives, this empire of the father continues even after his death; for he may by his will appoint a guardian to his chil-He may alfo delegate part of his parental authority, during his life, to the tutor or fehoolmafter of his child; who is then in loco parentis, and has such a portion of the power of the parent committed to his charge, viz. that of restraint and correction, as may be necessary to answer the purposes for which he is employed. The power of a parent in China is very great; for a father, while living, has the power of an absolute despotie tyrant, and after his death is worshipped as a god. Let a fon become ever fo rich, and a father ever to poor, there is no submission, no point of obedience, that the latter cannot command, or that the former can refuse. The father is absolute master, not only of his fon's estate, but also of his concubites and children, whom, whenever they displease him, he may sell to strangers. If a father accuses his son before a mandarine, there needs no proof of his guilt; for they cannot belive that any father can be fo unnatural as to bring a falle accufation against his own fon. should a fon be so infolent as to mock his father, or arrive at fuch a pitch of wickedness as to strike him, all the province where this fhameful act of violence is committed is alarmed; it even becomes the concern of the whole empire; the emperor himself judges the criminal. All the mandarines near the place are turned out of their posts, especially those of the town where he lived, for having been so negligent in their instructions; and all the neighbours are reprimanded for neglecting, by former punishments, to put a stop to the wickedness of the criminal before it arrived to fuch flagitiousnefs. As to the unhappy wretch himself, they cut him into a thousand pieces, burn his bones, level his house to the ground, and even those houses

morials of the horrid deed. See CHILDRE N, FIL IAL PIETY, PARENTAL AFFECTION, &c.

\* PARENTACE. n. f. (parentage, Fr. from parent,] Extraction; birth; condition with re

spect to the rank of parents.

A gentleman of noble parentage. ShaThough men efteem thee low of parentage, Thy father is th' eternal king. Milte To his levee go,

And from himfelf your parentage may know.

-We find him not only boalling of his parentag as an Ifraelite at large, but particularizing his de from Benjamin. Atterburg.

(1.) \* PARENTAL adj. [from parent.] B coming parents; pertaining to parents.-It ove throws the careful course and parental provise of nature. Brown.-Thefe eggs hatched by th warinth of the fun into little worms feed wither any need of parental care. Derham.-Young is dies, on whom parental control fits heavily, gif a man of intrigue room to think, that they was

to be parents. Clariffu. (2.) PARENTAL AFFECTION, the endearing a tachment of parents to their children, including it love, a defire of doing good to those who l an act of our own depend upon us for all the they enjoy. Nature even excites this affection brutes: but in them it continues only fo long it is necessary for the preservation of their of fpring; for when these are able to provide so themselves, it ceases, and the relation is forgotte In man, however, though it lessens, or at least b comes less anxious as the dependence of the chi becomes less, it never entirely ceases, except fome few inftances of extreme depravity. And, i deed, it is one of the greatest comforts of life even when all dependence has ceased. As p rental kindness is the most simple and natural c pansion of self-love, so there are innumerable stances of it in all countries savage and civilized

PARENTALIA, in antiquity, funeral obl quies, or the last duties paid by children to the deceased parents.

PARENTATION. n. f. [from parento, La Something done or faid in honour of the dead.

(1.) \* PARENTHESIS. n. f. [parenthefe, I παρα, 10 and τιθημι.] A sentence so included in a other sentence, as that it may be taken out, wit out injuring the fenfe of that which incloses i being commonly marked thus, ().—In vain is r. person excepted by a parenthesis of words, wh fo many are armed against me with swords. Charles.—He is seldom mentioned, without a c rogatory parenthefis, in any author. Brown.-

Thou shait be seen, Tho' with some short parenthefis between, High on the throne of wit. Drød -Don't fuffer every occational thought to car

you away into a long parenthesis. Watts. (2.) PARENTHESIS, is defined by others, Ci tain intercalary words inferted in a discour which interrupt the fense, but seem necessary a the better understanding of the subject. But th is not a definition of the parenthelis, but of t fentences included in it. Dr Johnson's, § 1, Brietly accurate. The parentheles are often m

app1i

eppind by authors and printers, by being made to include words at the end of a fentence, where they are quite unnecessary, and fell more, when they are made to include clauses without which the sentence is incomplete.

PARENTHETICAL. adj. [from parenthefis.]
Pertaining to a parenthefis.

PARENTIUM, an ancient fea port town of

Idra: (Plie. iii. c. 19.) now called

PARENZO, a finall but strong town of Maritime Austria, in Litria, with a bishop's see and a good harbour; seated on the guif of Venice, 9 mais NNW, of Rovigno, and 65 E. of Venice. It submitted to the Venetians in 1267. Lon. 13. 56. E. Lat. 45, 24. N.

\* PARER. n. f. [from pare.] An inftrument to

cut away the furface.-

A hone and a parer, like fole of a boot, To pare away graffe, and to raife up the root.

To pare away gradle, and to raile up the root.

Tuffer.

\*PARERGY. n. l. [122] and 1921.] Something comportant; fornething done by the by.—Scriptuse being ferious, and commonly omitting fuch family it will be unreasonable to condemn all language. Brown.

PARESIS, in medicine, a palfy of the bladder, wherein the urine is either suppressed or discharge

ed myoduntarity.

PARETONEUM, in mineralogy, an earth found on the shores of Egypt, Cyrene, and Crete, used by the ancients in painting. It had its name either from a part of Egypt, near which it was gathered, or from a town in that kingdom, where was usually fold. Vitruvius is of the first opinion, and Volaternus of the last. Of late it was thought to be loft; but it is still common on the hores of most of the islands of the Archipelago, though not observed or regarded; and is truly a very heavy and tough clay of a fine white colour, found in mailes of different fizes, generally as foft \*the fofter crays within the strata; and, by rolling about on the heach in this state, it gathers up the inc., finall thells, and other foulneffes, we always be about it. It is likely there are strata of it we sed pure in the cliffs there, and that the sea of inaffes of them in ftorms and high tides, which are what we find.

PARFAIT, Francis, a French dramatic writer, born at Paris, in 1698. He wrote a tragedy entitled Afrec, and a comedy called Panuege; but his greatest work was a General History of the French Theatre, from its origin to his own time; is 15 vols, 12mo. He died in 1753, aged 55.

PARFRE, John, the oldest dramatic writer of England, but of whom nothing is recorded; except that he wrote a piece, entitled Candlemas Des, or the killing of the Children of Israel; a mystry; 15112; republished in Mrs Hawkins's College of Old Plays, in 1773.

PARGA, a strong sea port town of Maritime Austria, in the late Venetian Albania; 26 miles W. of Arta, opposite Corfu; inhabited by Greeks and Albanians. Lon. 20, 47. E. Lat. 20, 28. N.

and Albanians. Lon. 20. 47. E. Lat. 39. 28. N. (1.) PARGET. n. f. Plaster iaid upon roofs

र्ख १००७३.—

Gold was the parget, and the cicling bright Did thine all feary with great plates of gold. Spenfer.

-Of English tale the coarser fort is called platter or parget: the finer spaad.

(2.) PARGET, in mineralogy, a name given to

feveral kinds of gypfum, or plafter frome.

\* To PARGET. v. a. [from the noun.] To platter; to cover with piatter.—While we thus paint and parget our own deformities, we cannot allow any the least imperfection of another's to remain undetected. Government of the Tongue.

" PARGETER. n. f. [from parget.] A plat-

terer.

FARGETING, part. n.f. in building, is used for the plastering of walls, and sometimes for plaster itself. Pargeting is of various kinds: as, 1. White lime and hair-mortar laid on bare walls. 2. On bare laths, as in partitioning and plain cicling. 3. Renewing the insides of the walls, or doubling partition walls. 4. Rough-casting on heart-laths. 5. Plastering on brick-work, with sinishing mortar, in imitation of stone-work; and the like upon heart-laths.

PARHAM, a town of Antigua, 5 miles W. of

St John's.

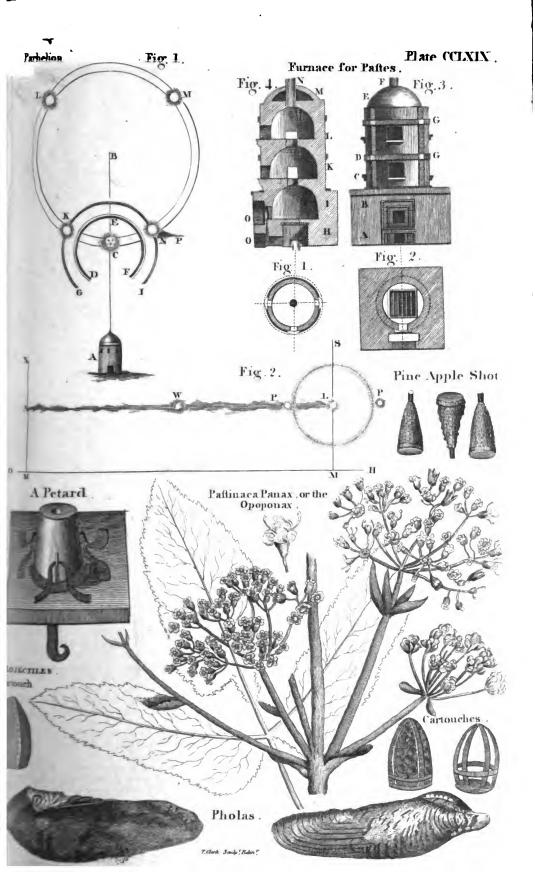

(1.) \* PARHELION. n. f. [ \( \alpha \tilde{e}^2 \) and \( e^{\lambda} \tilde{e}^2 \). Prock fun.—To negled that fupreme refplendency, that thinks in God, for those dim representations of it, that we fo doat on in the creature, is as absurd, as it were for a Persian to offer his facrifice to a parbelion, instead of adoring the sun.

Boyle.

(2.) PARHELION, or I [from xaza near, and new PARHELIUM, Jun,] in natural philofor, phy, is a meteor in form of a bright light, appearing on one fide of the fun. Appearances of this kind have been mentioned both by the ancients and moderns. Aristotle observes, that in general they are feen only when the fun is near the horizon, though he takes notice of two that were feen in Bosphorus from morning till evening; and Pliny has related the times when fuch phenomena were observed at Rome. Gassendi says, that in 1635 and 1636 he often faw one mock fun. Two were observed by M. De la Hir in 1689; and the fanie number by Cassini in 1693, Mr Grey in 1700, and Dr Halley in 1702: but the most celebrated appearances of this kind were feen at Rome by Scheiner, by Muschenbroeck at Utrecht and by Herelius at Sedan. By the two former, 4 mock funs were observed, and by the latter 7. Parhelia are apparently of the fame fize with the fun, though not always of the same brightness, nor even of the fame thape; and when a number appear at once, there is some difference in both respects among them. Externally they are tinged with colours like the rainbow; and many have a long fiery tail opposite to the sun, but paler towards the extremity. Parhelia are generally accompanied with coronas, some of which are tinged with rainbow colours, but others are white. (See Halo.) They differ in number and fize; but all agree in breadth, which is that of the apparent diameter of the fun. A very large white circle, parallel to the horizon, generally paffes through all the parhelia; and, if it were entire, it would go through the centre of the fun. Sometimes there are arcs of leffer circles concentric to this; touching those coloured circles which fur-round the sun. They are also tinged with co-lours

lours, and contain other parhelia. There are also faid to have been other circles obliquely fituated with respect to all these. The order of the colours in these circles is the same as in the rainbow; but on the infide, with respect to the sun, they are red, as is also observed in many haloes. Parhelia have been vifible for 1, 2, 3, and 4 hours together; and in North America they are faid to continue some days, and to be visible from sunrife to funfet. When the parhelia disappear, it fometimes rains, or fnow falls in the form of oblong spicules, as Maraidi, Weidier, Krafit, and others have observed; and because the air in N. America abounds with fuch frozen fpiculæ, which are even vitible to the eye, according to Ellis and Middleton, such particles have been thought to be the cause of all coronas and parhelia. Mr Wales fays, that, at Churchill in Hudson's Bay, the rifing of the fun is always preceded by two iong ftream: of red light, one on each fide of him, and about 20° distant from him. These rise as the fun rifes, and as they grow onger begin to bend towards each other, till they meet directly over the fun, just as he rifes, forming there a kind of parhelion or mock fun. These two streams of light, he says, seem to have their source in two other parhelia, which rife with the true fun; and in winter when the fun never rifes above the haze or fog, which he fays is conftantly found near the horizon, all these accompany him the whole day, and fet with him. Once or twice he faw a 4th parhelion directly under the fun; but this is not common. These facts being constant, are very valuable, and may throw great light on the theory of these remarkable phenomena. Sometimes parhelia appear in a different manner; as when three funs have been feen in the fame vertical circle, well defined, and touching one another. The true fun was in the middle, and the lowest touched the horizon; and they fet one after the other. This appearance was feen by Maieziew in 1722. Other appearances similar to this are recited by M. Muschenbroeck. Sometimes the fun has rifen or fet with a luminous tail projecting from him, of the same breadth with his diameter, and perpendicular to the horizon. Such an appearance was feen by Caffini in 1672 and 1692, by De la Hire in 1702, and by Mr Ellis in Hudfon's Bry. As M. Femlée was walking on the banks of the rivor La Plata, he faw the fun rifing over the river with a incomous tail projecting d > nwards, which continued till he was fix degrees high. PARASELENÆ, or mock moons, have also been seen, accompanied with tails and coloured circles, like those which accompany the parhelia. An account of several, and a particuar description of a fine appearance of this kind, inay be seen in Muschenbroeck. The Roman inay be feen in Muschenbroeck. phenomenon, observed by Scheiner, is famous on account of its having been the first appearance of the kind that engaged the attention of philosophers, It is represented in Pl. CCLXIX. fig. 1. in which A is the place of the observer, B his zenith, C the frue sun, AB a plane passing thro? the observer's eye, the true fun, and the zenith. About the fun C, there appeared two concentric rings, not complete, but diverlified with colours. The letter of them, DEF, was fuller, and more

pericet; and though it was open from D to P, yet those ends were perpetually endeavouring to unite; and sometimes they did so-The outer of these rings was much fainter, so as scarcely to be discernible. It had, however, a variety of colours; but was very inconstant. The third circle, KLMN, was very large, and all over white, passing thro the middle of the fun, and everywhere parallel to the horizon. At first this circle was entire; but towards the end of the appearance it was weak and ragged, so as hardly to be perceived from M towards N. In the interfection of this circle, and the outward iris GKI, there broke out two parhelia, or mock funs, N and K, not quite perfect; K being rather weak, but N shone brighter and stronger. The brightness of the middle of them was fomething like that of the fun; but towards the edges they were tinged with colours like those of the rainbow; and they were uneven and ragged. The parhelion N was a little wavering, and fent out a spiked tail, NP, of a colour somewhat fiery, the length of which was continually changing. The parhelia at L and M in the horizontal ring were not so bright as the former; but were rounder, and white, like the circle in which they were placed. The parhelion N disappeared before K; and while M grew fainter, K grew brighter, and vanished the last of all. The order of the colours in the circles DEF, GKN, was the fame as in the common halos, namely, red next the fun; and the diameter of the inner circle was alfo about 45°; which is the usual fize of a halo. The rev. Dr Hamilton sent the following account of parhelia feen at Cookstown to the Royal Irith Academy:-" Wednesday, Sept. 24th, 1783, as I was preparing to observe the sun passing through the meridian before the first limb touched the centre wire, it was obscured by a dark weil defined cloud, about 10° in diameter. Upon going to the door of the transit room, to see it is was likely foon to pass off the disk of the sun, observed the following phenomena: From the western edge of the cloud issued a luminous are parallel to the horizon, perfectly weil defined extending exactly to the northern meridian; if was about 30' broad, white, and ended in a biunt ed termination. On it were two parhelia; the nearest to the sun displaying the prismatic co lours; the remote one white, and both ill defi In a fliort time the cloud had paired of and showed the luminous almicantar, reaching perfect to the true fun. While things were thu fituated, I measured with an accurate sextant th distances of the parhelia; I found the coloures one 26°, the remoter one 90°, from the true fur Just as I had done this, a new and prismatic circl furrounded the fun, immediately within the pri matic parhelion. And now another coloured pai helion appeared on the eattern board. The fex tant, with its face up and down, exactly meafure this and the former at the original distance of 26°; the luminous almicantar ftill remaining pe In about 10 or 12 minutes whitish haz clouds came on, and obscured all these uncon mon appearances. I did not observe that the a mospherical phenomena before or after were all uncommon. The wind a light breeze at SSV ln **fg.** Si Bar. 29,6 rifing. Thermometer 55.

8M represents the south meridian; NM north meridian; PP the prismatic circle, with two prismatic funs or parhelia, at 26° diftance on each ice the true fun; W the white parhelion, at 900 diffance from the true fun; LA the luminous almeantar; and HO the horizon. Various hypotacks have been framed by philosophers to account for this phenomenon, particularly by M. Manotte, Descartes, and Huygens. None of then, however, are fatisfactory: but readers who with to become acquainted with them may con-

and Colours, vol. ii. p. 613, &c. (1.) PARIA, or New Andalusia, a country of Terra Firma in S. America; hounded on the N. by the North Sea; E. by Surinam; S. by Guiana, and W. by New Granada and the Ca-

fit Huygens's differtation on this subject, in

Introduction, &c. vol. xi. p. 1038, &c. 4to.; but especially Dr Priestley's History of Vision, Light,

capital. See Cumana.

(2) PARIA, a diffrict of S. America, in La Plath beginning 2 to miles NW. of the city of La Platy and extending 120 miles. The climate is cold, and the soil barren; but it has silver mines, and abounds with cattle. Its cheese is much esteemed, and exported through all the provinces of Peru. (1.) PARIAN, adj. Of or from PAROS.

(4) Parian Chronicle. See Arundelian MARRLES, § 1-3. Under that article, we have given as full a view of the arguments for and agame the authenticity of the Parian Chronicle as the abject seemed to require, or as the nature of our work would admit. Such of our readers, himster, as with for further information on this wheel, (which is equally interesting to the schohr and to the antiquarian,) we must refer to Robertion's attack, and to Gough's learned and judicious vindication of their authenticity, publishof in Archicologia for 1789. The extent of his learning, and the folidity of his arguments, ap-

per, upon the whole, to outweigh the objections

I has fensible and p autible opponent. Hewlett's

box upon the same side of the question is also E-CEBCHIS.

(5) PARIAN MARBLE, in the natural history of the a cients, the white marble used then, and to this day, for carving flatues, &c. and called by " I this time STATUARY MARBLE. Too many of the later writers have confounded all the white marbles under the name of the Parian; red among the workmen, this and all the other white marbles have the common name of alabaim; fo that it is in general forgotten among tiem, that there is such a thing as alabaster difform from marble; which, however, is truly the cie. Almost all the world also have confoundof the Corrara marble with this, though they are really very different; the Carrara kind being of a foer firecture and clearer white than the Pariw; but less bright and splendid, harder to cut, 15.1 not capable of so glittering a polish. the Parian marble has usually somewhat of a fant bluith tinge among the white, and often has time veins in different parts of it. It is supposed ly some to have had its name from the island Pamy (See Paros,) where it was first found; but

others will have it to have been so called from Agoracritus Parius, a famous statuary, who ennobled it by cutting a statue of Venus in it.

PARIANI, the inhabitants of PARIUM.

PARIAS, or PERREAS, a tribe of Hindoos, for peculiarly degraded beyond all others, that they live by themselves in the out-skirts of towns: and, in the country, build their houses apart from the villages, or rather have villages of their own, furnished with wells; for they dare not fetch water from those which other families make use of; and, lest these latter should inadvertently go to one of theirs, they are obliged to featter the bones of dead cattle about their wells, that they may be known. They dare not in cities pass through the streets where the Bramins live; nor fet foot in the villages where they dwell; nor enter a temple, either of their god Wistnow or Eswara; because they are held impure. They get their bread by fowing, digging, and building races. See Annalusia, New. Cumana is the the walls of mud houses; most of those inhabited by the common people being raifed by these Parias; who do all fuch kinds of dirty work as other people will not meddle with. Nor is their diet much more cleanly; for they eat cows, horfes, fowls, or other carrion, which die of themfelves. One would scarce imagine, that contentions for precedency should ever occur among a people who have renounced all cleanliness, and, like swine, wailow in filth; and who are held in fuch utter contempt by the rest of the Hindoos; yet pride has divided the Parias into two classes: the first are simply called Parias, the other The employment of these last is to SERIPERES. go about selling leather, which they dress; also to make bridles, and some of them serve for sol-The Parias, who reckon themselves the better family, will not eat in the houses of the Scriperes; who must pay them respect, by lifting their hands aloft, and standing upright before them. The Seriperes, when they marry, cannot fet up a pandal, a kind of garland, before their doors, made with more than three stakes or trees; elfe the whole city would be in motion. They are, in fact, flaves; for when any person of authority dies in the families of the Komitis, Sittis, Palis, farriers, or goldfmiths, and the relations incline to give fome clothes to the Scriperes, their beards must be shaven; and when the corpse is carried out of town to be burned or interred, they must do that office; for which each receives a piece of fiiver, worth 3½ fous. These Scriperes are called at Surat Halalebors; that is, in the Persian language, eat-alls, or eaters at large. Nothing can offend an Hindoo more than to be called an Halalchor; yet these poor people submit to all this drudgery and contempt without repin-They are very stupid, and ignorant, and even vicious, from their wretched way of life: the Bramins and nobility shun them as if they had the plague, and look on the meeting a Paria as the greatest misfortune. To come near one of them is a fin, to touch them a facrilege. Paria were dying, it is infamy to vitit him, or to give him the least assistance, even in the utmost diffress. A Bramin who touches a Paria, immediately washes himself from the impurity. Even their shadow and breath being reckoned contagious, they are obliged to live on the east side of their towns, that the westerly winds which reign in this country may keep back their breath. And a Bramin may kill one of these unhappy creatures, if he does not avoid it by getting out of his way: In short, they think them reprobated by God, and believe the fours of the damned enter into the Parias, to be punished for their crimes. Yet the mission have found among these dregs of the people very active zealous catechifts, who by their labours have very much contributed to the convertion of their countrymen, particularly one Rajanaiken, a Paria foldier, who, of all the inferior missionaries, has distinguished himself most by his labours and fufferings.

PARICHIA. See Paros, Nº 2.

PARIDRONG, a town of Thibet. Lon. 88.

34. E. Lat. 28. o. N.

PARIED, a town of France, in the dep. of the Meuse; 6 miles SSE, of Estaing, and 12 E. of Verdun.

\* PARIETAL. adj. [from paries, Latin.] Constituting the fides or walls.—The lower part of the parietal and upper part of the temporal bones were fractured. Sharp.

PARIETALIA Ossa. Sec Anatomy, § 119. PARIETARIA, PELLITORY OF THE WALL; a genus of the monocia order, belonging to the polygamia class of plants; and in the natural method ranking under the 53d order, Scabrida. The calyx of the hermaphrodite is quadrifid; there is no coroila; there are 4 stamina; one style; and one feed, funerior and elongated. The female calyx is quadrifid; there is no corolla; nor are there any stamina. There is one style; and one feed superior, and elongated. There are fix species, of which the

PARIETARIA OFFICINALIS is used in medicine. This has a creeping root. The flaik grows erect, is rough to the touch, and adhefive. The leaves are alternate, elliptical, lanceolate, veined, and a little rough. The flowers grow out of the alæ of the leaves, in feffile, branched, verticillate clufters, of a greenish colour tinged with red. antheræ have a great degree of fenfibility; for, if arritated with the point of a pin, they fly from the calyx with elastic force, and throw out their powder. The plant has a cooling and diuretic quality. Three ounces of the juice taken internally, or a fomentation externally applied, have been found ferviceable in the strangury. plant laid upon heaps of cotton infelted with weeviis, is faid to drive away those destructive inrects.

• PARIETARY. n. f. [parietaire, Ft.] herb. Ain?

PARIETES, in anatomy, a term used for the inclosures or membranes that stop up or close the hollow parts of the body; especially those of the heart, the thorax, & c. The parietes of the two heart, the thorax, &c. The parietes of the two ventricles of the heart are of unequal strength and thickness; the left exceeding the right, because of its office, which is to force the blood through all parts of the body; whereas the right only drives it through the lungs.

PARIGNE, a town of France, in the department of the Sarte: 9 miles SE. of Mans.

PARILIA. See Pales.

(2.) PARINA COCAS, a province of Lima, 7. miles long; which also abounds with gold and filver mines, pastures, cattle, corn, and fruits.

\* PARING. v. f. [from pare.] That which i pared off any thing; the rind.—Virginity breed mites, much like a cheefe; and confumes itself to the very paring. Shak .-

To his gueft, tho' no way sparing,

He eat himself the rind and paring. -In May, after rain, pare off the furface of the earth, and with the parings raife your hills high and enlarge their breadth. Mort. Hufb.

PARIPE, a tewn of Brazil, in Bahia.

(1.) PARIS, in fabulous history, the fon of Pr am, king of Troy, by Hecuba, also named Alex ander. He was decreed, even before his birtl to become the rain of his country; and when h mother, in the first months of her pregnancy, ha dreamed that the thould bring forth a torch whic would fet fire to her palace, the footblayers for told the calamities which were to be expecte from the imprudence of her future fon, and which would end in the ruin of Troy. Priam, to pre vent so great a calamity, ordered his flave Archi laus to defiroy the child as foon as he was bor The flave only exposed the child on mount Id where the shepherds of the place found him, an educated him as their own. Some fay a she be: fuckled bim. Though educated among shephere and peafants, he gave very early proofs of courag and intrepidity; and from his care in protectir the flocks of mount Ida from the rapacity of the wild beafts, he was named, Alexander, a help of men. He gained the esteem of all the she herds, and his manly deportment recommends him to Enone, a nymph of Ida, whom he mari ed, and with whom he lived with the most pe fect tenderness. Their conjugal peace was, hor ever, of no long duration. At the marriage Peleus and Thetis, ATE, the goddess of discor who had not been invited to partake of the ente tainment, showed her displeasure, by throwing into the affembly of the gods who were at the celebration of the nuptials, a golden apple, ( which were written the words, Let it be given An the fairest. All the goddesses claimed it as the own; the contention at first became general; b at last only three, Juno, Yenus, and Miners wished to dispute their respective right to beaut The gods, unwilling to become arbiters in an a fair so delicate in its nature, appointed Paris adjudge the prize. The goddeffes appeared h fore their judge without covering or orname and each endeavoured by promifes to influer his judgment. Juno promifed him a kingdon Minerva, wildom and military glory; and Venthe fairest woman in the world for his wife. vid. Heroid 17. v. 118.] After he had heard the

prize to Venus, and gave her the golden apple. This decision drew upon the judge and his famiby the resentment of the two other goddesses. Soon after, Priam proposed a contest among his ions and other princes, and promifed to reward the conqueror with one of the finest bulls of mount Ida. His emissaries were sent to procure the animal, and it was found in the possession of Pans, who rejuctantly yielded it. But he went to Troy and entered the lifts of the combatants. He was received with applause, and obtained the nctory over his rivals, Neftor the fon of Neleus, Cyerus son of Neptune, Polites, Ilckenus, and Deiphobus, fons of Priam. He likewife obtained a superiority over Hector himself; who, enraged to ice himfelf conquered by an unknown firanger. pursued him closely; and Paris must have fallen a victim to his rage, had he not sled to the altar of Jupiter. This facred retreat preferved his life; and Caffandra, the daughter of Priam, firuck with the fimilarity of the features of Paris with those of her brothers, inquired his birth and his From these circumstances she discovered that he was her brother, and as fuch introduced him to ber father and to her brothers. Priam acknowledged Paris as his fon, and all jealoufy ceased among the brothers. Paris did not long remain inactive; he equipped a fleet, as if willing to redects Helione his father's fifter, whom Hercules had carried away, and obliged to marry This was the pre-Telemen the fon of Æacus. tended motive of his voyage, but the causes were far different. Helen was the fairest woman of the ace, and Venus had promifed her to him. He therefore went to Sparta, the refidence of Helen, who had married Menelaus. He was received with great respect; but he abused the hospitality of Menelaus, and while the hulband was absent in Crete, persuaded Helen to elope with him, and to by to Afia. Priam received her without difficary, as his lifter was then detained in a foreign wantry, and as he wished to show himself as hos-La possible to the Greeks. This affair was poductive of ferious confequences. When Moeters had married Helon, all her fuitors had themselves by a solemn oath to defend her bee every violence; and therefore he reminded them of their engagements, and called upon them to recover her. Upon this all Greece took up Agamemnon was chosen general of the combined forces, and a regular war was begun. Paris, meanwhile, who had refused Helen to the petitions and embassies of the Greeks, armed himsee, with his brothers and fubjects, to oppose the they; but he fought with little courage, and z the very fight of Menelaus, whom he had fo. recently injured, his courage vanished, and he rebod from the army. In a combat with Meneum, Paris must have perished, had not Venus intenered. He wounded, however, in another batte, Machaon, Euryphilus, and Diomedes; and, according to fome, he killed with an arrow the peat Achilles. The death of Paris is differently risted: some say he was mortally wounded by e of the poisoned arrows of Philochetes; and at when he found himself languid by his wends, be ordered himself to be carried to the

keeral claims and promifes, Paris allindged the feet of Ginone, whom he had basely abandoned, and who had foretold him that he would folicit her affistance in his dying moments. He expired before he came into the presence of Enone, who threw herself upon his body, and stabbed herself to the heart. According to others, Paris did not immediately go to Troy when he left the Peloponnesus, but he was driven on the coasts of Egypt, where Proteus, the king of the country, detained him. He died about 1188 B. C. See Troy.

> (2.) PARIS, Matthew, one of the hest English hittorians, from William the Conqueror to the latter end of the reign of Henry III. Leland, his original biographer, informs us, that he was a monk of St Alban's, and that he was fent by Pope Innocent to reform the monks of the convent at Holm in Norway. Bp. Bale adds, that, on account of his extraordinary gifts, he was much eftermed by Henry III. who ordered him to write the hife tory of his reign. Fuller makes him a native of Cambridgeshire, and says, he was sent by the pope to visit the monks in the diocese of Norwich. Paris died in the monastery of St Alban's in 1259. He was a man of extraordinary knowledge for the 13th century; of an excellent mo-ral character, and, as an historian, of strict integrity. His works are, 1. Historia ab Adamo ad Conquestum Anglie, lib. i. M. S. col. C. C. Cantab. c. ix. Most of this book is transcribed, by Matthew of Westminster, into the first part of his Florilegium. 2. Historia major, seu rerum Anglicanarum historia à Gul. Conquestoris adventu ad annum 43 Henrici III. &c. several times printed. 3. Vitæ duorum Offarum, Merciæ regum, S. Albani fundatorum. 4. Gesta 22 abbatum S. Albani. 5. Additamenta chronicorum ad hist. majoren; printed. 6. Historia minor, sive epitome majoris historia; Befides many other things in MS.

> (3.) PARIS, in geography, the capital of France: is fituated on the river Seine, in the department of Paris, and ci-devant ise of France, being one of the largest and finest cities in Europe. It derived its modern name from the ancient Parisii; and is supposed to have had the Latin name of LUTETIA, from Lutum, mud, the place where it now stands having been anciently very marshy and muddy. Ever fince the reign of Hugh Capet, that is, for above 800 years, this city hath been the usual residence of the kings of France; it is of a circular form, and, including the fuburbs, about 15 English miles, in circumference. The number of its inhabitants is computed at above 800,000; that of its streets above 2000; and that of its houses upwards of 24,000, exclusive of the public fructures of all forts. Its greatest defect is the want of good water. The streets are narrow, but weil built, paved, and lighted. The number of churches, hospitals, market-places, fountains, gates, and bridges, in this city is very great; befides the National Institute, which supplies the place of the ci-devant academies, public libraries, &c. and above 100 hotels, some of them very stately. That part called the City, lies in the centre, and confifts of three islands formed by the Seine, viz. the illes of Palais, Notre Dame, and Louviers. It is the principal of the three parts into which the city is divided, and contains

the following remarkable structures: 1. Several bridges; of which some are of wood, and others of stone, and have most of them a row of houses on each fide. The chief of these are the Pont neuf and Pont royal: the first confists of 12 arches, which, properly speaking, make two bridges, the one leading from the suburbs of St Germain to the city, and the other from thence to that part called la Ville; there is a carriage-way in the middle 30 feet broad, and foot walks on each fide, raifed two feet high; and in the centre flood, before the revolution, a brass statue of king Henry IV. on horseback; but it was destroyed during the anti-monarchical mania, in 1792. On this bridge is also the building called La Samaritaine, from a group of figures upon it representing our Saviour and the Samaritan woman, standing near Jacob's well. Here is a pump to raise the water, which through several pipes supplies the quarter of the Louvre, and some other parts of the town. The Pont-royal, which leads to the Thuilleries, was built by order of Lewis XIV. in the room of a wooden bridge that was carried away by the current in 1684. 2. The cathedral of Notre Dame, or our Lady, being dedicated to the Holy Virgin, which is a large stately Gothic structure, said to have been founded by king Childeric, and built in the form of a cross. Here, besides other great perfonages, are interred the cardinals de Retz and Noailles. From the two square towers belonging to it, is a noble prospect of the city and neighbouring country. Heregis a vast quantity of gold and filver plate, rich tapeltry, &c. and formerly there were 50 canons. Near it flood the palace of the Abp. in which is the advocates' library. 3. The priory and parish church of St Bartholomesu; the last of which is the most beautiful in all this part of the city, and stands near the Palais. 4. The Palais, which gives name to an island, and in which the parliament, with many other courts, were formerly held. There is a beautiful chapel belonging to the Palais: in which is also the prifon, or jail, called La Conciergerie. 5. The Hotel Dieu, the nooft ancient and largest hospital in Paris, in which 8000 fick and infirm poor are taken care of. 6. The hospital of St Catharine, where poor women and maidens are entertained three days. 6. The Grande Chatelet. 7. Fort l'Eveque, in which is the mint and a prison, near the street La Ferroniere, in which Henry IV. was stabbed by Ravilliac. 8. St Germain l'Auxerrois. 9. The Louvre, an ancient royal palace, of which a part was rebuilt by Lewis XIV. On one of its gates is the following inscription, Dum totum impleat orbem: the meaning of which is, " May it last till the owner of it hath extended his sway over the whole world:" which implies what the French kings have constantly aimed at; as well as what the First Conful, now about to be crowned emperor of France, still aims at. This palace is joined to the Thuilleries by a gallery, in which are 180 models of fortresses, some situated in France, and some in other countries, executed with the utmost accuracy. Here is, or at least was, before the revolution, a valuable collection of paintings, the mint, together with a prodigious quantity of rich tapestry hangings, and a collection of ancient arms, among which are those worn

by Francis I. at the battle of Pavia. Here also at the ci-devant royal academies held their meet ings. (See Academy, N° I, 3; 11, 3, 5; VIII, 3 XIII, 9, 11, 12.) 10. Le Palais Royal, built b Card. Richelieu, in 1636. It contained picture to the value of four millions of livres, which wer purchased by Richelieu, and of which a part be longed to Christina, queen of Sweden. 11. Th Thuilleries, so called from a tile or brick-kil which flood there formerly. Behind it are plea fant gardens, adorned with fine walks, plante with ever-greens, &c. with beautiful parterres, fine fountains, and a canal. Behind the Thuill ries, on the bank of the river, are pleafant walk composed of 4 rows of lofty elms, to which val crowds of people refort, as well as to the garden In the palace is a spacious and magnificent the tre; and hard by it are the Elysian fields, and the church of St Roche. 12. La Place de Louis Grand, a very beautiful square, in the centre which was an equestrian statue of that king, which was also demolished by the democrates. 13. Tl Place, or Square des Villoires, which is round, as contained a statue of Lewis XIV. of gilt brass, rected to him by the duke of Fuillade, with this i scription, Viro immortali. 14. The ci-devant Roy Library in the Rue Vivien, which contained 94.00 printed books, 30,000 MSS, and a prodigious co lection of copperplates and medals. 15. The p rish church of St Eustace, which stands in t quarter so named. 16. The gate of St Denni and 17. The gate of St Martin, both of while were erected in form of triumphal arches, in h nour of Lewis XIV. 18. La Greve, an open place where public rejoicings were celebrated, and n lefactors executed. 19. The Hotel de Ville, a lar building of Gothic architecture, adorned with d lumns of the Corinthian order. 20. The arfer in the quarter of St Paul, confisting of many sp cious buildings; among which are a founder and a house for making faltpetre. Here is a mi quetoon of two barrels, which it is faid will pier a thick board at the distance of six miles; a for differning an object at that diffance, has a lescope fixed to the barrel. 21. The Temple commandery of the knights of Malta, which gi name to a quarter; and, during the course of t revolution, has been used as a state prison, inste of the Bastile, which was destroyed July 1789; but, like the Hydra's head, has been si ceeded by numberiess other Bastiles. 22. The devant La Maison prosesse des Jesuites, in quarter of St Anthony, in the church of wh the hearts of Lewis XIII. and XIV. are preserve each in a casket of gold, supported by two ang of massy sliver, and as big as the life, hover with expanded wings. In the fame quarter v -a fine looking-glass manufacture, where above persons were employed in polishing plates cast -St Gobin. In that part of the city called University, the principal places are, 1. The v verfity, which was first founded by Charles. Great. 2. The Gobelins, a house where a gr number of ingenious artifts, in various manu! tures and handicrafts, were employed by the The most curious tapestry of all se vernment. was made here. 3. The General Hospital, a m noble foundation for the poor of the female

where 7000 objects were taken care of and proruled for. 4. The ci-devant Royal Physic Garden, in which are an immense variety of plants and trees. 5. The abbey of St Victor, in which is a public library, containing fome very ancient and fcarce books, feveral curious MSS, and a prodigious collection of maps and copperplates. 6. The College of Phylicians. 7. The Little Chatelet, as old fortress, used as a prison. 8. The Rue S. Jacques. 9. The Royal College, and that of Lowe the Great. 10. The Abbey of St Genenow in which is the marble monument of king Civis, the shrine of St Genevieve, a large library, with a cabinet of antiquities and natural curiofi-11. The ci-devint Royal Observatory, a not stately edifice, built on the highest part of the city. 11. The Academy of Surgery, inflituted in 1731. 13. The Convent of Franciscans, in the quarter of St Andrew, where there were remims of the palace of Julian the Apollate, in which Child bert, and some other kings of the 14. The Theatre. Franks, afterwards relided. 13. The Convent of Carthufians, in the quarter of Luxemburg, containing fine paintings. 16. The ci-devant palace of Luxemburg, or Orleans, magnificent structure, containing fine paintings by Rubens, with a noble garden. 17. The Abbry of St Germain des Prez, which contained a very valuable library, the MSS, alone making 2000 volumes: also a cabinet of antiquities. 18. The Hatel des Invalides, erected by Lewis XIV. in which iame and superannuated officers and soldiers These buildings take up 17 a-Tett mainteined. tres. The chapel is very magnificent. Hard by with the military academy. For the history of the city, during the late bloody revolution; See REVOLUTION. Paris is 70 miles S. of Rouen, 255 SE. of London, 625 NW. of Vienna, and 6:3 NE. of Madrid. Lon. 2. 25. E. Lat. 48. 50:

(a.! Paris, a department of France, containing the capital (N° 3.) with its suburbs, and a

crewt of about 3 miles around it.

(5.) Paris, a mountain in the ifle of Anglesey, es the coast of North Wales, which abounds in topper ore, the bed of which is above 40 feet The leffces of this mine annually raise foo 6000 to 7000 tons of merchantable ore, and dely employ above 40 furnaces in fmelting it: Two ore contains a great quantity of fulphur, \* beck must be separated by roasting before it can le finsed into copper. Part of the vitriolic acid u diperied into the air by the fire; another part zinces and diffoires fuch a quantity of the copps, that the water in which the roafted ore is waked (by means of old iron immerfed in it according to the German method) produces great contities of fine copper, fo that the proprietors tare obtained in one year near 100 tons of the copper precipitated from this water. If this waer vere afterwards evaporated, it would yield green vitriol or vitriolated iron, at nearly the rate of see tons of vitriol for each 100 tons of iron # leaft; which, at the rate of 3l. Sterling per ton, might produce very good profit to the undertakers, if any should settle such a manufacture LICTE.

VOL. XVII. PART I.

(6.) Paris, an island on the coast of S. Carolina.
(7.) Paris, a thriving township of New York, in Herkemer county, 6 miles W. of Whitestown. It has a congregational church, an academy calle! Hamilton, and, in 1796, contained 3,459 citizens, of whom 564 were electors. Iron ore is found near it.

(8.) \* PARIS. n. f. [aconitum.] An herb. Ainf.

(9.) PARIS, in botany, HERB PARIS, or TRUE-LOVE, a genus of the trigynia order, belonging to the octandria class of plants; and in the natural method ranking under the 11th order, Sarmentacea. The calyx is tetraphyllous; there are four petals, narrow in proportion; the berry quadrilocular. There is but one species, growing naturally in woods and fliady places both in Scotland and England. It hath a fingle naked stem, greenish blossoms, and bluish black berries.-The leaves and berries are faid to partake of the properties of opium; and the juice of the berries is useful in inflammations of the eyes. Linnæus fays, that the root will vomit as well as ipecacuanha, but must be taken in double the quantity. Goats and sheep eat the plant; cows, horses, and swine, refuse it. Though this plant has been reckoned poisonous, being ranked among the aconites; yet late authors attribute quite other properties to it, effeeming it a counter-poifor, and good in malignant and pestilential fevers.

(10.) Paris, Herb, of America, or of Ca-

NADA. See TRILLIUM.

(11.) Paris, Massacre of. See France, § 11, 42.

(12.) PARIS, PLASTER OF. See PLASTER. (1.) \* PARISH. n. f. [parochia, low Latin; paroisse, Fr. of the Greek wagonia, i. e. accolarunt conventus, accolatus, fucra vicinia.] The particular charge of a fecular prieft. Every church is either cathedral, conventual, or parochial: cathedral is that where there is a bishop seated, so called a cathedral: conventual confifts of regular clerks, professing some order of religion, or of a dean and chapter, or other college of spiritual men: parochial is that which is inflituted for faying divine fervice, and administring the holy facraments to the people, dwelling within a certain compass of ground near unto it. Our realm was first divided into parishes by Honorius, archbishop of Canterbury, in the year 636. Coavel .- Dametas came piping and dancing, the merricit man in a parish. Sidney .- By the Catholick church is meant no more than the common church, into which all fuch persons as belonged to that parish, in which it was built, were wont to congregate. Pearson.

The tythes, his parish freely paid, he took; But never su'd, or cur'd with bell or book.

(2.) \* PARISH. adj. 1. Belonging to the parish; having the care of the parish.—

A parish priest was of the pilgrim train. Dryd. Not parish clerk, who call the psalms so clear.

The office of the church is performed by the parish priest, at the time of his interment. Ayliffe.

A man, after his natural death, was not capable of the least parish office. Mart. Scrib.—The parish allowance to poor people is very seldom a comfortable

comfortable maintenance. Law. 2. Maintained by the parish.—The ghost and the parish girl are

entire new characters. Gaz.

(3.) PARISH is otherwife defined the precinct of a parochial church, or a circuit of ground inhabited by people who belong to one church, and are under the particular charge of its minister. The word comes from wagoness, babitation; of waex near, and ones bouse. Du Cange observes, that the name wagnizia was anciently given to the whole territory of a bishop, and derives it from neighbourhood; because the primitive Christians, not daring to affemble openly in cities, were forced to meet fecretly in neighbour houses. In the ancient church there was one large edifice in each city for the people to meet in; and this they called parochia, parish. But the fignification of the word was afterwards enlarged, and meant a diocele, or the jurifdiction of a bishop, confisting of several Du Pin observes, that country parishchurches. es had not their origin before the 4th century; but those of cities are more ancient. Alexandria is faid to have been divided into pariflies. In the early ages of Christianity in this island, parishes were unknown, or at least signified the same that a diocese now does. There was then no appropriation of ecclefiaftical dues to any particular church; but every man was at liberty to contribute his tithes to any priest or church he pleased, but he was obliged to do it to some; or if he made no special appropriation, they were paid to the bishop, to distribute them among the clergy, and for other pious purposes. Sir Henry Hobart maintains that parishes were first erected by the council of Lateran, held A. D. 1179. But Mr Selden proves, that the clergy lived in common without any division of parishes, long after the time mentioned by Camden, (A. D. 636) and it appears from the Saxon laws, that parishes were in being long before the council of Lateran in 1179. The distinction of parishes occurs in the laws of king Edgar, about 970. It feems pretty clear and certain, says judge Blackstone (Com. Vol. I. p. 112.), that the boundaries of parishes were first ascertained by those of a manor or manors; because it very feldom happens that a manor extends itself over more than one parish, though there are often many manors in one parith. The lords, he adds, as Christianity spread, began to build churches upon their own demelnes or wastes, to accommodate their tenants in one or two adjoining lordships; and that they might have divine service regularly performed therein, obliged all their tenants to appropriate their tithes to the maintenance of the one officiating minister, instead of leaving them at liberty to distribute them among the clergy of the diocese in general; and this tract of land, the tithes of which were fo appropriated, formed a diffinct parish; and this accounts for the frequent intermixture of the parishes one with another. For if a lord had a parcel of land detached from the main of his estate, but not sufficient to form a parish of itself, it was natural for him to endow his newly erected church with the tithes of fuch lands. Extra-parochial wastes and marsh lands, when improved and drained, are by 17 Geo. II. cap. 37. to be affeffed to all parochial rates in the parish next adjoining. Camden rec-

kons 9284 parishes in England; and Chamberlayne makes 9913. They are now generally reckoned about 10,000.

PARISH-CLERK, n. f. is a compound sufficiently authorised, but is more properly written in two words by Mr Gay. (See Parish, § 2.) In every parish in England, the parson hatha parish-clerk under him, who is the lowest officer of the church These were formerly clerks in orders, and their bunnels at first was to officiate at the altar; for which they had a competent maintenance by of ferings; but they are now laymen, and have cer tain fees with the parson on christenings, marria ges, burials, &c. befides wages for their mainter The law looks upon them as officers for life: and they are chosen by the minister of the parish, unless there is a custom for the parishion ers or churchwardens to choose them; in which case the canon cannot abrogate such custom; and when chosen it is to be fignified, and they are to be fworn into their office by the archdeacon, for which the court of king's bench will grant a man

\* PARISHIONER. n. s. [paroissien, Fr. fron parish.] One that belongs to the parish.—I praise the Lord for you, and so may my parishioners for their fons are well tutored by you. Shak .-

Hail bishop Valentine; whose day this is,

All the air is thy diocese a

And all the chirping choristers

And other birds are thy parishioners. Donn In the greater out-parishes, many of the pa rishioners, through neglect, do perish. Graunt .-I have deposited thirty marks, to be distributed among the poor parishioners. Addison.

PARISI, ancient Britons, who inhabited the countries now called Durbam, Westmoreland, and

Cumberland. Anderson's Royal Geneal.
PARISIAN, adj. Of or belonging to Paris.
PARISIANS, the people of Paris. See Franci

§ 54; and REVOLUTION.
(1.) PARISII, an ancient people of Gallia Ce tica, who inhabited the country about the Sequi na and Marona, fince called the Isle of France.

(2.) Parisii, an ancient people of Britain, wh had the Brigantes on the N. and W. the Germa fea on the E. and the Coritani on the S.; from whom they were separated by the Humber. The inhabited the diffrict now called HOLDERNESS in Yorkshire.

PARISIORUM CIVITAS. See LUTETIA.

(1.) PARISOT, John Patroclus, a French wi ter of the 17th century, who published a wol entitled La Foi devoilee, par la Raison, which i cenfed the French clergy so much, that they of tained an order for its suppression.

(2.) PARISOT, a town of France, in the dep. Averron; 101 miles SW. of Villefranch, and 1

W. of Sauveterre.

PARISUS, a river of Pannonia, which runs i to the Danube. Strabo.

PARITEE Hotun, a town of Chinese Tartar 445 miles ENE. of Peking. Lon. 143. 2. E. Fe Lat. 42. 28. N.

\* PARITOUR. n. f. [from apparitor.] A be dle; a summoner of the courts of civil law. -Ye thall be fummoned by an host of paritours; ye shall be sentenced in the spiritual court. Dryden \* PARIT

PARITY. n. f. [parité, Fr. paritas, Latin.] Equality; refemblance.—We may here justly tax the dishonesty and shamefulness of the mouths, who have upbraided us with the opinion of a certan floical parity of fins. Hall .- That Christ or ha apolica ever commanded to fet up fuch a pamy of prefbyters, and in such a way as those Scott ordeavour, I think is not very disputable. Ing Charles.—Survey the total fet of animals, inducinay, in their legs or organs of progrefhas, observe an equality of length and parity of materials. Brown.—Those accidental occurmes, which excited Socrates to the discovery of fach an invention, might fall in with that man that n of a perfect parity with Socrates. Hale.-Their agreement in effential characters, makes rathe m identity than a parity. Glawville. - Women could not live in that parity and equality of ex-pense with their hufbands, as now they do. Grans.—By an exact parity of reason, we may argue, if a man has no fense of those kindnesses that pris spon him, from one like himself, whom he ku and knows, how much less shall his heart be ascard with a grateful sense of his favours, whom he convertes with only, by imperfect speculations, by the discourses of reason, or the discoveries of futh ! South.

PARIUM, in ancient geography, a noble city of Mysia Minor, with a port on the Propontis; cilled Adragia by Homer, according to Piny; but Strabo duftinguishes them: according to othen, it is the Paestos of Homer. It was the buttplice of Neoptolemus, furnamed Gloffogra-Jun (Strabo.) Here stood a Cupid, equal injexquit workmanship to the Cnidian Venus. It is

now called Camanar.

(L) PARK. n. f. [pearrue, Sax. parc, Fr.] A Prox of ground inclosed and stored with wild beats of chase, which a man may have by preimption or the king's grant. Manwood, in his tact-law, defines it thus: a park is a place for punlege for wild beafts of venery, and also for ober wild beafts that are beafts of the forest and or the chaire: and those wild beasts are to have a peace and protection there, so that no man Int or chase them within the park, without of the owner: a park is of another nature, the other a chase or a warren; for a park must be mixed, and may not lie open; if it does, it is a food cause of seizure into the king's hands: and the owner cannot have action against such as hunt is park, if it lies open. Gowel.-We have parks and inciolures of all forts of beafts and birds, we use not only for view or rareness, but thewile for diffections and trials. Bacon.

L) PARK. See CHASE and FOREST. No man on coa a park without licence under the broad kel; for the common law does not encourage matla of pleasure, which brings no profit to the commonwealth. But there may be a park in reputation orded without any lawful warrant; and the ownc may bring his action against persons killing his cer. To a park 3 things are required. 1. A rant thereof. 2. Inclosures by pale, wall, or beige. 3. Beafts of a park; fuch as the buck, ix, &c. And where all the deer are destroyed, than no more be counted a park; for a park saiks of vert, venison, and inclosure: and if it

is determined in any of them, it is a total disparking. Parks as well as chases are subject to the common law, and are not governed by the forest laws.

(3.) PARK, as connected with gardening. See FARM, § IV, 1-4: and GARDENING, § II, 1-The most perfect composition of a place that can be imagined, confifts of a garden opening into a park, with a short walk through the latter to a farm. and ways along its glades to ridings in the country; but to the farm and the ridings the park is no more than a paffage; and its woods and its buildings are but circumstances in their views; its scenes can be communicated only to the garden. The affinity of the two subjects is so close, that it would be difficult to draw the exact line of separation between them. Gardens have lately encroached both in extent and in ftyle on the character of a park; but still there are scenes in the one which are out of reach of the other. The small sequestered spots which are agreeable in a garden would be trivial in a park; and the spacious lawns which are among the nobleft features of the latter, would in the former fatigue by their want of variety; even fuch as, being of a moderate extent, may be admitted into either, will feem bare and naked, if not broken in the one; and lose much of their greatness, if broken in the The proportion of a part to the whole is a measure of its dimensions: it often determines the proper fize for an object, as well as the space fit to be allotted to a scene; and regulates the Ryle which ought to be affigned to either. But whatever distinctions the extent may occasion between a park and a garden, a flate of highly cultivated nature is confistent with each of their characters; and may in both be of the same kind, though in different degrees. The excellencies both of a park and a garden are happily blended, at Hagley, near Stourbridge in Worcestershire, the seat of Lord Lyttelton, where the scenes are equally elegant and noble. It is feated in the midst of a pleasant and fertile country, between the Clent and Witchberry hills.

(4.) PARK OF ARTILLERY. See ARTILLERY,

N° 5, § 3.

(5.) PARK OF PROVISIONS, in military affairs, the place where the futlers pitch their tent in the rear, and fell their provisions to the foldiers. Likewife that place where the bread-waggons are drawn up, and where the troops receive their ammunition bread, being the store of the army.

\* To PARK. v. a. [from the noun.] To inclose

as in a park.-

How are we park'd, and bounded in a pale. A little herd of England's tim'rous deer,

Maz'd with a yelping kennel of French curs. Shak. PARKANY, a town of Hungary, at the conflux of the Danube and the Gran; 2 miles N. of

Gran, and 14 E. of Comorn.

(1.) PARKER, Henry, Lord Morley, a noble author, who flourished in the reign of Henry VIII. and wrote several works, a list of which may be seen in Mr Walpole's (or Lord Orford's) Catalogue of Royal and Noble Authors, vol. 1. He was one of the barons, who figned the memorable letter to Pope Clement VII. threatening him with the lofs of his supremacy in England, unless the proceeded to dispatch the king's divorce against

Q. Catherine. (2.) PARKER, Matthew, the 2d Protestant archbishop of Canterbury, was born at Norwich in 2504, the 19th of Henry VII. His father, who was in trade, died when he was 12 years old; but his mother took care of his education, and at the age of 17 sent him to Corpus-Christi college in Cambridge, where, in 1523, he took his degree of A. B. In 1527 he was ordained, created A. M. and chosen fellow. In 1533 or 1534 he was made chaplain to Q. Anne Boleyn, who obtained for him the deanry of Stoke-Clare in Suffork, where he founded a grammar-school. After her death, Henry made him his own chaplain, and in 1541 prebendary of Ely. In 1544, he was elected mafter of Corpus-Christi college, and in 1555 vicechancellor of the university. In 1547 he lost the deanery of Stoke, by the diffolution of that college; and married the daughter of Robert Harlestone, a Norfolk gentleman. In 1552 he was nominated, by Edward VI. dean of Lincoln, which enabled him to live in great affluence; but Mary I. was hardly feated on the throne before he was deprived of every thing, and obliged to live in obscurity, often changing his place of abode to avoid the fate of the other reformers. Q. Elizabeth succeeded in 1558; and in 1559 Dr Parker, from indigence and obscurity, was at once raised to the see of Canterbury; an honour which he neither solicited nor defired. He was consecrated Dec. 17, 1559, in Lambeth chapel, by the Bps: of Chichester, Exeter, and Bedford, and not in a tavern, as the Romanias pretended. In this high station he acted with spirit and propriety. He vifited his cathedral and diocele in 1560, 1565, 1570, and 1573. He repaired and beautified his palaces at Lambeth and Canterbury, at an expence of above 14001. Aerling, which is at least equal to ten times the fum now. He gave feveral of the most magnificent entertainments which are on record, and regaled not only the nich, but fed plent-outly the poor. Queen Elizabeth was prefent at one of these. He founded several icholarships in Gorpus-Christi college in Cambridge, and gave large presents of plate to that and other colleges in this university. He gave 100 volumes to the public library. He likewise founded a free school at Rochdale in Lancashire. He took care to have the fees filled with pious and learned men; and, confidering the great want of bibles in many places, he, with the affiftance of other learned men, improved the English translation, had it printed on a large paper, and disperfed through the kingdom. This worthy prelate died in 1575, aged 72, and was buried in his own chapel at Lambeth. He was pious without affectation or austerity, cheerful and contented in the midst of adversity, moderate in the height of powe:, and beneficent beyond example. He wrote deveral books; and published four of our best historians; Matthew of Westminster, Matthew Paris, Affer's Life of King Alf. ed, and Tho. Walfingham. He also translated the Platter. This vertion was printed, but without a name, which led the learned Wood to attribute them to an obscure poet of the name of Keeper.

(3.) PARKER, John, an eminent lawyer of the

17th century, who practifed at Northampton a. bout 1640. He was educated in one of the Temples at London; and, being afterwards against the king, was made a member of the high court of justice in 1649, where he gave sentence against the three lords, Capel, Holland, and Hamilton, who were beheaded. During Cromwell's ufinpation, he was made an affiftant committee man for his county. In 1630 he published a book in defence of the new government, as a common-wealth, without a king or house of lords. In June 1655, when Cromwell was declared protect tor, he was appointed a commissioner for removing obstructions at Worcester-house in the Strand near London, and was fworn ferjeant at law next day. In Jan. 1639, he was appointed one of the barons of the exchequer by the Rump Parliament but, upon a complaint, was displaced. However he was again regularly made ferjeant at law, or the recommendation of Chancellor Hyde, at the first call after the restoration.

(4.) PARKER, Samuel, D. D. an English clergy man, for of the preceding, who, by temporizing became Bp. of Oxford. He was born Sept. 1640 at Northampton, and educated among the Pu ritans in Northampton; whence, being fit for the univerfity, he was fent to Wadham college if Oxford, and admitted, in 1059, under a profby terian tutor. Here he led a firset and religion life, and was effected one of the most preciou young men in the university. He took the degre of A. B. Feb. 28, 1659-60. Upon the restoration he besitated what side to take; but continuin publicly to speak against Episcopacy, he was muc discountenanced by the new warden Dr Blandford who had been appointed to that office upon th dawn of the restoration in 1659. Upon this h removed to Trinity-college, where, by the advice of Dr Ralph Ruthwell, then a fenior fellow of that fociety, he was rescued from the prejudici of his education, which he publicly avowed | print. He then became a zealous Anti-purital and for many years acted the part of what w then called a true fon of the church. In this ten per, having taken the degree of M. A. in 1663, 1 entered into holy orders, went to London, at became chaplain to a nobleman; continuing display his wit upon his old friends the Presbyt rians, Independents, &c. In 1665, he publish fome Philosophical Effays, and was elected F. These Essays he dedicated to Sheldon Abp. Canterbury, who became his patron; and in 16 made him his chaplain. Being thus in the road preferment, he left Oxford, and refided at Lai beth, under his patron; who, in 1670, made h archdeacon of Canterbury. In Nov. 1670, joined the train of William prince of Orange, w visited Cambridge, and had the degree of D. conferred upon him there. In Nov. 1672, he w installed a prebendary of Canterbury; and w made rector of Ickham and Chatham in Kent the archbishop. He was very obsequious to t court during the reign of Charles II. and upon t accession of James II. he continued the same s vile complanance; and foon reaped the fruits it in the bishopric of Oxford, to which he w appointed by James II. in 1686, being allowed hold the arch-deacoury of Canterbury in comme dam. He was likewise made a privy counsellor, and by a royal mandamus president of Magdaten Cosege in Oxford. These favours, however, were the price of his religion, which he scrupled not to seesse to his ambition. His authority in his diocese was very insignificant. At last falling into contempt, trousise of mind threw him into a distemper, of which he died unlamented, at Magdalen College, March 20, 1687. He sent, however, a Décorse to James, persuading him to embrace the Protestant religion, with a letter to the same purpose, which was printed at London in 1690, 40. He wrote several pieces, in all which Burnetallows that there was an entertaining liveliness; though "neither grave nor correct."

(5,6.) PARKER, Samuel, fon of the preceding was an excellent scholar, and of singular modesty. He married a bookfeller's daughter at Oxford, where he resided with a numerous samily; to support which, he published some books, with a modest Findication of his Father. One of his sons is now, or was sately, a bookfeller at Oxford.

7.) PARKER. n. f. [from park.] A park keep-

u daj.

PARKER'S BAY, a bay on the SE. coast of Ja-

(1.) PARKER'S ISLAND, an illand of the United States, on the coart of Maine, in Lincoln county, expensed by a narrow frait from Arrofick illand at the N. It is named from John Parker, who purchased it from the natives in 1650; and part of a shill possessed by his descendants.

(2) PRIKER'S ISLAND, an illund on the Chefapest, near the coast of Maryland, 15 miles S. of Amagoin.

PAREER'S RIVER, a river of Massachusetts, which rises in Essex county, and, after running several miles, fails into the Sound between Plumb library and the main land. It is navigable about mices from its mouth, where a bridge, built in 1758, crosses it, 870 feet long, and 26 broad; contains of stone piers, with eight wooden writes.

PARKGATE, a fea port town of Cheshire, on the ME coast of the Dee, at its mouth, 12 miles NW. of Chester, and 193 NNW. of London.

PARKHURST, John, a learned divine and lexicoupier, borse at London; and educated at Can Hall, Cambridge; of which he was admitted follow in 1751, and took his degrees of A.B. and A.M. He fettled at Epforn in Surry; was the estimate friend of Bp. Horne, and like him, septed the opinions of Hutchinfon. He publifulated the opinions of Hutchinfon. He publifulated and English Lexicon, 4to. 2. A lichew and English Lexicon, 4to.; both of which are very useful: 3. An Answer to Dr Priestly on the pre-emittence of Christ. He died in 1797.

PARKINSON, John, an eminent English botanit, born in 1567. He was the first who singly deroted and figured the subjects of the flower-garara. His Theatrum Betanicum contained a more resus history of medicinal plants than any forment publication; but the title of his nist work intered a pun upon his name; viz. Paradis in Sole continu Terrestrius: i. c. Park-in-Sun's Terresrus Paradise.

PARKINSONIA, so called in honour of the infin botanist Parkinson; a genus of the mono.

gynia order, belonging to the decandria class of plants; and in the natural method it ranks under the 33d order, Lomentacee. The calyx is quinquesid; there are 5 petals, all oval except the lowest, which is reniform; there is no style; the legumen moniliform, or like strong beads. We know but one species, which is very common in the Spanish West Indies, and has lately been introduced into the English settlements, for the beauty and sweetness of its slowers. In the countries where it grows naturally, it rises to a tree of 20 or more seet high, and bears long slender bunches of yellow flowers; which have a most agreeable sweet scent.

(1.) \* PARKLEAVES. n. f. An herb. Ainfw.

(2.) PARK-LEAVES. See HYPERICUM, No 1.
PARKSTEIN, a town of Bavaria, in Saltzbach;
16 miles N. of Nabburg, and 17 NE. of Saltzbach.

PARLASCA, a town of the Italian republic, in the dep. of Olona, diffrict and late duchy of Milan, on the E. bank of the Lake Como.

\* PARLE. n. f. [from parler, Fr.] Conversation; talk; oral treaty; oral discussion of any thing.—
Of all the gentlemen,

That every day with parle encounter me,
In thy opinion which is worthieft love? Shak.
Our trumpet call'd you to this general parle.
Shak.

The bishop, by a parle, is, with a show Of combination, cunningly betray'd. Daniel. I hate this parle; 'tis tame: if we must meet, Give me my arms. Roque's Amb. Step-mother. (1.) \* PARLEY. n. s. [from the verb.] Oral treaty; talk; conference; discussion by word of mouth.—Seek rather by parley to recover them, than by the sword. Sid.—

Well, by my will, we shall admit no parley; A rotten case abides no handling. Sbak. Summon a parley, we will talk with him.

Let us resolve never to parley with our lusts. Calamy.—Parley and holding intelligence with guilt in the most trivial things, he pronounced as treason to ourselves, as well as unto God. Fell.—

'Twas beyond parley when the fiege was laid.

Dryd.

We yield on parley, but are storm'd in vain.

Pryd.
Yet when some better sated youth

Shall with his am'rous parley move thee, Reflect one moment on his truth,

Who, dying thus, perfifts to love thee. *Prior.* (2.) A PARLEY, in war, is a conference with an enemy. Hence, to beat or found a parley, is to give a fignal for holding fuch a conference by beat of drum, or found of trumpet.

\* To Parley. v. n. [from parler, French.] To treat by word of mouth; to talk; to discuss any thing orally. It is much used in war for a meeting of enemies to talk.—A Turk desired the captain to send some with whom they might more conveniently parley. Knolle's Hist.—He parleys with her a while, as imagining the would advise him to proceed. Broome.

(1.) \* PARLIAMENT. n. f. [parliamentum, low Latin; parlement French.] In England, is the affembly of the king and three estates of the realm;

mamely, the lords spiritual, the lords temporal, and commons, for the debating of matters touching the commonwealth, especially the making and correcting of laws; which assembly or court is, of all others, the highest, and of greatest authority. Coscol.—

The king is fled to London,
To call a prefent court of parliament. Shak.
Far be the thought of this from Henry's heart,

To make a shambles of the parliament house.

Shak.

—The true use of parliaments is very excelient. Bacon.—I thought the right way of parliaments the most safe for my crown. King Charles.—These are mob readers: if Virgil and Martial, stood for parliament men, we know who would carry it. Dryd.

(2.) The PARLIAMENT is the grand affembly of the three states of this kingdom, summoned together by the king's authority, to consider of matters relating to the public welfare, particularly to

enact and repeal laws.

(3.) PARLIAMENT, ANTIQUITY OF. The original or first institution of parliament lies so far hidden in the dark ages of antiquity, that the tracing of it out is equally difficult and uncertain. word parliament is, comparatively, of modern date; derived from the French, parler, and fignifying the place where they met and spoke, or conferred together. It was first applied to general affemblies of the states under Lewis VII. in France, about the middle of the 12th century. But it is certain, that, long before the Norman conquest, all matters of importance were debated and fettled in the great councils of the realm; A practice which feems to have been univerfal among the northern nations, particularly the Germans; and carried by them into all the countries of Europe, which they over-ran at the diffolution of the Roman empire. Relies of this constitution, under various modifications and changes, are still to be met with in the diets of Poland, Germany, and Sweden, and formerly in the affembly of the states in France: for what was there lately called the parliament, was only the fupreme court of justice, confisting of the peers, certain dignified ecclefiaftics, and judges; which was neither in practice, nor supposed to be in theory, a general council of the realm.

(4.) PARLIAMENT, ANTIQUITY OF, IN ENG-LAND. In England, this general council hath been held immemorially, under the feveral names of miivel fynoth, or great council; michel gemote, or great meeting; and more frequently WITTENA GEMOTE, or, the meeting of avisemen. It was also styled in Latin, commune concilium regni, magnum concilium regis, curia magna, conventus magnatum vel procerum affifa generalis, and fometimes communitas regni Anglia. We have instances of its meeting to order the affairs of the kingdom, to make new laws, and to amend the old, or, as Fleta expresses it, novis injuriis emerfis nova constituere remedia, so early as the reign of Ina king of the West Saxons, Offa king of the Mercians, and Ethelbert king of Kent, in the feveral kingdoms of the heptarchy. And after their union, the Mirrour informs us, that king Alfred ordained for a perpetual usage, that these councils should meet twice in the year,

or oftener, if need be, to treat of the government of God's people; how they should keep themselve from fin, should live in quiet, and should receiv right." The fublequent Saxon and Danish me narchs held frequent councils of this fort, as a pears from their codes of laws; the titles when of usually speak them to be enacted, either by the king with the advice of his wittena-gemote, as H funt instituta, que Edgarus rex consilio sapientium se rum instituit: or to be enacted by those sages wi tie advice of the king; as, Hec funt judicia, q sapientes confilio regis Ethelstani instituerunt; ( laftly, to be enacted by them both together, Hæ sunt, institutiones quas rex Edmundus et episa These are sui cum sapientibus suis instituerunt. councils were also occasionally held under the si princes of the Norman line. Glanvil, who wre in the reign of Henry II. speaking of the partic lar amount of an amercement in the sheriff's cou fays, it never yet had been afcertained by the neral affize or affembly, but was left to the c tom of particular counties. Here the general fize is fpoken of as a meeting well known, and statutes or decisions are put in a manifest cont distinction to custom, or the common law. A in Edward III's time, an act of parliament, ma in the reign of William I. was pleaded in the c of the abbey of St Edmund's-bury, and judicia allowed by the court. Hence it indisputably pears, that parliaments, or general councils, coeval with the kingdom itself. How those p liaments were constituted and composed, has be matter of great dispute among our learned as quarians; whether the commons were fumme ed at all; or, at what period they began to fo a distinct assembly. But waving these control fies, it is generally agreed, that, in the main, constitution of parliament, as it now stands, marked out so long ago as the 17th year of K John, A. D. 1215, in the great charter granted that prince; wherein he promifes to summon arch-bishops, bishops, abbots, earls, and grea barons, personally; and all other tenants in cl under the crown, by the sheriff and bailiss; meet at a certain place, with 40 days notice, affess aids and scutages when necessary. MAGNA CHARTA.) And this constitution has fifted in fact at least from 1266, 49 Henry there being still extant writs of that date, to si mon knights, citizens, and burgeffes, to par ment. We proceed therefore, to inquire, wh in confifts this conflitution of parliament, a now stands, and has stood, for at least 500 year 1. As to the manner and time of its affembli 2. Its conftituent parts: 3. The laws and culti-relating to parliament: 4. The methods of 1 ceeding, and of making flatutes, in both hou And, 5. The manner of the parliament's adjoin ment, prorogation, and diffolution.

(5.) PARLIAMENT, ASSEMBLING OF. I. parliament is regularly fummoned by the ki writ or letter, iffued out of chancery by advic the privy-council, at leaft 40 days before it be to fit. It is a branch of the royal prerogative, no parliament can be convened by its own autry, or by the authority of any, except the lalone. And this prerogative is founded upon good reason. For, supposing it had a right

neet spontaneously, without being called together, it is impossible to conceive that all the members, of each of the houses, would agree ummimously upon the proper time and place of meeting: and it half of the members met, and half abfented themkhes, who shall determine which is really the legilative body, the part affembled, or that which kays away? It is therefore necessary, that the parament should be called together at a determinute time and place; and, highly becoming its draw and independence, that it should be called weather by none but one of its own constituent parts: and, of the three constituent parts, this office can only appertain to the king; as he is a fagle person, whose will may be uniform and fleady; the first person in the nation, being superor to both houses in dignity; and the only branch of the legislature that has a separate existence, and is capable of performing any act at a time when no parliament is in being. Nor is it any exception to this rule, that by fome modern statutes, on the demise of a king or queen, if there be then to parliament in being, the last parliament revives, and is to fit again for fix months, unless dissolved by the successor: for this revived parliament must have been originally fummoned by the crown. It is true, that the convention parliament which refored King Charles II. met above a month before bis return; the lords by their own authority, and the commons in pursuance of write issued in the name of the keepers of the liberty of England by with mity of parliament; and that the faid parliamest be till the 29th of December, full 7 months after the reftoration; and enacted many laws, feeral of which are still in force. But this was for the accessity of the thing, which supersedes all 4x: or if they had not so met, it was morally rapelible that the kingdom should have been setund in peace. And the first thing done after the ting's return was, to pass an act declaring this to **be a good parliament**, notwithstanding the defect of the king's writ. So that as the royal prerogathe was chiefly wounded by their fo meeting, and " the king himself, who alone had a right to oband, conferred to wave the objection, this cunnot karn into an example in prejudice of the The fitte crown. Befides, it was at that time I me doubt among the lawyers, whether even the scaling act made it a good parliament, and held by very many in the negative; though it to have been too nice a scruple. And vet, of abundant caution, it was thought necessary to confirm its acts in the next parliament by flat 17 Car. II. c. 7. & c. 14. It is likewise true, at time of the REVOLUTION, A. D. 1688, the indicated commons by their own authority, and the furnmons of the prince of Orange, (after-William III.) met in a convention, and seem disposed of the crown and kingdom. the afferabling was upon a like principle of \*\* as at the Restoration; that is, upon a full regions that King James II. had abdicated the pecament, and that the throne was thereby va**which supposition of the individual mem**was confirmed by their concurrent resolution. they actually came together. And, in fuch • case as the palpable vacancy of a throne, it fola acceptate rei, that the form of the royal.

writs must be laid aside, otherwise no parliament can ever meet again. For let us put another poffible case, and suppose, for the sake of argument, that the whole royal line should at any t me fail, and become extinct, which would indifputably vacate the throne: in this fituation it feems reafonable to prefume, that the body of the nation, confifting of lords and commons, would have a right to meet and fettle the government; otherwife there must be no government at all. And upon this and no other principle did the convention in 1688 affemble. The vacancy of the throne was precedent to their meeting without any royal fummons, not a consequence of it. They did not atfemble without writ, and then make the throne vacant; but the throne being previously vacant by the king's abdication, they affembled without writ. as they must do if they assembled at all. Had the throne been full, their meeting would not have been regular; but, as it was empty, fuch meeting became absolutely necessary. And accordingly it is declared by statute, r W. & M. st. 1. c. 1. that this convention was really the two houses of parliament, notwithstanding the want of writs or other defects of form. So that, notwithstanding these two capital exceptions, which were justifiable only on a principle of necessity (and each of which, by the way, induced a revolution in the government), the rule laid down is in general certain, that the king only can convoke a parliament. And this, by the ancient statutes of the realm, he is bound to do " every year, or oftener if need be." Not that he is, or ever was, obliged by these statutes to call a new parliament every year; but only to permit a parliament annually for the redrefs of grievances, and dispatch of business, if need be. These last words are so loose and vague, that such of our monarchs as were inclined to govern without parliaments, neglected the convoking them, fometimes for a very confiderable period, under pretence that there was no need of them. But, to remedy this, by flat. 16 Car. II. c. 1. it is enacted, that the fitting and holding of parliaments shall not be intermitted above 3 years at the most. And by flat. 1 W. & M. ft. 2. c. 2. it is declared to be one of the rights of the people, that for redrefs of all grievances, and for the amending, strengthening, and preferving, the laws, parliaments ought to be held frequently. And this indefinite frequency is again reduced to a certainty by flat. 6 W. & M. c. 2., which enacts, as the statute of Charles II. had done before, that the new parliament shall be called within 3 years after the determination of the former.

(6.) PARLIAMENT, CONSTITUENT PARTS OF. II. There are the king's majefty, fitting there in his royal political capacity, and the three effates of the realm; the lords fpiritual, the lords temporal (who fit together with the king in one house), and the commons, who fit by themselves in another. And the king and these three effates together form the great corporation or body politic of the kingdom, of which the king is said to be capus, principium, et similar. For upon their coming together the king meets them, either in person or by representation; without which there can be no beginning of a parliament; and he also has alone the power of disjoing them. It his highly neces-

fary for preferving the balance of the constitution, that the executive power should be a branch, though not the whole, of the legislature. The total union of them, we have feen, would be productive of tyranny; the total disjunction of them, for the prefent, would in the end produce the fame effects, by cauting that union against which it feems to provide. The legislature would foon become tyrannical, by making continual encroachments, and gradually assuming to itself the rights of the executive power. Thus the long parliament of Charles I. while it acted in a constitutional manner, with the royal concurrence, redreffed many heavy grievances and established many falutary laws. But when the two houses assumed the power of legislation, in exclusion of the royal authority, they foon after assumed likewise the reins of administration; and, in consequence of these united powers, overturned both church and state, and established a worse oppression than any they pretended to remedy. To hinder therefore any fuch encroachments, the king is himfelf a part of the parliament; and as this is the reason of his being fo, very properly therefore the share of legillation which the constitution has placed in the crown, confifts in the power of rejecting, rather than refolving; this being fufficient to answer the end proposed. For we may apply to the royal negative, in this instance, what Cicero observes of the negative of the Roman tribunes, that the crown has not any power of doing wrong, but merely of preventing wrong from being done. The crown cannot begin of itself any alterations in the prefent established law; but it may approve or disapprove of the alterations suggested and confented to by the two houses. The legislature therefore cannot abridge the executive power of any rights which it now has by law, without its own consent; fince the law must perpetually stand as it now does, unless all the powers will agree to alter it. And herein indeed confifts the true excellence of the British government, that all the parts of it form a mutual check upon each other. In the legislature, the people are a check upon the nobility, and the nobility a check upon the people, by the mutual privilege of rejecting what the other has refolved; while the king is a check upon both, which preserves the executive power from encroachments. And this very executive power is again checked and kept within due bounds by the two houses, through the privilege they have of inquiring into, impeaching, and punishing the conduct (not indeed of the king, which would destroy his constitutional independence; but which is more beneficial to the public) of his evil and pernicious counfellors. Thus every branch of our civil polity supports and is supported, regulates and is regulated, by the rest: for the two houses naturally drawing in two directions of opposite interest, and the prerogative in another still different from them both, they mutually keep each other from exceeding their proper limits; while the whole is prevented from separation, and artificially connected together by the mixed nature of the crown, which is a part of the legislative, and the sole executive magistrate. Like three distinct powers in mechanics, they jointly impel the machine of government in a di-

rection different from what either, acting by itsel would have done; but at the same time in a d rection partaking of each, and formed out of al a direction which constitutes the true line of the liberty and happiness of the community. See the articles King, Lords, and Commons.

(7.) PARLIAMENT, LAWS, CUSTOMS AND POT ER OF. The power and jurisdiction of parliame fays Sir Edward Coke, is fo transcendent and a folute, that it cannot be confined either for cau or perfons within any bounds. And of this hi court he adds, it may be truly said, Si antiqui tem spectes, 'est vetustissima; si dignitatem, est bot ratissima; si jurisdictionem, est capacissima. It h fovereign and uncontrollable authority in making confirming, enlarging, restraining, abrogating, pealing, reviving, and expounding of laws, co cerning matters of all possible denominations, clefiastical or temporal, civil, military, maritis or criminal: this being the place where that ab lute despotic power, which must in all gove ments refide somewhere, is entrusted by the o stitution of these kingdoms. All mitchiefs grievances, operations and remedies, that tra cend the ordinary course of the laws, are wit the reach of this extraordinary tribunal. It regulate or new-model the fuccession to the crow as was done in the reigns of Henry VIII. and V liam III. It can alter the established religion the land; as was done in a variety of instance the reigns of king Henry VIII. and his three c dren. It can change and create afreth even constitution of the kingdom and of parliame themselves; as was done by the act of union, the several statues for triennial and septennial e tions. It can, in fliort, do every thing that is not turally impossible; and therefore some have scrupled to call its power, by a figure rather bold, the omnipotence of parliament. True i that what the parliament doth, no authority u earth can undo. So that it is a matter mol fential to the liberties of this kingdom, that f members be delegated to this important trul are most eminent for their probity, their fortit and knowledge; for it was a known apophth of the great lord treasurer Burleigh, "That I land could never be ruined but by a parliamer and, as Sir Matthew Hale observes, this being highest and greatest court, over which none d can have jurisdiction in the kingdom, if by means a mifgovernment should anyway fall u it, the subjects of this kingdom are left wit all manner of remedy. Mr Locke, and other t retical writers, have held, that " there ren still inherent in the people a supreme power to move or alter the legislature, when they find legislature act contrary to the trust reposit them; for when such trust is abused, it is the forfeited, and devolves to those who gave But however just this conclusion may be in the we cannot adopt it, nor argue from it, under dispensation of government at present actually ifting. For this devolution of power, to the ple at large, includes in it a diffolution of whole form of government established by that ple; reduces all the members to their ori state of equality; and by annihilating the reign power, repeals all positive laws whatti

iche emded. No human laws will therefore Impose a case, which at once must destroy all ia, and compel men to build afresh upon a new fordation; nor will they make provision for so defecte an event, as much render all legal promoss heffectual. So long therefore as the Engen confinution laits, we may venture to affirm, the newer of parliament is absolute and withvalue out. To prevent the milchiefs that might rk by placing this extensive authority in hands ole acapable or improper to manage it, it is much by the custom and law of parliament, has more shall fit or wote in either house, un-labeless years of age. This is also expressly decard by flat 7 and 8 W. JH. c. 25: yet with reand to the house of commons, doubts have amen from fome contradictory adjudications, whethe crost a minor was incapacitated from fitting is that house. It is also enacted by stat. 7. Jac. Lc. 6. that no member be permitted to enter the be of commons till be hath taken the oath of seriore the lord steward or his deputy: of by 10 Car. II. st. 2. and a Geo. I. c. 13. that sampe thail vote or fit in either house, till he in the presence of the house, taken the and abjuration, supremacy, and abjuration, and repeated the declaration against and invocation of faints, and Medicate of the mass. Aliens, unless naturamile to serve therein: and now it is enacted, 1 W. III. c. 2. that no alien, even be naturalized, thall be capable of be-Wincher of either house of parliament. And has according these standing incapacities, but day seem is made a peer by the king, or elec-Molere in the house of commons by the peoke may the respective houses, upon comand proof weed, adjudge him distabled and incapable to fit #12cmber: and this by the law and custom of For as every court of justice hath made culoms for its direction, some the civil ime the common law, others their was and customs; so the high court friend hath also its own peculiar law, callde la et consuetudo parliamenti; a law which Coke observes is ab omnibus quarenda, merata, a paucis cognita. It will not be expected that we should enter into eccinion of this law with minuteness; fince ale learned author affures us, it is much war learned out of the rolls of parliame t wer records, and by precedents and conexperience, than can be expressed by any The whole of the law and custom of at his its original from this one maxim whatever matter arises concerning either parliament, ought to be examined, difand adjudged in that house to which it reand not ellewhere." Hence, for instance, and will not suffer the commons to interfere will not allow the lords to judge of the and a burgefs; nor will either house perthe labordinate courts of law to examine the of either case. But the maxims upon PART Lan

which they proceed, together with the method of proceeding, rest entirely in the breast of the parliament itself; and are not defined and afcertained by any particular flated laws. The privileges of parliament are likewife very large and indefinite; and therefore, when, in 31st Hen. VI. the house of lords propounded a question to the judges concerning them, the chief justice, Sir John Fortescue, in the name of his brethren, declared, "That they ought not to make answer to that question; for it hath not been used aforetime, that the justices should in anywife determine the privileges of the high court of parliament; for it is To high and mighty in its nature, that it may make law; and that which is law, it may make no law: and the determination and knowledge of that privilege belongs to the lords of parliament, and not to the justices." Privilege of parliament was principally established, in order to protect its members not only from being molested by their fellow-fubjects, but also more especially from being oppressed by the power of the crown. If therefore all the privileges of parliament were once to be fet down and afcertained, and no privilege to be allowed but what was so defined and determined, it were easy for the executive power to devife fome new case, not within the line of privilege, and under pretence thereof to harafs any refractory member, and violate the freedom of parliament. The dignity and independence of the two houses are therefore in great measure preferved by keeping their privileges indefinite. Some, however, of the more notorious privileges of the members of either house are, privilege of speech, of person, of their domestics, and of their lands and goods. As to the first, privilege of speech, it is declared by the statute r W. & M. st. 2. c. 2. as one of the liberties of the people, " That the freedom of speech, and debates, and proceedings in parliament, ought not to be impeached or queftioned in any court or place out of parliament." And this freedom of speech is particularly demanded of the king in perion, by the speaker of the house of commons, at the opening of every new parliament. So likewise are the other privileges, of person, servants, lands, and goods; which are immunities as ancient as Edward the Confessor: in whose laws we find this precept, Ad synodos venientibus, five s mmoniti fint, five per fe quid agendum habuerint, fit fumma pax; and fo too in the old Gothic constitutions, Extenditur bue par et lecuritas ad quatuordecim dies, convocato regni fenatu. This included formerly not only privilege from illegal violence, but also from legal arrefts and feizures by process from the courts of law. And still to affault by violence a member of either house, or his menial servants, is a high contempt of parliament, and there punished with the utmost severity. It has likewise pe-culiar penalties annexed to it in the courts of law, by flat. 3 Hen. IV. c. 6. and 11 Hen. VI. c. Neither can any member of either house he arrested and taken into custody without a breach of the privilege of parliament. But all other privileges which derogate from the common law are now at an end, fave only as to the freedom of the member's person; which in a peer (by the privilege of peerage) is for ever facred and inviolable; and in a commoner (by the privilege of parliament) for 40 days after every prorogation, and 30 days before the next appointed meeting; which is now in effect as long as the parliament subsists, it seldom being prorogued for more than 80 days at a As to all other privileges which obstruct the ordinary course of justice, they were restrained by the statutes 12 W. III. c. 3. 2 and 3 Ann. c. 18 and 11 Geo. II. c. 24. and are now totally abolished by statute to G. III. c. 50.; which enacts, that any fuit may at any time be brought against any peer or member of parliament, their fervants, or any other person entitled to privilege of parliament; which shall not be impeached or delayed by pretence of any fuch privilege, except that the person of a member of the house of commons shall not thereby be subjected to any arrest or imprisonment. Likewise, for the benefit of com-merce, it is provided by statute 4 Geo. III. c. 33. that any trader, having privilege of parliament, may be ferved with legal process for any just debt (to the amount of rool): and unless he makes fatisfaction within two months, it thall be deemed an act of bankruptcy; and that commission of bankruptcy may be fillued against such privileged traders in like manner as against any other. The only way by which courts of juffice could anciently take cognizance of privilege of parliament was by writ of privilege, in the nature of juperfedeas, to deliver the party out of cultody when ar-refted in a civil fuit. For when a letter was written by the speaker to the judges, to stay proceedings against a privileged person, they rejected it as contrary to their oath of office. But since the statute 12 Will. III. c. 3. which enacts, that no privileged person shall be subject to arrest or imprisonment, it hath been held, that such arrest is irregular ab initio, and that the party may be discharged upon motion. It is to be observed, that there is no precedent of any fuch writ of privilege, but only in civil fuits; and that the statute of a Jac. I. c. 13, and that or King William which remedy fome inconveniences ariting from privilege of parliament, fpeak only of civil actions. And therefore the claim of privilege hath been usually guarded with an exception as to the case of indictable crimes; or, as it hath been frequent-ly expressed, of treaton, felony, and breach of the peace. Whereby it feems to have been under-Ito ..., that no privilege was allowable to the mehitheir families, or fervants, in any crime whatfoever; for all crimes are treated by the law as being contra pacem domini regis. And instances have not been wanting, wherein privileged persons have been convicted of mildemeanors, and committed, or projecuted to outlawry, even in the middle of a fellion; which proceeding has after-wards received the fanction and approbation of parliament. To which may be added, that as bout 30 years ago, the case of writing and publishing seditions libels was resolved by both houses sot to be entitled to privilege; and that the rea-fons upon which that case proceeded, extended equally to every indicipable offence. So that the chief, if not the only, privilege of parliament, in such cases, seems to be the right of receiving immediate information of the imprisonment or de-

tention of any men. er, with the reason for which he is detained: a practice that is daily used upon the slightest military accusations, preparatory a trial by a courtemartial; and which is recognized by the several temporary statutes for suspending the babeas corp at act: whereby it is provided, the no member of either house shall be detained, the matter of which he stands suspected be secondaricated to the house of which he is a member, and the consent of the said house obtain for his commitment or detaining. But yet tusage has uniformly been, ever since the Revolton, that the communication has been subseque to the arrest. See King, Lords, and Common

(8.) PARLIAMENT, METHOD OF MAKING LA' in.-IV. The method of proceeding, in enacti laws, is much the fame in both houses. But for the we refer the reader to the article Bill, § 10-1 and shall only observe in this place, that, for a patch of business, each house of parliament has speaker. The SPEAKER of the house of lor whose office it is to prefide there, and main the formality of buliness, is the lord chancell or keeper of the king's great scal, or any of appointed by the king's commission: and if no be so appointed, the house of lords (it is said) n The ipeaker of the house of con mon chosen by the house; but must be approved the king. And herein the utage of the two hot differs, that the speaker of the house of comm cannot give his opinion or argue any question the house; but the speaker of the house of los if a lord of parliamer ., may. In each house act of the majority binds the whole; and this jority is declared by votes openly and public given; not, as formerly, at Venice, and many of fenatorial affemblies, privately, or by ballot. 1 latter method may be ferviceable, to prevent trigues and unconstitutional combinations; by impossible to be practifed with us, at least in house of commons, where every member's ( duct is subject to the future censure of his c flituents, and therefore should be openly subted to their inspection.

(9.) PARLIAMENT, METHOD OF PROROGUL ADJOURNING, AND DISSOLVING.-V. i. An JOURNMENT is no more than a continuance of fession from one day to another, as the word nifics; and this is done by the authority of house separately every day; and sometimes s fortnight or a month together, as at Christma Eatter, or upon other particular occasions. the adjournment of one house is no adjourn of the other. It has also been usual, when Majesty hath signified his pleasure that bot either of the houses should adjourn themselve a certain day, to obey the king's pleafure fo nified, and to adjourn accordingly. Other befides the indecorum of a refusal, a proreg would affuredly follow; which would ofte very inconvenient to both public and private nels. For prorogation puts an end to the sel and then fuch bills as are only begun, and not fected, must be refumed de nove (if at all) in a sequent setsion; whereas, after an adjourns all things continue in the fame state as at the of adjournment made, and may be proceede without any fresh commencement.

turior is the continuance of the parliament from one killion to another; as an adjournment is a cutination of the fetlion from day to day. This side by the royal authority, expressed either is the lord chancellor in his Majesty's presence, or by commission from the crown, or frequently by proclamation. Both houses are necessarily prompted at the same time; it not being a proregion of the house of lords or commons, but e the parliament. The fellion is never underto the at an end until a prorogation; though, with the act be passed, or some judgment given upplament, it is in truth no fellion at all. And tered the ulage was, for the king to give the mai affent to all fuch bills as he approved at the rad of every fession, and then to provogue the parhomes, though fometimes only for a day or two; and which all business then depending in the miles was not to be begun again. Which cufton obtained so strongly, that it once became a section, Whether giving the royal affent to a lage bill did not of course put an end to the sef-And though it was then refolved in the nepare, yet the notion was to deeply rooted, that the famile 1 Car. L. c. 7. was pailed to declare, the hing's affent to that and some other acts hould not put an end to the fession; and even so at the reign of Charles II. we find a proviso frequently tacked to a bill, that his Majesty's afint thereto should not determine the session of pariament. But it now feems to be allowed, that a prorogation must be expressly made, in order to determine the fetfion. And if at the time of and rebellion, or imminent danger of invathe parliament thall be feparated by adjournand a prorogation, the king is empowered to all them together by proclamation, with 14 days soci of the time appointed for their reassem-LA DISSOLUTION is the civil death of the parliament; and this may be effected three wars: 1. By the king's will, expressed either in prim or by representation. For as the king has he ide right of convening the parliament, fo albe at branch of the royal prerogative, that he whenever he pleases) prorogue the parliairatime, or put a final period to its exist-Le gothing had a right to prorogue or difbeigniament but itseif, it might become per-And this would be extremely dangerous, Fayine it should attempt to encroach upon enecutive power; as was fatally experienced The unfortunate king Charles I.; who, having passed an act to continue the parlialed then in being, till fuch time as it should to discolve itself, at last fell a facrifice to nordinate power which he himfelf had conto give them. It is is therefore extremely that the crown should be empowered the duration of these assemblies, under which the English constitution has moded: To that, on the one hand, they may and regularly come together for the difd bufinels and redrels of grievances; an l 70% on the other, even with the confent of be continued to an inconvenient or unlength. 2. A parliament may be of the demise of the crown. This difformerly happened immediately upon the

death of the reigning fovereign: for he being confidered in law as the head of the parliament, (caput, principium, et finis), that failing, the whole body was held to be extinct. But the calling a new parliament immediately on the inaguration of the fuccessor being found inconvenient, and dangers being apprehended from having no parliament in being in case of a disputed succession, it was enacted by the flatutes 7 and 8 W. III. c. 1/4 and 6 Ann. c. 7. that the parliament in being shall continue for fix months after the death of any king or queen, unless sooner prorogued or disfolved by the successor; that if the parliament be, at the time of the king's death, separated by adjournment or prorogation, it shall notwithstanding affemble immediately: and that if no parliament is then in being, the members of the last parliament shall assemble, and be again a parliament. Lastly, a parliament may be dissolved or expire. by length of time. For if either the legifiative body were perpetual, or might last for the life of the prince who convened them, as formerly, and were to to be supplied, by occasionally filling the vacancies with new representatives; in these cases. if it were once corrupted, the evil would be path all remedy; but when different bodies succeed' each other, if the people fee cause to disapprove of the present, they may reclify its faults in the next. A legislative affembly also, which is fare to be separated again, (whereby its members will themselves become private men, and subject to the full extent of the laws which they have enacted for others), will think themselves bound, in interest as well as duty, to make only such laws as are good. The utmost extent of time that the fame parliament was allowed to fit, by the statute 6 W. and M. c. 3. was three years : after the expiration of which, reckoning from the return of the first summons, the parliament was to have no longer continuance. But by flat. 1 Geo. I. ft. 2. c. 38. (in order, professedly, to prevent the great and continued expences of frequent elections, and the violent heats and animofities confequent thereupon, and for the peace and fecurity of the government then just recovering from the late rebeilion), this term was prolonged to feven years; and, what alone is an inflance of the vast authoria ty of parliament, the very same house that was chosen for three years, enacted its own continuance for feven. So that, as our constitution now stands, the parliament must expire, or die a natural death, at the end of every feventh year, if not fooner diffolved by the royal prerogative:

(10.) PARLIAMENT, PECULIAR FORMS OBSERVED IN. In the house of LORDS, the princes of the blood fit by themselves on the sides of the throne; at the wall, on the king's right hand, the two archbishops fit by themselves on a form. Below them, the bishops of London, Durham, and Winchester, and all the other bishops, fit according to the priority of their consecration. On the king's left hand the lord treasurer, lord president, and lord privy-seal, fit upon forms above all dukes, except the royal blood; then the dykes, marquisses, and earls, according to their creation. Across the room are wool-sacks, continued from an ancient cultom; and the chancellor, or keeper being of course the speaker of the house of lords,

fits on the first wool-fack before the throne, with the great feal or mace lying by him; below thefe are forms for the viscounts and barons. On the other wool-facks are seated the judges, masters in chancery, and king's council, who are only to give their advice in points of law; but they all stand up till the king gives them leave to fit. 2. The Commons fit promiseuously; only the speaker has a chair at the upper end of the house, and the clerk and his affishant fit at the table near him. When a member of the house of commons speaks, he stands up uncovered, and directs his speech to the speaker only. If what he says be antivered by another, he is not allowed to reply the same day, unless personal reflections have been cast upon him: but when the commons, in order to have a greater freedom of debate, have refolved themselves into a committee of the whole boule, every member may speak to a question as often as he thinks necessary. In the house of lords they vote, beginning at the puisne, or lowest baron, and so up orderly to the highest, every one answering, Content or Not content. In the house of commons they vote by year and nays; and if it be dubious which are the greater num-Ber, the house divides. If the question be about bringing any thing into the house, the year go out; but if it be about any thing the house already has, the nays go out. In all divisions the speaker appoints 4 tellers, two of each opinion. In a committee of the whole house, they divide by changing fides, the year taking the right and the mays the left of the chair; and then there are but two tellers. If a bill pass one house, and the other demur to it, a conference is demanded in the painted chamber, where certain members are deputed from each house; and here the lords fit covered, and the commons stand bare, and debate the case. If they disagree, the affair is null; and if they agree, this, with the other bills that have passed both houses, is brought down to the king in the house of lords, who comes thither dothed in his royal robes; before him the clerk of the parliament reads the title of each bill, and as he reads, the clerk of the crown pronounces the royal affent or diffent. If it be a public bill, the royal affent is given in these words, Le roy le zeut, The king will have it so; if private, Soit fait comme ilest desiré, Let the request be complied with; if the king refuses the bill, the answer is Le roy s'avijera, The king will think of it; and if it be a money-bill, the answer is, Le rey remercie ses loyaux sujets, accepte leur benevolences-es aust le veut; The king thanks his loyal subjects, accepts their benevolence, and therefore grants his confent.

(11.) PARLIAMENT, THE HIGH COURT OF, is the fupreme court in the kingdom, not only for the making, but also for the execution, of laws; by the trial of great and enormous offenders, whether lords or commoners, in the method of parliament to attaint particular persons of treason or felony, or to inside pains and penalties, beyond or contray to the common law, to serve a special purpose, we speak not of thom; being to all intents and purposes new laws, made pro re nata, and by no means an execution of such as are already.

in being. But an impeachment before the lord by the commons of Great Britain, in parliament is a profecution of the already known and efta bilthed law, and has been frequently put in practic; being a prefentment to the most high and si preme court of criminal jurifdiction by the mo folemn grand inquest of the whole kingdom. commoner cannot, however, be impeached be fore the lords for any capital offence, but only for any high mildemeanors; a -er may be in peached for any crime. And they usually (in cal of any impeachment of a peer for treason) addre the crown to appoint a lord high fleward, for the greater dignity and regularity of their proceedings which high steward was formerly elected by th peers themselves, though he was generally con missioned by the king; but it hash of late yes been strenuously maintained, that the appoint ment of a high-fleward in fuch cases is not indi peniably necessary, but that the house may priceed without one. The articles of impeaching are a kind of bills of indictment, found by the house of commons, and afterwards tried by the lords; who are in cases of mistemeanours con dered not only as their own peers, but as t peers of the whole nation. This is a cuftom d derived to us from the constitution of the ancie Germans; who in their great councils fometim tried capital accusations relating to the public Licet apud concilium accusare quoque, et discrim capitis intendere. And it has a peculiar proprie in the English constitution; which has much it proved upon the ancient model imported hith from the continent. For though in general t union of the legislative and judicial powers our to be most carefully avoided, yet it may happ that a subject, intrusted with the administration public affairs, may infringe the rights of the pl ple, and be guilty of fuch crimes as the ordina magistrate either dares not or cannot punish. these the representatives of the people, or ho of commons, cannot properly judge; becal their constituents are the parties injured, and therefore only impeach. But before what co shall this imperchment be tried? Not before ordinary tribunals, which would naturally swayed by the authority of so powerful an acq er. Reason therefore will suggest, that t branch of the legislature, which represents people, must bring its charge before the of branch, which confifts of the nobility, who neither the fame interests, nor the same passed This is a vast superior as popular affemblies. which the conflitution of this island enj over those of the Grecian or Roman repubil where the people were at the fame time b judges and accujers. It is proper that the nobi should judge, to insure justice to the accused it is proper that the people should accuse, to fure justice to the commonwealth. And theref among other extraordinary circumstances atte ing the authority of this court, there is one very fingular nature, which was infifted on the house of commons, in the case of the ear Datby in the reign of Charles II. and is t enacted by statute 12 & 13 W. Ilk c. a. that pardon under the great seal shall be pleadable an impeachment by the commons of Great

thin parliament. Such is the nature of a British parliament, and in theory at leaft we should prefame it were nearly perfect; but some of our felhe-countrymen, more zealous perhaps than wife, he profigious fauits in it, such indeed as they thisk must inevitably prove fatal. The confeenergy of this perfuation has been a loud and inecfant call for parliamentary reform. That abules ought to be reformed, is certain, and that fre inflitutions are so perfect as not to need amendment, is a fact equally indisputable. All ern suppose, that there are many abuses in our puliament which would require to be amended; but granting all this and fomething more if it were necessary, we would recommend in the mean time to the serious confideration of those who call themselves the Friends of the People, whose fincerity in their professions it would be sapolite to question, the example of France, and that they would allow it to be a warning to Britain. France wanted reform indeed, and that which was first proposed had the countenance of of the cooleft and the best of men; but the consequences have been dreadful; and instead of estabilling LIBERTY and EQUALITY, have ended in the most absolute and uncontrolled DESPOTISM, everelablished in any nation; now rendered Impried and bereditary in the boule of Bonaparte.

(13.) PARLIAMENT, THE LATE PRENCH. ei-devant Parliaments of France were fovereign courts established by the king, finally to determine all députes between particular persons, and to promote on appeals from fentences given by infoist judges. - There were ten of these parliament in France, of which that of Paris was the ame, is privileges and jurisdiction being of the present extent. It consisted of eight chambers, what causes of audience were pleaded; the chamber of written law; the chamber of counsel; the Tournelle criminelle, for judging criminal affurs; the Tournelle civile, in aid of the grand chamber; and three chambers of inquests, where processes were adjudged in writing; besides there, there was also the chamber of vocasom, and those of requests. In 1771 the king thought fit to branch the parliament of Paris into to different parliaments, under the denomination of superior courts, each parliament having similar jurilliction. Under their second race of kings, to parliament, like that of England, was the log's council, it gave audience to ambaffadors, and consulted of the affairs of war and government. The king, like ours, at that time prefi-But in after times their authority reloutions. wa abridged; as the kings referved the decision of the grand affairs of the public to their own consols; leaving none but private ones to the The parliament of Paris also enjoyperhaments. ed the privileges of verifying and registering the ing's arrets or edicts, without which those edids were of little or no value.

(13.) PARLIAMENT, THE SWEDISH, confifts of four chates, with the king at their head. These chates are, s. The nobility and representatives of the gentry; with whom the colonels, lieutenant changes, majors and captains of every regiment, it and wete. 2. The elegy; one of which body

is elected from every rural deanery of ten parithes ; who, with the bishops and superintendents, aground to about 200. 3. The burghers, elected by the magistrates and council of every corporation as their reprefentatives; of whom there are four for Stockhoim, and two for every other town, amounting in the whole to about 150. 4. The peasants, chosen by the peafants out of every diffrich; who choose one of their own rank, and not a gentleman, to represent them: these amount to about 250. All these generally meet at Stockholm: and after the flate-affairs have been represented to them fromthe throne, they separate and fit in four several chambers or houses, in each of which affairs are earried on by majority of votes; and every chamber has a negative in the paffing any law.

(1.) \* PARLIAMENTARY. adj. [from parliament.] Enacted by parliament; pertaining to parliament.—To the three first titles of the two houses, or lines, and conquest, were added two more; the authorities parliamentary and papal. Bacon.—Many things, that obtain as common law, had their original by parliamentary acts. Hale.—Credit to run ten millions in debt, without parkamentary fecurity, I think to be dangerous and illegal. Swift:

(2.) PARLIAMENTARY REPORM BILL. See ENG-

\*PARLOUR. n. f. [parloir, Fr. parlatorio, Ital.]?

\*PARLOUR. n. f. [parloir, Fr. parlatorio, Ital.]?

1. A room in monafteries, where the religious meet and converse.

2. A room in houses on the first floor, elegantly furnished for reception or entertainment.—Can we judge it a thing feemly for a man to go about the building of a house to the God of heaven, with no other appearance than if his end were to rear up a kitchen or a parlour for his own use? Hooker.—

Back again fair Alma led them right,

And foon into a goodly parlour brought. Spenf.—It would be infinitely more fhameful, in the dress of the kitchen, to receive the entertainments of the parlour. South.—

Roof and fides were like a parlour made. Dryd... The first, forgive my verse if too dissuse, Persorm'd the kitchen's and the parlour's use.

\* PAREOUS. adj. [This might feem to come from parler, Fr. to ipeak; but Junius derives it, I think, rightly, from perilous, in which fense it answers to the Latin improbus.] Keen; sprightly; waggish.—

One must be trusted, and he thought her fit, As passing prudent, and a parlow wit. Dyd. \*PARLOUSNESS.n.f. [from parlow.] Quick-

ness; keenness of temper.

(1.) PARMA, a duchy or province of Italy, bounded on the N. by the Po; on the NE, by the late Mantuan, now the department of the Mincio, in the Italian republic; on the E. by the ci-devant duchy of Modena, now the dep. of Panaro, in the fame republic; on the S. by Tufcany, now the kingdom of Etruria; and on the W. by the duchy of Placentia. In the midft of all these furrounding changes, this duchy has undergone no change in its political constitution, government, or geographical division; though such were threatened, but the duke made peace with the French republic, on the 25th Oct. 1795. The air s very wholesome, on waich ascount the inhabitants live

to a great age. The foil is very fertile, in corn, wine, oil, and hemp; the pastures seed a great number of cattle, and the cheese is in very high efteem. Here are confiderable mines of copper and filver, and plenty of truffles. See PARME-

SAN, Nº 1. (2.) PARMA, an ancient, rich, populous, and handsome city of Italy, capital of the above duchy, with a citadel, a bishop's fee, and an university. It has a magnificent cathedral, and the largest opera-house in Europe, which has seats for 12,000 spectators; but as it required a vast number of candles, which occasioned great expence, they have contrived another which has room for 2000 spectators. The dome and the church of St John are painted by the famous Corregio, who was a native. Charles III, king of the two Sicilies, carried away the library to Naples, which contained 18,000 volumes, and a very valuable cabinet of curiofities, as also the rich collection of medals. The citadel, which is very near the city, is built in the fame taste as that at Antwerp. In 1734, there was a bloody battle fought here; and in 1741, by the treaty of Aix-la-Chapelle, the duchies of Parma, Placentia, and Guastalla, were given to Philip, brother to Charles above mentioned. The principal streets meet in the centre, and form a handsome square. The new palace is built on the site of the old. It has 5 collegiate and 30 parish churches, besides the cathedral of St John. Its chief manufacture is filk flockings, and fome other articles in filk. It was famous for printing, and the books printed by Bodoni are remarkably beau-Parma, from its first foundation by the ancient Etrurians, has never changed its name. The population is estimated by Mr Martyn, at 37,000; by Berenger at 45,000. It is 32 miles SW. of Mantua; 60 SE. of Milan, and 60 SE. of Cremona. Lon. 10. 30. E. Lat. 44. 47. N.

(3.) PARMA, a river of Italy, which rises in the S. part of the duchy, (No 1.) near Etruria; divides the city of Parma, (N° 2.) into three parts, which were connected by 2 bridges over these branches; and falls into the Po, near Viadana.

(4.) PARMA. See PARMESAN, No 1. \* PARMACITTY. n. f. Corruptedly for sperma ceti. Ainsworth.
PARMANI, or

PARMANI, or } the ancient inhabitants of PARMENENSES, PARMA.

PARMENIDES, an ancient Greek philosopher, born in Elis, about A. A. C. 505. He studied under Xenophanes, or Anaximander. He taught that there were only two elements, fire and earth; and that the first generation of men was produced from the fun. Along with these and other abfurdities, he taught some philosophical truths: He first discovered that the earth is round, but he placed it, like Ptolemy, in the centre of the Solar System. He put his system into verse; and Fragments of it were collected by Henry Stephans, and published under the title of De Poefi Philosophica.

PARMENIO, a celebrated and popular general, in the army of Alexander the Great, who long enjoyed that prince's confidence, and was more attached to his person, as a man than as a monarch. Yet in a moment of suspicion, excited by false information, Alexander ordered this faithful friend to be put to death, in his 70th year, along

with his son. Plutarch remarks, that Parmenio gained many victories without Alexander, but Alexander not one without Parmenio.

PARMENTIER, John, a celebrated French navigator, born at Dieppe, in 1494. He was the first pilot who conducted veilels to Brazil, and the first Frenchman, who discovered the Indies as far as Sumatra. He was a good aftronomer, and laid down several excellent maps. He died at Suma

tra, in 1530.

(1.) PARMESAN, the duchy of PARMA, in it most extensive sense; including not only the city and duchy of Parma Proper, (see Parma, No 1 & 2) but also those of Guastalla and Placentia. (See Pla CENTIA.) It extends 40 miles from N. to S. an from 30 to 48, from E. to W. This country onc formed a finall republic; but afterwards fell fuc ceffively under the popes, the emperors, the duke of Milan, and the French, upon whose expulsio out of Italy, it was re-united to the Papal dom nions. In 1345, Paul III. gave it to his natura fon, Peter Aloysius Farnese; from whom the princes of that family descended. Of these th most celebrated was prince Alexander. (See ALE) ANDER, N° 32.) The princess Elizabeth Farnes daughter of duke Edward, being married to I Philip V. of Spain, in 1714, became heiress Parma, in 1720, on the death of her uncle Print Francis; and her son, Philip, succeeded in 174

(2.) PARMESAN, adj. Of or belonging to Parm (3.) PARMESAN CHEESE, a fort of cheefe muc efteemed among the Italians; so named from t duchy of Parma where it is made, and whence is conveyed to various parts of Europe. The cows from whose milk this cheese is made yield great quantity of it. Of this cheese there are forts; the fromaggio di forma, about two pali in diameter, and 7 or 8 inches thick; and the fi maggio di ribiole and di ribolini, which are not large. It is of a faffron colour; and the best

kept 3 or 4 years. See Cheese, § 4. PARMIGIANO, a celebrated painter, who true name was Francis MAZZUOLI; but he w named Parmigiano, from Parma, where he w born, in 1504. He was educated under his ti uncles, and was an eminent painter when but years of age. He was famous all over Italy at I and at 23 performed fuch wonders, that when I general of Charles V. took Rome by storm, for of the foldiers, having, in facking the town, bro into his apartments, found him intent upon work, and were instantly so struck with the bety of his pieces, that inflead of involving him the plunder and destruction in which they w then employed, they resolved to protect him for all manner of violence; which they actually p His works are diftinguished by the formed. beauty of the colouring, invention, and drawi His figures are spirited and graceful, particula with respect to attitude, and dresses. celled in mufic, in which he much delighted. paintings in oil are few, but held in high effect as are also his drawings and etchings. He the first that practised etching in Italy. At Ro he was employed by pope Clement VII. who highly pleased with his performances, and rewa ed him liberally. In the Houghton collection pictures, now in possession of the emperor of I

fin, is one of his best pictures, representing Christ had in the sepulchre, for which he is said to have been knighted by the duke of Parma. His principal works are at Parma, where he died poor in

PARMILLIEU, a town of France, in the dep.

of the liere, 24 miles ENE. of Lyons.

PARNASSIA, grafs of Parnatius, in botany; a genus of the tetragyria order, belonging to the pentandria class of plants. The calyx is quinquepartie; there are five petals, and as many nectarii, beart-shaped, and ciliated with globular tops; the capfule quadrivalved. There is but one specres, having a flalk about a foot high, angular, and often a little twifted, bearing a fingle white fower at top. The flowers are very beautifully freaked with yellow; fo that though it is a common plant, growing naturally in moist pastures, it frequently admitted into gardens.

PARNASSO, in modern geography, a mountum of European Turkey, in Livadia; 8 miles N. of Livadia: much celebrated by the poets, under

its ancient name

PARNASSUS, in ancient geography, a mountain of Phocis near Delphi, and the mounts Citherea and Helicon, with two tops; the one called ت من المحتول to Apollo; and the other Nifa, facred to Bacchus. It was covered with bay trees, and originally called Larnassus, from Deucalion's brnaz or ark, thither conveyed by the flood; after the flood, Parnaffin; from Har Nahas, changing the 4 into p, the hill of divination or augury; the crack of Delphi Randing at its foot. (Strabo. Pind. For Jev. Steph. Poucerus.) Dr Chandler, who vi-"Paradus was the western boundary of Phocis, and firetching N. from about Delphi toward the C'zan mountains, separated the western Locri from those who possessed the sea-coast before Eubezz. It was a place of refuge to the Delphians in times of danger. In the deluge, which happened under Deucation, the natives were faved on it. On the invation by Xerxes, some transported their funities to Achaia, but many concealed them in the mountain, and in Correium, a grotto of the Symphs. All Parnassus was renowned for fancti-... bet Correium was the most noted among the tallowed caves and places. On the way to the mmits of Parnatlus, fays Paufanias, 60 stadia beand Delphi, is a brazen image; and thence the icent to Correium is eafier for a man on foot, than ir mules and horses. Of all the caves in which I have been, this appeared to me the best worth feeing. On the coasts, and by the sea-side, are name than can be numbered; but some are very Emoos both in Greece and in other countries. The Corycian cave exceeds in magnitude those I mentioned, and for the most part may be through without a light. It is sufficiently 2; and has water, some springing up, and yet exce from the roof, which petrifies; so that the The inhabitants of Parnassus esteem it saced to the Corycian Nymphs, and to Pan.-From to reach the fuminits of the mountain is checule even to a man on foot. The fummits are store the clouds, and the women called Thyades and Apol-

lo.' Their frantic orgies were performed yearly. Wheler and his company ascended Parnassus from Delphi, some on horses, by a track between the Stadium and the clefts of the mountain. were cut in the rock, with a straight channel, perhaps a water-duct .- In a long hour, after many traverses, they gained the top, and entering a plain turned to the right, towards the fummits of Castalia, which are divided by deep precipices. From this eminence they had a fine prospect of the gulf of Corinth, and of the coast; mount Cirphis appearing beneath them as a plain, bounded on the E. by the bay of Asprospitia, and on the W. by that of Salona. They returned to the way they had quitted, and croffed a hill, covered with pines and fnow. On their left was a lake, and beyond it a peak, exceedingly high, white They travelled to the foot of it with fnow. through a valley, 4 or 5 miles in compass; and rested by a plentiful fountain called *Drosonigo*, the stream boiling up a foot in diameter, and nearly as much above the furface of the ground. It runs into the lake, about a quarter of a mile to the SE. They did not discover Corycium, or proceed farther on, but keeping the lake on their right, came again to the brink of the mountain, and descended by a deep and dangerous track to Racovi, a village 4 or 5 miles E. of Delphi. It was the opinion of Wheler, that no mountain in Greece was higher than Parnallius; that it was not inferior to mount Cenis among the Alps; and that, if detached it would be feen at a greater distance than even mount Athos. The summits are perpetually inercasing, every new fall of snow adding to the perennial heap, while the fun has power only to thaw the superficies. Castalis Pleistus, and innumerable fprings are fed, some invisibly, from the lakes and refervoirs, which, without these drains and fubterraneous vents, would fwell, especially after heavy rain and the melting of fnow, to as to fill the valleys, and run over the tops of the rocks down upon Delphi, spreading wide an inundation, fimilar, as has been furmifed, to the Deucalionean deluge."

PARNE, a town of France, in the department

of Mayenne; 6 miles SE. of Laval.

PARNEL. n. f. The diminutive of petronella.]
A punk; a flut. Obfolete. Skinner.
PARNELL, Dr Thomas, a very ingenious divine and poet, born at Dublin, in 1679. He was educated at Trinity College, and in 1700, took his degree of M. A. In 1706, he came to England, and was much respected by Gay, Swift, Arbuthnot, &c. He was archdeacon of Clogher, and the intimate friend of Mr Pope: who published his Hermit and other works, with recommendatory verses prefixed. He died in 1718, aged 39.

PARNES, a mountain of Africa, abounding in

vines. Stat. Theb. v. 620.

PARNESSUS, a mountain of Afia, near Bactriana. Diongf. Per. 737.

PARNI, an ancient nation of Scythia, who in-

vaded Parthia. Strabo, xi.

PARNOT, a town of France, in the dep. of Upper Marne; 5 miles NW. of Bourbonne.
\* PAROCHIAL. adj. [parochialis, from paro-

chia, low Lat.] Belonging to a parish.—The married state of parochial pastors hath given them the opportunity

opportunity of fetting a more exact and universal ter or syllable, several things are alluded to. R pattern of holy living, to the people committed is called, in Latin, agnominatio. Dia.

to their charge. Atterburg.

PARODICAL DEGREES, in an equation, a term used to denote the several regular terms in a quadratic, cubic, biquadratic, &c. equation, when the indices of the powers ascend or descend order-ly in an arithmetical progression. Thus  $x^3 + m$  $x^{1} + n x = is$  a cubic equation, where no term is wanting, but having all its parodic degrees; the indices of the terms regularly descending thus,

3, 2, 1, 0. (1.) \* PARODY n. f. [parodie, Fr. wagedia.] A kind of writing, in which the words of an author ' or his thoughts are taken, and by a flight change adapted to some new purpose.—The imitations of the ancients are added together with some of the parodies and allusions to the most excellent of the

moderns. Pope's Dunciad.

(2.) PARODY is also used for a popular maxim,

adage, or proverb.

(3.) PARODY, in poetry, (§ 1.) confifts in applying the vertes written on one subject, by way of ridicule, to another; or in turning a ferious work into a burlesque, by affecting to observe as near as possible the same rhimes, words, and cadences. The parody was first set on foot by the Greeks; from whom we borrow the name. It comes near to what some of our late writers call TRAVESTY. Others have more accurately diffinguithed between a parody and burlefque; and they observe, that the change of a single word may parody a verie; or of a fingle letter a word. Thus, in the last case, Cato exposed the inconstant dispolition of Marcus Fulvius Nobilior, by changing Nobilior into Mobilior. Another kind of parody confifts in the mere application of some known verse, or part of a verse of a writer, without making any change in it, with a view to expose it. A 4th instance is that of writing verses in the taste and ftyle of authors little approved. The rules of parody regard the choice of a fubject, and the manner of treating it. The subject should be a known and celebrated work: as to the manner, it should be by an exact imitation, and an intermixture of good natural pleafantry.

To PARODY. v. a. [parodier, Er. from parody.] To copy by way of parody.—I have translated, or rather parodied, a poem of Horace, in which I

introduce you advising me. Pope.

PARO-HOTUN, a town of Chinese Tartary; 288 miles NNE. of Peking. Lon. 136. 33. E. Ferro.

Lat. 44. 2. N.
(1.) PAROLE. n. f. [parole, French.] Wordgiven as an affurance; promife given by a pisoner anot to go away.

Love's votaries enthral each other's foul.

'Till both of them live but upon parole. Cleaveland.

-I have a scruple whether you can keep your parole, if you become a prisoner to the ladies.

(2.) PAROLE means also a word given out every day in orders by the commanding officer, both in camp and garrison, in order to know friends from enemies.

(1.) \* PARONOMASIA. n. f. [ \*\*a est : page a.] thetorical figure, in which, by the change of a let-

(2.) Pronomasia, fignifies also a pun. See O-

RATORY, § 218.
(1.) \* PARONYCHIA. n. f. [ emeteroxus; pare nychie, Fr.] A preternatural fwelling or fore un der the root of the nail in one's tinger; a felon; a whitiow. Dia.

(2.) PARONYCHIA, the WHITLOW, in furgery, is an abfeefs at the end of the fingers. According as it is fituated more or less deep, it is differently denominated, and divided into species. It begin with a flow heavy pain, attended with a fligh pullation, without swelling, recinele, or heat: bu toon the pain, heat, and throbbing, are intoler able; the part growe large and red, the adjoin ing fingers and the whole hand fwell up; in som cases, a kind of red and inflated streak may b observed, which, beginning at the affected part, continued almost to the elbow; nor is it unusua for the patient to complain of a very sharp pai under the flioulder, and fometimes the whole an is excellively inflamed and fweiled;, the patiet cannot sleep, the fever, &c. increasing; and som times delirium or convultions follow. 1. When is scated in the skin or fat, in the back or the to part of the finger, or under or near the nail, the pain is severe, but ends well. 2. When the pel ofteum is inflamed or corroded, the pain is to menting. 3. When the nervous coats of the flex tendons of the fingers or nerves near them a feized, the worst symptoms attend. If the fi kind suppurates, it must be opened, and treat as abscettes in general; but the best method treating the other two species is, on the first, at furthest the second day, to out the part wh the pain is feated quite to the bone: if this of ration is longer deferred, a suppuration will co on; in which case suppuration should be speed promoted, and as early a discharge given to matter as possible. As the pain is to considera as to occasion a fever, and sometimes convulsion the tinct, theh, may be added to the suppurat applications, and also given in a draught at time. The 2d species proves very troublesome; fometimes ends in a caries of the fubjacent be The 3d species is very tedious in the cure, usually the phalanx on which it is feated is stroyed.

\* PARONYMOUS. adj. [ accompos.] Refemb another word.—Shew your critical learning in etymology of terms, the fynonimous and the

rosymous or kindred names. Watts.

PAROPAMISUS, in ancient geography, a r of mountains and an extensive territory in the of India; which took Alexander the Great his army 16 days to cross it. (See MACEDO 14.) It is now called the Indian Cancafus, part of it Stony Girdle.

PAROPUS, a town of Sicily on the N. co

now called Colifano. Polyb. i, 24.

(1.) \* PAROQUET. n. f. (parroquet, or p quet, Fr.] A small species of parrot. The g red and blue, are parrots; the middlemost c popinjays; and the letter, paroquets. Grew .-

I would not give my paroquet For all the doves that ever flew.

(2.) PAROQUET. See PSITTACUS. PAROR PAROREIA, in ancient geography: 1. A town of Thrace, near mount Hæmus: (Liv. 39, c. 27.) 2. A town of Peloponnesus: 3. A district of

Purygia. Serabo, xii.

(a.) PAROS, in ancient geography, an island of the Ægean sea, one of the Cyclades, 38 miles from Delos; anciently called PACTYE and Minoa; also Dometrias, Zacynthus, Hyria, Hylesca, and Ca-bernu. It was the country of Archilochus, the lambic poet, and famous for its white marble, carel acheites, because dug with lamps. The rate of Cabarnia is derived according to Stepharay from one Cabarnus, who informed Ceres of the rape of her daughter Proferpine; or, according to Hefychius, from the Cabarni, the priests of Ceres, so called by the Parians. The name of Minon is borrowed from Minos king of Crete, who subdued this as he did most of the other islands of the Ægean fea. It was called Paras, which name it retains to this day, from Paros the fon of Parrhafius, or of Jason the Argonaut. Paros, according to Pliny, is 74 miles from Naxos, and 28 from Delos. Some modern travellers will have it to be 80, others only 50 miles in compais. Pliny tips it is half as large as Naxos, that is, 36 miles in compals. Dr Brookes lays, it is to miles long, and 8 broad. It was a rich and powerful island, being reckoned the most wealthy of the Cyclades. (Play, Nepos, Stral. Nicanor, Virg. Hov. Ovid.) It is provided with several capacious and sate harbours, and was anciently much reforted to by traders. It was, according to Thucydides, origraily peopled by the Phoenicians, who were the that makers of the sea. Afterwards the Carians letted here. Thucydides fays, the Carians were drives out by the Cretans under Minos; but Diodorus writes, that the Cariaus did not fettle here till after the Trojan war, when they found the Cretans in the island. Stephanus thinks that the Cretans, mixed with some Arcadians, were the only people that ever possessed this island. Minos himself, Pliny says, resided some time in this island, and received here the news of the death of his son Androgeus, who was killed in Africa after he had diftinguished himself at the public games. The Parians were chosen from apublic games. mong all the Greeks by the Milefians to compole the differences which had rent that state into factions. They acquitted themselves with great prudence, and reformed the government. atted Darius in his expedition against Greece with a confiderable squadron; but after the victory obtained by Miltiades at Marathon, they were reduced to great straits by that general. Howener, after blocking up the city for 26 days, he biged to quit the enterprize, and return to Athena with dilgrace. After the battle of Sala-Themikocles subjected Paros and most of the seighbouring islands to Athens, exacting large me from them, for having favoured the Per-L. It appears from the famous monument of Adulas, which Cosmos of Egypt has described mith great exactness, that Paros and the other Cyclades were ouce subject to the Ptolemies of Expe. However, Paros fell again under the power of the Athenians, who continued mafses of it till they were driven out by Mithridates the Great. But that prince being obliged **Vol. XVII. Part L** 

to yield to Sylla, Lucullus, and Pompey, this and the other islands of the Archipelago submitted to the Romans, who reduced them to a province with Lydia, Phrygia, and Caria. The Russians made this place their grand arienal; their powder magazines, and several other buildings, are still standing; and the island is indebted to them for improving the convenience for water, and for the trade which the cash they expended introduced among the inhabitants. It lies near to Naxia.

(2.) Paros, the metropolis of the above island is ftyled by Stephanus a potent city, and one of the largest in the Archipelago: the present city of Paros, now Parichia, is built upon its ruins, the country abounding with valuable monuments of antiquity. The very walls are built with columns, architraves, pedestals, mingled with pieces of ancient marble of a surprising magnitude, which were once employed in more noble edifices. Paros was indeed formerly famous for its marble, which was of an extraordinary whiteness, and in fuch request among the ancients that the best sta-tuaries used no other. The celebrated statuaries Philias and Praxiteles were born in it; and the authenticity of its marble Chronicle is now eftablished. See Arundelian Marblus; and Pa-RIAN CHRONICLE. . The city lies on the W. coast. Lon. 25. 44. E. Lat. 37. 8. N.
(1.) \* PAROTID. adj. [parotide, Fr. 4066.

(1.) \* PAROTID. adj. [parotide, Fr. exelle, exe and era.] Salivarye to named because near the ears.—Beasts and birds, having one common use of spittle, are surnished with the parotid glands, which help to supply the mouth with it. Grew.

(2.) PAROTID GLANDS, or the

PAROTIDES, See Anatomy, Index.

PAROTIS. n. f. [\*\*reals.] A tumour in the glandules behind and about the ears, generally called the emunctories of the brain; though, indeed, they are the external fountains of the fa-

liva of the mouth. Wiseman.

\* PAROXYSM. n. f. [emerican; paraxyfme, Fr.] A fit; periodical exacerbation of a difeafe.—I fancied to myself a kind of ease, in the change of the paraxyfm. Dryden.—Amorous girls, thro' the fury of an hysteric paraxyfm, are cast into a trance for an hour. Harvey.—The greater distance of time there is between the paraxyfms, the fever is less dangerous, but more obstinate. Arbuthnot.

PARPAILLOTS, a name given to the Calvi-

nifts in France. See CALVINISM.

PARQUIMANS, a county of N. Carolina, in Edenton diffrict, bounded on the N. by Virginia, E. by the Pafquotank, S. by Albemarle Sound, and W. by Chowan county. In 1795, it contained as 1560 citizens, and 1878 flaves. A county court is held at the Court house the 2d Monday of February, May, August, and November.

(1.) PARR, Catharine, was the eldest daughter of Sir Thomas Parr of Kendall. She was first married to John Nevil, lord Latymer; after whose death she so captivated K. Henry VIII. that he raised her to the throne. The royal nuptials were folemnized at Hampton Court, on the rath of July 1534. Being religiously disposed, she was, in the early part of her life, a zealous observer of the Romish rites and ceremonies; but in the dawning of the Reformation, she became as zear

lous a promoter of the Lutheran doctrine; yet with fuch prudence and circumfpection as her perilous fituation required. In fuch danger was the at one time, that the king had actually figned a warrant for committing her to the tower. She had art enough to restore herself to his good graces. The \* king died in January 1547, just 31 years after his marriage with his 3d Catharine; who in a short time was again espoused to Sir Thomas Seymour Jord-admiral of England: for in September 1548 the died in childbed. The historians of this period generally infinuate, that the was poisoned by her husband, to make way for his marriage with the lady Elizabeth. That Catharine Parr was beautiful is beyond a doubt; that the was pious and learned is evident from her writings: and that her prudence and fagacity were not inferior to her other accomplishments, may be concluded from her holding up the passion of a capricious tyrant as a shield against her enemies; and that at the latter end of his days, when his puffions were enfeebled by age, and his peevish austerity increased by difease. She wrote, 1. Queen Cathanne Parr's lameutation of a finner, bewaiting the ignorance of her blind life; Lond. 8vo, 1548, 1563. 2. Prayers or meditations, wherein the mynd is stirred patiently to suffic all assistions here, to fet at nought the vain prosperitee of this world, and always to long for the everlaftynge felicitee. Collected out of holy workes, by the most virtuous and gracious princesse, Katharine, queene of Englande, France, and Irelande. Printed by J. Wayland, 1545, 4to,-1561, 12mo. 3. Other

Meditations, Prayers, Letters, &c. unpublished.
(2.) PARR, Thomas, or Old Parr, a remarkable Englishman, who lived in the reigns of ten kings and queens. He was the fon of John Parr, a husbandman of Winnington, in the parish of Alderbury, Salop. Pollowing the profession of his father, he laboured hard, and lived on coarse fare. Being taken up to London by the E. of Arundel, the journey proved fatal to him; owing to the alteration in his diet, to the change of the air, and his general mode of life, he lived but a very short time, though one Robert Samber says, in his work, entitled Long Livers, that Parr lived 16 years after his presentation to Charles II. He was buried in Westminster Abbey. After his death his body was opened; and an account was drawn up by the celebrated Dr HARVEY, of which the following is an extract; "He had a large breaft, not fungous, but filcking to his ribs, and diffended with blood; a lividness in his face, as he had a difficulty of breathing a little before his death, and a long lafting warmth in his armpits and breaft after it; which fign, together with others, were so evident in his body, as they use to he on those that die by suffocation. His heart was great, thick, fibrous, and fat. The blood in the heart blackish and diluted. The cartilages of the sternum not more bony than in others, but Bexile and fort. His viscera were found and firong, especially the flomach; and he used to eat often by night and day, though contented with old cheefe, milk, coarse bread, finall beer, and whey; and, which is more remarkable, that he eat at midnight a little before he died. His kidheys were covered with fat, and pretty found;

only on the interior furface were found some queous or serous abscelles, whereof one was ne the bigness of a hen's egg, with a yellowish water in it, having made a roundish cavity, impre fed on that kidney; whence fome thought came that a little before his death a suppression of urine had befallen him; though others we of opinion, that his urine was suppressed upon the regurgitation of all the ferofity into his lung Not the least appearance there was of any stor matter, either in the kidneys or bladder. H bowels were also sound, a little whitish wither His spleen very little, hardly equalling the bigni of one kidney. In short, all his inward parts a peared so healthy, that if he had not changed ! diet and air, he might perhaps have lived a go while longer. The cause of his death was imput chiefly to the change of food and air; forafmu as coming out of a clear, thin, and free air, came into the thick air of London; and after constant plain and homely country diet, he w taken into a splendid family, where he fed hi and drank plentifully of the best wines, whe upon the natural functions of the parts of his l dy were overcharged, his lungs obstructed, a the habit of the whole body quite disordere upon which there could not but enfue a diffo tion. His brain was found, entire, and firm; a though he had not the use of his eyes, nor my of his memory, several years to fore he died, he had his hearing and apprehention very we and was able even to the 130th year of his a to do any husbandman's work, even thresh of corn." The following summary of his life from Oldys's MS. notes on Fuller's Worthi "Oid Pair was born 1483; lived at home u 1500, æt. 17, when he went out to service. 15 æt. 35. returned home from his mafter. 1522, 39, spent four years on the remainder of his fathe 1543, æt. 60, ended the first leafe he newed of Mr Lewis Porter. 1563, æt. 80, n ried Jane, daughter of John Taylor, a maid by whom he had a fon and a daughter, v both died very young. 1564, æt. 81, ended fecond leafe which he renewed of Mr John I ter. 1585, æt. 102, ended the third leafe had renewed of Mr Hugh Porter. 1588, at. 1 did penance in Alderbury church, for lying v Katharine Milton, and getting her with ch 1595, æt. 112, he buried his wife Jane, after t had lived 32 years together. 1605, æt. having lived to years a widower, he man Jane, widow of Anthony Adda, daughter John Lloyd of Gilfells, in Montgomeryshire, furvived him. 1635, æt. 152 and 9 months died; after they had lived together 30 yeard after 50 years possession of his last lease."

(I.) PARRA, in geography, a town of Per in Segestan, so miles N. of Zareng.

(II.) PARRA, in ornithology, a genus of the belonging to the order of grallæ; the character of which are: The bill is tapering and a lobtufe; the noffrils are oval, and fituated in middle of the bill; the forehead is covered the caruncles, which are lobated; the wings small, and spinous. There are 5 species:

1. PARRA CHAVARIA is about the fize dung-hil cock, and stands a foot and a half s

the ground. The bill is of a dirty white colour; the upper mandible fimilar to that in a dung-hil cet; the nortrils are oblong, pervious: on both ides, at the base of the bill, is a red membrane, which extends to the temples. The irides are bown. On the hind head are about 12 blackish featiers; inches long, forming a creft, and hangeg domwards. The rest of the neck is covered The body is brown, whateck black down. us the wings and tail inclined to black. On the based the wings are 2 or 3 spurs half an inch ion. The belly is a light black. The thighs are 12 but of feathers. The legs are very long, and of a yellow red colour. The toes are fo long as to entangle one another in walking. "This technique Mc Latham in his Synophis) inhabits ex utes, &c. near the river Cinu, about 30 lagues from Carthagena, in S. America; and hols on regetables. Its gait is folermn and flow; icit flies cafily and fwiftly. It cannot run, unas allifed by the wings at the same time. When espect of the skin is touched by the hand, a is felt, though it is very downy beneath المناهة المناهة the lathers; and indeed this down adheres fo timely as to enable the bird at times to swime The roice is clear and loud, but far from a cree-The natives, who keep poultry in great my have one of these tame, which goesalong in fock about the neighbourhood to feed the day, when this faithful shepherd dethem against birds of prey; being able, by of the spurs on the wings, to drive off whig as the carrion vulture, and even that tis so far of the greatest use, as it with the charge committed to its care, them all home fafe at night. It is fo to fuffer itself to be handled by a grown int will not permit children to attempt For the above account we are indebtwho feems to be the only one who any account of this wonderful bird.

The bill is yellow, as are also the head at uper parts; the under are of a yellowith the head at the parts; the under are of a yellowith the head at the parts; the under are of a yellowith the head at the parts of the parts of America and St Domingo.

Para Jacana, the spur-winged water ben's the five of the water rail. The bill is in bot an inch and a quarter, of an orange and on the forehead is a membranous flap and long and nearly as broad. On each bead also is another of the same, about of an inch broad, and both together they the base of the bill. The head, throat, beat, and under parts, are black; and the belly is mixed with white, &c. The species inhabit Brasil, Guiana, and Suribut are equally common at St Domingo, by frequent the marshy places, sides leds, and streams, and wade quite up to in the water. They are also genem pairs, and when separated call each commally till they join again. They are 1 and most common in the rainy seasons and November. They are at all times " if; their cry sharp and shrill, and may and a great way off. This is called by the French chirurgien. The flesh is accounted presty good.

4. PARRA SENEGALLA is about the fame fize with the DOMINICA, N° 2. Its bill is also yellow tipped with black; the forehead is covered with a yellow skin; the chin and throat are black; the head and upper parts of the body and leffer wing coverts are grey-brown. The lower part of the belly, and the upper and under tail-coverts are dirty white. At the bend of the wing is a black spur. It inhabits Senegal, and thence derives its name. The negroes call them Uett Uett, the French the squallers, because, as we are told, as foon as they see a man they seream and sty off? They always sty in pairs.

5. PARRA VARIABILIS, the four-awinged quater hen, is about 9 inches long. The bill is about 14 inches in length, and in colour orange-yellow. On the fore head is a flap of red skin; the crown of the head is brown, marked with spots of a darker colour; the hind part of the neck is much the fame, but of a deeper dye. The fides of the head, throat, fore part of the neck; breaft, belly, thighs, and under tail coverts are white, with a few red spots on the sides of the belly and base of the thighs. On the fore part of the wing is a yellow spur, &c. The legs are furnished with long toes, as in all the others, the colour of which is bluith ath. Mr Latham fays, that one which came under his inspection from Cayenne was rather finaller. It had the upper parts much paler; over the eye was a streak of white passing no further. and unaccompanied by a black one. The hind part of the neck was dufky black. It had only the rudiment of a spur; and the red caruncle on the forehead was less, and laid back on the forehead. From these differences this learned ornithologist conceives it to have differed either in fex or age from the other. This species inhabits Brafil, and is faid to be pretty common about Carthagena and in South America.

PARRAMATTA, a town of New S. Wales, fettled by British convicts, at the harbour of Port Jackson, 11 nules W. of Sydney Cove, between Rose-hill and the landing place. In 1791, about 1000 acres of the adjacent grounds were in cultivation; and the foil is good. Lon. 151. 39. E. Lat. 33. 50. S.

PARRECEY, a town of France, in the dep. of Jura; 45 m. S. of Dole, and 44 NNE. of Chaustin.

PARRELS, n. f. in a ship, are frames made of trunks, ribs, and ropes, which, having both their ends fastened to the yards, are so centrived as to go round about the mast, that the yards by their means may go up and down upon the mast. These also, with the breastropes, fasten the yards to the masts.

PARRET, or Pedrep, a river of Somerfetshire, which rises in the S. part of that county, on the borders of Dorfetshire. Near Langport it is joined by the Ordred, augmented by the Ivel; and, about four miles from this junction, it is joined by the Tone or Thone, a pretty large river, rising among the hills in the western parts of this country. About two miles below the junction of the Tone, the Parret receives another confiderable stream; and thus augmented, it passes by the town of Bridgewater, and falls into the Bristol channel in Bridgewater Bay.

(r.) PARRHASIUS, a famous ancient painter of Ephefus, or, as fome fay, of Athens: he sourished about the time of Socrates, according to Xenophon. It is faid, that, he was excelled by Timanthes, but excelled Zeuxis. His subjects

were very licentious.

(2.) PARRHASIUS, Janus, a famous grammarian in Italy, who was born at Cofeaza, in Naples, in He was intended for the law, the profeffion of his ancestors; but he preferred classical learning. His real name was John Paul Parifius; but according to the humour of the grammarians of that age, he called himself Janus Parrhasius. He taught at Milan with much reputation, being admired for a graceful delivery, in which he chiefly excelled other professors.—He went to Rome when Alexander VI. was pope; but left it when in danger of being involved in the misfortunes of Cajetan and Savello, with whom he had some correspondence. Soon after, he was appointed professor of rhetoric at Milan; but presuming to cenfure the teachers there as arrant blockbeads, they accused him of a criminal converse with his scholars, which obliged him to leave Milan. to Vicenza, where he obtained a larger falary; and he held this professorship till the Venetian states were laid waste by the troops of the League; upon which he returned to his native country. By the recommendation of John Lascaris, he was called to Rome by Leo X. who appointed him professor of polite literature. But, exhausted by his studies and labours, he became so afflicted with the gout, that he was obliged to return to Calabria, where he fell into a fever, and died. are feveral books ascribed to him; particularly Commentaries on Horace, and Ovid.

PARRHESIA. See ORATORY, § 233.

\* PARRICIDAL. PARRICIDIOUS. adj. [from parricida, Latin.] Relating to parricide; committing parricide.—He is now paid in his own way, the parricidious animal, and the punishment of murtherers is upon him. Brown.

(1.) \* PARRICIDE. n. f. (parricide, French; parricida, Latin.) 1. One who destroys his fa-

ther.-

I told him the revenging gods

'Gainst parrieides did all their thunder bend. Shak.

2. One who destroys or invades any to whom he owes particular reverence: as his country or patron.

3. [Parrieide, Fr. parrieidium, Lat.] The murder of a father; murder of one to whom reverence is due.—Although he was a prince in military virtue approved, and likewise a good law-maker; yet his cruelties and parrieides weighed down his virtues. Bacon.—

He will by parricide secure the throne. Dryd. (2.)PARRICIDE, (§ 1. Def. 3.) is the murder of one's parents or children. By the Roman law, it was punished in a severer manner than any other kind of homicide. After being scourged, the delinquents were sewed up in a leathern sack, with a live dog, a cock, a viper, and an ape, and so cast into the sea. Solon, it is true, in his laws, made none against parricide; apprehending it impossible that one should be guilty of so unnatural a barbarity. And the Persians, according to Herodotus, entertained the same notion, when they adjudged all persons who killed their reputed parents to be

bastards. And upon some such reason as this mul we account for the omission of an exemplary pu nishment for this crime in the English law; which treat it no otherwise than as fimple murder, ut less the child was also the servant of the paren For though the breach of natural relation is us observed, yet the breach of civil or ecclesianic con nections, when coupled with murder, denominati it a new offence; no less than a species of treasor called, parva proditio, or petis treason: which owever, is nothing else but an aggravated de gree of murder; although, on account of the vilation of private allegiance, it is stigmatized as a inferior species of treason. And thus, in the a cient Gothic constitution, we find the breach bot of natural and civil relations ranked in the fan class with crimes against the state and sovereign

(1.) \* PARSON. n. f. [Derived either from persona, because the parson omnium personam in ecclesia sustinet; or from parochianus, the parish priest.] 1. The priest of a parish; one that has a parochial charge or cure of fouls.-Abbot was preferred by king James to the bishoprick of Coventry and Litchfield, before he had been parson, vicar, or curate of any parish church. Clarendon. 2. A clergyman.-

Sometimes comes she with a tithe pig's tail, Tickling the parson as he lies alleep. 3. It is applied to the teachers of the presbyteri-

(2.) A Parson is one that hath full possession of all the rights of a parochial church. He is called parson, persona, because by his person the church is represented; and he is in himself a body corporate, to protect and defend the rights of the church (which he personates) by a perpetual He is fometimes called the rector or fucceffion. governor of the church; but the appellation of parson is the most legal and most honourable title, that a parish priest can enjoy; because such a one, (Sir Edward Coke observes), and he only, is faid vicem feu perfonam ecclefie gerere. A parfon has, during his life, the freehold in himfelf of the parsonage house, the glebe, the tithes, and other dues. But these are sometimes appropriated; that is, the benefice is perpetually annexed to fome spiritual corporation, either sole or aggregate, being the patron of the living; whom the law esteems equally capable of providing for the service of the church as any fingle private clergyman. (See Appropriation, § 2.) The appropriating corporations, or religious houses, were wont to depute one of their own body to perform divine fervice, and administer the facraments in those parithes of which the society was thus the parson. This officiating minister was in reality no more than a curate, deputy, or vicegerent of the appropriator, and therefore called vicarius, VICAR. His stipend was at the discretion of the appropriator, who was, however, bound of common right to find somebody, qui illi de temporalibus, episcopo de spiritualibus, debeat respondere. But this was done in fo scandalous a manner, and the parishes suffered so much by the neglect of the appropriators, that the legislature was forced to interpole: and accordingly it is enacted, by flat. 15 Ric. II. c. 6. that in all appropriations of churches the diocesan bishop shall ordain (in proportion to the value of the church) a competent fum to be diffributed among the poor parishioners annually; and that the vicarage shall be sufficiently endowed. The parish frequently suffered, not only by the want of divine service, but alfo by with-holding those alms, for which, among other purpoles, the payment of tithes was originally imposed: and therefore in this act a pension is directed to be distributed among the poor parochians.

chians, as well as a sufficient stipend to the vicar. But he, being liable to be removed at the pleafure of the appropriator, was not likely to infift too rigidly on the legal fufficiency of the stipend; and therefore, by stat. 4. Hen. IV. c. 12. it is ordained, that the vicar shall be a secular person, not a member of any religious house; that he shall be vicar perpetual, not removable at the caprice of the monastery; and that he should be canonically inflituted and inducted, and be fuffiziently endowed, at the discretion of the ordinary; for these three express purposes, to do divine strice, to inform the people, and to keep hospitality. The endowments, in consequence of these statutes, have usually been by a portion of the glebe or land belonging to the parsonage, and a particular share of the tithes, which the appropriators found it most troubiesome to collect, and which are therefore generally called petty or small tithes; the greater, or perdial tithes, being still reserved to their own use. But one and the same rule was not observed in the endowment of all vicarages. Hence fome are more liberally, and fome more feantily, endowed: and hence the tithes of many things, as wood in particular, are in some parishes rectorial, and in some vicarial tithes. The distinction, therefore, of a parson and vicar, is this: The parson has for the most part the whole right to all the eccleliaftical dues in his parith; but a vicar has generally an appropriator over him, entitled to the best part of the profits, to whom he is in effect perpetual curate, with a standing falary. Though in some places the vicarage has been confiderably augmented by a large share of the great tithes; which augmentations were greatly affifted by stat. 27 Car. II. c. 8. enacted in favour of poor vicars and curates, which rendered fuch temporary augmentations (when made by the appropriators) perpetual. The method of becoming a parson or vicar is much the fame. To both there are 4 requisites necessary; holy orders, presentation, institution, and induction. By common law, a deacon, of any age, might be inflituted and inducted to a parfonage or vicarage; but it was ordained, by stat. 13 Eliz. c. 12. that no person under 23 years of age, and in deacon's orders, should be presented to any benefice with cure; and if he were not ordained priest within one year after his induction, he should be ipso fallo deprived and now, by flat. 13 and 14 Car. II. c. 4. no person is capable to be admitted to any benefice, unless he hath been first ordained a prieft; and then he is, in the language of the law, a clerk in orders. But if he obtain orders, or a licence to preach, by money or corrupt practices, (which feems to be the true, tho not the common, notion of simony), the person giving such orders forfeits 401, and the person reeciving, 101, and is incapable of any etclefiaftical preferment for 7 years after. Any clerk may be preferred to a parsonage or vicarage; that is, the patron, to whom the advowfon of the church beiongs, may offer his clerk to the bishop of the diocese to be instituted. But when he is presented, the bithop may refuse him upon many accounts. As, 1. If the patron is excommunicated, and remains in contempt 40 days; or, 2. If the clerk be unfit: which unfitness is of several kinds.

First, with regard to his person; as if he be a bas tard, an outlaw, an excommunicate, an alien, under age; or the like. Next, with regard to his faith or morals; as for any particular herefy, or vice that is malum in fe; but if the bishop allege only in generals, as that he is schismaticus invete ratus, or objects a fault that is malum probibitud merely, as haunting taverns, playing at unawfu games, or the like, it is not good cause of refusal Or, lastly, the clerk may be unfit to discharge th paftoral office for want of learning. In any o which cases, the bishop may refuse the clerk. I case the refusal is for herefy, schism, inability q learning, or other matter of ecolefiaftical cogniz ance, there the bishop must give notice to the pa tron of fuch his cause of refusal, who being usu ally a layman, is not supposed to have knowledg of it; else he cannot present by lapse; but if the cause be temporal, there he is not bound to giv notice. If an action at law be brought by the patron against the bishop for refusing his clerk the bishop must assign the cause. If the case-h of a temporal nature, and the fact admitted, (fo instance, outlawry), the judges of the king's court must determine its validity, or whether it be su ficient cause of refusal: but if the fact be denied it must be determined by a jury. If the cause b of a spiritual nature, (as heresy, particularly a leged) the fact, if denied, shall also be determine ed by a jury: and if the fact be admitted ( found, the court, upon confultation and advice learned divines, shall decide its fufficiency. If the cause be want of learning, the bishop need of specify in what points the clerk is deficient, by only allege that he is deficient: for flat. 9 Edi II. st. 1. c. 13. is express, that the examination ( the fitness of a person presented to a benefice b longs to the ecclefiaftical judge. But because would be nugatory in this case to demand the reason of refusal from the ordinary, if the patro were bound to abide by his determination, wh has already pronounced his clerk unfit; ther fore, if the bishop returns the clerk to be min sufficiens in literatura, the court shall write to the metropolitan to re-examine him, and certify qualifications; which certificate of the archbilli is final. If the bishop hath no objections, b admits the patron's prefentation, the clerk so a mitted is next to be inflituted by him; which a kind of investiture of the spiritual part of the benefice; for by institution, the care of the for of the parish is committed to the charge of t When a vicar is instituted, he (besides t usual forms) takes, if required by the bishop, oath of perpetual relidence; for the maxim law is, that vicarius non babet vicarium: and the non-residence of the appropriators was t cause of the perpetual establishment of vicarage the law judges it very improper for them to d feat the end of their constitution, and by abten to create the very mischief which they were a pointed to remedy; especially as, if any profi are to arise from putting in a curate and living a distance from the parish, the appropriator, wl is the real parson, has undoubtedly the elder tit When the ordinary is also the patro to them. and confers the living, the presentation and inf tution are one and the same act, and are called collati

collation to a benefice. By inflitution or collation the church is full, so that there can be no fresh presentation till another vacancy, at least in the case of a common patron; but the church is not full against the king till induction: nay, even if a derk is inflituted upon the king's prefentation, the crown may revoke it before induction, and prefest another clerk. Upon institution also the clerk may enter on the parsonage house and glebe, adule the tithes; but he cannot grant or let then, or bring an action for them, till induction. Seclipportion, § 3. For the rights of a parson or near, in his tithes and eccleliastical dues, see Tithes. As to his duties, they are so numerous, that a simpracticable to recite them here with any tolerable concileness or accuracy; but the reader who has occasion may consult B. Gibson's lader, Johnson's Clergyman's Vade Mecum, and Barn's Ecclefiaftical Law. We shall therefore onmink mention the article of refidence, upon the apposition of which the law doth style every pamediai minister an incumbent. By stat. 21 Henry Vill.c. 13. persons willingly absenting themselves from their benefices, for one month together, or two months in the year, incur a penalty of 51. to ticking, and 51. to any person that will sue for metane; except chaplains to the king, or others therein mentioned, during their attendance in the bouchold of such as retain them; and also except all heads of honses, magistrates, and profesin in miverfities, and all students under 40 years of recreliding there, bona fide, for study. Legal residence is not only in the parish, but also in the parlange house; for it hath been resoived, that the latme intended residence, not only for servmy the cure and for hospitality, but also for maintrung the house, that the successor also may keep hospitality there. There is but one way whereby one may become a parlon or vicar; but there are many by which one may cease to be so. 1. By death. 2. By ceffion, in taking another benefice; for by stat. 21 Hen. VIII. c. 13. if any the having a benefice of 81. per annum, or upwards, in the king's books, (according to the pre-'nt valuation), accepts any other, the first shall radjudged void, unless he obtains a dispensaman; which no one is entitled to have but the caplains of the king and others therein mention-th, the brethren and fons of lords and knights, and doctors and bachelors of divinity and law, admitted by the universities of this realm. And a recover thus made for want of a dispensation, is called affion. 3. By confectation; for, when a derk is promoted to a bishopric, all his other preicruents are void the inftant that he is confecratd. But there is a method, by the favour of the of holding fuch livings in commendam. Comenda, or ecclefia commendata, is a living combended by the crown to the care of a clerk, to hold till a proper pattor is provided for it. This ter be temporary for one, two, or three years, repetual, being a kind of dispensation to athe vacancy of the living, and is called a There is also a commenda refor, which is to take a benefice de novo in the hiop's own gift, or the gift of some other paon contenting to the same; and this is the same him as inflitution and induction are to another

clerk. 4. By refignation. But this is of no avail till accepted by the ordinary, into whose hands the refignation must be made. 5. By deprivation, either by canonical censures, or in pursuance of divers penal statutes, which declare the benefice void, for fome nonfeafance or neglect, or elfe fome malefeafance or crime: as for fimony; for maintaining any doctrine in derogation of the king's supremacy, or of the 39 articles, or of the book of common prayer; for neglecting after institution to read the liturgy and articles in the church, or make the declarations against Popery, or take the abjuration oath; for using any other form of prayer than the liturgy of the church of England; or for absenting himself 60 days in one year from a benefice belonging to a Popish patron, to which the clerk was prefented by either of the univerfitles: in all which, and fimilar cases, the benefice is ip/o fallo void, without any formal fentence of deprivation.

(1.) \* PARSONAGE. n. f. [from parfon.] The benefice of a parish.—I have given him the par-

sonage of the parish. Addison.

(2.) A PARSONAGE is a rectory, or parish church, endowed with a glebe, house, lands, tithes, &c. for the maintenance of a minister, with cure of souls within such parish. See PARA

SON, ∮ 2.

(1.) PARSONS, James, M. D. and F. R. S. a late eminent and learned physician, born at Barnstaple, Devonshire, in 1705. He was the 9th son of Col. Parsons, and was educated at Dublin, whence he went to Paris, and improved himself under Aftruc, Lemery, Hunaud, Le Cat, Bouldue, and Justieu. He graduated at Rheims, in 1736; came to London, and was made F. R. S. in 1740. He was also a member of the Antiquarian, Medical, and Agricultural Societies. In 1751, he was admitted a licentiate of the College of Phyficians, and appointed Phyfician to St Giles's infirmary. He also assisted Dr James Douglas in anatomy. He died in 1770. He was much esteemed by the literati at home, and had an extensive correspondence with those abroad. His publications are numerous and valuable. Of these we shall only mention his " Remains of Japhet; being Historical Enquiries into the Affinity and origin of the European Languages." Its object is to prove the antiquity of the first inhabitants of these islands, as descended from Gomer and Magog, above 1000 years before Christ, and the affinity of their languages with fome others

(2.) Parsons, Robert, an eminent writer of the church of Rome, born at Nether Stowey, near Bridgewater, in 1546, and educated at Baliol college, Oxford, where he distinguished himself as a zealous Protetant, and an acute disputant; but being charged by the fociety with incontinency and embezzling the college money, he went to Flanders, and declared himself a Catho-After travelling to feveral other places, he effected the establishment of the English seminary at Rome, and procured father Allen to be chosen rector of it. He himself was appointed the head of the mission to England, to dethrone Q. Elizabeth, and extirpate the Protestant religion. accordingly came over in 1580, and took fome bold steps for that purpose, in which he concealed himself with great art, travelling about the country to gentlemen's houses, disguised in the habit fometimes of a foldier, fometimes of a gentleman, and at other times like a minister or an apparitor; but father Campian being feized and committed to prison, our author eloped, and . went to Rome, where he was made rector of the English seminary. He had long entertained the most sauguine hopes of converting to the Popish faith the young king of Scots, which he confidered as the most effectual means of bringing over his subjects to the same religious principles; but finding this impossible, he published in 1594 his celebrated book, under the name of Doleman, to overthrow James's title to the crown of England. He died at Rome in 1610, and was buried in the chapel of the English college. He also wrote, r. A Defence of the Catholic Hierarchy. 2. The Liturgy of the Sacrament of the Mass. 3. A Memorial for the Reformation; and several other

For the fair kindness you have shewed me, And part being prompted, by your present trouble,

I'll lend you tomething. Shak, (1.) PART, ALIQUANT, is a quantity which, being repeated any number of times, becomes als vays either greater or less than the whole. Thus i is a aliquant part of 17, and 9 an aliquant part of the Acc. The aniquant part is resolvable into Equot parts. Thus 15, an aliquant part of 20, unclivable into 104, and 5 a fourth part of the

(4) PART, ALIQUOT, is a quantity which, beme repeated any number of times, becomes equal in an integer. Thus 6 is an aliquot part of 24, an aliquot part of 30, &c.

U.) PART, LOGICAL, is a division for which we at indebted to the schoolmen. It refers to some wittal as its whole; in which sense the species reports of a genus, and individuals are parts of Ce species.

VOL. XVII. PART I.

(6.) PART, PHYSICAL, is that which, though is enter the composition of a whole, may yet be confidered apart, and under its own diffinct idea; in which sense, a continuum is said to consist of parts. Physical parts, again, are of two kinds, homogeneous and heterogeneous; the first are those of the same denomination with some other; the second of a different one. (See Homogensous, &c.) Parts, again, are diftinguished into subjective, essential, and integrant. The schoolmen were also the authors of this division.

(7.) PARTS OF SPEECH, in grammar, are all the forts of words which can enter the composition of a discourse. See Gramman, under Eng-LIBH LANGUAGE. Mr Horng Tooke's attempt to reduce the number of the Parts of Speech to three, Nouns, Verbs, and Adverbs, is no real im-

provement in Grammar.

(1.) \* To PART. v. a. 1. To divide; to share; to diffibute .- All that believed, fold their goods, and parted them to all men. Alls, ii. 45 .-

Jove himself no less content wou'd be To part his throne, and share his heav'n with a. To separate; to disunite.—Nought but death shall part thee and me, Ruth, i. 171-

All the world, As 'twere the bus'ness of mankind to part us, Is arm'd against nay love. 3. To break into pieces.—Part it in pieces, and pour oil thereon. Leviticus, ii. 6. 4. To keep as funder.-

In the narrow feas, that part The French and English, there miscarried A veiled of our country. Sbaki 5. To separate combatants.

King John did fly, an hour or two before

The stumbling night did part our weary pow-Jove did both hofts furvey,

And, when he pleas'd to thunder, part the fray, Waller

6. To secem.-

The liver minds his own affair, And parts and strains the vital juices. Priora (2.) \* To PART. v. n. 1. To be separated .-

Powerful hands will not pari Eafily from polletion won with arms.

Milton 'Twas for him much easier to subdue

Those foes he fought with, than to part from you. Dryden

2. To quit each other.-

He wrung Baffanio's hand, and so they part-Sbuke -This was the defign of a people, that were at

What I part, for ever part? unkind Ismenal

liberty to part afunder, but delired to keep in one body. Locke.-

If it pleases God to restore me to my health. I shall make a third journey; if not, we must part, as all human creatures have parted. Swift. 3. To take farewel.

Ere I could Give him that parriag kis, which I had fet Betwixt two charming words, comes in my fa-Stat. ther. Nuptial Nuptial bow'r! by me adorn'd, from thee How shall I part, and whither wander? Milt.—They parted from him with tears in their eyes. Swift. 4. To have share.—As his part is, that goeth down to the battle, so shall his part be, that tarrieth by the stuff; they shall part alike. If 5. [Partir, Fr.] To go away; to set out.—

So parted they; the angel up to heaven From the thick shade, and Adam to his how'r.

Milton.

Thy father

Embrac'd me, parting for th' Etrurian land.

6. To PART with. To quit; to refign; to lofe; to be separated from.—

For her sake, I do rear up her boy; And for her sake, I will not part with him.

—An affectionate wife, when in fear of parting deith her beloved husband, hearthly defired of God his life or fociety. Taylor.—

Celia, for thy fake, I part

With all that grew to near my heart. Waller. Thou marble hew'st, ere long to part with breath.

And houses rear'st, unmindful of thy death.

Sandys. -Lixiviate falts, though, by piercing the bodies of vegetables, they dispose them to part readily with their tincture, yet some tinctures they do not only draw out, but likewife alter. Boyle:-The ideas of hunger and warmth are fome of the first that children have, and which they scarce ever part with. Lucke.-What a despicable figure must mock patriots make, who venture to be hanged for the ruin of those civil rights, which their ancestors, rather than part with, chose to be cut to pieces in the field of battle? Addifor .-The good things of this world fo delight in, as remember, that we are to part with them. Atterbury .- As for riches and power, our Saviour plainly determines, that the best way to make them bleffings, is to part with them. Savift.

\* PARTABLE. adj. [from pars.] Divifible; fuch as may be parted.—His hot love was partable among three other of his miftrelles. Camden's Re-

\* PARTAGE. n. f. [partage, Fr.] Division; act of sharing or parting. A word merely French.—This partage of things, in an equality of private possessions, men have made practicable out of the bounds of society without compact, only by putting a value on gold and silver. Locke.

(1.)\* To PARTAKE. v. n. Preterite, I partook: participle passive, partaken. [part and take.] 1. To have share of any thing; to take share with: it is commonly used with of before the thing shared. Locke uses it with in.—

Partake and use my kingdom as your own.

—How far brutes partake in this faculty, is not easy to determine. Locke.—Truth and falsehood have no other trial, but reason and proof, which they made use of to make themselves knowing, and so must others too, that will partake in their knowledge. Locke, 2. To participate; to have something of the property, nature, claim, or

right.—The attorney of the dutchy of Lancaste partiakes partly of a judge, and partly of an attoney-general. Bacon. 3. To be admitted to; not to be excluded.—

You may partake of any thing we fay; We speak no treason.

4. To combine; to unite in some bad design, juridical sense.—As it prevents sactions, and pa takings, so it keeps the rule and administration the laws uniform. Hule.

(2.) \* To PARTAKE. v. a. 1. To flare;

have part in.—

By and by thy bosom shall partake
The secrets of my heart.

Sh

Let her with thee partake, what thou he heard.

Mila
Let ev'ry one partake the general joy.

Dryd
2. To admit to part; to extend participation (

My friend, hight Philemon, P did partake
Of all my love, and all my privity.

Soen

Your exultation partake to every one. She PARTAKER. n. f. (from partake.) I. A paner in polledions; a sharer of any thing; an sociate with: commonly with of before the thin partaken.—They whom earnest lets hinder from the partakers of the whole, have yet, throulength of divine service opportunity for access to some reasonable part thereof. Hooker.—

Didst thou

Make us partakers of a little gain,

That now our loss might be ten times as muc

With fuch she must return at setting light.
Tho not partaker, witness of their night.

—His bitterest enemies were partakers of his kines. Calamy. 2. Sometimes with in before thing partaken: perhaps of is best before a thing partaken.—

Wish me partaker in thy happiness,

When thou do'st meet good hap.

When thou do'st meet good hap.

We would not have been partakers with the in the blood of the prophets. Mat. xxiii. 30.

Accomplice; associate.—Thou consenteds, hast been partaker with adulterers. Pfulm 1. 16.

He drew with him complices and partakers.

PARTEEN, a town of Ireland, in Clare, M fter, pleasantly seated on the Shannon.

PARTENAY. See PARTHENAY, Nº 4.
PARTENI, a river of Afiatic Turkey, wl
runs into the Black Sea, near Amafich, in N
lia.

PARTENKERCH, or a town of Bavaric PARTENKIRK. Freyling, 6 miles Weilhaim, and 40 SW. of Munich. Lon. 1 E. Lat. 47. 36. N.

\*PARTER. \*. f. [from part.] One that professares.—The parter of the fray was ni which, with her black arms, pulled their malic fights one from the other. Sidney.

(1.) \* PARTERRE. n. f. [parterre, Fr.] level division of ground, that, for the most places the fouth and best front of an house, ar furnished with greens and slowers. Miller.—T

are as many kinds of gardening, as of poetry; your makers of parterres and flower gardens are epigrammatifis and fonneteers. Spellator.—

The vaft parternes a thousand hands shall make. Pope.

(1.) PARTERRES, in gardening, are of two kinds; the plain, and parterres of embroidery. Pain parterres are most valuable in England, becase of the firmness of the English grass turf, which a superior to that of any other part of the world; and the parterres of embroidery are cut into thell and ferroll work, with alleys between then. An oblong, or long square is accounted the most proper figure for a parterre; and a parare should indeed be always twice as long as it is broad, because, according to the laws of perspecture, a long square always links to a square; and an exact fquare always appears lefs than it really is. As to the breadth of a parterre, it is to **roportionable to the front of the house; but** less than 200 feet in breadth is too little. There sould be on each fide the parterre, a terras walk ruled for a view, and the flat of the parterre between the terrafes should never be more than 300 feet, at the utmost, in breadth, and about 140 feet m width, with twice and a half that in length, is effectued a very good fize and proportion.

PARTHA, or BARDA, a river of Upper Saxo-

into the Presse, near Leipsic.

PARTHAMASIRIS, a king of Armenia and Patha, who was taken prifoner by Trajan. See PARTHIA, 6 9.

PARTHANASPATES, a king of Parthia,

PARTHAON, in fabulous history, the son of Northere, or of Agenor and Epicaste; and father of OSEGUE, STEROFF, &c. by his wife Euryte.

(A.) PARTHENAY, John DE, lord of Soubise, an eminent French commander, born in 1522.

He commanded the troops in Italy in 1550; and supported the Protestant cause till his death, in

1364. He left one daughter. See N° 3.
(1.) PARTHENAY, Anne DE, a lady of great geness and learning, and a proficent in Latin and Greek. She married Anthony De Pons, count of Marenes, and was one of the brightest ornaments

of the court of Ferrara. She was a Calvinift.

(3.) PARTHENAY, Catharine DE, niece to the preceding, and lady of Soubile, was married in 1581, to the Baron De Pons, and in 1575 to Rezé Visc. Rohan; by whom she had the famous De of Rohan, who so bravely defended the Protestant cause, during the civil wars under Lewis XIII. She published poems, comedies and tragedies. Her daughter Catharine was eminent for vatue, and married the D. of Deux Ponts. She

(4.) PARTHENAY, in geography, a town of France, in the dept. of the Two Sevres, and late prov. of Poitou. It has a great trade in corn and cattle, and contains about 3,500 citizens. In Aug. 1793, the republicans were defeated by the royalds near it: It is feated on the Thoue, 17 miles 8. of Thouars, 21 NNE. of Niort, and 24 W. of Poitiers. Lon. o. 19. W. Lat. 47. 36. N.

ded in 1607; and her mother in 1631.

PARTHENIAS, a river of Greece, in Peloponlefus, which runs past Elis. Paufan. vi. c. 21.

PARTIJENII, citizens of ancient Sparta, who owed their existence to a singular circumstance. During the Messenian war, the Spartans had been ten years ablent from their city; and "they had bound themselves by a solemn oath not to return till they had subdued Messenia. The magistrates as well as the suomen of Sparta were alarmed at the danger of fuch long absence depopulating the country. A law was therefore enacted, that all the young men, who had not taken the oath, should have free access to the unmarried women. The fruits of this promiseuous intercourse were named Hagerom, Parthenii, i. e. Sons of Virgins. When they grew up, knowing they had no legitimate fathers, and of courfe, no inheritance, they conspired with the Helots, to massacre the other citizens, and feize their possessions. The conspiracy was discovered, but the Spartans, inflead of punishing them, permitted them to emigrate to Italy, where under their leader PHALAN-Tus, they fettled in Magna Græcia, and built TARENTUM; A. A. C. 707. Justin, iti, 5. Strabo, 6. Pauf. Plut.

PAKTHENION, a mountain of Peloponnesus,

N. of Tegen. Paufan.

PARTHENIUM, in botany, Bastard Fever-FEW, or KIU-HOA of the Chinese, a genus of the pentandria order, belonging to the monœcia class of plants; and in the natural method ranking under the 49th order, Compositie. The male calyx is common and pentaphyllous; the florets of the disk monopetalous: the female has s florets of the radius, each with two male florets behind it; the intermediate female superior; the seed is naked. It has been much neglected in Europe, having on account of its smell been banished from our parterres. It is therefore indebted for its culture to the distinguished rank it holds among the Chinese The skill of the florists, and their contiflowers. nual care, have brought this plant to so great perfection, that Europeans scarcely know it. The elegance and lightness of its branches, the beautiful indentation of its leaves, the splendour and duration of its flowers, feem indeed to justify the florimania of the Chinese for this plant. They have, by their attention to its culture, procured more than 300 species or varieties of it: every year produces a new one. A lift of the names of all these would be tedious; we shall only say, that in its flowers are united all the possible combinations of shapes and colours. Its leaves are no less various: some are thin, others thick; some very small, and some large and broad; some indented like those of the oak, while others resemble those of the cherry tree; fome may be feen in the form of fins, and others ferrated on the margin, and tapering towards the points. Parthenium is propagated in China by feeds, and by fuckers, grafts, and flips. When the florists have a fine plant, they fuffer the feeds to ripen, and about the end of autumn fow them in twell prepared earth. Some keep them in this manner, during winter, others fow them in fpring. Provided they are watered after the winter, they shoot forth, and grow rapidly. After the parthenium is flowered, ail its branches are cut three inches from the root, the earth is hold around, and a little dung is mixed with it; and when the

cold becomes fevere, the plant is covered with straw, or an inverted pot. Those that are in vales are transported to the green-house, where they are uncovered and watered, and they shoot forth a number of stems: of these some florists leave only two or three, others pull up the stalk, together with the whole root, and divide it into feveral portions, which they transplant elsewhere. Some join two flips of different colours, in each of which, towards the bottom, they make a long notch, almost to the pith, and afterwards tie them together with packthread, that they may remain closely united: by these means they obtain beautiful flowers, variegated with whatever colours they choose. Parthenium requires a good expofure, and fresh moist air that circulites freely: when that up closely, it foon languishes. The earth in which it is planted ought to be rich, moift, and loamy, and prepared with great care. For refreshing it, the Chinese use only rain or river water; and in spring they mix with this water the excrements of filk-worms, or the dung of poultry; in fummer, they wave the feathers of ducks or fowls to infuse in it for several days, after having thrown into it a little faltpetre; but in autumn they mix with the water a greater or fmaller quantity of dried excrement reduced to powder, according as the plant appears more or less vigorous. During the great heats of fummer, they water it morning and evening; but they moisten the leaves only in the morning; they also place small fragments of brick round its root, to prevent the water from pressing down the earth too much. By fuch minute care, the patient Chinese have procured from a wild and almost stocking plant, so beautiful and odoriferous flowers. The most common fpiche are,

1. PARTHENIUM HYSTEROPHORUS; and

2. PARTHENIUM INTEGRIFOLIUM.

(1.) PARTHENIUS, an ancient Greek writer, whose are is uncertain; but his romance, De Amatoriis aigle Similar, is expant; and was published in 120.0 Befil, in 1531.

(2.) PARTHENIUS, in geography, a mountain of Arcadia, where Teicphus had a temple, and on which Ariantis was exposed. Paul. viii, 54. Æ-

lian --

river if European Sarmatia.

PARTHENOPÆUS, the fon of Meleager and Atalanta; one of the 7 chiefs, who accompanied Adrastus in his expedition against Thebes.

(r) PARTHENOPE, one of the SIRENS.

(2.) PARTHEROPE, an ancient name of NAPLES, to called from the Siren; who is faid to have founded it.

PARTHENOPEAN REPUBLIC. See NEAPO-

LITAN REPUBLIC.

(1.) RARTHIA, a celebrated empire of antiquity, bounded on the W. by Media; N. by Hyrtania, E. by Aria, S. by Carmanîa the defert; furfounded on every fide by mountains, which fill live as a boundary; though its name is now changed, to EYRAC of IRAC; and to diffinguish it from Chaiden, to that of IRAC AGEMI.

(2.) Parthia, ancient divisions of. By

Ptolemy it is divided into 5 districts, viz. Caminfine, or Gamisene, Parthyene, Choroane, Atticene, and Tabiene. The ancient geographers enumerate many cities in this country. Ptoremy reckons 25 large cities; and it certainly must have been very populous, fince we have accounts of 2000 villages, besides a number of cities, in this district being destroyed by carthquakes. Its capital was named Hecatompolis, from the circumstance of its having 100 gates. It was a noble and magnisheent place; and according to some, it still remains under the name of ISPAHAN, the capital of the present Persian empire.

(3.) PARTHIA, HISTORY OF, TILL THE DEATH OF ARSACES. Parthia is by fome supposed to have been first peopled by the PHETRI OF PATHRI, often mentioned in scripture, and will have the Parthians to be descended from PATHRUSIN the fon of Mifraim. But however true this may be with regard to the ancient inhabitants, yet it is certain, that those Parthians who were so tamous in history, descended from the Scythians, though from what tribe we are not certainly informed. The history of the ancient Parthians is totally lost. All we know is, that they were first subject to the Medes, afterwards to the Perfians, and laftly to Alexander the Great. After his death the province fell to Seleucus Nicator, and was held by him and his fucceffors till the reign of Antiochus Theos, about A. A. C. 250. At this time the Parthians revolted, and chose one Arfaces for their king. The immediate cause of this revoit was the lewdness of Agathocles, to whom Antiochus had committed the care of all the provinces beyond the Euphrates. This man made an infamous attempt on Tiridates a youth of great beauty: which so enraged his brother Arfaces, that he excited his countrymen to revoit; and before Antiochus had leifure to attend to the rebellion, it became too powerful to be crushed. Scieucus Callinious, the fuccessor of Antiochus Theos, atfempted to reduce Arfaces; but the latter having had to much time to firengthen himself, defeated and drove him out of the country. Sciencus food after undertook another expedition against Arlaces; but was still more unfortunate; being not only defeated in a great battle, but taken prifoner; and he died in captivity. The day on which Arfaces gained this victory was ever after observed among the Parthians as an extraordinary festival, Arfaces being thus fully established in his new kingdom, reduced Hyrcania and fome other provinces under his power; and was at last killed in a battle against Ariarathes IV. king of Cappado-

(4.) PARTHIA, HISTORY OF, TILL THE DEATH OF ANTIOCHUS ZIDETES, AND SLAUGHTER OF HIS ARMY. Alfaces I. was fucceeded by his fon Arlaces II. who, entering Media, made himfelf mafter of that country, while Antiochus the Great was engaged in a war with Antiochus Euergetek hing of Egypt. Antiochus, however, was no fooner difengaged from that war, than he marched with all his forces against Arlaces, and at first drove him quite out of Media. But he foon returned with an army of 100,000 foot and 20,000 horse, with which he put a stop to the further progress of Antiochus; and a treaty was soon af-

fer concluded, in which it was agreed, that Arbees hould remain mafter of Parthia and Hyrcama, upon condition of his affifting him in his wars with other nations. Arfaces II. was succeeded by has for Priapatius, who reigned 15 years, and left time fore, Phrahates, Mithridates, and Artaba-10. Parahates, the eldest, succeeded to the turne, and reduced under his subjection the Marin, who had never been conquered by any but Akunder the Great. After him, his brother Mithrites was invested with the regal dignity. He much the Bactrians, Medes, Perfians, Elymem, and over-ran all the east, penetrating beyond the boundaries of Alexander's conquefts, Demeto Nicator, who then reigned in Syria, endeanamed to recover these provinces; but his army was entirely destroyed, and himself taken prisoner, and tept captive till his death; after which Mi-Melopotamia, so that he now commanded ail the provinces between the Euphrates and the Ganges. subnitates died in the 37th year of his reign, and the throne to his fon Phrahates II. who was face letted in his kingdom when Antiochus Zithe marched against him at the head of a numelous army, under pretence of delivering his brothe Demetrius, who was still in captivity. Phrahe was defeated in three pitched battles; in confequence of which he lost all the countries conspecied by his father, and was reduced within the lasts of the ancient Parthian kingdom. Antiode de not, however, long enjoy his good forter; for his army, on account of their number, least to no fewer than 400,000, being obliled to separate to such distances as prevented Let, a case of any sudden attack, from joining Detter, the inhabitants, whom they had most suppressed, taking advantage of this separecon, conspired with the Parthians to destroy This was accordingly executed; and the the way of Antiochus, with the monarch himto reclammentered in one day, scarce a single to carry the news to Syria.

PARTHIA, HISTORY OF, TILL THE DEATH Classus Junior. Phrahates, elated with bent, proposed to invade Syria; but in the be tree, happening to quarrel with the Scywas by them cut off with his whole armad was succeeded by his uncle Artahanus; sojoyed his dignity but a very thort time, low days after his accession, killed in a-Carbattle with the Scythians. He was fucord by Pacorus I. who entered into an alece with the Romans; and he by Phrahates III. Monarch took under his protection Tigranes for of Tigranes the Great, king of Armenia, his daughter in marriage, and invaded begion with a defign to place the fon on the of Armenia; but on the approach of Pomthe Romans. Phrahates was murdered by los Mithridates and ORODES; and foon after threat was put to death by his brother, who breame fole mafter of the Parthian empire. Regn happened the memorable war with haman under Craffus. This was occasioned by my breach of treaty on the side of the but through the shameful avarice of

Crassus. The whole Roman empire had been divided between Cæsar, Pompey and Crassus; and the eastern provinces had failen to the lot of Craffus. No fooner was he invested with this dignity, than he resolved to carry the war into Parthia, to enrich himself with the spoils of that people, who were then very wealthy. Some of the tribunes opposed him, as the Parthians had religiously observed the treaty; but Crassus having, by the affiltance of Pompey, carried every thing before him, left Rome in the year 55 B. C. and purfued his march to Brundufium, where he immediately embarked his troops, though the wind blew very high; and after a difficult paffage, where he loft many of his ships, he reached the ports of Galatia. From Galatia Craffus haftened to Syria, and paffing through Judea, plundered the temple at Jerusaiem. He then marched with great expedition to the Euphrates, which he croffed on a bridge of boats: and, entering the Parthian dominions, began hostilities. As the enemy had not expected an invafion, they were quite unprepared for refislance; and therefore Crassus over-ran ail Mesopotamia; and if he had taken advahtage of the confternation which the Parthians were in, might have also reduced Babylonia. But instead of this, early in autumn, he repassed the Euphrates, leaving only 7000 foot and 1000 horse to garrison the places he had reduced; and putting his army into winter quarters in Syria, gave himself totally up to his favourite passion of amasfing money. Early in spring he drew his forces out of their winter quarters, in order to pursue the war with vigour; but during the winter, Orodes had collected a very numerous army, and was well prepared to oppose him. Before he entered upon action, however, the Parthian monarch fent ambaffadors to Crassus, to expostulate with him on his injustice in attacking an ally of the Roman empire; but Craffus only returned for anfwer, that "they should have his answer at Seleu-cia." Orodes, finding that a war was not to be avoided, divided his army into two bodies. One he commanded in person, and marched towards Armenia, in order to oppose the king of that country, who had raifed a confiderable army to affift the Romans. The other he fent into Mesopotamia, under Surenas, a most experienced general, by whose conduct all the cities which Crasfus had reduced were quickly retaken. On this fome Roman foldiers, who made their escape, and fled to the camp of Crassus, filled the minds of his army with terror at the accounts of the number, power, and strength, of the enemy. They told their fellow-foldiers, that the Parthians were very numerous, brave, and well disciplined; that it was impossible to overtake them when they fled, or escape them when they pursued; that their defensive weapons were proof against the Roman darts, and their offensive weapons fo sharp, that no buckler was proof against them, &c. Crassus looked upon all this only as the effects of cowardice: but the foldiers, and even many of the officers, were fo difficertened, that Cassius, the fame who afterwards conspired against Cæsar, and most of the legionary tribunes, advited Crassus to fuspend his march, and consider better of the enterprife before he proceeded farther in it. But Crassus

Craffus obstinately persisted in his former resolution, being encouraged by the arrival of Artabazus king of Armenia, who brought with him 6000 horse, and promised to send 10,000 entrastiers, and 30,000 foot, whenever he should stand in need of them. At the same time, he advised him not to march his army through the plains of Mesopotamia, but to take his route over the mountains of Armenia, as in every respect much safer. This salutary advices however, was rejected, and Crassus entered Mesopotamia with an army of about 40,000 men. The Romans had no fooner croffed the Euphrates, than Cassius advised Crassus to advance to some of those towns in which the garrisons yet remained, to hait and refresh his troops: or to march along the Euphrates to Seleucia; and thus to prewent the Parthians from furrounding him, at the dame time that he would be plentifully supplied with provisions. Of this advice Crassus approved, but was diffuaded by Abgarus king of Edefla, whom the Romans took for an ally, but who was in reality a traitor fent by Surenas to bring about their destruction. Under this faithless guide, the Romans entered a vast green plain divided by mamy rivulets. Their march proved at first very eafy, but the farther they advanced, the worse the roads became, infomuch that they were at last obliged to climb uprocky mountains, which brought them to a dry and fandy plain, where they could neither find food nor water. Abgarus then began to be suspected by the tribunes and other officers, who earnefly intreated Crassus not to follow him any longer, but to retreat to the mountains; at the fame time an express arrived from Artabazus, acquainting the Roman general that Orodes had anvaded his dominions with a great army, and that he was obliged to keep his troops at home, to defend his own dominions. The same messenger advised Crassus to avoid by all means the barren plains, where his army would certainly perish with hunger and fatigue, and to approach Armemia, that they might join their forces against the common enemy. But Craffus, instead of hearkening either to the advice of the king or his own ofticers, first slew into a violent passion with the messengers of Artabazus, and then told his troops, that they were not to expect the delights of Campania in the most remote parts of the world. Thus shey continued their march cross a desert, the very light of which was fufficient to throw them into despair; for they could not perceive the least tree, plant, or brook, not fo much as a fingle blade of grass; nothing all around them but huge heaps of burning fand. The Romans had scarcely got through this defert, when word was brought them by their scouts, that a numerous army of Parthians was advancing full speed to attack them; for Abgarus, under pretence of going out on parties, had often conferred with Surenas, and concerted measures with him for destroying the Roman army. Upon this advice, which occalioned great confusion in the camp, the Romans being quite exhausted with their long march, Crassus drew up his men in battalia, following at first the advice of Caslius, who was for extending the in-Jantry as wide as possible, that they might take up the more ground, and thus prevent the enemy from furrounding them; but Abgarus affuring the

proconful that the Parthian forces were not fo m merous as was represented, he changed this di polition, and drew up his troops in a fquare which faced every way, and had on each fide is cohorts in front. Near each cohort he placed cohorts in front. troop of horse to support them, that they migh charge with the greater fecurity and boldnet Thus the whole army looked more like one phi lanx than troops drawn up in manipuli, with sp ces between them, after the Roman manner. The general himself commanded in the centre, his se in the left wing, and Cassius in the right. In the order they advanced to the banks of the Baliffi the fight of which was very pleafing to the folder who were much haraffed with drought and her Most of the officers were for encamping on the banks of this river, to give the troops time to r fresh themselves; but Crassus, hurried on by t inconfiderate ardour of his fon, only allowed t legions to take a meal flanding, and before the could be done by all, he ordered them to advance not flowly, and haiting now and then after t Roman manner, but as fast as they could mor till they came in fight of the enemy, who, co trary to their expectation, did not appear ently fo numerous or so terrible as they had been presented; but this was a stratagem of Suren who had concealed his men in convenient place ordering them to cover their arms, lest their bnyl ness should betray them, and, starting up at t first signal, to attack the enemy on all sides. T stratagem had the defired effect; for Surenas fooner gave the fignal, than the Parthians, nfi as it were out of the ground, with dreadful cit and a most frightful noise, advanced against 1 Romans, who were greatly turprifed and difm ed at that fight; and much more so, when t Parthians, throwing off the covering of their ari appeared in shining cuirastes, and helmets of b nuhed steel, finely mounted on horses covered over with armour of the same metal. At the head appeared young Surenas, in a rich dress, w was the first who charged the enemy, endeavo ing, with his pikemen, to break through the ! ranks of the Roman army; but finding it too cit and impenetrable, the cohorts supporting each ther, he fell back, and retired in a feeming c fusion: but the Romans were much surpri when they faw themselves suddenly surrounded all fides, and galled with continual showers of rows. Crassus ordered his light-armed foot: archers to advance, and charge the enemy; they were foon repulfed, and forced to cover the felves behind the heavy armed foot. Parthian horse, advancing near the Romans, charged showers of arrows upon them, which great execution, the legionaries being drawn in such close order, that it was impossible for enemy to mis their aim. As their arrows v of an extraordinary weight, and discharged v incredible force and impetuolity, nothing proof against them. The two wings advance good order to repulse them, but to no effect; the Parthians shot their arrows with as great c terity when their backs were turned, as when t faced the enemy; so that the Romans, when they kept their ground, or purfued the flying nemy, were equally annoyed with their fatal

tows. The Romans, as long as they had any hopes But the Parthians, after having spent their armes, would either betake themselves to flight, or engige them hand to hand, stood their ground with great resolution and intrepidity; but when they observed that there were many camels in ther rear loaded with arrows, and that those who enotical their quivers wheeled about to fill them ance, they began to lofe courage, and to complain of their general for fuffering them thus to find fill, and ferre only as a butt to the enemy's amer. Hereupon Crassus ordered his son to adrance, and to attack the enemy with \$300 horse, con archers, and 8 cohorts. But the Parthians no kong faw this choice body (for it was the flower of the army, marching up against them, than they wheeled about, and betook themselves, according to their cuftom, to flight. Hereupon young Crafhis, crying out, They fly before us, pushed on full feed after them, not doubting but he should gain a complete victory; but when he was at a great diffrace from the main body of the Roman army, be perceived his miftake; for those who before had fled, facing about, charged him with incredible tury. Young Craffus ordered his troops to halt, hoping that the enemy, upon feeing their final number, would not be afraid to come to a close fight: but herein he was likewife greatly dilippointed; for the Parthians, contenting themkives to oppose his front with their heavy armed borie, forrounded him on all fides; and, keeping 24 Mance, discharged incessant showers of arrows upon the unfortunate Romans, thus furconsider and pent up. The Parthian cavairy, in wheeling about, raised so thick a dust, that the Ramas could scarce see one another, far less the coemy. In a short time, the place where they food was covered with dead bodies. Some of the mhappy Romans finding their entrails torn, and many overcome by the exquisite torments they inferred, rolled themselves in the fand and expired. Others endeavouring to tear out by tere the bearded points of the arrows, only in-creased their pain. Most of them died in this namer; and those who outlived their companions were no more in a condition to act; for when 7000g Craffus exhorted them to march up to the meny, some showed him their wounded bodies, others their hands nailed to their bucklers, and tone their feet pierced through and pinned to the found: so that it was equally impossible for them to attack the enemy or defend themselves. The formg commander, therefore, leaving his infaxry to the mercy of the enemy, advanced at the bead of the cavalry against their heavy-urmed horse. The thousand Gauls whom he had brought with him from the west, charged the emy with incredible boldness and vigour: but their lances did little execution on men armed with containes, and horfes covered with tried armour: however, they behaved with great refoletion; for some of them taking hold of the enemy's pears, and closing with them, threw them off their horses on the ground, where they lay without being able to ftir, by the great weight of their recor; other's dismounting, crept under the ebeing's horses, and thrusting their swords into their bellies, made them throw their riders. Thus

the brave Gauls fought, though greatly harassed with heat and thirst, which they were not accustomed to bear, till most of their horses were killed, and their commander dangeroully wounded. They then thought it advisable to retire to their infantry, which they no fooner joined, than the Parthians invested them anew, making a most dreadful havock of them with their arrows. In this desperate condition, Crassur, spying a rising ground at a small distance, led the remains of his detachment thither, with a design to defend himfelf in the best manner he could, till succours should be fent him from his father. The Parthians purfued him; and having furrounded him in his new poft, continued showering arrows upon his his men, till most of them were either killed or disabled, without being able to make use of their arms, or give the enemy proofs of their valour. Young Craffus had two Greeks with him, who had fettled in the city of Carrhæ. Thefe touched with compassion, at seeing so brave a man reduced to fuch straits, pressed him to retire with them to the city of Ischnes, which had declared for the Romans; but the young Roman rejected their proposal, saying, that he would rather die a thousand times than abandon so many valiant men, who facrificed their lives for his fake. He then embraced and difmissed them, giving them leave to retire and shift for themselves. As for himself, having now loft all hopes of being relieved, and feeing most of his men and friends killed round him, he gave way to his grief; and, not being able to make use of his arm, which was shot thro with a large barbed arrow, he prefented his tide to one of his attendants, and ordered him to put an end to his unhappy life. His example was followed by Cenforius a fenator, by Megabaucus as experienced and brave officer, and by must of the nobility who ferved under him: 500 foldiers were taken prisoners, and the rest cut in pieces.

(6.) PARTHIA, HIS FORY OF, TILL THE DRATH OF CRASSUS SENIOR. The Parthians, having thus cut off or taken the whole detachment conpmanded by young Crassus, marched without delay against his father, who, upon the first advice that the enemy fled before his fon, and were closely purfued by him, had taken heart, the more because those who had remained to make head against him seemed to abate much of their ardour, the greatest part of them having marched with the rest against his son. Wherefore, having encouraged his troops, he had retired to a fmall hill in his rear, to wait there till his fon returned from the pursuit. Young Crassus had dispatched frequent express. to his father, to acquaint him with the danger he was in; but they had fallen into the enemy's hands, and been by them put to the fword; only the last, who had escaped with great difficulty, arrived fafe, and informed him that his fon was lost if he did not fend him an immediate and powerful reinforcement. This news threw Craffus into the utmost consternation; But the defire he had of faving his fon, and fo many brave Romans who were under his command, made him immediately decamp, and march to their assistance. He was not gone far before he was met by the Parthians, who, with loud shouts, and fongs of victory, gave, at a diffance; the un-

happy father notice of his misfortune. Thev had cut off young Craffus's head, and, having fixed it on the point of a lance, were advancing full speed to fall on the father. As they drew near, Crassus was struck with the dismal sight, but behaved like an hero: for he had the presence of mind to stifle his grief and to cry out to the difmayed troops, " This misfortune is entirely mine; the loss of one man cannot affect the victory: Let us charge, let us fight like Romans: if you have any compassion for a father who has lost a son whose valour you admired, let it appear in your rage and resentment against these insult-ing barbarians." Thus Crassus strove to reanimate his troops; but their courage was quite funk, as appeared from the faint and languishing shout which they raised, according to custom, be-fore the action. When the fignal was given, the Parthians, keeping to their old way of fighting, discharged clouds of arrows on the legionaries, without drawing near them, which did fuch dreadful execution, that many of the Romans, to avoid the arrows, which occasioned a long and painful death, threw themselves in despair, on the enemy's heavy-armed horse, seeking from their spears a more speedy death. Thus the Parthians continued plying them incessantly with their arrows till night, when they left the field of battie, crying out, that they would allow the father one night to lament the death of his fon. This was a melancholy night for the Romans. Craffus kept himself concealed from the soldiers, lying not in the general's tent, but in the open air, and on the bare ground, with his head wrapped up in his military cloak: and was, in that forlorn condition, fays Plutarch, a great example, to the vulgar, of the instability of fortune; to the wife, a still greater, of the pernicious effects of avarice, temerity, and ambition. Octavius, one of his lieutenants, and Cassius, endeavoured to raise him up and confole him: but, feeing him quite funk under his affliction, and deaf to all comfort, they summoned a council of war, composed of all the chief officers; wherein it was unanimously refolved, that they should decamp before day break, and retire to Carrhæ, which was held by a Roman garrison. Agreeably to this resolution, they began their march as foon as the council broke up; which produced dreadful outcries among the fick and wounded, who, perceiving that they were to be abandoned to the mercy of the enemy, filled the camp with their complaints and lamentations: but their cries did not stop the march of the others, which indeed, was very flow, to give the ftragglers time to come up. There were only 300 light horse, under the command of one Ægnatius, who purfued their march without stopping. These arriving at Carrhæ about midnight, Ægnatius calling to the centinels on the walls, defired them to acquaint Coponius, governor of the place, that Crassius had fought a great battle with the Parthians; and, without letting them know who he was, continued his march to the bridge of Zeugma; which he patted, and thus faved his troops, but was much blamed for abandoning his general. However, the meffage he fent to Coponius was of some temporary fervice to Craffus. For that commander, wifely

conjecturing, from the manner in which the maknown person had given him that intelligence, that some misfortune had befallen Crassus, immediately ordered his garrifon to stand to their arms; and, marching out, met Crassus, and conducted him and his army into the city: for the Parthians, though informed of his flight, did not oner to pursue him; but when it was day, they entered the Roman camp, and having put all the wounded, to the number of 4000, to the sword, dispersed their cavalry all over the plain, in purfuit of the fugitives. One of Crassus's lieutenants, named Vargunteius, having separated in the night from the main body of the army, with four cohorts, missed his way, and was overtaken by the enemy; at whose approach he withdrew to a neighbouring hill, where he defended himfelf, with great valour, till all his men were killed, except 20, who made their way through the enemy fword in hand, and got tafe to Carrhæ: but Vargunteius himself was killed. In the mean time Surenas, not knowing whether Craffus and Cassius had retired to Carrhæ, or chosen a different route; in order to be informed of the truth, difpatched a messenger, who spoke the Roman language, to the city of Carrhæ, enjoining him to approach the walls, and acquaint Craffus himself, or Cassius, that the Parthian general was inclined to enter into a treaty with them, and demanded a conference. Both the proconful and his quæltor Cassius spoke from the walls with the messenger; and accepting the proposal with great joy, defired that the time and place for an interview might be immediately agreed upon. The melfenger withdrew, promifing to return quickly with an answer from Surenas: but that general no fooner understood that Crassus and Cassius were in Carrhæ, then he marched thither with his whole army; and, having invested the place, acquainted the Romans, that if they expected any favourable terms, they must deliver up Crassus and Cassus to him in chains. Hereupon a council of the chief officers being fummoned, it was thought expedient to retire from Carrhæ that very night, and feek for another afgium. It was of the utmost importance that none of the inhabitants of Carrhæ should be acquainted with their dengn till its execution; but Craffus, whose conduct was infatuated, imparted the whole matter in confidence to one Andromachus, chooling him for his guide, and relying on the fidelity of a man whom he fearce knew. Andromachus immediately acquainted Surenas with the delign of the Romans; promising at the same time, as the Parthians did not engage in the night, to manage matters fo, that they should not get out of his reach before day-break. Pursuant to his promise, he led them through many windings and turnings, till he brought them into deep marshy grounds, where the infantry were up to the knees in mire. Cashus, suspecting that their guide had led them into those bogs with no good design, refused to follow him any longer; and, returning to Carrba, took his route towards Syria, which he reached with 500 horse. Octavins, with 5000 men under his command, being conducted by trufty guides, gained the mountains cailed by Plutarch and Appian Sinnaci, and there intrenched himself before break

heat of day. As for Craffus, he was still enunged in the marthes, when Surenas, at the rifme of the fun, overtook him, and invested him with his cavalry. The proconful had with him emborts, and a fmall body of horfe; and with theele gained, in spite of all opposition, the least of another hill within 12 furlongs of Octime; who, seeing the danger that threatened to meal, flew to his affiftance; first with a mater of his men, but was foon followed कृषीभ्राती, who, quitted their post, tho' very in me charging the Parthians with great fury, Garaged Craffus, and obliged the enemy to abades the hill. Upon the retreat of the enemy, tler femed themselves into an hollow square; and piacing Craffos in the middle, made a kind drampart round him with their bucklers, refoindy protefling, that none of the enemy's arrows fould touch their general's body, till they were whiled fighting in his defence. Surenas, loth wet in fine a prey escape, surrounded the hill; The defigued to make a new attack; but find-Parthians very backward, and not doubtbut the Romans, when night came on, would murch, and get out of his reach, he Propure again to artifice; and declared bebe bee puloners, whom he foon after fet at that he was inclined to treat with the prosale of a peace; and that it was better to come Rome, than to fow the Market war, by shedding the blood of Agreeably to this declarastate advanced towards the hill where rere posted, attended only by some and, with his bow unbent, and open Crassus to an interview. So judbedsee fremed very suspicious to the protherefore declined the interview, by his own foldiers, to intrust m enemy whose treachery they had enemy the legionaries, flocking tot only abused him in an outrabut even menaced him if he did say of the proposals made him by the Par-Seeing, therefore, that his troops to mutiny, he began to advance, withmards, towards the enemy, after the gods and his officers to witness liv troops offered him; and intreated bere present, but especially Octavius and two of the chief commanders, for the Rome, their common mother, not to the fhameful behaviour Raman legionaries. Osavius and Petronito let him go alone; but atas did likewise some kteping at a distance. Craffus was Me foot of the hill by two Greeks; who, from their horses, saluted him with which: and defired him, in the Greek w and some of his attendants, who have him, that Screnas, and those who bim, came without arms. Hereupon ant two brothers of the Rofcian family having caused them to be seized, adto the foot of the hill, mounted on a fine atended by the chief officers of his ar-Cofin, who waited for the return of his

ATVIL PART I.

two messengers, was surprised to see himself prevented by Surenas in person, when he least expected it. The Parthian general, perceiving, as he approached Crassus, that he was on foot, cried out, in a feeming surprise, " What do I fee? a Roman general on foot, and we on horseback! Let an horse be brought for him immediately." "You need not be furprifed (replied Craffus); we are come only to an interview, each after the cuf-tom of his country." "Very well (answered Surenas), there shall be henceforth a lasting peace between king Orodes and the people of Rome; but we must fign the articles of it on the banks of the Euphrates; for you Romans do not always remember your conventions." Crassus would have fent for an horse: but a very stately one; with a golden bit, and richly caparifoned, was brought to him by a Parthian; which Surenas presenting to him, "Accept this horse from my hands (faid he), which I give you in the name of my mafter king Orodes." He had fearee uttered these words, when some of the king's officers; taking Craffus by the middle, fet him upon the horfe, which they began to whip with great violence before them in order to make him quicken Octavius, offended at this infult, took the horse by the bridle; Petronius, and the few Romans who were present, seconded him, and flocking all round Craffils, flopped his horfe. Parthians endeavoured to repulse them, and clear the way for the proconful; whereupon they began to justie and push one another with great tumult and diforder. At laft, Octavius, drawing his fword; killed one of the king's grooms; but at the same time another, coming behind Octavius, with a blow laid him dead at his feet. Both parties fought with great refolution, the Parthians strivto carry off Craffus, and the Romans to rescue him out of their hands. In this scuffle most of the Romans who came to the conference were killed; and among the rest Crassus himself, but whether by a Roman or a Parthian is uncertaina Upon his death, the rest of the army either surrendered to the enemy, or, dispersing in the night, were purfued, and put to the fword. The Romans lost in this campaign at least 30,000 men; of whome 20,000 were killed, and 10,000 taken prisoners.

(7.) PARTHIA, HISTORY OF, TILL THE DEATH of Orones. When the battle of Carrhæ was fought, king Orodes was in Armenia, where he had made peace with Artabazus. While the two kings were folemnizing their new alliance with expensive and public feasts, Syllaces, a Parthian officer, whom Surenas had fent with the news of his late victory, and the head of Crassus as a proof of it, arrived in the capital of Armenia. The transports of joy which Orodes felt at this fight, and these news, are not to be expressed; and the lords of both kingdoms, who attended their fovereigns; raised loud and repeated shouts of joy. Syllaces was ordered to give a more particular and distinct account of that memorable action; which when he had done, Orodes commanded melted gold to be poured into Craffus's mouth; reproaching him thereby with avarice, which had been . ways his predominant passion. Surenas did not long enjoy the pleasure of his victory; for Orodes, jea lous of his power and authority among the Par-

thians, foon after caused him to be put to death. cut off all the rest of the royal family, not sparing Pacorus, the king's favourite son, was put at the head of the army; and, agreeable to his father's directions, invaded Syria: but he was driven out with great lofs by Cicero and Cassius, the only general who furvived the death of Crassus. After this we find no mention of the Parthians, till the time of the civil war between Cælar and Pompey, when the latter fent ambaffadors to folicit fuccour against his rival. This Orodes was willing to grant, upon condition that Syria was delivered up to him; but as Pompey would not confent to fuch a proposal, the succours were not only denied, but, after the battle of Pharsalia, he put Lucius Hirtius in irons, whom Pompey had again fent to ask assistance, or at least to defire leave to shelter himself in the Parthian dominions. Cæsar is faid to have meditated a war against the Parthians, which in all probability would have proved fatal to them. His death delivered them from this danger. But, not long after, the eastern provinces, being grievously oppressed by Mark Antony, rose up in arms; and having killed the taxgatherers, invited the Parthians to join them, and drive out the Romans. They very readily accepted the invitation, and croffed the Euphrates with a powerful army, under the command of Pacorus and Labienus a Roman general of Pompey's party. At first they met with great success, over-ran all Asia Minor, and reduced all the countries as far as the Hellespont and Ægæan Sea, subduing like-They did wife Phœnicia, Syria, and even Judæa. not however long enjoy their new conquefts: for being elated with their victories, and despising the enemy, they engaged Ventidius, Antony's lieutenant, before Labienus had time to join them, and were utterly defeated. This so disheartened Labienus's army, that they all abandoned him; and he himfelf, being thus obliged to wander from place to place in disguise, was at last taken and put to death at Cyprus. Ventidius pursuing his advantage, gained several other victories; and at last entirely defeated the Parthian army under Pacorus, cutting almost the woole of them in pieces, and the prince himself among the rest. He did not, however, pursue this last victory as he might have done; being afraid of giving umbrage to Antony, who had already become jealous of the great honour gained by his lieutenant. He therefore contented himself with reducing those places in Syria and Phœnicia, which the Parthians had taken in the beginning of the war, until Antony arrived to take the command of the army upon him-Orodes was almost distracted with grief, on receiving the dreadful news of the loss of his army and the death of his favourite son. However, when time had restored the use of his faculties, he appointed Phrahates, the eldest, but the most wicked, of all his children, to fucceed him in the kingdom, admitting him at the same time to a fliare of the fovereign authority with himfelf. The consequence of this was, that Phrahates very from attempted to poison his father with hemlock. But this, contrary to expectation, proving a cure for the dropfy, which an excess of grief had brought upon the king, the unnatural fon had him stifled in bed; and soon after not only murdered ail his own brethren, who were 30 in number, but the enemy's army without. At last he begi

even his own eldest son, lest the discontented Par thians should place him, as he was already of age on the throne.

(8.) Parthia, history of, till the defeat AND RETREAT OF M. ANTONY. Many of th chief lords of Parthia, being intimidated by th cruelty of Phrahates, retired into foreign cour tries: and among these was one Monœses, a per fon of great distinction, as well as skill and exp rience in war. This man, having fled to Anton foon gained his confidence, and was by him cafe prevailed upon to engage in a war against his cou trymen. But Phrahates, justly dreading the co fequences of fuch a person's defection, sent a s lemn embassy to invite him home on such tem as he should think fit to accept: which great provoked Antony; though he did not hinder hi from returning, left others should thereby be d couraged from coming over to him. He there fore dismissed him with great civility, sendi ambassadors at the same time to Phrahates to tre of a peace. Thus he hoped to divert the P thian monarch's attention from making the ceffary preparations for war, and that he shot be able to fall upon him in the spring when hew in no condition to make relistance. But her he was greatly disappointed; for on his arrival the Euphrates, which he intended to pass, and ter the Parthian dominions on that fide, he for all the passes so well guarded, that he thou proper to enter Media, with a defign first to duce that country, and then to enter Part This plan had been suggested to him by Artab us king of Armenia, who in the end betrayed hi for initead of conducting the army the first way from Zeugma on the Euphrates, to the axes which parted Media from Armenia, and wh was about 500 miles diftant from the place who he first set out, Artabazus led them over rocks mountains fo far about, that the army marc above 1000 miles before they reached the born of Media, where they intended to begin the Thus they were not only greatly fatigued, had not fufficient time, the year being far sp to put in execution the defign on which they come. However, as Antony was impatient to back to Cleopatra, he left behind him most of baggage of the army, and 300 waggons los with battering rams and other military engine fieges; appointing Statianus, one of his lieu ants, with a body of 10,000 men, to guard t and to bring them, by flower marches, after army. With the rest of the forces he man more than 300 miles before the rest, withou lowing his men any/respite till he arrived at aspa or Phrahata, the capital of Media, which immediately invested. But the Parthians, knowing that he could not make any progress out his military machines, passed by his arm order to attack Statianus; which they did fuch fuccefs, that the body commanded by were all to a man cut off, and all their militar gines taken, among which was a battering ra feet long. Antony, notwithstanding this dif continued the fiege of Praaspa; but was dail raffed by fallies of the garrifon from within think of a retreat, when his provisions were almost chulled, finding it impossible to become master of the city. But as he was to march 300 miles though the enemy's country, he thought proper in to fend ambassadors to the Parthian monarch, acquisting him that the Romans were willing to allow him a peace, provided he would restore the taskets and prisoners taken at Carrhæ. Phrahatumeived the ambassadors, fitting on a golden thore; and, after having bitterly inveighed against the mnce and unbounded ambition of the Roam, told them that he would not part with the mands and prisoners; but that if Antony would immediately raife the fiege of Praaspa, he would fuffer him to retire unmolested. Antony, who was reduced to great straits, no sooner reared this answer than he broke up the siege, and muched towards Armenia. However, Phrahates was sot to good as his word; for the Romans were attacked by the enemy no fewer than 18 tmes on their march, and were thrice in the utmod danger of being cut off. A famine also rand in the Roman army; upon which they begen to defert to the enemy; and indeed Antony would probably have been left by himfelf, had not the Parthoans, in a very cruel as well as impolitic manner, murdered all those who fled to tion in light of the reft. At last, after having lost 34000 men, and being reduced to fuch despair that he was with difficulty prevented from laying ristent hands on himself, he reached the river Arate; when his men, finding themselves out of the resch of the enemy, fell down on the ground, and hised it with tears of joy.

(9.) PARTHIA, HISTORY OF, TILL THE REvas no fooner gone, than the kings of Media and Parthia quarrelled about the booty they had taken; and after various contests Phrahates reduced all Media and Armenia. After this, being elated with his conquelts, he oppressed his subjects in such a and tyrannical manner, that a civil war took place; in which the competitors were alternately criven out and restored, till A. D. 50, when one Vologeses, the son of Gortazes, a former king, became peaceable possessor of the throne. He carned on some wars against the Romans, but with very indifferent success, and at last gladly consented to a renewal of the ancient-reaties with that powerful people. From this time the Parthian belowy affords nothing remarkable till the reign of the emperor Trajan; when the Parthian king, Cosaces, infringed the treaty with Rome, by driving out the king of Armenia. Upon this, Trawas glad of any pretence to quarrel with e Pathians, immediately hastened into Arme-His arrival there was fo fudden and unexthat he reduced almost the whole country execut opposition; and took prisoner Parthamathe king whom the Parthians had fet up. the the he entered Mesopotamia, took the city Kulibis, and reduced to a Roman province the of that wealthy country. Early in the of the following year, Trajan, who had the his winter quarters in Syria, took the field but was warmly opposed by Cosroes. him encamped on the banks of the Euwith a defign to dispute his passage;

which he did with fuch vigour, that the emperor, after having several times attempted to ford that river, and been always repulfed with great flaughter, was obliged to cause boats to be built on the neighbouring mountains, which he privately conveyed from thence on carriages to the water lide; and having, in the night time, formed a bridge with them, he passed his army the next day; but not without great loss and danger, the Parthians harassing his men the whole time with incessant showers of arrows, which did great execution. Having gained the opposite bank, he advanced boldiy into Assyria, the Parthians slying every-where before him, and made himself master of Thence he purfued his march; fubduing, with incredible rapidity, countries where the Roman standard had never been displayed before. Babylonia voluntarily submitted to him. city of Babylon, was, after a vigorous relistance, taken by ftorm; by which means he became mafter of all Chaldea and Assyria, the two richest provinces of the Parthian empire. From Babylon he marched to Ctefiphon, the metropolis of the Parthian monarchy; which he belieged and at last reduced. But as to the particulars of these great conquests, we are quite in the dark: this expedition, however glorious to the Roman name, being rather hinted at than described, by the writers of those times.

(10.) PARTHIA, HISTORY OF, TILL THE RE-DUCTION OF THE WHOLE COUNTRY BY TRAJAN. While Trajan was thus making war in the heart of the enemy's country, Cofroes, having recruited his army, marched into Mesopotamia, with a defign to recover that country, and cut off all communication between the Roman army and Syria. On his arrival in that province, the inhabitants flocked to him from all parts; and most of the cities, driving out the garrisons left by Trajan, opened their gates to him. Hereupon the emperor detached Lucius and Maximus, two of his chief commanders, into Mesopotamia, to keep fuch cities in awe as had not revolted, and to open a communication with Syria. Maximus was met by Cofroes; and having ventured a battle, his army was entirely defeated, and himself killed. But Lucius being joined by Euricius and Clarius. two other commanders fent by Trajan with fresh supplies, gained considerable advantages over the enemy, and retook the cities of Nisibis and Seleucia, which had revolted. And now Trajan, feeing himself possessed of all the best and most fruitful provinces of the Parthian empire, but at the fame time being well apprifed that he could not, without a vast expence, maintain his conquests, nor keep in subjection so fierce and warlike a people, at fuch a distance from Italy; resolved to set over them a king of his own choofing, who should hold the crown of him and his faccessors, and acknowledge them as his lords and fovereigns. With this view he repaired to Ctefiphon; and having there affembled the chief men of the nation, he crowned one of the royal family, named PARTHANASPATES, king of Parthia, obliging all who were present to pay him their allegiance. He chose Parthanaspates, because that prince had joined him at his first entering the Parthian dominions, conducted him with great fidelity, and thown on all occations an extraordinary attachment to the Romans. Thus the Parthians were at last subdued, and their kingdom made tributary to Rome.

(11.) Parthia, history of, to its conquest By Cassius. The Parthians did not long continue in this state of subjection: for the no socner heard of Trajan's death, which happened fhortly after, than, taking up arms, they drove Parthanaspates from the throne; and recalling Cofroes, who had retired into the country of the Hyrcanians, openly revolted from Rome. Adrian, who was then commander in chief of all the forces in the east, and soon after acknowledged emperor by the army, did not care, though he was at that time in Syria with a numerous army, to engage in a new war with the Parthians; but contented himfelf with preferving the ancient limits of the empire, without any ambitious prospects of further conquests. Therefore, in the beginning of his reign, he abandoned those provinces beyond the Euphrates which Trajen had conquered; withdrew the Roman garrifons from Mefopotamia; and, for the greater fafety of other places, made the Euphrates the boundary of aud barrier in those parts, posting his legions along the banks of that river. Cosoes died after a long reign, and was succeeded by his eldest Ion Volorefes II: in whose reign the Alani breaking into Media, then subject to the Parthians, committed there great devastations; but were prevailed upon, with rich presents sent them by Vologeses, to abandon that kingdom, and return home. Upon their retreat, Yologefes, having no enemy to contend with at home, fell unexpectedly upon Armenia; furprised the legions there; and having cut them all in pieces to a man, entered Syria; defeated with great flaughter Attilius Cornelianus, governor of that province; and advanced without opposition to the neighbourhood of Antioch; putting everywhere the Romans, and those who favoured them, to the fword. Hereupon the emperor Verus, by the advice of his colleague Antoninus fur-named the Philosopher, leaving Rome, hastened into Syria: and having driven the Parthians out of that province, ordered Statius Priscus to invade Armenia; and Cassius, with Martius Verus, to enter the Parthian territories, and carry the war into the enemy's country. Priscus made himself mafter of Artaxata; and in one campaign drove the Parthians, though not without great loss on his fide, quite out of Armenia. Cassius, on the other hand, having in feveral encounters defeated Vologefes, though he had an army of 400,000 men under his command, reduced, in four years time, all those provinces which had formerly submitted to Trajan, took Seleucia, burnt and plundered the famous cities of Babylon and Cteliphon, with the flately palaces of the Parthian monarchs, and struck terror into the most remote provinces of that great empire. On his return, he lost above half the number of his forces by sickness and famine; fo that, after all, the Romans, as Spartianus of firves, had no great reason to boast of their Victories and conquefts.

Y (12.) PARTEIA, HISTORY OF, TO ITS CONQUEST BY SEVERUS. However, Verus, who had never Airred during the whole time of the war from Amioch and Daphne, took upon him the lofty ti-

tles of Parthicus and Armenicus, as if he had ac quired them in the midst of his pleasures and de baucheries. After the revolt and death of Cashiu Antoninus the Philosopher repaired into Syria t fettle the affairs of that province. On his army there, he was met by ambailadors from Vologelei who having recovered most of the provinces sul dued by Cassius, and being unwilling either part with them or engage in a new war, folicite the emperor to confirm him in the policilium them, promiting to hold them of him, and to a knowledge the fovereignty of Rome. To the terms Antoninus readily agreed, and a peace w accordingly concluded between the two empire which Vologefes did not long enjoy, being for after carried off by a diftemper, and not murden by his own subjects, as we read in Constanting Manasses, who calls him Belegefes. Upon his deat Vologefes III. the fon of his brother Sanatruo and grandfon of Coiroes, was raised to the three He fided with Niger against the emperor Seven who thereupon having fettled matters at hom marched with all his forces against him; and vancing to the city of Cteliphon, whither he h retired, laid close fiege to that metropolis. Vo gefes made a most gallant defence; but the ci after a long frege, and much bloodshed on be fides, was at length taken by allault. The kin treafures, with his wives and children, fell into emperor's hands: but Vologetes himfelf had t good luck to make his escape; which was a gr difappointment to Severus, who immediately patched an express to acquaint the senate, with fuccess that had attended him in his expedition gainst the only nation that was then tormidable Rome.

(13.) PARTHIA, HISTORY OF, TO ITS CONQUI BY THE PERSIANS. He had no fooner crouded Euphrates, than Vologeies recovered all the p vinces, except Mesopotamia, which he had re These expeditions were chargeable to Romans, and cost them much blood, with reaping any advantages from them; for as t had not sufficient forces to keep in awe the vinces they had subdued, the inhabitants, gre attached to the family of Arlaces, never failed return to their ancient obedience as foon as Roman armies were withdrawn. Vologeles foon after engaged in a war still more troubles and destructive, with his brother Artabanus, w encouraged by fome of the discontented not attempted to rob him of the crown, and place on his own head. Vologek's gained feveral vi ries over his brother and rebellious subjects; died before he could restore the empire touts mer tranquillity. Artabanus, who had a nu rous army at his devotion, did not meet with opposition in seizing the throne, vacant by death of his brother, though Tiridates had a ter title to it, as being his elder brother. He scarce settled the affairs of his kingdom, when Emperor Caracalla, defirous to fignalize hin as feveral of his predeceffors had done, by ! memorable exploit against the Parthians, fint lenn embally to him, defiring his daughte marriage. Artabanus, overjoyed at this prop which he thought would be attended with a ing peace between the two empires, received

ministers with all possible marks of honour, and readily complied with their request. Soon site, Caracalla fer t a fecond embassy to acquaint the king that he was coming to folermize the nuptales whereupon Artabanus went to meet him atimid with the chief of the nobility and his best trop, all unarmed, and in most pompous habit: but this peaceable train no fooner approachd the human army, than the foldiers, on a fignal presten, fairing upon the king's retinue, made applicatible flaughter of the unarmed multitude, drabuus himself escaping with great difficulty. The tracherous Caracalla, having gained by this cubit great booty, and, as he thought, no left ray, waxe a lung and boatting letter to the feute, sliuming the title of Parthions for this piece of treachery; as he had before that of Germanicus, or murdering, in like manner, forme of the Gerwas nobility. Artabanus, refolving to make the HETAES pay dear for their inhuman and barbarous brackey, raised the most numerous army that laderer been known in Parthia, croffed the Eupartes, and entered Syria, putting all to fire and food. But Caracalla being murdered before this arason, Macrinus, who had succeeded him, met the Parthians at the head of a mighty army, compaid of many legions, and all the auxiliaries of the fates of Alia. The two armies no fooner came in fight of each other, than they engaged with the utmost fury. The battle continued two days; both Romans and Parthians fighting fo obtimely, that night only parted them, without apparent advantage on either fide; though both retired when night had put an end to the conwith crying, Victory, Victory. The field of battle was covered all over with dead bodies, there bem above 40,000 killed, including both Roman and Parthians: nevertheless Artabanua was beard to say, that the battle was only begun, ed that he would continue it till either the Parwas or Romans were all to a man cut in pieces. Marinus, being well apprifed that the king care highly enraged against Caracalla in particus and dreading the confequences which would and the destruction of his army, sent an herald harabanus, acquainting him with the death of calla, and proposing an alliance between the memperes. The king, understanding that his enemy was dead, readily embraced the proi of peace and amity, upon condition that all mioners who had been taken by the freachery cracalla should be immediately restored, and tem of money paid him to defray the exproces of the war. These articles being performci without delay, Artabanus returned into Parand Macrinus to Antioch. As Artabanus a chis eccasion the flower of his army, Ara Perlian of mean descent, but of great and experience in war, revolting from the prevailed on his countrymen to join and attempt the recovery of the fovereign which he faid they had been unjustly deand afterby the Parthians their vallals. the news of this revolt, marched with the brength of his kingdom to suppress it; but and by Artanerxes at the head of a no less army, a bloody battle enfued, which is

faid to have lasted three days. At length the Parthians, though they behaved with the utmost bravery, and fought like men in despar, were forced to yield to the Pertians, who were commanded by a more experienced leader. Most of their, troops were cut off in the slight; and the king himfelf was taken prisoner, and toon after put to death by Artaxerxes's order. The Parthians, having lost in this statl engagement both their king and their army, were forced to submit to the conqueror, and become vassils to a nation, which had been subject to them for 475 years.

P. A.

PARTHIAN, adj. Or or belonging to Parthia. PARTHIANS, the people of Parthia. For an account of the manners, customs, &c. of the ancient Parthians, see Persia.

PARTHICUS, a title abfurdly affuned by the emperors Verus and Caracalla, upon their pretended conquest of Parthia. See Parthia, y 7, 13.

PARTHINI, an ancient people of hilyricum.

Live. xxik, 12; xliv, 30. Sucton. Aug. 10.

PARTHYENE, a province of Parthia. Ptol.

PARTI, Partie, Party, or Parted, part.

PARTI, PARTIE, PARTY, or PARTED, part. adj. in heraldry, is applied to a thield or efcutcheon, denoting it divided or marked out into partitions. Thus,

1. PARTI PER BEND DEXTER, is when the cut comes from the upper corner of the shield on the right hand, and descends athwart to the opposite lower corner.

2. PARTI PER BEND SINISTER, is when the cut, coming from the upper left corner, descends across to the appointe lower one.

3. PARTI PER FESS, is when the cut is across the middle from side to side.

4. PARTI PAR PALE, is when the shield is divided percendicularly into two halves. All these partitions, according to M. de la Colombiere, have their origin from the cuts and bruises that have appeared on shields after engagements; and, being proofs of the dangers to which the bearers had been exposed, they gained them esteem: for which reason they were transmitted to posterity, and became arms and marks of honour to their su-

ture families.

\* PARTIAL. adj. [partial, French.] 1. Inclined antecedently to favour one party in a cause, or one side of the questions more than the other.—Ye have not kept my ways, but have been partial in the law. Mal. ii. 9.—Self-love will make men partial to themselves and friends. Locks. 2. Inclined to savour without reason: with to before the part favoured.—Thus kings heretofore who showed themselves partial to a party, had the service only of the worst part of their people. Davenant,—

Authors are partial to their wit, 'tis true, But are not criticks to their judgment too? Pope.—In these, one may be sincerer to a reasonable friend, than to a sond and partial parent. Pope.

3. Affecting only one part; substituing only in a part; not general; not universal; not total.—If we compare these partial disolutions of the earth with an universal disolution, we may as easily conceive an universal deluge from an universal dissolution, as a partial deluge from a partial. Burnet.—The weakening of a thing is only a partial destruction of it. South.—

All partial evil, univerfal good. Pope.

(1.) \* PARTIALITY. n. f. [partialite, Fr. from partial.] Unequal state of the judgment and favour of one above the other, without just reason.-Then would the Irish party cry out partiality, and complain he is not used as a subject. Spenser .-Partiality is properly the understanding's judging according to the inclination of the will and affections, and not according to the exact truth of things, or the merits of the caufe. South .- As there is a partiality to opinions, which is apt to mislead the understanding; so there is also a partiality to studies, which is prejudicial to knowledge. Locke. (2.) PARTIALITY. See PREJUDICE, and SELF-PARTIALITY.

\* To PARTIALIZE. v. a. [partializer, Fr. from partial.] To make partial. A word, perhaps, peculiar to Shakespeare, and not unworthy

of general use.

Such neighbour nearness to our sacred blood Should nothing priv'lege him, nor partialize Th' unflooping firmness of my upright soul.

Shak. \*\* PARTIALLY. adv. [from partial.] 1. With anjust favour or dislike. 2. In part; not totally. -Phat stole into a total verity, which was but partially true in its covert sense. Brown.-The mellage he brought opened a clear prospect of eternal falvation, which had been but obscure-By and partially figured in the shadows of the law.

Rogers, PARTIBILITY: n. J. [from partible.] Divi-

\* PARTIBLE. adj. [from part.] Divilible; feparable:- Make the moulds partible, glued or cemented together, that you may open them, when you take out the fruit. Bacon — The fame body, in one circumftance; is more weighty, and, in another, is more partible. Digby on the Soul.

PARTICIPABLE adj. [from participate.] Such as may be shared or partaken.—Plato, by his ideas, means only the divine ellence with this connotation, as it is varioufly imitable or participable by created beings Norris's Miscellanies.

\* PARTICIPANT. adj. [participant, Fr. from participate.] Sharing; having share or part: with of.—He published his proclamation, offering pardon to all flich as had taken arms, or been participant of any attempts against him. Bacon.-The prince saw he should confer with one participant of more than monkish speculations. Wotton .- If any part of my body be so mortified, as it becomes like a rotten branch of a tree, it putrefies, and is not participant of influence derived from my foul. Hale.

(1.) \* To PARTICIPATE. v. n. [participo, Lat. participer, Fr.] 1. To partake; to have share.
The other instruments

Did see, and hear, devise, instruct, walk, feel; And mutually participate. Shak: a. With of.-An aged citizen brought forth all his provisions, and said, that as he did communidate unto them his store, so would he participate of their wants. Hayward. 3. With in.

His delivery, and thy joy thereon,

In both which we, as next, participate. Milton: 4. To have part of more things than one.-Few creatures participate of the nature of plants and metals both. Bacon. -

God, when heav'n and earth he did create, Form'd man, who should of both participate.

-Those bodies, which are under a light, which is extended and distributed equally through a s. To have part of fomething common with an ther.—The species of audibles seem to participa more with local motion, like percussions made pon the air. Bacon.

(2.) \* To PARTICIPATE. v. a. To partak to receive part of; to share.-Neither can participate him without his presence. Hooker.-T French seldom atchieved any honourable a without Scottiff hands, who therefore are to pe ticipate the glory with them. Camden's Remains.

**Fellowship** Such as I feek, fit to participate

All rational delight. Milt \* PARTICIPATION. n. f. [participation, from participate.] r. The flate of sharing for thing in common.—In fociety, this good of mu al participation is so much larger. Hooker.-Th spirits are so married in conjunction, with the ticipation of fociety, that they flock together consent. Shak. Henry IV.—A joint coronation himself and his queen might give any countena of participation of title. Bacon. 2. The act or ft of receiving or having part of fomething.things seek the highest, and govet more or less participation of God himself. Hooker .- Those ties are so by participation, and subordinate to fupreme. Stilling fleet.-What an honour, t God should admit us into such a blessed partial tion of himself? Atterburg .- Convince them, 1 brutes have the least participation of thought, they retract. Bentler.—Your genius should me above that mist, in which its participation neighbourhood with earth long involved it. I 3. Distribution; division into shares.—It suffic not, that the country bath wherewith to ful even more than live upon it, if means be w ing whereby to drive convenient participation the general store into a great number of well fervers. Raleigh

\* PARTICIPIAL. adj. [participalis, Lat.]

ing the nature of a participle.

PARTICIPIALLY. adv. [from partic

In the fense or manner of a participle. (1.) \* PARTICIPLE. n. f. participium, La 1. A word partaking at once the qualities noun and verb.—A participle is a particular fo adjective, formed from a verb, and together its fignification of action, passion, or some manner of existence, signifying the time the Clarke's Lat. Gram: 2. Any thing that pa pates of different things. Not used .ciples or confiners between plants and living tures, are such as are fixed, though they h motion in their parts: fuch as, oysters and cor

(1.) \* PARTICLE. n. f. [particule, Fr. part Lat.] 1. Any small portion of a great subst -From any of the other unreasonable dea the houses had not given their commissions thority in the least particle to recede. Cla -There is not one grain in the universe,

much is any one particle of it, that mankind may not be either the better or the worse for, according as its applied. L'Estrange.—

With particles of heavenly fire,
The God of nature did his foul inspire. Dryd.
Curious wits,

With rapture, with aftonishment reflect, On the small fize of atoms, which unite

To make the smallest particle of light. Blackm.

—It was impossible, but that microscopes may, at each, be improved to the discovery of the process of bodies, on which their colours depend.

Moreon.—

But with more particles of heav'nly flame.

s. A word unvaried by inflection.—"Till Arianism had made it a matter of sharpness and subtilty of wit to be a sound believing christian, men were not curious what syllables or particles of speech they used. Hooker.—The Latin varies the signification of verbs and nouns, not as the modern huguages, by particles prefixed, but by changing the last syllables. Locke.—Particles are the words, stareby the mind signifies what connection it gives to the several affirmations and negations, that it unites in one continued reasoning or narration. Locke.—In the Hebrew tongue, there is a particle, consisting but of one single letter, of which there are reckoned above sifty several significations. Locke.

tions. Locke. (1.) A PARTICLE, in physiology, (§ 1, def. 1.) use minute part of a body, an assemblage of which confitutes all natural bodies. In the new philosophy particle is often used in the same sense \*Lb ATOM in the ancient Epicurean philosophy, and coapuscue in the latter. Some writers, bowever, diftinguish them; making particle an as-Explage or composition of two or more primitre and physically indivisible corpuscles or atoms; and corputele, or little body, an affemblage or mais of feveral particles or fecondary corputcles. The diftinction, however, is of little moment; and, as to most purposes of physics, particle may waterflood as synonimous with corpuscle. Partides are then the elements of boules: it is the rations arrangement and texture of there, with is difference of the cohelion, &c. that constitute he various kinds of bodies, hard, foft, liquid, beavy, light, &c. The finallest particles or expuscles cohere with the strongest attractions, always compose bigger particles of weaker chefion; and many of these cohering compose particles, whose vigour is still weaker; and on for divers successions, till the progression and in the biggeft particles, whereon the operatens in chemistry, and the colours of natural bodepend, and which, by cohering, compole of fensible bulks. The cohesion of the parof matter, according to the Epicureans, we effected by hooked atoms; the Aristotelians managed by reft, that is, by nothing But Sir Isaac Newton shows it is done by of a certain power, whereby the particles attrad or tend towards each other, s Lill perhaps giving a fact without the By this attraction of the particles, he that most of the phenomena of the leffer are affected, as those of the heavenly bodies are by the attraction of gravity. See At-

(3.) Particle, in grammar, (§ 1. def. 2.) is 2 denomination for all those words that unite or disjoin others; or that express the modes or manners of words or things. It comprehends all those parts of speech, divided by grammarian into Articles, Adverss, Prepositions, Interjections, and Conjunctions. See these articles.

(4.) PARTICLE, in theology, is used in the Latin church for the crums or little pieces of conficrated bread, called in the Greek church piedis. The Greeks have a particular ceremony, called των μιρίδον, of the particles, wherein certain crumbs of bread, not confecrated, are offered up in honour of the Virgin, St John the Baptist, and several other faints. They also give them the name of seespee, oblation. Gabriel archbishop of Philadelphia wrote a treatife express sie our meeder, wherein he endeavours to show the antiquity of this ceremony, in that it is mentioned in the liturgies of St Chrysoftom and Basil. There has been much controversy on this head between the Aubertin and reformed and catholic divines. Blondel explain a passage in the theory of Germanus patriarch of Constantinople, where he mentions the ceremony of the particles as in use in his time, in favour of the former; Messieurs de Port Royal contest the explanation; but M. Simon, in his notes on Gabriel of Philadelphia, endeavours to show that the passage itself is an interpolation, not being found in the ancient copies of Germanus, and consequently that the dispute

is very ill grounded. (5.) PARTICLES, ORGANIC, are those small moving bodies which are imperceptible without the help of glaffes; for belides those animals which are perceptible to the fight, fome haturalifts reckon this exceedingly small species as a eparate class, if not of animals properly to called, at least of moving bodies, which are found in the semen of animals, and which cannot be seen without the help of the microscepe. In consequence of these obfervations, different fystems of generation have been proposed, concerning the spermatic worms of the male and the eggs of the female. (See A-NATOMY, Index.) In Buffon's Natural History, vol. 2. feveral experiments are related, tending to show that those moving bodies which we discocover by the help of glasses in the male semen are not real animals, but organic, lively, active, and indestructible molecules, which possess the property of becoming a new organized body fimilar to that from which they were extracted. Buffon found such bodies in the female as well as in the male femen; and he supposes that the moving bodies which he observed with the microscope in infusions of the germs of plants are likewife vegetable organic molecules. Needham, Wrisberg, Spallanzani, and several other writers on the animal economy, having purfued the fame tract with M. de Buffon. Some suppose that these organic molecules in the semen answer no purpose but to excite the venereal desire: but fuch an opinion cannot be well founded; for eunuchs who have no feminal liquor, are nevertheless subject to venereal desire. With respect to the beautiful experiments which have been made with the micoroscope on organic molecules, M. Bonnet, that learned and excellent observer of nature, remarks that they seem to carry us to the farthest verge of the tensible creation, did not reason to the tensible creation, did not reason to the tensible creation, did not reason to the tensible trible globule of seeminal liquor is the commencement of another universe, which, from its infinite smallness, is beyond the reach of our best microscopes. Animalicules properly so called, must not be consounded with the wonderful organic particles of Busson. See Animalicules.

(1.) \* PARTICULAR. adj. [particulier, Ft.] 3. Relating to fingle persons; not general.—He, as well with general orations, as particular dealing with men of most credit, made them see how necessary it was. Sidney .- As well for particular application to special occasions, as also in other manifold respects, infinite treasures of wisdom are abundantly to be found in the holy scripture. Hooker. 2. Individual; one distinct from others. -Wherefoever one plant draweth fuch a partieular juice out of the earth, as it qualifieth the earth, fo as that juice, which remaineth is fit for the other plant; there the neighbourhood doth good. Bacon .- This is true of actions confidered in their general nature or kind, but not confidered in their particular individual instances. South. -Artists, who propose only the imitation of such a particular person, without election of ideas, have often been reproached for that omission. Dryden'. 3. Noting properties or things peculiar.—Of this prince there is little particular memory. Bacon: 4. Attentive to things lingle and distinct .- I have been particular in examining the reason of children's inheriting the property of their fathers. Locke. 5. Single; not general; one among many. -Rather performing his general commandment, which had ever been, to embrace virtue, than any new particular, sprung out of passion. Sidney. 6. Odd; having fomething that eminently distinguishes him from others. This is commonly uled in a fense of contempt.

(2.) \* PARTICULAR. n. f. 1. A fingle instance; a fingle point .- I must referve some particulars, which it is not sawful for me to reveal. Bacon.-What is universal soutt needs proceed from some univertal constant principle; the same in all particulars, which can be nothing elfe but human nature. South.—Having the idea of an elephant or an angle in my mind, the first and natural enquiry is, whether fuch a thing does exist? and this knowledge is only of particulars. Locke.- The mafter could hardly fit on his horse for laughing, all the while he was giving me the particulars of this story. Addison .- Vespalian he resembled in many particulars. Swift. 2. Individual; private person.—It is the greatest interest of particulars, to advance the good of the community. L'E/trange. 3. Private interest.-Our wisdom must be fuch, as doth not propose to itself en dier our own particular, the partial and immoderate delire whereof poisoneth wherefoever it taketh place; but the publick and common good. Hooker .-They apply their minds even with hearty affection and zeal, at the leaft, unto those branches of public prayer, wherein their own particular is moved. Hooker .-

His general lov'd him In a most dear particular.

-We are likewife to give thanks for tempor bleffings, whether fuch as concern the publick, elfe fuch as concern our particular. Daty of Ma 4. Private character; fingle felf; state of an invidual.

For his particular, I'll receive him glady;
... But not one follower.

5. A minute detail of things fingly enumerated.

The reader has a particular of the books, whe in this law was written. Aylife. 6. In Particular Peculiarly; distinctly.—Invention is cailed a mu authors ascribe to each of them in particular, so sciences which they have invented. Dryden And if we will take them, as they were directly in particular to her, or in her, as their represent itive, to all other women, they will, at most, cern the female sex only. Locke.—This in particular happens to the lungs. Bluckmore.

\* PARTICULARITY. n. f. [particularité, from particular. 1. Distinct notice or enum tion. - So did the boldness of their affirmation company the greatness of what they did affi even descending to particularities, what kingde he should overcome. Sidney. 2. Singleness; i v.duality; fingle act; fingle cafe.—Knowle imprinted in the minds of all men, upon wl conclusions grow, in particularity, the choice good and evil. Hooker. 3. Petty account; pri incident .- To fee the titles that were most ag able to fuch an emperor, the flatteries that he open to, with the like particularities only to met with on medals, are certainly not a little fing. Addison. 4. Something belonging to fi perions.

Let the general frumpet blow his blaft, Particularities and petty founds

To cease. Soak. Henry 5. Something peculiar.—I saw an old heathen a with this particularity, that it was hollowed li dish at one end. Addison on Italy.—He applied self to the coquette's heart; there occurred a particularities in this dissection. Addison.

\* To PARTICULARIZE. v. a. [particula Fr. from particular.] To mention diffinctly detail; to flew minutely.—The leanness tha flicts us, is an inventory to particularize the bundance. Shakefp. Coriol.—He not only boah is parentage as an Ifraelite, but particularize descent from Benjamin. Atterbury.

\* PARTICULARLY. adv. from partic 1. Diffinctly; fingly; not univerfally.—Provid that univerfally cafts its eye over all the cree is yet pleased more particularly to fasten it fome. South. 2. In an extraordinary degree. exact propriety of Virgil, I particularly regi as a great part of his character. Dryden. the flower and the leaf I was so particularly fed, that I commend it to the reader. Dryde

\* To PARTICULATE. v. a. [from partic To make mention fingly. Obfolete.—I ma particulate of Alexander Hales, the irrefra doctor. Camden's Remains.

(I.) PARTING, n. f. in metallurgy. See TALLURGY, Part II, Seff. IV; and Part II (II.) PARTING, in chemistry, an operation which gold and filver are separated from e:

ther. As these two metals resist equally well the action of fire and of lead, they must therefore be separated by other methods. This separation could not be effected if they were not soluble by different menstruums. Nitrous acid, marine acid, and fulphur, which cannot diffolve gold, attack fiber very eafily; and therefore these three agents funds methods of feparating filver from gold, or of the operation called parting. Parting by nitrous acid is the most convenient, and therefore mod ಚನ್ನ, and even almost the only one employed by goldsmiths and coiners. Wherefore it is called simply parting. That made with the marate acid is only made by cementation, and is known by the name of concentrated parting. Laftly, parting by fulphur is made by fulion, which the chemits call the dry way, and is therefore called by parting.

I. PARTING BY AQUAFORTIS. Altho' parting by squafortis be easy, it cannot be very exact, eniefi we attend to some essential circumstances. L The gold and filver must be in a proper proportion: for if the gold be in too great quantity, the lilver will be covered and guarded by it from the action of the acid. Therefore, when the essavers do not know the proportion of these two metals in the mus to be operated upon, they discover it by the following method: They have a certain number of scolles composed of gold and filver allayed together in graduated proportions, and the allay of can needle is known by a mark upon it. These are alled proof needles. When estayers want to hardy the proportion of gold and filver in a man, they rub this mils upon a touchstone, so as to kare a mark upon it. They then make marks in the touchftone with some of the needles the color of which they think comes nearest to that of the mass. By comparing the marks of these with the mark of the mass, they discover scarry the proportion of the gold and filver in the mak. If this trial shows, that in any given mass the filver is not to the gold as three to one, this mais is improper for the operation of parting by equatortis. In this case, the quantity of filver neto make an allay of that proportion must he added. This operation is called QUARTATION, probably because it reduces the gold to a fourth part of the whole mass. II. That the parting may the enitrous acid or aquafortis employed be very pure, and especially free from mix-time of vitriolic and marine acids. For if this be attended to, a quantity of filver proportionwhe to these two foreign acids will be separated during the folution; and this portion of filver, refaced by these acids to vitriol of silver and to lua cornea, will remain mingled with the gold, sich confequently will not be entirely purified When the metallic mass is promy allayed, it is to be reduced to plates, rolled or to grains. are to be put into a matrals, and upon them a and a quafortis is to be poured, the weight which is to that of the filver as three to two: as the nitrous acid employed for this operarather weak, the folution is affifted, espeat first, by the heat of a fund bath, in which andrals is to be placed. When, not withstand-VOL. XVII. PART I:

ing the heat, no further mark of folution appears, the aquafortis charged with filver is to be decanted. Fresh nitrous acid is to be poured into the matrass, stronger than the former, and in less quarttity, which must be boiled on the residuous mass and decanted as the former. Aquafortis must even be boiled a 3d time on the remaining gold, that all the filver may be certainly diffolved. gold is then to be washed with boiling water. This gold is very pure if the operation has been performed with due attention. It is called gold of parting. No addition of filver is required, if the quantity of filver of the mass is evidently much more confiderable than that of the gold: perions who have not proof needles and other apparatus to determine the proportion of the allay, may add to the gold an indeterminate quantity of filver, obferving that this quantity be rather too great than too small, and so considerable as to render the mass nearly as white as filver; for a large quantity of filver is rather favourable than hurtful to the operation: It has no other inconvenience than an useless expence, as the larger the quantity is of filver the more aquafortis must be employed. We ought to attend to this fact, that the colour of gold is fearcely perceptible in a mass two 3ds of which are filver and one 3d is gold; this colour then must be much less perceptible when the gold is only one 4th part, or less, of the whole mass. If the quantity of gold exceeds that of the filver, the mais may be exposed to the action of aquaregia, which would be a kind of inverse parting, because the gold is dissolved in that menstruum, and the filver is not, but rather reduced to a luna cornea, which remains in form of a precipitate after the operation. But this method is feldom or never practifed, for the filver is not to accurately feparated from the gold by aqua-regia, as the gold is from the filver by aquafortis. The gold, after the parting by aquafortis, is much more eafily collected when it remains in finall maffes than when it is reduced to powder. When the mass has been regularly quarted, that is, when it contains three parts of filver and one part of gold, we must employ, particularly for the first folution, an aquafortis so weakened that heat is required to affift the folution of the filver; by which means the folution is made gently; and the gold which remains preferves the form of the fmall mailes before the folution. If the aquafortis employed were stronger, the parts of the gold would be difunited and reduced to the form of a powder, from the activity with which the folution would be made. We may indeed part by aquafortis a mass containing two parts of filver to one part of gold: but then the aquafortis must be stronger: and if the folution be not too much haftened, the gold will more eafily remain in maffes after the operation. In both cases, the gold will be found to be tarnished and blackened. Its parts have no adhefion together, because the filver diffolved from it has left many interflices; and the cornets or grains of this gold will be easily broken, unless they be handled very carefully. To give them more solidity, they are generally put into a test under a muffle and made red hot; during which operation they contract confiderably; and their parts are · H approx-

These pieces of gold are then approximated. found to be rendered much more folid, fo that they may be handled without being broken. By this operation also the gold resumes its colour and luftre; and as it generally has the figure of cornets, it is called gold in cornets, or grain gold. Effayers avoid melting it, as they choose to preserve this form, which thows that it has been parted. The gold and filver thus operated upon ought to have been previously refined by lead, and freed from all allay of other metallic matters, so that the gold which remains should be as pure as is possible. However, as this is the only metal which refifts the action of aquafortis, it might be purified by parting from all other metallic substances; but this is not generally done, for feveral reasons. First, because the reining by lead is more expeditious and convenient for the separation of the gold from the imperfect metals; 2dly, because the silver, when afterwards separated from the aquafortis, is pure; laftly, because, as most imperfect metals do not remain completely and entirely disfolved in nitrous acid, the gold would be found after the parting mixed with the part of these metals which is precipitated. The gold remaining after the parting ought to be well washed, to cleanse it from any of the solution of silver which might adhere to it; and for this purpose distilled water ought to be used, or at least water the purity of which has been afcertained by its not forming a precipitate with a folution of filver, because such a precipitate would alter the purity of the gold. The filver diffolved in the aquafortis may be feparated either by distillation, in which case all the aquafortis is recovered very pure, and fit for another parting; or it may be precipitated by fome Substance which has a greater affinity than this metal with nitrous acid. Copper is generally employed for this purpole at the mint. The folution of filver is put into copper veffels. quafortis diffolves the copper, and the filver precipitates. When the filver is all precipitated, the new folution is decanted, which is then a folution of copper. The precipitate is to be well washed, and may be melted into an ingot. It is called parted filter. When this filver has been obtained from a mass which had been refined by lead, and when it has been well washed from the solution of copper, it is very pure. Mr Cramer observes justly in his Treatise on Essaying, that however accurately the operation of parting has been per-formed, a small portion of blver always remains united with the gold, if the parting has been made by aquafortis; or a finall portion of the gold re-mains united with the filver, if the parting has been made by aqua-regia; and he estimates this fmall allay to be from a 200dth to a 150th part; which quantity may be confidered as nothing for ordinary purpofes, but may become fensible in accurate chemical experiments. (Chem. Diff.) The mass of gold and filver to be quarted ought previoully to be granulated; which may be done by melting it in a crucible, and pouring it into a large veffel full of cold water, while at the same time a gapid circular motion is given to the water by quickly stirring it round with a stick or broom. The aquafortis ought to be so strong as to be capable of acting fenfibly on filver when cold, but

not fo strong as to act violently. If the aquafor be very strong, however pure, and if the vessels well closed, a small quantity of the gold wil diffolved along with the filver, which is to guarded against. Little heat ought to be app at the beginning, the liquor being apt to swell rife over the veffel; but when the acid is no faturated, the heat may be fafely increased. W the folution ceases, which may be known by discontinuance of the effervescence, or emission air-bubbles; the liquor is to be poured off. If grains appear entire, more aquafortis must be ed, that all the filver may be disfolved. If the ration has been performed flowly, the remai gold will have ftill the form of distinct ma which are to receive folidity and colour by as above directed. If the operation has been formed hastily, the gold will have the appear of a black mud or powder, which after 5 washings with pure water must be melted. filver may be recovered by precipitating it. the aquafortis by fmall plates of copper throu long with the liquor into glass vetlels. A derable heat is required to accelerate this pro tation. Dr Lewis says, he has observed that the aquafortis was perfectly faturated with no precipitation was occasioned by plates of per, till a drop or two of aquafortis was add the liquor, and then the precipitation began continued as ufual. The precipitated filver be well washed in boiling water, and fused fome nitre; the use of which is to scorify an preous particles which may adhere to the From the folution of copper in aquafortis, pigment, called verditer, is obtained by pitation with whiting. Notes to Chem. Diff.

2. PARTING BY CEMENTATION. CONCEN TED PARTING is performed by comentation is used when the quantity of gold is so gr proportion to the filver, that it cannot be for ted by aquafortis. (See Cement, § 4.) operation is done in the following manne cement is first prepared, composed of 4 pa bricks powdered and fifted, of one part of vitriol calcinated till it becomes red, and o part of common fait. The whole is very rately mixed together, and a firm paste is m it by moistening it with a little water or This cement is called cement royal, because employed to purify gold, which was ftyled chemilts, the king of metals. The gold to mented is to be reduced to thin plates, as t fimail pieces of money. At the bottom of the cible or cementing pot, a stratum of ceme the thickness of a finger, is to be put, which be covered with plates of gold; upon the ther stratum of cement is to be laid, and then plates of gold, till the crucible is fifled with alternate strata of cement and of gold. whole is then to be covered with a lid, which to be luted with a mixture of clay and fand. pot is to be placed in a furnace, or oven, heated by degrees till it is moderately red, w heat is to be continued during 24 hours. heat must not be so great as to melt the s The pot is then left to cool, and the gold is t carefully separated from the cement, and be at different times in a large quantity of pure

ter. This gold is to be effayed upon a touchstone or otherwise; and if it be found not sufficiently puifed, it is to be cemented a 2d time in the fame manner. The fulphuric acid of the bricks and of the calcined vitriol difengages the acid of the common falt during this cementation: and this last acid diffolves the filver allayed with the gold, and separates it by that means. - This expement proves, that although the muriatic acid, which bliquid, cannot attack filver, it is neverthe spiwerful folvent of that metal. But for the purpose it must be applied to the silver in the fate of rapours, extremely concentrated, and affiled with a confiderable heat. All these circumfunces are united in the concentrated parting. This experiment proves also, that notwithstanding at the circumstances, which favour the action of the muriatic acid, it is incapable of diffolying gold. Laftly, the muriatic acid in this state more esternally dissolves the filter than the nitrous acid does in the parting by aquafortis, fince this operation fucceeds well when the filver is in fo small a proportion as that it would be protected from the adion of the nitrous acid in the ordinary partmr. lakead of sea-salt, nitre may be used with equal socces; because the nitrous acid is then put in a flate to attack the filver, notwithstanding the

quantity of gold which covers it. J. PARTING BY FUSION, OF DRY PARTING, is performed by fulphur, which has the property of cating eafily with filver, while it does not attack toic. This method of separating these two metals wild be the cheapeff, the most expeditious and receivent of any, if the fulphur could dissolve the fire, and separate it from the gold as well we really as nitrous acid does; but, on the िक्षा अरह are obliged to employ a particular " " " and a kind of concentration, to begin ". 22303 of the sulphur allayed with gold. Then speaked and troublesome fusions must be made, is each of which we are obliged to add different Aemediate substances, and particularly the mewhich have the strongest affinity with sulphur, which in that case does we give a regulus of pure gold, but a gold still leged with much filver, and even with a part of recipitating metals; fo that, to complete the scation, cupellation is necessary, and also partby aquafortis. It is therefore evident, that eperation ought not to be made but when the ganty of filver with which the gold is allayed is great, that the quantity of gold which might be obtained by the ordinary parting is not sufficiet to pay the expences; and that it is only prope for concentrating a larger quantity of gold in a faller quantity of filver. As this dry parting is before, and even expensive, it ought not to exertaken but on a confiderable quantity of allayed with gold. Accordingly Cramer, ster, Schlinder, and all good chemists and who have processes for the dry parting, reits use only in such cases. As this opesom for extracting a finall quantity of gold from quantity of filver is, notwithstanding its in-Schlutter, Sheffer, and = authors, and practifed in Hartz, we iliall what Dr Lewis, in his History of Cold, has - pon the fubject. The most advantageous

method of separating a small portion of gold from a large one of filver, appears to be by fulphur; which unites with and fcorifies the filver without affecting the gold; but as fulphurated filver does not flow thin enough, to fuffer the finall particles of gold diffuled through it to reunite and fettle at the bottom, some addition is necessary for collecfing and carrying them down. In order to the commixture with the fulphur, 50 or 60 lb, of the mixed metal, or as much as a large crucible will receive, are melted at once, and reduced into grams, by taking out the fluid matter, with a small crucible made red-hot, and pouring it into cold water stirred with a rapid circular motion. From \(\frac{1}{2}\) to \(\frac{1}{2}\) of the granulated metal, according as it is richer or poorer in gold, is referred, and the rest well mingled with f of powdered sulphur. The grains enveloped with the fulphur are again put into the crucible, and the fire kept gentle for fome time, that the filver before it melts, may be thoroughly penetrated by the fulphur; if the fire be haftily urged, great part of the sulphur will be diffipated, without acting upon the metal. If to fulphurated filver in fusion pur- filver be added, the latter falls to the bottom, and forms there a diftinct fluid not miscible with the other. particles of gold, having no affinity with the fulphurated filver, join themselves to the pure filver, wherever they come in contact with it, and are thus transferred from the former into the latter, more or less perfectly according as the pure filver was more or less thoroughly diffused through the mixed. It is for this use that a part of the granulated metal was reserved. The sulphurated mass being brought into perfect fusion, and kept melted for near an hour in a close covered crucible one third of the referved grains is thrown in; and as foon as this is melted, the whole is well ftirred, that the fresh silver may be distributed through The ftirthe mixed to collect the gold from it. ring is performed with a wooden rod; an iron one would be corroded by the fulphur, fo as to deprive the mixed of its due quantity of fulphur, and likewise render the subsequent purification of the filver more troublesome. The fusion being continued an hour longer, another third of the unfulphurated grains is added, and an hour after this the remainder; after which the fusion is surther continued for some time, the matter being ftirred at leaft every half hour from the beginning to the end, and the crucible kept closely covered The sulphurated silver appears in the intervals. in fusion of a dark brown colour; after it has been kept melted for a certain time, a part of the fulphur having cscaped from the top, the surface becomes white, and some bright drops of silver, about the fize of peafe, are perceived on it. When this happens, which is commonly in about three hours after the last addition of the referved grains, tooner or later according as the crucible has been more or less closely covered, and the matter continued; for otherwise more and more of the filver, thus losing its fulphur, would subfide and mingle with the part at the bottom in which the gold is collected. The whole is poured out into an iron mortar greafed and duly heated; or if the quantity is too large to be fately lifted at once, a part is first taken out from the H2

too with a small crucible, and the rest poured into the mortar. The gold, diffused at first through the whole mass, is now found collected into a part of it at the bottom, amounting only to about as much as was referved unfulphurated. This part may be separated from the sulphurated silver above it by a chiffel and hammer; or more perfeetly, the furface of the lower mass being generally rugged and unequal, by placing the whole mais with its bottom upwards in a crucible: the fulphurated part quickly melts, leaving unmelted that which contains the gold, which may thus be completely separated from the other. The fulphyrated fliver is essayed by keeping a portion of it in fusion in an open crucible till the sulphur is diffipated, and then diffolying it in aqua fortis. If it fliould full be found to contain any gold, it is to be melted again; as much more unfulphurated filver is to be added as was employed in each of the former injections, and the fution continued about an hour and a haif. The gold thus collected into a part of the filver may be further concentrated into a smaller part, by granulating the mats and repeating the whole process. The operation may be again and again repeated, till fo much of the filter is separated, that the remainder may be parted without much expence. This proceis, according to M. Schlutter, is practifed at Rammelberg in Lower Hartz. The prevailing metal in the ore of Rammelsberg is lead: the quantity of lead is at most 40 lb. on a quintal of 100 lb, of the ore, The lead worked off on a test or concave hearth yields about 110 grains of filver, and the filver contains only a 384th part of gold; yet this little quantity of gold, amounting feareely to a third of a grain in a hundred weight of this ore, is thus collected with profit. author above-mentioned confines this method of feparation to such filver as is poor in gold, and reckons parting with aquafortis more advantage. ous where the gold amounts to above a 64th of the filver: he advises also not to attempt concentrating the gold too far, as a portion of it will always be taken up again by the filver. Mr Schef, fer, however, relates (in the Swedish Memoirs for 1752), that he has by this method brought the gold to perfect finencis; and that he has likewise collected all the gold which the filver contained; the filver of the last operations, which had taken up a portion of the gold, being referved to be worked over again with a fresh quantity of gold-h h ing filver. The sulphurated filver is purified by continuing it in fution for fome time with a large furface exposed to the air; the sulphur gradually exhales and leaves the filver entire.

PARTING-GLASS E, n, f. Glass veilels used for parting gold and filver. They have the form of truncated cones, the bottom being commonly about 7 inches wide, the aperture about one or two inches wide, and the height about 12 inches, These vessels ought to have been well annealed, and chosen free from flaws; as one of the chief inconveniences attending the operation is, that the glaffes are apt to crack by exposure ro cold, and even when touched by the hand. Some operators fecure their glasses by a coating. For this purpose they spread a mixture of quick lime, flaked with beer and whites of eggs, upon linen cloth, which they wrap round the lower part of the vel fel, leaving the upper part uncovered, that the may fee the progress of the operation; and over this cloth they apply a composition of clay an hair. Schlutter advises to put the parting-glasse containing some water, and supported by trevel with fire under them. When the heat commun cated by the water is too great, it may be dim nished by adding cold water; which must be don very carefully by pouring against the sides of the pan, to prevent too fudden an application of co to the parting-glass. The intention of this co trivance is, that the contents of the glaffes, these should break, may be received by the copp veilel. Into a glass 15 inches high, and 10 or inches wide at bottom, placed in a copper part. inches wide at bottom, 15 inches wide at top, a to inches high, he usually put about 80 oz. of a tal, with twice as much aquafortis.

\*PARTNER. n. f. [from part.] 1. Partaker; one who has part in any thing; affoci-

My noble partner,

You greet with prefent grace. Shak. Macheth.

Those of the race of Sem were no partners in
the unbelieving work of the tower. Raleigh.—

My elf the total crime; or to accuse My elf the total crime; or to accuse My other self, the partner of my life. Milton.—Sapor, king of Persia, had an heaven of glass, which sixting in his estate, he trod upon, calling bankels brother to the sun and moon, and partner the saxion, till her partner is again qualified to hear her company. Addison. 2. One who dances with another.—

Lead in your ladies every one; sweet partner, I must not yet forsake you. Shak. Henry VIII.

To PARTNER. v. a. [from the noun.] To sea; to associate with a partner.—

A lady who So fair, and faften'd to an emprey,

Would make the great'ft king double to be partner'd

With tomboys. Shakespeare. (I.) PARTNERSHIP. n. f. [from partner.]

1. Joint interest or property.—

He does possession keep,
And is too wise to hazard partnership. Dryden.
2. The union of two or more in the same trade.
—'Tis a necessary rule in alliances, partnerships and all manner of civil dealings, to have a strict regard to the disposition of those we have to do withal. L'Estrange.

(II.) PARTNERSHIP is a contract among two or more persons, to carry on a certain business, at their joint expence, and share the gain or loss which arises from it. Of this there are sour

kinds.

I. PARTNERSHIP IN COMPANIES INCORPO-RATED BY AUTHORITY. A royal charter is neceffary to enable a company to hold lands, to have a common feal, and enjoy the other prie vileges of a corporation. A charter is fometimes procured, in order to limit the risk of partners; for, in every private company, the partners are liable for the debts, without limitation; in corporated focieties, they are only liable for their thares in the stock of the society. The incorporation of societies sometimes is authorised by act of parliament; but this high authority is not necessary, unless for conferring exclusive privileges.

2. Partnership in Companies, where the BUSINESS IS CONDUCTED BY OFFICERS. There are many companies of this kind in Britain, chiefly established for purposes which require a larger capital than private merchants can command. The laws with respect to these companies, when not confirmed by public authority, are the same as the following, but the articles of their agreement usually very different. The capital is condescended on, and divided into a certain number of thares, whereof each partner may hold one or more, but is generally restricted to a certain number. Any partner may transfer his share; and the company must admit his assignee as a partner. The death of the partners has no effect on the company. No partner can act perfonally in the affairs of the company: but the execution of their business is intrusted to officers, for whom they are responsible; and, when the partners are numer-ous, the superintendency of the officers is committed to directors chosen annually, or at other appointed times, by the partners.

3. PARTNERSHIP, IN OCCASIONAL JOINT TRADE, is where two or more merchants agree to employ a certain fum in trade, and divide the gain or lofs fo foon as the adventure is brought to an iffue. This kind of contract being generally private, the parties concerned are not liable for each other. If one of them purchafe goods on truft, the furnisher, who grants the credit through confidence in him alone, has not recourse, in case of his infolvency, against the other partners. They are only aniwerable for the share of the adventure that belongs to the infolvent partner. If it be proposed to carry the adventure farther than originally agreed on, any partner may withdraw his interest; and if it can-

the whole shall be brought to an issue. 4. PARTNERSHIP IN STANDING COMPANIES is generally established by written contract between the parties, where the stock, the firm, the duration, the division of the gain or loss, and other circumstances, are inserted. All the partners are generally authorised to fign by the firm of the company, though this privilege may be confined to some of them by particular agreement. The firm ought only to be subscribed at the place where the copartnery is established. If a partner has occasion, when absent, to write a letter relating to their affairs, he subscribes his own name on account of the company. When the fame partners carry on business at different places, they generally choose different firms for each. The fignature of each partner is generally fent to new correspondents; and when a parther is admitted, although there be no alteration' in the firm, his fignature is transmitted, with an intimation of the change in the copartnery to all' their correspondents. Houses, that have been long established, often retain the old firm, though all the original partners be dead or withdrawn. No partner is liable to make good the loss arifing from his judging wrong in a case where he had authority to act. If he exceeds his power, and the event prove unsuccessful, he must bear the lofs; but if it prove successful, the gain belongs to the company: yet if he acquaints the company immediately of what he has done, they must either acquiesce therein, or leave him the chance of gain, as well as the risk of loss. All debts contracted under the firm of the company are binding on the whole partners, though the money was borrowed by one of them for his private use. without the confent of the rest. And if a partner exceeds his power, the others are nevertheless obliged to implement his engagements; though they may render him responsible for his misbehaviour. Although the fums to be advanced by the partners be limited by the contract, if there be a necessity for raising more money, to answer emergencies or pay the debts of the company, the partners must furnish what is necessary in proportion to their shares. A debt to a company is not cancelled by the private debts of the partner; and when a partner becomes insolvent, the company is not bound for his debts beyond the extent of his share. The debts of the company are preferable, on the company's effects, to the private debts of the partners. Partnership is generally diffolved by the death of a partner; yet, when there are more partners than two, it may, by agreement, sublist among the survivors. Sometimes it is Ripulated, that, in case of the death of a partner, his place shall be supplied by his fon, or fome other person condescended on. The contract ought to specify the time and manner in which the furviving partners thall reckon with the executors of the deceased for his share of the flock, and a reasonable time allowed for that purpose. When a partnership is dissolved, there are often outstanding debts that cannot be recovered for a long time, and effects that cannot ea-fily be disposed of. The partnership, though dis-

folved in other respects, still sublists for the ma-

nagement of their outstanding affairs; and the money ariting from them is divided among t partners, or their representatives, when it is rec vered. But as this may protract the final fett ment of the company's affairs to a very incom nient length, other methods are fometimes ul to bring them to a conclusion, either in con quence of the original contract, or by agreem at the time of diffolution. If a partner withdray he continues responsible for his former partn till it be publicly known that he hath done A deed of separation, registered at a public fice, and announced in the Gazette, is suffici prefumption of fuch notoriety.

\* PARTOOK. Preterite of partake.

(1.) \* PARTRIDGE. n. f. | perdr x, Fr. per Welsh; perdix, Lat.] A bird of game.-The is come out to feek a flea, as when one doth h a partridge in the mountains. I Sam. xxvi. 20.

(2.) PARTRIDGE, in ornithology. See T The places partridges delight in most corn fields, especially whilst the corn grows, under that cover they shelter and breed; and are frequented by them when the corn is down for the grain. In the furrows, amongst clots, branches, and long grafs, they hide themselves and coveys, which are sometime in number, nay 30, in a covey. When wint arrived, and the stubble fields are ploughed or over-foiled with cattle, partridges refort the upland meadows, and lodge in the dead-g or fog under hedges, amongst mole-hills, or der the roots of trees; fometimes they refor coppices and under-woods, especially if any o fields are adjacent, or where there is grown bro brakes, fern, &c. In harvest, when every sic full of men and cattle, in the day they are to in fallow fields adjoining to corn fields, w they lie lurking till evening or morning, and among the sheaves of corn. This bird contribut much to the pleafures of the table, that many pedients were formerly in use to take them a Having deceived the timid creatures by an hi imitation of their notes, it was easy to el them into the fnare; but their destruction is almost entirely reserved for the murderous of the sportsman. The partridges of Abyssinia faid to be as large as capons.

PARTRIDGEFIELD, a township of M chusetts, in Berkshire county; 128 miles V Boston; containing 1041 citizens, in 1795.

\* PARTURIE

PARTURIENT. adj. [parturiens, Latin.] Abut to bring forth.

(1.) PARTURITION. n. f. [from parturio, Lam.] The flate of being about to bring forth.—Conformation of parts is required, not only unto the previous conditions of birth, but also unto the parturition or very birth. Brown.

(a) Parturition is rather the act of bringing forth, a being delivered of young. See Min-

WIFIRT.

(1) PARTY. n. f. [partê, Fr.] 1. A number of persons consederated by similarity of designs cromins in opposition to others; a faction.-Wes my of these combatants strips his terms of antiguty, I shall think him a champion for trath, and not the flave of vain glory or a party. Lin.-This account of party patches will apper improbable to those, who live at a distance from the fashionable world. Addison .- Party writo are to tentible of the fecret virtue of an inseeds that they never mention the q-n at kath. Spedator.—This party rage in women onh kives to aggravate animofities that reign amost them. Addition.—As he never leads the conrelation into the violence and rage of party difpares listened to him with pleasure. Tatler. Domina between those of the same party, exposes then to their enemies. Pope.—The most violent proposes are such, as, in the conduct of their hies have discovered least sense of religion or worthy. Swift. 2. One of two litigants.you are hearing a matter between party and party, if pinched with the cholick, you make faces like mental, and diffinife the controverly more encapled by your hearing: all the peace you make in their cash, is calling both parties knaves. Shak. The cuse of both parties shall come before de judges. Exedus xxii. 9.—If a bishop be a party to a fast and excommunicates his adversary; accommunication shall not bar his adversary has his action. Agliffe. 3. One concerned in DY MAY.

Free'd and enfranchis'd not a party to

The mager of the king.

I do suspect this trash

To be a party in this injury. Shak.

Sie; persons engaged against each other.—
The peace both parties want is like to last.

j. Cittle; fide .-

Eglecame in, to make their party good. Dryd.

Dryden

LA scied affembly .-

Fil have a party at the Bedford-head. Pope.—If the clergy would a little fludy the arts of carriftion, they might be welcome at every both for a perfonding them, or opposed to, another.—She was floped than a number of trees, so thickly placed to the standard flow of the lamentable flows, that she was afraid she should, with rushing them, the man afraid she should, with rushing the flow of the lamentable flows.—The minister of justice may, for the cample virtuously will the execution of the party wirtuously may desire. Hooker.—If the sound, that the party slain was of English a had been adjudged selony. Daviet.—It is bring me to the party? Shak.—The received into the most sile, causes the party

to lie as if he were drunk. Abbot.—The imagination of the party to be cured is not needful to concur; for it may be done without the knowledge of the party wounded. Bacon.—There is nothing left to be done by the offended party, but to return to charity. Taylor.—Though there is a real difference between one man and another, yet the party, who has the advantage, usually magnifies the inequality. Colher. 8. A detachment of foldiers: as, he commanded the party sent thither.

A R.

as, he commanded the party fent thither.

(2.) PARTY, adj. Of or belonging to a party; joined with a party. The authorities above quoted by Dr Johnson, (§ 1, def. 1.) of "party patches, party curiters, party rage, and party diffuser," are plainly examples of the adjective noun, and ought not to have been adduced as examples

of the noun substantive.

(3.) PARTY, in a military sense, (§ 1, def. 8.) a small number of men, horse, or foot, sent upon any kind of duty; as into an enemy's country to pillage, to take prisoners, and to oblige the country to come under contribution. Parties are often sent out to view the roads and ways, get intelligence, seek forage; to reconnoire, or amuse the enemy upon a march; they are also frequently sent upon the flanks of an army or regiment, to discover the enemy if near, and prevent surprise or ambuscade.

(4,) PARTY, in heraldry. See PARTI.

\* PARTY-COLOURED. adj. [party and coloured.] Having diversity of colours.—

The fulfome ewes,

Then conceiving, did, in yeaning time,
Fall party-colour'd lambs. Shak. Merch. of Ven.

The leopard was valuing himself upon the lustre
of his party-coloured skin. L'Estrange.—

Both girt with gold, and clad in party-co. lour'd cloth. Dryd.

Constrain'd him in a hird, and made him fly With party-colour'd plumes a chattering pie.

—I looked with as much pleasure upon the little party-coloured assembly, as upon a bed of tulips. Spellator.—

Nor is it hard to beautify each mouth

With files of party-colour'd fruits. Philips-Four knaves in garb fuccinct, a trufty band, And party-coloured troops, a finning train,

Draw forth a combat on the velvet plain. Pope.

\* PARTY-JURY. n. f. [In law.] A jury in fome trials, half foreigners and half natives.

\* PARTY-MAN. n. f. [party and man.] A facti-

ous person; an abettor of a party.-

\* PARTY-WALL. 2. f. [party and avall.] Wall that separates one house from the next.—'Tis an ill custom among bricklayers to work up a whole story of the party-walls, before they work up the fronts. Mox.

(1.) PARU, in ichthyology, a very fingular American fish. It is broad, flat, and rounded; not very thick, and usually of about 5 or 6 inches long, and more than 4 broad. It has fix fins, one large and long, one on the back, and another on the belly behind the anus; each of these reaches to the tail, and has towards the end a long string or cord, made of a single filament, that on the back fin being longer than that on the belly; behind the gills it has also two fins of two fingers.

breadth long and one broad; and two others on the belly, which are very narrow; its head is small, and its mouth elevated and small, and furnished with small teeth; its scales are of a moderate fize, and are half black and half yellow, fo that the fish appears of a black colour, variegated with yellow half moons; its gills, and the beginning of its fins, are also yellow; and it has, on each fide near the head, a yellow spot; it is eat-

(2.) PARU, in geography, a fort of Brazil, in Para, on the N. bank of the Amazoa. Lon. 53.

10. W. Lat. 1. 30. S.
PARVICH, an ifland of Maritime Austria, near Dalmatia, and one of the best peopled and most confiderable of those which are under the jurisdiction of Sebenico. It contains a great number of fishermen, and perfons who follow agriculture. It contains many Roman antiquities, which show that it was a Roman station. It seems to be among the number of those islands which Pliny calls Ca ladusse, which is supposed to be an inversion of Borniades, which means ill-founding or noify. It is not large, but it is extremely fertile. Every product succeeds in perfection there; particularly vines, olives, mulberry trees, and fruits. The afpect of this island is very pleasant at a distance. The name Particle is derived from its being the first island met with on going out of the harbour of Sebenico; for the Illyric word parvi fignifies firft.
PARVICHIO, an island of Maritime Austria,

on the coast of Dalmatia, S. of Velia, one of the

Quarnato islands. It has a harbour called Dubaz.

\* PARVIS. n. f. [Pr.] A church or churchporch: applied to the mootings or law-disputes among young students in the inns of courts, and also to that disputation at Oxford, called disputatio in parvis. Bailey.

PARVITUDE. n. f. [from parvus, Latin.] Littleness; minuteness. Not used .- The little ones of parvitude cannot reach to the same floor with

them. Glanville.

PARVITY. n. f. [from parvus, Lat.] Little-ness; minuteness. Not used.—What are these for finences and parceity, to those minute animalcula discovered in pepper-water? Ray.

PARULIDES, in furgery, tumours and inflammations of the gums, commonly called gun boils. They are to be treated with discutients like other

inflammatory tumours.

PARUS, the TITMOUSE, in ornithology, a gests belonging to the order of passers. The bill nus belonging to the order of passeres. is very entire, covered at the balis with hairs; the tongue is truncated and hairy. There are 14 species; of which the most remarkable are these:

1. PARUS BIARMICUS, the bearded titmouse, has a fhort, strong, and very convex bill, of box colour; the head of a fine grey; the chin and throat white; the middle of the breast slesh-coloured; the fides and thighs of a pale orange; the hind part of the neck and back of orange bay; the tail is two inches and three quarters long; the legs of a deep shining black. The semale wants the sleshcolour on the breaft, and a triangular tuft of black feathers on each fide the bill which adom the male. They are found in marshy places.

2. PARUS CÆRULEUS, the blue titmoufe, is a very beautiful bird. The bill is short and dusky; the crown of the head a fine blue; from the bi the eyes is a black line; the forehead and ch white; the back of a yellowish green; the k fide of the body yellow; the wings and tail ! the former marked transversely with a white the legs of a lead colour. They frequent gard and do great injury to fruit trees, by bruifing tender buds in fearch of the infects which li der them. They breed in holes of walls, an 12 or 14 eggs.

3. PARUS CANDATUS, the lang-tailed titmos about 54 inches, long and 7 inches broad. Th is black, very thick and convex, differing fro others of this genus. The top of the head, the bill to the hind part, is white, mixed w few dark grey feathers: this bed of white i tirely furrounded with a broad stroke of b which, rifing on each fide of the upper man paffes over each eye, unites at the hind part ( head, and continues along the middle of the The feathers on each fide of to the rump. black stroke are of a purplish red, as are the mediately incumbent on the tail. longest, in proportion to the bulk, of any I bird, being in length three inches, the fort unlike that of a magpie, confifting of 12 fe of unequal lengths, the middlemost the lo those on each fide growing gradually sh These birds are often seen passing through or dens, going from one tree to another, as if in road to fome other place, never making an They make their nefts with great elegance, oval shape, and about eight inches deep, ! near the upper end a hole for admission. ternal materials are moffes and lichens cur interwoven with wool. On the infide it is warmly lined with a thick bed of feathers. female lays from 10 to 17 eggs. The your low their parents the whole winter; and, fre flimness of their bodies, and great length of appear, while flying, like as many darts cutti air. See Plate CCLXVIII.

4. PARUS CRISTATUS, the crefted titmoufe, 13 pennyweight; the bill is black, with a f the fame colour above it; all the upper p the body grey; the neck and under par white, with a faint tincture of red, which is est just below the wings. The legs are of colour. It erects its crown feathers into They inhabit the warm parts of North Au

and frequent, forest-trees, feeding upon 5. PARUS MAJOR, the great titmouse, h head and throat black, the cheeks whit back green, the belly yellowish green, a in the middle by a line of black which exte the vent; the rump a bluish grey, the le lead colour, the toes divided to the very and the back toe very large and strong. T and the back toe very large and firong. cies sometimes visit our gardens; but for th part inhabit woods where they build in trees, laying about ten eggs. They feed on which they find in the bark of trees. In they do a great deal of mischief by picking tender buds of the fruit trees. Like woo ers, they are perpetually running up and the bodies of trees in quest of food. This has three cheerful notes, which they begin! in February.

6. PARUS PENDULINUS, the REMIZ, Or Small his woule. It is often found in Lithuania. Mr Core, in his Travels through Poland, gives the fellowing account of this little animal. "The wondrous structure of its pendent nest induced me to give an engraving of both that and the birds therefelves. (See Plate 268.) They are the fmallest species of titmice. The head is of a pale bluith wh reloar; the fore part of the neck and the breat singed with red; the belly white; wings birt; bick and rump of a yellowith ruft colour; qual fathers cinereous, with the exterior tides while; the tail ruft-coloured. The male is fingulity diffinguished from the female, by a pair of Nick pointed whilkers. Its neft is in the shape of a log purie, which it forms with amazing art, by interweaving down, goffamer, and minute fibres, in a close and compact manner, and then lining the inide with down alone, fo as to make a foug and warm lodge for its young brood. 'The entrance is at the fide, fmall, and round, with its edge more strongly marked than the rest of this runous fabric: the bird, attentive to the prefervation of its eggs or little ones from noxious animals, suspends it at the leffer end to the extremity of the licular twigs of a willow or forne other tree over a tiver. Contrary to the custom of titmice, it lays only four or five eggs: possibly Providence hath endanted this scantiness of eggs to the remiz, becruse by the fingular instinct imparted to it, it is rabled to fecure its young much more effectualh from destruction, than the other species which at var prolific."

7. PARUS VIRGINIANUS, the gellow rump, is found in Virginia; and is diftinguished by a yellow foot on it. rump. All the rest of the feathers are hown, with a flight tincture of green. run about the bodies of trees; and feed on infects, which they pick from the crevices of the bark.

PARUTA, Paul, a noble Venetian, born in 1140; diftinguished for his learning, and knowledge as a Statesman. He filled several high officts; was lent on feveral embassies; was appointed governor of Brescia, and procurator of St Mark: mall which he showed great abilities and probity. He wrote, 1. Notes upon Tacitus: 2. Political Discourses: 3. A Treatise of the Perfection of the Political Life: 4. A History of Venice, from 1513 to 1571, with the War of Cyprus; all m luiun. He died in 1598.

PARWAN, a town of Cabul, 63 miles NW. of Cabul

PARWIS, a town of Tirol, 18 miles WNW. of Inspruck.

PARYS, or Paris. See Paris, No 4.

MARYSATIS, an infamous Persian Queen, wife Dunus Nothus, and mother of Artaxerxes Memon, and Cyrus the younger. Her partialito the Cyrus ied her to commit the greatest injusand barbarities; and the poisoned Statira, the wife of Artaxerxes. See Persia.

[1.] PAS. n. f. [French.] Precedence; right going foremost.—When she came into any full monly, the would not yield the pas to the best

them. Arbutbnet.

(2) Pas, in geography, a town of France, in the dop, of the Straits of Calais; 6 miles E. of Posters, and 134 SW. of Arras. Vol. XVII. PART L.

(3.) PAS DE CALAIS, OF STRAITS OF CALAISI

See Calais, N° 4. alto Dover, N° 9.
PASAICK, a large river of New Jersey, which rifes in Morris county, runs 12 miles SE. then turns NE, and receives a large supply of waters from the rivers Romopack, Kingwood, and Peguinock; then running NE. paffes by the town of Patterson, over the Little and Great Falls; after which, it runs feveral miles SE, and S, and falls into Newark bay, where its mouth is 400 yards broad. It is navigable so miles up to the Great falls, where it is 40 yards broad, and falls over a rock 80 feet perpendicular. There is a bridge over this river 40 feet long.
PASAKAMENITZ, a town of Bohemia, in Chrudim; 8 miles WNW. of Politzka.

PASANGA, an island in the E. Indian Ocean :

near the W. coast of Sumatra. Lat, 5. 10. S. PASARGADA, a town of Perha, near Caramania, founded by Cyrus the Great, on the spot where he conquered Astyages. The kings of Persia were afterwards crowned in it. Strabo, 15. Plin. viii, 26. Herod. 1, 125.

PASARGADÆ, one of the nobleft families of ancient Persia. The Achemenides were a tribe

(1.) PASCAGOOLA, or a town of West Flo-(1.) PASCAGOULA, 5 rida. Lon. 88. 32.

W. Lat. 30. 30. N.

(2.) PASCAGOULA; a river of Georgia, which runs through W. Florida, passes the above town, to which it gives name, and falls into the Gulf of Mexico, by feveral mouths, which occupy a space of near 4 miles; which is one continued bed of

oyster shells. It is navigable above 150 miles.
(1.) PASCAL, Stephen, a French gentleman, of an ancient family, born in 1588. He was prefi-dent of the court of aids in Auvergne; he was a very learned man, an able mathematician, and a friend of Descartes. Having an extraordinary tendernels for his only son, he quitted his office in his province, and went and settled at Paris in 1631, that he might be quite at leifure for the instruction of him; and Blaife never had any ma-

fter but his father.

(2.) Pascal, Blaife; one of the greatest geniuses, and best writers France has produced, was born at Clermont in Auvergne, in 1623. From his infancy he gave proofs of a very extraordinary capacity. His father had kept all mathematicai books out of his way, lest they should interrupt his study of the languages; but, by intuition alone, he advanced confiderably in the knowledge of mathematics, without knowing a fingle term. He understood Euclid's Elements as soon as he cast his eyes upon them. At 16 years of age, he wrote A Treatife of Conic Sections, which was accounted by the most learned, a mighty effort of genius. At 19, he contrived an admirable arithmetical machine, which would have done credit to any man versed in science. About this time his health became impaired, and he was in confequence obliged to suspend his labours for 4 years. In his 23d year, having feen Torricelli's experiment respecting a vacuum and the weight of the air, he turned his thoughts towards thefe objects; and he published the result of a variety of experiments, in two small treatifes, the one entitled, A Differtation on the Equilibrium of Liquors; and the other, An Essay on the Weight of the Atmosphere. These labours procured him so much reputation, that the greatest mathematicians and philosophers of the age consulted him about fuch difficulties as they could not folve. But his career, though brilliant, was ordained to be but fhort. His health declined fo rapidly, that he was obliged to renounce all fevere fludy, and betook himself to devotion, which he carried to fuch a mistaken degree, as to inslict on himself the most severe tortures. He died at Paris 1662, aged 39 years. Befides the works above mentioned, he wrote Lettres Provinciales, satirizing the Jefuits, and fome religious pieces. His works were collected by Boffu, in 5 vols. 8vo.

PASCATAQUA. See PISCATAQUA.

(1.) \* PASCHAL. adj. | pascal, French: paschalis, Latin.] 1. Relating to the passover. 2. Relating to Easter.

(1.) PASCHAL. See Passover and Easter. PASCOMAYO, a sea port town of Peru, in the prov. of Sana, and bishopric of Truxilio.

PASCUAR, or Pasquaro, a town of Mexico, in Mechoacan; 18 miles SW. of Mechoacan.

PAS-EP-A, the chief of the Lamas, particularly eminent for having invented characters for the He was much esteemed by the Chistefe. There is still at Pekin a myau or temple, built in honour of Pas-ep-a in the time of the Mo-

gul emperors. He died in 1279.
PASEWALK, a town of Pomerania, on the Ucker, by which it exports goods; belonging to Prussia. It has iron works, and sies 22 miles W. of Old Stettin, and 66 SSE. of Stralfund. Lon.

31. 43. E. Ferro. Lat. 53. 27. N. \* PASH. n. f. [paz, Spanith, a kifs.] A face.

Thou want'st a rough pash. Shak.

\* To PASH. v. a. [perssen, Dutch.] To strike; to cruth.-

I'il pash him o'er the face.

Thy cunning engines have with labour rais'd My heavy hanger, like a mighty weight,

To fall and pash thee dead. PASIGRAPHY, n. f. from ness all or quible, and yeaper, to write,] "the art of writing on any fabject to as, to be understood by ail nations." Schemes of Universal Characters, to answer this purpole have been propoled by different ingenious men; (See CHARACTER, § II, i. No 5,) but the practicability, of introducing fuch characters to univerfal use, is generally doubted. " In France," (fays the learned Dr Gleig,) "where every thing is admired that is new, and every vagary of a pretended philosopher thought practicable, a propofal has been made to introduce one univerfal language into the world, constructed by a few metaphyficians on the laws of human rhought. And to this language, in its written form, is to be given the name of Paffigraphy." (60 the Dr speils it.) "Such readers as think this idle dream worthy their attention, (which is for from being the cafe with us,) will find fome ingenious thoughts on the history of a Philoso-· phical Language, in the 2d vol. of Nicholfon's Yournal of Natural Philosophy, &c. Euc. Brit. J.pp.

PASIPHAE, in fabulous history, daughter of Apollo, by Perseis, and wife of Minos, king of Crete, and mother of the Minotaur. See DEDA LUS, No 1, MINOS II, and MINOTAUR

PASITANO, a sea port town of Naples, of the bay of Salerno, a few miles W. of Amalfi famous for being the birth place of Flavius Bem bo, or Gioia, the inventor of the Mariner's Com pass. See Bembo, No 1.

PASITHEA, one of the three GRACES. PASITIGRIS, a name of the Tigris.

PASKA, a town of A rica, in the kingdom ( Fonia, where the king keeps a garrison. It is ful rounded with 6 rows of palifadoes.

PASMAN, an island of Maritime Austria, nea the coast of Dalmatia; 18 miles long, and broad; containing 7 villages, a convent in it centre, and a monastery on its E. point. It i bounds with vines and olives, and the people has oil and wine, &c. in plenty.

PASOMDSO, a lake of Thibet, 48 miles in ci cumference. Lon. 112. 10. E. Ferro. Lat. 2 42. N.

PASOR, Matthias, a learned German divit of the 17th century, born at Herborne, in Wel phalia. He became professor of divinity at Cri ningen, and afterwards of mathematics at Heide burg. On the invalion of the Palatinate, he can over to England, and read lectures at Oxford, ( Hebrew and mathematics; and was afterwan appointed professor of oriental languages in the univerfity. He died in 1658.

PASPALUM, in botany, a genus of the Dig nia order, belonging to the Triandria class plints; and in the natural method ranking und the 4th order Gramina.

(1.) PASPAYA, a mountainous, but fertile pr vince of Peru in La Piata; abounding in gra and fruits.

(2.) PASPAYA, a town in the above province

120 miles from the city of Piata.

PASQUA, a town of Mexico, in New Galid at the mouth of a river, on the N. Pacific Ocea 25 miles SE. of Cape Corientas, and 310 W. Mexico.

PASOUARO. See Pascuar.

PASQUATAQUA. Ser Piscataqua. (1.) \* PASQUE FLOWER. n. f. [ pulfatil Lat.] A flower. Mill.

(2.) PASQUE-FLOWER. See ANEMONE, 9 III.

PASQUETANK. See PASQUOTANK.
(1.) PASQUIER, Stephen, a learned Fren lawyer, poet and historian, born at Paris, in 15 He became an advocate in parliament, afterwar counfellor, and at last advocate general, und Henry III. all of which he filled with abilities a reputation. His works, which were publish together, confift of Letters, Inquiries, Poen Portraits, Epigrams, Epitaphs, &c. His poe entitled Puce, occasioned by his observing a fl on the breast of the learned Catherine De Roch made no small noise. He died at Paris, Aug. ! 1615, aged 87.

(2-4.) PASQUIER, Theodore, Nicolas, at Guy, fons of the preceding, were also emine Theodore was colleague and fu for learning. ceffor to his father as advocate general; Guy w

auditor of accompts, and Nicolas was mafter of requelts. He published Letters, containing difcourses upon the occurrences in France, in the reigns of Henry IV. and Lewis XIII.

PASOUIL. See Pasquinade, § 1. PASOUIMANS. See PARQUIMANS.

(1.) PASQUIN, a mutilated ita.ue at Rome, in a con-rof the parace of the Urfini. It takes its name from a cobler of that city, called Pasquin, famous for his facers and gibes, and who diverted hinlest by passing his jokes on all that went through that threet. After his death, as they were dyring up the pavement before his door, they found in the earth the statue of an ancient gladistor, well cut, but maimed and haif spoiled: this they fet up in the place where it was found, and by common consent named it Pasquin. Since that time all fatires are attributed to that figure; and are either put into its mouth, or pasted upon ir, as if they were written by Pasquin redivivus; and these are addressed by Pasquin to Marforio, another statue at Rome. When Marforio is attackof, Pasquin defends him; and when Pasquin is attacked, Marforio affifts him in his turn; that is, the people make the flatues speak just what they please.

(1) PASQUIN, PASQUIL. \ n. f. [from paf-(1.) PASQUINADE. \ \ quino, a statue at Rome, to which they affix any lampoon or paper or faurical observation.] A lampoon.—He never valued any pasquils that were dropped up and down. House. The pasquils, Jampoons, and lites, se meet with now-a-days, are a fort of playme with the four and twenty letters, without icale, truth, or wit. Tatler.

(2) A Pasquinade is a fatirical libel faftened to the flatue of PASQUIN: these are commonly flient, witty, and pointed; and from hence the tem has been applied to all lampoons of the fame

(1.) PASQUOTANK, a county of N. Carolina, in Edention diffrict; bounded on the N. by Camden, E. by Curritiick, S. by Albemarie Sound, mi W. by Parquimans county. In 1795, it contened 8874 citizens, and 1623 flaves. A county court is held at the court-house the 1st Monday = March, June, Sept. and Dec.

(1.) PASQUOTANK, a river of N. Carolina, which rifes in Great Difmal Swamp, and running and S. by W. and then SE. passes Hertford, and

talls into Aibemarle Sound.

(1.) PASS. n. /. [from the verb.] 1. A nartow entrance; an avenue.-

The firaight pass was damm'd

With dead men. Shak. —It would be easy to defend the passes into the Thole country, that the king's army should never be to enter. Clar. Truth is a strong hold, and diligence is properly the understanding's laybe feet to it; fo that it must be perpetually obtrying ail the avenues and passes to it. South. Pallage; road.—The Tyrians had no pair to the 24 ng 5. -

Pity tempts the pafs. Dryden. > ▲ permiftion to go or come any where.—They bei protect all that come in, and fend them to word deputy, with their fafe conduct or pass,

the at his disposition. Spenser .-

When evil deeds have their permissive pass, And not the punishment.

Give quiet pass

Through your dominions. Shak. If ever fate would fign my pass, delaid

It should be now no more. Chapman. A gentieman had a past to go beyond the seas. Claren. 4. An order by which vagrants or impotent perfons are fent to their place of abode. 3. Puth; thrust in fencing.

'Tis dangerous when the bafer nature comes Between the pa's and fell incenfed points

Of mighty opposites. -The king hath laid, that in a dozen paffes between you and him, he shall not exceed you three hits. Shak.-

With feeming innocence the crowd beguil'd: But made the desperate passes, when he simil'd.

6. State; condition.—To what a pas are our minds brought, that, from the right line of virtue, are wryed to these crooked shifts? Sidney .-After King Henry united the roses, they laboured to reduce both English and Irish, which work, to what pass and perfection it was brought, in queen Elizabeth's reign, hath been declared. Davies's State of Ircland .-

Thou did'it to this paffe, my affections move.

-I am now brought to fuch pass, that I can see nothing at ali. L'Estrange.—Matters have been brought to this pass, that if one among a man's fous had any blemish, he laid him aside for the ministry. South.

(2.) A Pass, in a military fense, is a strait and difficult pailage, which shuts up the entrance in-

to a country.

(3.) Pass. See Passado, § 2.

(4.) Pass Parole, in military affairs, a command given at the head of an army, and thence · communicated to the rear, by passing it from mouth to mouth.

(1.) \* To Pass. v. n. [passer, French; passus, a kep, Latin.] 1. To go; to move from one place to another; to be progressive. Commonly with fome particle.-

Teli him his long trouble is paffing

Out of this world. Sbak. -If I have found favour in thy light, pafs not a-. way from thy fervant. Genefis. - While my glory pafeth by, I will put thee in a clift of the rock, and will cover thee, while I pals by. Exodus xxxiii. 22 .- Thus will I cut off him that paffeth out, and him that returneth. Exekiel xxxv. 7 .- This heap and this pillar be witness, that I will not pais over to thee, and that thou shall not pass over it and this pillar unto me for harm. Genefis xxxi. 52 .-An idea of motion not puffing on, is no better than an idea of motion at reft. Locker-

He felt their fleeces as they pass' dalong. Pope. -If the cause be visible, we stop at the instrument, and feidom pass on to him that directed it. Wake's Prep. for Death. 2. To go; to make a-

Her face, her hands were torn

With passing through the brakes. 3. To make a change from one thing to another. -Others diffatisfied with what they have, and

Sha

not trufting to those innocent ways of getting more, fall to others, and pass from just to unjust.

Temple. 4. To vanish; to be lost.—

Beauty's a charm, but foon the charm will pas. Dryden.

s. To be spent; to go away progressively.—The sime, when the thing existed, is the idea of that space of duration, which passed between some sixed period and the being of that thing. Locke.—One who fixes his thoughts very intentity on one thing, so as to take but little notice of the succession of ideas that pass in his mind, whilst he is taken up with that earnest contemplation, lets slip out of his account a good part of that duration, and thinks that time shorter than it is. Locke. G. To be at an end; to be over.—

Eager Romans, eve all rites were past,

Did let too foon the facred eagle fly. Dryden.
7. To die; to pass from the present life to another state.

The pangs of death do make him grin; Disturb him not, let him pass peaceably. Shak. 8. To be changed by regular gradation. - Inflammations are translated from other parts to the iungs; a pleurity easily passetb into a peripuen-mony. Arbuthnot. 9. To go beyond bounds. Obiolete.—Why this passes, Mr Ford:—you are not to go loose any longer. Shak. 10. To be in any state.—I will cause you to pass under the rod. Ezekiel, xx. 37. 11. To be enacted .- Many of the nobility spoke in parliament against those things, which were most grateful to his majesty, and which still passed. Clarendon.—Neither of these bills have yet paffed the house of Commons. Swift. 32. To be effected; to exist. Unics this may be thought a noun with the article suppressed, and be explained thus: it came to the pass that.—I have heard it enquired, how it might be brought to pass that the church should every where have able preachers. Hooker.-When the case required diffimulation, if they used it, it came to pass that the former opinion of their good faith made them almost invitible. Bacon. 13. To gain reception; to become current: as, this money will not pass: -That trick, faid the, will not pass twice. Hulibras.—Though frauds may pass upon men, they are as open as the light to him that searches the heart. L'Estrange. - Their excellencies will not pass for such in the opinion of the learned. Dryd. -False eloquence passet only where true is not understood. Felton. The grossest suppositions pass upon them. Swift. 14. To be practised arttuily or fuccefsfully.-

This practice hath most shrewdly pass upon thee.

Shak.

15. To be regarded as good or ill.—This won't pass for a fault in him, 'till 'tis proved one in us. Atterbury.

16. To occur; to be transacted.—If we would judge of the nature of spirits, we must have recourse to our own consciousness of what passes within our own mind. Watt.

17. To be done.—Provided that no indirect act pass upon them to defile them. Taylor.

18. To heed; to regard. Not in use.—

A. for these fishen-coated flaves, I pass not.

zg. To determine finally; to judge capitally.

Well we may not pals upon his life, Without the form or justice.

20. To be supremely excellent.— Sir Hudibras's passing worth,

The manner how be falled forth. Underwood 21. To thrust; to make a push in sencing.—

To see thee fight, to see thee pass thy punds

They lash, they soin, they pa's, they strive bore

Their corflets. Drya

22. To omit.—

She would not play, yet must not pass.

23. To go through the alimentary duct.—Si stances hard cannot be dissolved, but they v pass; but such, whose tenacity exceeds the poers of digestion, will neither pass, nor be convered into aliment. Arhubnot. 24. To be in a lerable state.—A midding fort of man was well enough to pass by his father. L'Estrances. To Pass away. To be lost; to glide of Desining the soul to be a substance that aiw thinks, can serve but to make many men suspential they have no souls at all, since they such good part of their lives pass away. To vanish.

(2.) \* To Pass. v. a. 1. To go beyond it is advantageable to a physician to be called the cure of a declining distast; so it is for a comander to suppress a fedition, which has po-

the height. Hayward.

2. To go through: as, the horse passed the ri 3. To spend; to live through.—Were I not fured he was removed to advantage, I should my time extremely ill without him. Gollier.—

You know in what deluding joys we past The night that was by heav'n decreed our Dry

-We have examples of fuch, as pass most of t nights without dreaming. Locke.-

The people, free from cares, serene and Pass all their mild untroubled hours away.

—A lady, who had paffed the winter at Lot with her husband, entered the congregation. di'on. 4. To impart to any thing the powe moving.—Dr Thurston thinks the principal vinspiration to be, to move, or pass the blood, the right to the less twentricle of the heast. bann. 5. To carry hastily.—I had only tim pass my eye over the medals. Addison. 6 transfer to another proprietor.—

He that will pass his land,
As I have mine, may set his hand
And heart unto this deed.
7. To strain; to percolate.—They speak a vering wine from water, passing it through wood. Bacon. 8. To vent; to pronounce.—
many thousands take upon them to pass censures on the personal actions of others? 4
—They will commend the work in general pass so many fly remarks upon it afterwates shall destroy all their cold praises. Watts. gutter ceremoniously.—Many of the lords some of the commons, passed some complision.

to the two lords. Clarendon. 10. To utte

( 69 )

P A S

iemoly; or judicially.—All this makes it more prudent, rational and pious, to fearch our own ways, than to pals fentence on other men. Hammad.—He pals his promife, and was as good as his word. L'Edrange. 11. To transmit; to produce to go.—Wailer passed over 5000 horse and footby Newbridge. Clarendon. 12. To put an endlu.—

This night

We'll pass the business privately.

33. To surpass: to excel.—

Shak.

She more fweet than any bird on bough Would oftentimes amongst them bear a part,

And strive to pais, as she could well enough, Their native musick by her skiiful art. Spenser.

-Whom do'st thou pass in beauty? Ezekiel, 2001. 19.—

In my royal subject I pass thee. B. Jonson

The ancestor and all his heirs,

Though they in number pass the stars of heav'n, Are still but one.

Davies.

14. To omit; to neglect; whether to do or to mention.—

li you fondly pafi our proffer'd offer,
'Tis not the rounder of your old fac'd walls
Can hide you.

Shak.

Please you that I may pass this doing. Shak. I pass the wars, that spotted linkes make

With their fierce rivals. Dryden.

1 pass their warlike pomp, their proud array.

15. To transcend; to transgress.—They did fass those bounds, and did return fince that time. 16. To admit; to allow—The money of every one that passets the account, let the priest take. 1 Kings, xii. 4.—

Fil pass them all upon account. Hudibras.

17. To enact a law.—How does that man know, but the decree may be already passed against him?

South.-

Among the laws that pass'd, it was decreed,
That conquer'd Thebes from bondage should
be freed.

Dryden.

—Could the same parliament which addressed with 6 much zeal and earnestness against this eval. pass it into a law? Swist.—His majesty's minders proposed the good of the nation, when they advised the passing this patent. Swist. 18. To impose fraudulently.—

Th' indulgent mother did her care employ, And pass'd it on her husband for a boy.

Dryden.

19. To practice artfully; to make succeed.—After that discovery there is no passing the same trick upon the mice. L'Estrange. 20. To send from one place to another: 2s, pass that beggar to his own parish. 21. To Pass acway. To spend; to waste.—The father waketh for the daughter, left she pass acway the flower of herage. Early, kin. 9. 22. To Pass by. To excuse; to surgive.—God may pass by single sinners in this world. Tillosson. 23. To Pass by. To neglect; to disregard.—How far ought this enterprize to want upon these other matters, to be mingled with them, or to pass by them? Bacon.—It conduces much to our content, if we pass by those things which happen to our trouble. Taylor.—Certain passages of scripture we cannot, without

injury to truth, pass by here in filence. Burnes, 24. To Pass over. To omit; to let go unregarded.—

Better to pass him o'er, than to relate

The cause I have your mighty fire to hate.

to hate. *Dryde*e.

—It does not belong to this place to have that point debated, nor will it hinder our pursuit to pass it over in silence. Watts.—The poet passes it over as hashly as he can. Dryden.—The queen asked him, who he was; but he passes over this without any reply. Broome.

PASSA, a town of Perlia, in Farlillan.

\* PASSABLE. adj. [paffible, Fr. from pafs.]
1. Poslible to be passed or travelled through or over.—His body is a paffable carkais, if he be not hurt. Sbak .- Antiochus departed in all hafte, weening in his pride to make the land navigable, and the sea passable by foot. 2 Mac. 2. Supportable; tolerable; allowable.-They are crafty, and of a paffable reach of understanding. Howel. -Lay by Virgil; my version will appear a passable beauty when the original muse is absent. Dryden .- White and red, well mingled on the face, make what was before but paffable, appear beautiful. Dryden. 3. Capable of admission or reception.—In counterfeits, it is with men as with falle money; one piece is more or less pussible than another. L'Estrange.—Could they have made the flander paffable, we should have heard farther. Collier. 4. Popular; well received. This is a fense less usual.-Where there is no eminent odds in fufficiency, it is better to take with the more paffabie, than with the more able. Bacon .- A man of the one faction, which is most passable with the other, commonly giveth best way. Bacon.

PASSACAILLE. See Music, § 252.

(1.) PASSADE, in fencing. See Passado.
(2.) Passade, n. f. in the manege, is a turn or course of a horse backwards or forwards on the same spot of ground. Hence there are several sorts of passades, according to the different ways of turning, in order to part or return upon the same tread, which is called closing the passade; as the passade of one time, the passade of sive times, and the raised or high passades, into which the demivolts are made into curvets. See Horse-Manship.

(1.) PASSADO. n. f. [Italian.] A push; a thrust.—A duellist, a gentleman of the very first

house; ah! the mortal passado.

(2.) PASSADO, PASS, or PASSADE, in fencing, an advance or leap forward upon the enemy. Of these there are several kinds; as passes within, above, beneath, to the right, the left, and passes under the line, &c. The measure of the pass is when the swords are so near as that they may touch one another.

(1.) PASSAGE. n. f. | paffage, French.] 1. Act of passing; travel; course; journey.—The story of such a passage was true. Raleigh.—

So shalt thou best prepar'd endure

Thy mortal passage when it comes. Milton.—All have liberty to take fish, which they do by standing in the water by the holes, and so intercepting their passage, take great plenty of them. Brown.—Live like those who look upon themselves as being only and or passage that up have

fixte. Atterbury.—Though the passage be troublesome, yet it is secure. Wake.—

In fouls prepar'd, the paffage is a breath From time t' eternity, from life to death.

Harte.
2. Road; way.—That seemeth the best course, which hath most passages out of it. Bacon.—The land enterprize of Panama was grounded upon a salfe account, that the passages towards it were no better fortified than Drake had left them. Bacon.—

Is there yet no other way belides
These painful passages, how we may come
To death, and mix with our connatural dust?

Milton.

Against which open'd from beneath A passage down to th' earth, a passage wide.

To bleed to death was one of the most desirable passages out of this world. Fell.—When the passage is open, land will be turned most to great cattle; when thut, to sheep. Temple.—The Pertian army had advanced into the straight passages of Cilicia. South.—

The passage made by many a winding way, Reach'd e'en the room, in which the tyrant iny.

He plies him with redoubled strokes;
Wheels as he wheels; and with his pointed dart

Explores the nearest passage to his heart.

—The genius told me there was no passage to them, except through the gates of death. Addison.—I have often stopped all the passages to prevent the ants going to their own nest. Add son.—When the gravel is separated from the kidney, oily substances relax the passages. Arbathnot. 3. Entrance or exit; liberty to pass.—

What, are my doors opposed against my paffage?

Shak.

Make my passage free

For lov'd Dulichius. Chapman.

4. The state of decay. Not in use.—
Would some part of my young years

Would fome part of my young years Might but redeem the passage of your age!

5. Intellectual admittance; mental acceptance.— I expect it will have a fairer puffage than among those deeply imbued with other principles. Digby. 6. Occurrence; hap.—

It is no act of common puffage, but

A ftrain of rareness.

7. Unsettled state; aptness by condition or nature to change the place of abode.—Traders in Ireland are but factors; the cause must be rather an ill opinion of security than of gain: the last intices the poorer traders, young beginners, or those of passage; but without the first, the rich will never settle in the country. Temple.—

A bird of paffage! loft as foon as found.

8. Incident; transaction.—This business as it is a very high passage of state, so it is worthy of serious consideration. Hayward.—

Thou doest in thy passages of life
Make me believe that thou art only mark'd
For the hot vengeance of heav'n.

Shak.

9. Management; conduct.—Upon confideratio of the conduct and passage of affairs in forme times, the state of England ought to be cleared; an imputation cast upon it. Davies. 10. Part (a book; single place in a writing. Endroit. Fr.-A critic who has no taste nor learning, seldor ventures to praise any passage in an author, who is not been before well received by the publick. A dison.—As to the cantos, all the passages are as bullous as the vision at the beginning. Pope.—

How commentators each dark passage shun

And hold their farthing candle to the fun!

Your

(a) Passage Form a town and fort of I

(2.) PASSAGE, FORT, a town and fort of J maica, between Port Royal and Spanish town, miles SE, of the latter, at the mouth of the Cobr It has a brisk trade, and about 400 houses.

(2)

(1.) Passaron, a town of European Turkey, in the Morea; x8 miles S. of Argos.

PASSAROWAN. See Passaruan.

PASSAROWITZ, a town of European Turkey in Servia, near the Morava: famous for being the scene of a peace made, in 1718, between Charles VI and Achimet III. It lies 33 miles ESE. of Begrede, and 44 W. of Orlova.
(1.) PASSARUAN, or a kingdom of the E. In(1.) PASSARUAN, dies, in the ifle of Java.

(2.) PASSARVAN, the capital of the above kingdom, lies on the N. coast of the isle of Java, 40 miles W. of Panarucan. Its chief trade is in extron. Lon. 114. 15. E. Lat. 7. o. S.

(1.) PASSAU, a ci-devant bithopric and principainy of Germany, in the circle of Bavaria, lying between Lower Bavaria, Austria and Bohemia; about so miles long. It is now fecularized, and by Bonaparte's decision of the indemnities, Aug. 11, 1801, was divided between the Archduke of Austria, and the Elector of Bavaria; that part of it which lies beyond the Iltz, being affigned to the archduke, and the remainder to the elector.

(2.) Passau, an ancient, handsome, and celebrated city, of Germany, capital of the above terbriory, is seated on the Danube, at its conflux with the Inn and the Iltz, where it has a fort. It confile of 3 towns, besides the suburb, which has an old cafele. These towns are, 1. Passau Pro-\*\*\*, between the Danube and the Inn; 2. INN-ETABT; 22d 3. Ilzstadt or Ilstadt. See these The houses are well built, and the cathe finest in Germany. 22 is 201 furrounded by water, it is fortified by walls, ramparts and ditches. It was under the power of the Romans till A. D. 475, when it was trice by the Alemanni; after which it fell under be dominion of the Franks, and then under the Lkes of Bavaria. Otho III. made it a bishopric ▶ 999. It is famous for the treaty, called the reprace, made in 1552. It lies 82 miles ENE. Marich, and 120 E. of Vienna. Lon. 13. 34. E. ∠ 48. 26. N.

PASSAVANT, 3 towns of France: 1. in the cf the Doubs, 4 miles S. of Baume, and 134 SE of Belançon: 2. in that of Marne, 6 miles of St Menchould: 3. in that of Mayne and cee, 6 miles ESE. of Vihiers, and 15 SW. of

PASSED. Preterite and participle of pass. The fayest thou my judgment is passed over → God? Isaiab, xl. 27.—He affirmed, that g and law paffed fince king William's accettion; the act for preserving the game. Addison. The description of a life, passed away in vanity the shadows of pomp, may be soon drawn in the same place. Addison.

PASSENBERG, a town of Maritime Austria,

γ miles NNE. of Pedena.

7-) PASSENGER. n, f. [paffager, French.] Seller; one who is upon the road; a way-

the way, the wanton damsel found with, her passenger to entertain. Spenser. mates, that make their wills their law, some unhappy passenger in chase. Shows adding horror of whose thady brows the ferlord and wand'ring paffenger. Milt.

-Apelles, when he had finished any work, exposed it to the fight of all passengers, and concealed himself to hear the censure of his faults. Dryden. 2. One who hires in any vehicle the liberty of travelling.—The diligent pilot in a dangerous tempest doth not attend to the unskilful words of a pas-Jenger. Sidney.

(2.) \* Passenger. falcon. n. f. A kind of mi-

gratory hawk. Ainfavorth.

PASSENHEIM, a town of Prussia, in Oberland, built in the 14th century. It has often fuffered by fire, war, and peftilence. It is 70 miles S. of Konigsberg.

PASSEPIED. See Music, § 252.

(1.) \* PASSER. n. s. ifrom pufs.] One who paffes; one that is upon the road.—Under you ride the home and foreign shipping in so near a distance, that, without troubling the paffer, or borrowing Stentor's voice, you may confer with any in the town. Carray.-

Like a matron, butcher'd by her fons, And cast beside some common way a spectacle

Of horror and affright to paffers by,

Our groaning country bled at every vein. Rowe. (2.) Passer, in geography, a river of Germany, which runs into the Adige, near Meran in Tirol.

PASSERAT, John, a celebrated professor of eloquence in the royal college of Paris, and one of the politest writers of his time, was born at Troyes, in Champagne, in 1534. He studied the law under the famous Cujacius at Bourges, where he became professor of eloquence in 1572. He was an indefatigable student, yet to an extraordinary erudition he joined an uncommon politeness of manners and pleafantry. He gained the effeem of Charles IX. Henry III. and all the men of wit and learning in his time. He died in 1602, and left feveral admired works behind him.

PASSERES, an order of birds, in the class Aves. See Ornithology, and Zoology.

(1.) PASSERI, John Baptift, a learned antiquary and philologer, born at Gubio in Urbino, in 1694. Having entered into orders, he became apostolic protonotary and vicar general of Pesara. He published many books, particularly Pidura Etruscorum in Vascu'is, nunc primum in unum collecta, explicationibus et dissertationibus illustrate. Rona, 1767. 3 tom fol. Being overturned in his carriage, he received a bruife of which he died in 1780.

(2.) Passeri, John Baptist, a painter and poet of Italy, born in 1609. He was a disciple of Dominichino, but had more merit as an author than as a painter. He wrote the Lives of the Painters. Sculptors, and Architetts, of his own time. He died at Rome, in 1679, aged 70.

(3.) Passeri, Joseph, nephew of the preceding, under whom he studied, afterwards became the disciple of Charles Maratti. He chiefly excelled

in portraits. He died in 1714, aged 60. PASSERINA, in botany, Sparrow-wort, a

genus of the monogypia order, belonging to the octandria class of plants; and in the natural method ranking under the 31st order Veprecula.

PASSERINE ORDER. See ORNITHOLOGY.

PASSERO, CAPE, a cape of Sicily, anciently called Pachinus, the most southerly point of the. island. It is not a peninsula, but a barren island

about a mile round, separated from Sicily by a frait half a mile broad. It has a fort to protect the adjacent country from the Barbary pirates. In 1735, admiral Sir George Byng defeated a Spanish squadron off this cape. I.on. 15. 12. E.

Lat. 36. 35. N. PASSEROE, a river of Pruffia, which runs

into the Frisch-haff, below Braunsberg.

\* PASSIBILITY. n. f. [passibilité, Fr. from passible.] Quality of receiving impressions from external agents.—The last doubt, touching the pallibility of the matter of the heavens, is drawn from the eclipses of the sun and moon. Hakewill.

\* PASSIBLE. adj. (passible, Fr. passibilis, Lat.) Susceptive of impressions from external agents. -Theodoret disputeth that God cannot be faid to fuffer; but he thereby meaneth Christ's divine nature against Apollinarius, which held even deity itself passible. Hooker.

PASSIBLENESS. n. f. [from paffible.] Quality of receiving impressions from external agents. -It drew after it the herefy of the paffibleness of

the deity; Brerewood.

PASSIENUS, Paulus, a Roman knight nephew of the poet Propertius, whose elegiac poetry he imitated. He also attempted Lyric poetry with fuccess, in which he followed Horace. Plin. ep.

PASSIFLORA, the Passion-flower; a genus of the pentandria order, belonging to the gymandria class of plants; and in the natural method ranking under the 34th order, Cucurbitaceae. The calyx is pentaphyllous; there are 5 petals; the nectarium a crown; the berry is pedicillated. There are near 30 different species; all natives of warm foreign countries, only one of which is fufficiently hardy to fucceed well in the open ground bere; all the others requiring the shelter of a green-house or stove, but chiefly the latter. The most remarkable are,

1. Passiflora Cærulea, the blue-rayed common palmated passion-slower, hath long, slender, fhrubby, purplish-green stalks, branchy, and ascending upon support by their claspers 30 or 40 feet high; with one large palmated leaf at each joint, and at the axillas large spreading flowers, with whitish-green petals, and a blue radiated nectarium; fucceeded by a large, oval, yellowish fruit. It flowers from July until October; the flowers are very large, conspicuous, and their composition is exceedingly curious and beautiful. They come out at the axillas on pedunculi about three inches long, which they terminate, each flower having just close under the calyx a threelobed involucrum-like appendage; a five-lobed calyx, and a five-petalous corolla; the fize, figure, and colour of the calyx, &c. the petals arranging alternately with the calicinal lobes; the whole, including the involucrum, calyx, and corolla, make just 13 lobes and petals, all expanded flat: and within the corolla is the nectarium, composed of a multitude of thread-like fibres, of a blue and purple colour, disposed in circular rays round the column of the fructification; the outer ray is the longest, flat, and spreading on the petals; the inner is short, erect, and narrows towards the centre: in the middle is an erect cylindric clubshaped column or pillar, crowned with the roundish germen, having at its base five horizont spreading filaments, crowned with incumbent y low antheræ, that move about every way; a from the fide of the germen arise three slend fpreading ftyles, terminated by headed ftigm the germen afterwards gradually becomes a la oval fleshy fruit, ripening to a yellowish colour These wonderful flowers are only of one day's ration, generally opening about 11 or 12 o'clo and frequently in hot funny weather burft of with elafticity, and continue fully expanded that day: and the next they gradually close, furning a decayed-like appearance, and never o any more: the evening puts a period to their istence, but they are succeeded by new ones d on the fame plant.—This plant and flowers held in great veneration in some foreign Cath countries, where the religious make the les tendrils, and different parts of the flower, to re fent the inftruments of our bleffed Saviour's fion; hence the name passifiora.

2. PASSIFLORA INCARNATA, the incarnate fesh-coloured Italian passion-slower, hath a st perennial root; slender, herbaceous stalks, upon support four or five feet high; leaves posed of three sawed lobes, each leaf attende a twining tendril; and at the axillas long fle pedunculi, terminated each by one whitith fle having a greenish calyx, and a reddish or p radiated nectarium, furrounding the column fructification, which fucceed to a large, n flethy fruit, ripening to a beautiful orange of The flowers of this species are also very b ful, though of fhort duration, opening u morning, and night puts a period to their be but they are fucceeded by a daily supply of ones .- The fruit of this fort is also very ora tal, as ripening to a fine reddish orange of but these rarely attain perfection here, unle plants are placed in the flove; therefore there is fuch accommodation, it highly meril indulgence, where it will exhibit both flower green and ripe fruit; all at the same time beautiful manner.

3. Passiflora vespertilto, the bat' paffion-flower, hath flender, ftriated, branchy large, bilobate, or two-lobed leaves, th roundish and glandular, the lobes acute, divaricated like a bat's wings, and dotted neath; and axillary flowers, having white and rays. The leaves of this species have a lar appearance, the two lobes being expan or feven inches wide, refembling the win bat upon flight; hence the name vespertil the species in this country are of a tender except the first, which succeeds very well full ground, in a warm fituation; only their branches are fometimes killed in very feve ters; but plenty of new ones generally ri in fpring following: the others, denominat kinds, must always be retained in that ret

\*PASSING. participial adj. [from pass.] 1. Su-

prime; furpalling others; eminent.-

No fit in of arms shall win this noble fort, Or share it is puitlant wall, such puffing might lave t ells and charms, if they be said aright.

Fairfax.

Lis used adverbially to enforce the meaning of anaber word. Exceeding.—

Oberon is passing fell and wroth.

Passing many know it.

Many in each region passing fair.

She was not only a Tou fair.

She was not only paffing fair,
But was withal different and debonair. Dryden.
We learnt our liege was paffing well. Gay.

Passingbell. n.f. [paffing and bell.] The

\*PASSINGBELL. n. f. [puffing and bell.] The bell which rings at the hour of departure, to obtain prayers for the pailing foul: it is often used for the bell, which rings immediately after death.

Pray'rs ascend

To heaven in troops at a good man's passingbell.

Donne.

A talk of tumult, and a breath Would ferve him as his paffingbell to death.

Daniel.

Before the passing bell begun,
The news thro' buit the town has run. Swift.
(1.) PASSION. n. s. [passion, Fr. passio, Latin.]
1. Any effect caused by external agency.—A body a reft affords us no idea of any active power to the standard when set in motion, it is rather a passion and action in it. Locke.
2. Susceptibility of effect from external action.—The differences of mondable and not enable, and many other passions of matter are pleman notions. Bacon.
3. Violent commotion of the mind.—

All the other passions sleet to air. Shak.

Every pussion fully strives

To make itself in thee fair and admired. Shak.

I am doubtful, left
You break into some merry passion. Shak.
In loving thou do'ft well, in passion not;

Wherein true love confifts not. Milton.

Cruel his eye, but cast separate and paffon, to behold The fellows of his crime condenu'd.

The fellows of his crime condemu'd. Milten. Fa fin's too fierce to be in fetters bound. Dryd. It the art of rhetorick, befides order and persenty, only moves the paffins, and thereby miffers the judgment. Locke. 4. Anger.—The word a figure the receiving any action in a large angle the receiving any action in a large limited philosophical fenfe; in a more limited philosophical fenfe; and or fear, joy, forrow: but the nature; as love, fear, joy, forrow: but the people confine it only to anger. Watt.

Lock: ardour.—Where states me are paginon to sory of their country. Addison. 6. Love.—You kill'd her father: you confess' d you drew anglety argument to prove your passion for the daughter. Dryden and Lee's Oedipus.

He, to grate me more,

Schly own'd his paffion for Amedris. Rosve.

That what a paffion fuch a form must have.

Crasselle.

VOL. XVII. PART I.

7. Eagerness.— Abate a little of that violent paffors for fine cloaths, so predominant in your sex. Swifts 8. Emphatically, the last suffering of the Redeemer of the world.—He shewed himself alive after his passion, by many infallible proofs. Alls, i. 3.

ter his paffon, by many infallible proofs. Alls, i. 3.
(2.) Passion is a word, of which, as Dr Reid observes, the meaning is not precisely ascertained, either in common discourse or in the writings of philosophers. In its original import, it denotes every feeling of the mind occasioned by an extrinfic cause; but it is generally used to fignify some agitation of mind, opposed to that state of tranquillity in which a man is most master of himselfa That it was thus used by the Greeks and Romans, is evident from Cicero's rendering rates, the word by which the philosophers of Greece expressed it, by perturbatio in Latin. In this fense of the word, palion cannot be itself a diffinet and independent principle of action; but only an occasional degree of vehemence given to those dispositions, detires, and affections, which are at all times present to the mind of man; and that this is its proper fenfe, we need no other proof, than that pailion has always been conceived to bear analogy to a storm at sea, or to a tempest in the air. With respect to the number of pattions of which the mind is fufceptible, different opinions have been held by different authors. Le Brun, a French writer on painting, justly considering the expression of the pailions as a very important as well as difficuit branch of his art, has enumerated no fewer than twenty, of which the figns may be expressed by the pencil on canvass. (See DRAWING, Sect. XI; Plates CXIX, and CXX.) That there are so many different states of mind producing different effects which are visible on the features and the gestures, and that those features and gestures ought to be diligently studied by the artist, are truths which cannot be denied; but it is abfurd to confider all these different states of mind as passions, since tranquillity is one of them, which is the reverse of pal-

(3.) Passions and emotions, difference be-

TWEEN. See Emotion, § 2.

(4.) Passions, controversy respecting the ORIGIN OF THB. A question of considerable importance in the philotophy of the human mind, has been discussed at no small length, by several eminent authors, whether the different paffions be each a degree of an original and innate dispof a tion, diffinct from those dispositions which are respectively the foundations of the other passions, or only different modifications of one or two general dispositions common to the whole race? The torner opinion is held by all who build their fyftem of metaphytics upon a number of diffinct internal fenies; and the latter by those, who, with Locke and Hartley, resolve what is commonly called inflinet into an early affociation of ideas. (See Instruct and METAPHYSICS.) This queltion also involves in it the arguments respecting the difinterestedness of our most benevolent patfions. But as it would swell this article beyond all due bounds to give even an abridged view of the arguments on both fides, we shall refer the reader to the writings of Mellis Locke and Hartley, Lord Kames, Reid's Inquiry into the Human Mind, and Dr Sayer's Disquisitions Metaphysical

and Literary, where they will find the question in Urbino, in 1682. He was educated at the Ch amply discutted.

(5.) Passions, external signs of. See Phy-

SIOGNOMY.

(6.) Passions, in medicine, are ranked among the non-naturals. Joy, anger, and fear, are the principal; but all of them when violent, produce very fensible effects on the health. There are more instances on record of people being killed by sudden joy than by fudden grief.

(7.) Passions, in painting, are the external exprettions of the different dispositions of the mind; particularly by their effects on the features. See DRAWING, Sect. X. & XI; and Plates 119 & 120:

and Painting, Sea. VIII.

\* To Passion v. n. [passioner, Fr. from the noun.] To be extremely agitated; to express great commotion of mind. Obsolete.—
'Twas Ariadne passoning

For Theseus' perjury and unjust flight. Slak. \* PASSIONATE. adj. [passionné, Pr.] r. Moved by passion; feeling or expressing great commotion of mind.-Follow the light of found and fine . : judgment, without either cloud of prejudice or mist of passionate affection. Hooker .- Thucydides observes, that men are much more passionate for injustice than for violence. Clarend.—In his prayers, as his attention was fixt and fleady, fo was it inflamed with paffionate fervors. Fell.-Good angels looked upon this ship of Noah's with a pasfinate concern for its fafety. Burnet.—Men, upon the near approach of death, have been rouzed up into fuch a lively sense of their guilt, such a pasfonate degree of concern and remorfe, that, if ten thousand ghosts had appeared to them, they scarce could have had a ruller conviction of their danger. Atterbury. 2 Easily moved to anger.—Homer's Achilles is haughty and passionate, impatient of any restraint. Prior.
\* To Passionate. v. a. [from passion.] An old

word. Obsolete. 1. To affect with passion.-

Great pleasure mix'd with pitiful regard, That godly king and queen did passionate, Whilft they his pitiful adventures heard. Spenf. To express passionately.

Thy nicce and I want hands,

And cannot puffionate our tenfold grief. Shak. \* PASSIONATELY. adv. [from paffionate.] 1. With passion; with desire, love or hatred; with great commotion of mind.—Whoever passionately covets any thing he has not, has lost his hold. L'Estrange. If sorrow expresses itself never so loudly and paffionately, and discharges itself in never so many tears, yet it will no more purge a man's heart, than the washing of his hands can cleanse the rottenness of his bones. South .- I made Melcfinda, in opposition to Nourmahal, a woman pasfionately loving of her husband. Dryden. 2. Angrily.—They lay the blame on the poor little ones, Sometimes paffionately enough, to divert it from themselves. Locke.

\* PASSIONATENESS. n. f. [from paffionate.] r. State of being subject to passion. 2. Vehemence of mind. To love with fome passionateness the perfon you would marry, is not only allowable

but expedient. Boyle.

PASSIONEI, Dominic, a learned Roman cardinal, born of an illustrious family, at Fosfombrone

\_:

mentine college in Rome, where he formed a ric library with a collection of rare MSS. He we to Paris in 1706, where he was much respected I the literati, particularly by Montfaucon. He w employed in various negociations. He was at t congress at Utrecht in 1712; at Basil in 1714; a at Soleure in 1715: of which he published an count, entitled. Adn Legationis Helvetica. He w made Abp. of Ephefus, by Innocent III, and pi nounced the funcral oration on Prince Euge He died in 1761; and was a great patron of m of letters.

A flower. Miller.

(2.) Passion-flower. See Passiflora. (1.) \* Passion-week. n. f. The week immerately preceding Easter, named in commemorate of our Saviour's crucifixion.

(2.) PASSION-WEEK. The Thursday of tweek is called Maunday Thursday; the Frid

Good Friday; and the Saturday, the Great Sable (1.) \* PASSIVE. adj. [paffif, Fr. paffivus, I 1. Receiving impression from some external ag High above the ground

Their march was, and the passive air upbon

Their nimble tread. -The active informations of the intellect, fil the passive reception of the will, grew actuate a third and distinct perfection of practice. So -As the mind is wholly passive in the receptor all its simple ideas, so it exerts several act its own, whereby, out of its simple ideas, the same is formed to the same in the same in the same is formed to the same in the same in the same in the same in the same is formed to the same in the sam ther is formed. Locke. The vis inertia is a pa principle by which bodies perfift in their mo or rest, receive motion in proportion to the s impressing it, and resist as much as they are n ed. Newton's Opticks. 2. Unrefifting; not of

Not those alone, who possive own her lai But who, weak rebels, more advance here

3. Suffering; not acting. 4. [In grammar.] A passive is that which agnisies passion or the c

of action: as doceor, I am taught. Clarke's Lat (2.) Passive Obedience, the duty enjoine the scriptures of submission to the powers that The abfurdity which commonly attaches to phrase passive obedience originates from the mist loyalty of the adherents of the house of St who, to aggravate the illegality of the revolu were wont to represent James II. as supreme both houses of parliament, and of course over We shall only observe, that there is a difference between affive and paffive obedie and that many who confider themselves as b on no account whatever to refill the supreme po would yet fuffer death rather than do an imp action in obedience to any law of earthly ori

(3.) Passive Prayer, among the myflic di is a total fuspension or ligature of the intelle faculties; in virtue whereof, the foul remain itself, and as to its own power, impotent wit gard to the producing of any effects. The pi state, according to Fenelon, is only passive it fame fense as contemplation is, i.e. it does no clude peaceable, difinterested acts, but only quiet ones, or fuch as tend to our own int In the passive state, the foul has not properly any activity, any fensation, of its own: it is a mere inrate flexibility of the foul, to which the feeblest impulfe of grace gives motion.

(4.) Passive Title, in Scots law. See Law,

In II, Chap. 11, Sed. XX, § 21-36.

15.) PASSIVE VERB, in grammar, the verb or word that expresses suffering, or the effect of actian, which, in the learned languages, has a pechartermination; as amor, doctor, &c. in Latin; that is an r is added to the actives amo, doceo : and, rithe Greek, the inflication is made by changing 1.310 1721; as roale or siques, &c. But, in the modie linguages, the passive inslection is performed by auxiliary verbs, joined to the participle of the ful tense; as, I am praised, in Latin lauder, and in Greek seasopar; or, I am loved, in Latin amor, and in Greek pissopar. Thus it appears, that the accidiary verb am, serves to form the passives of English verbs: and the same holds of the French; 14, Je fus loué, I am praised; j'ai eté loué, I bave bes praised, &c. See GRAMMAR, under English LINGUAGE, p. 665.

· PASSIVELY. adv. [from passive.] 1. With a

fubre nature.-

Tho' some are possively inclin'd, The greater part degenerate from their kind.

Dryden.

: Without agency .- A man may not only puffiveh and involuntarily be rejected, but also may, by an act of his own, cast out or reject himself. Pearson.

PASSIVENESS. n. f. [from passive.] 1. Qualiof receiving impression from external agents. 2. Pathinty; power of suffering.—We shall lose of paracess with our being, and be as incapable of maring as heaven can make us. Decay of Piety. : Prience; calmness.—Gravity and passiveness in children is not from discretion, but phlegme. Fell.

PASSIVITY. n. f. [from passive.] Passiveness. An impovated word.—There being no mean betrees penetrability and impenetrability, between and activity, thefe being contrary and opposte, the infinite rarefaction of the one quality is the polition of its contrary. Cheyne's Phil. Prin.

(1.) PASSO, or a town of Maritime Austria, Passo Di Han, in Dalmatia, in the territory Sign, feated on the Cettina, on the fite of the

accept town of Aguum.

(2) Passo DI Mora, a town of Naples, in the cor. of Capitanata; 17 miles WSW. of Viefta. PASSOLIA, and two species of dried grapes. PASSOLINA. See LIPARI, N° 2.

1.) PASSOVER. n. f. [pass and over.] I. A indituted among the Jews in memory of when God, fmiting the first born of the possed over the habitations of the He-The Jews possover was at hand, and Jewest up. John II. 13.—The Lord's paffover, cally called Easter, was ordered by the Agliffe. 2. The facrifice killed.—Take Leb and kill the paffover. Exodus. xii. 21.

The Passover was called pajcha by the Greeks and Romans; not we prefume from I fufer, as Chrysottom, Irenzus, and Ter-inppose, but from the Hebrew word I Toge, leap. The institution of this soschwal, the reason of it, the alteration of

the Hebrew Calender, and its other confequences, with all the peculiar ceremonies observed in the celebration of it, are particularly related in the xiith. chap. of Exodus. With regard to the bread, see BREAD, § 13. The obligation of keeping the paffover was fo strict, that whoever neglected to do it, was condemned to death, (Numb. ix. 13.) But those who had any lawful impediment, as a journey, fickness, or any uncleanness, voluntary or involuntary; those that had been present at a funeral, or by any other accident had been defiled, were to defer the celebration of the passover till the 2d month of the ecclefiaftical year, or to the 14th day of the month Jiar, which answers to April and May. (See a Chr. xxx. 1, 2, &c.) The modern Jews observe in general the same ceremonies that were practifed by their ancestors, in the celebration of the paffover. On the 14th of Nisan, the first-born fakt in memory of God's smiting the first-born of the Egyptians. The morning prayers are the same with those said on other festivals. They take the roll of the pentateuch out of the cheft, and read as far as the end of the 1sth chapter of Exodus, and what is contained in the 18 h chapter of Numbers, relating to the passover. The matron of the family then spreads a table, and sets on it two unleavened cakes, and two pieces of the lamb, a shoulder boiled and another roasted. To this they add fome small sillies, because of the leviathan; a hard egg, because of the ziz: some meal, because of the behemoth, (these three animais being appointed for the feast of the elect in the other life); and peas and nuts for the children, to provoke their curiofity to ask the reason of this ceremony. They likewise used a kind of mustard, which has the appearance of mortar, to represent thir making bricks in Egypt. ther of the family fits down with his children and flaves, because on this day all are free. He takes bitter herbs, and dips them in the mustard, then eats them, and distributes to the rest. Then they eat of the lamb, the institution of which is at that time recited by the master of the family. The whole repair is attended with hymns and prayers. They pray for the prince under whose dominion they live, according to Jeremiah's advice. (xxix. 7.) See FEAST. § III, N° iv. The fame things are repeated the two following days; and the festival is concluded by the ceremony babdala. (See HABDALA.) This ceremony is performed at the cloting of the Sabbath-day, when the mafter of the house pronounces certain benedictions, accompanied with certain formalities, requesting that every thing may succeed well the week fol-After going out of the fynagogue, they then eat leavened bread for the last time. (Leo of Modena, p. iii. c. 3. and the Rabbins.) While the temple was standing, they brought their lambs thither, and facrificed them, offering the blood to the prieft, who poured it out at the foot of the altar. The pallover was typically predictive of Christ (r Cor. v. 7.) Many erroneously imagine, that the passover was instituted in memory of the Israelites passing the Red Sea; though it is certain the feast was held, and had its name, before the Israelites took a step of their way out of Egypt, and consequently several days before their passing the Red Sea- Besides the passover celebrated on the rath of the first month, there was a second pafforer held on the 15th of the 2d month after the equinox, inflituted by God in favour of travellers and fick persons, who could not attend at the first, nor be at Jerusalem on the day. Greeks, and even some of the catholic doctors, from the 13th, 18th, and 19th chapters, of St John, conclude, that Jesus anticipated the day marked for the paffover in the law; but the authority of three evangelists feems to evince the countrary, See Whitby's Differtation on this subject, in an appendix to the fourteenth chapter of St Mark. F., Lamy supposes, that our Lord did not attend at the paffoyer the last year of his life; which sentiment has drawn upon him abundance of oppofers. F. Hardouin afferts, that the Galileans celebrated the passover on one day, and the Jews on another.

(1.) \* PASSPORT. n. s. [passport, Fr.] Permission of passage. Fain she would have given a Secret passport to her affection. Sidney .-

Giving his reason passport for to pass

Sidney, Whither it would. Let him depart; his paffport shall be made.

-Having used extreme caution in granting passports to Ireland, he conceived that paper not to have been delivered. Clar.—The golpel has then only a free admission into the assent of the understanding, when it brings a passport from a rightly disposed will. South,

He shows the passport which he brought a-

His passport is his innocence and grace. Dryden, At our meeting in another world ;

For though hast drunk thy paffport out of this.

Dryden.

Fortune, for a passport gave him wealth.

Harte, (2.) A PASSPORT, or PASS, if a licence or writing obtained from a government granting permission and a safe conduct to pass through the country without moleflation: Also a permission granted by any state to navigate in some particulàr fea, without molestation. It contains the name of the vessel, and that of the master, together with her tonnage and the number of her crew, certifying that the belongs to the subjects of a particular state, and requiring all persons at peace with that state to suffer her to proceed on her voyage without interruption. The violation of paffports expressly granted by the king, or by his ambaffadors, to the subjects of a foreign power in time of mutual war, or committing acts of hostility against such as are in amity, league, or truce with us, who are here under a general implied fafe conduct, are breaches of the public faith, without which there can be no intercourse or commerce between one nation and another; and fuch offences may, according to the writers upon the law of nations, be a proper ground of a national war. And it is enacted by ftat. 31 Hen. VI. c. 4. still in force, that if any of the king's subjects attempt or offend upon the fea, or in any port within the king's obeyfance, or against any stranger in amity, league, or truce, or under fafe-con-duct, and especially by attacking his person, or fpoiling him, or robbing him of his goods; the

lord-chancellor, with any of the Justices of eithe the king's bench or common pleas, may cause fu restitution and amends to be made to the part injured. Pasquier says, that passport was intruduced for passe par tout. Balzac mentions a ve honorable paffport given by an emperor to a pl lolopher in these terms: " If there be any one land or fea hardy enough to molest Potamon, I him consider whether he be strong enough to wa war with Cæfar."

(3.) Passport is used likewise for a licen granted by a prince for the importing or expo ing merchandizes, moveables, &c. without payi the duties. Merchants procure such passports certain kinds of commodities; and they are ways given to ambaffadors and ministers for th

baggage, equipage, &c.

(4.) PASSPORT is also a licence obtained for importing or exporting of merchandizes deen contraband, and declared fuch by tariffs, &c. gold, filver, precious stones, ammunition of w

horses, corn, wool, &c. upon paying duties. PASSUMPSICK, a river of Vermont, wh rifes in Orange County, runs 34 miles S.

then turns SE. and falls into the Connecticut. PASSUS, among the ancient Romans, a m fure of length, being about four feet ten incl The w or the 1000th part of a Roman mile. properly fignifies, the space betwixt the feet of man walking at an ordinary rate. See MEASU N° VII, \$ 5, iv.

PASSY, a town of France, in the departm of Paris, and district of St Denis, near Paris. PASSYUNK, a township of Pennsylvania

Philadelphia county. (1.) \* PAST. participial adj. [from pass.] Not present; not to come .-

This not alone has shone on ages past, But lights the present, and shall warm the

2. Spent; gone through; undergone.-A life of glorious labours paft.

(2.) \* PAST. n. f. Elliptically used for time.

The past is all by death possest. (3.) \* Past. preposition. 1. Beyond in tim Barah was delivered of a child, when the was age. Heb. xi. 11. 2. No longer capable of.vent prayers he made, when he was efteemed fense. Hayward.

Paft hope of conquest, 'twas his latest ca Like falling Crefar decently to die. Dr-Many men have not yet finned themselves all fense or feeling, but have some regrets. Cal 3. Beyond; out of reach of.-

We must not

Profitute our past cure malady. What's gone, and what's past help Should be past grief. That France and Spain were taught the u

shipping by the Greeks and Phænicians is a past questioning. Heylyn.—Love, when once government, is consequently past shame. L'Es

Her life she might have had; but the despair Of farme his, had put it past her care. Dryden. I'm fupify'd with forrow, past relief. Dryden. -That the bare receiving a fum should fink a man into a service state, is past my comprehension. (aller.-That he means paternal power, is past andt. Leie. 4. Beyond; further than .- We will robribe king's high way, until we be past thy keren Numbers, xxi. 22. 5. Above; more than. -The northern Irish Scots have bows not past tracquiters of a yard long. Spenfer. - The same mudion was not deep, not paff forty foot from

the ground. Bacon. PASTARO, a town of the Italian republic, in the dept of the Lario, district and late duchy of Com, feated on the E. bank of Lake Como, W.

4 Inrohio.

(i.) \* PASTE. n. f. [pafte, French.] 1. Any this mixed up to as to be viscous and tenacious: tach as flour and water for bread or pies; or vamos kinds of earth mingled for the potter.-Excost you could bray Christendom in a mortar, and avold it into a new paffe, there is no possibility of an body war. Bacon .-

With particles of heavenly fire The God of nature did his foul inspire; Which wife Prometheus temper'd into paffe, Aid, mixt with living itreams, the godlike image

Dryden. When the gods moulded up the paste of man, Sme of the dough was left upon their hands. Dry. the bas the whitest hand that ever you saw, and ruin pale better than any woman. Spellator. 2. Har and water boiled together fo as to make a anest. 3. Artificial mixture, in imitation of process frances.

12) Paste, in cookery, a fost composition of ber, wrought up with proper fluids, as water, mile or the like, to serve for cases or cossins, from to hake meats, fruits, &c. It is the basis or foundation of pycs, tarts, patties, pasties, and other works of pastry. It is also used in confectomary, &c. tor a preparation of some fruit, wak by beating the pulp thereof with some fluid other admixture, into a fost pappy consistence, triding it into a dish, and drying it with sugar, min becomes as pliable as an ordinary paste. It \* sled occasionally also for making the crusts and bottoms of pyes, &c. Thus, with proper admixtires, are made almond pastes, apple pastes, arcot paftes, cherry, currant, lemon, plum, per t, and pear pastes.

3-) Paste is likewise used for a preparation of Three flour, boiled up and incorporated with Feet; used by various artificers, as upholsterers, biller, bookbinders, &c. inftead of glue or fize, haten or cemeut their cloth, leathers, papers, to. When paste is used by bookbinders, or for per hangings to rooms, they mix a 4th, 5th, or th of the weight of the flour of powdered refin; ad where it is wanted still more tenacious, eum By be preferred, by diffolving a little fublimate, the proportion of a dram to a quart, in the wamaployed for making it, which will prevent Monty rats and mice, but any other kind of verand infects from preying upon it.

tion or counterfeiting of GEMS in glass, is an art of considerable importance. GEMS made of pastes, are noway inferior to the native stones, when carefully made and well polished, in brightness or transparence, but want their hardness.

(5.) Pastes, General Rules for making. These are, 1. That all the vessels in which they are made be firmly luted, and the lute left to dry before they are put into the fire. 2. That such veffels be chosen for the work as will bear the fire well. 3. That the powder be prepared on a porphyry stone; not in a metal mortar, which would communicate a tinge to them. 4. That the just proportion in the quantity of the feveral ingredients be nicely observed. 5. That the materials be all well mixed; and, if not sufficiently baked the first time, be committed to the fire again, without breaking the pot; for if this be not obferved, they will be full of blifters and air bladders. 6. That a small vacuity be always left at the top of the pot, to give room to the swelling of the ingredients. To make paste of extreme hardness, and capable of all the colours of the gems, with great lustre and beauty.-Take of prepared crystal, so lb. fast of polverine, 6 lb. fulphur of lead, 2 lb. mix all these well into a fine powder: make the whole with common water into a hard paste; and make this paste into fmall cakes of about 3 oz. each, with a hole in their middle; dry them in the fun, and afterwards calcine them in the straitest part of a potter's furnace. After this, powder them, and levigate them to a perfect fineness on a porphyry stone, and fet this powder in pots in a glass furnace to purify for 3 days: then cast the whole into water, and afterwards return it into the furnace, where let it stand 15 days, in which time all foulness and blifters will disappear, and the paste will greatly resemble the natural jewels. To give this the colour of the emerald, add to it brass thrice calcined; for a sea-green, brass simply calcined to -a redness; for a sapphire, add zaffer, with manganele; and for a topaz, manganele and tartar. All the gems are thus imitated in this, by the same way of working as the making of coloured glasses; and this is so hard, that they very much approach the natural gems. The colour of all the counterfeit gems made of the feveral pastes, may be made deeper or lighter according to the work for which the stones are designed; and it is a necessary general rule, that small stones for ringe, &c. require a deeper colour, and large ones a pa-Belides the colours made from manganele, verdigris, and zaffer, which are the ingredients commonly used, there are other very fine ones which care and skill may prepare. A very fine red may be made from gold, and one not much inferior to that from iron; a very fine green from brass or copper; a sky-colour from silver, and a much finer one from the granates of Bohemia. An excellent way of making the paste to imitate the coloured gens is this: Take a quantity of sugar of lead; set it in sand, in a glass body well luted from the neck downwards; leave the mouth of the glass open, and continue the fire 24 hours; then take out the falt, and if it be not red but yellowish, powder it fine, and return it into the \*, PASTES, in the glass trade, or the imita- vessel, and keep it in the fand-heat 24 hours more,

till it becomes as red as cinnabar. The fire must not be made so strong as to melt it, for then all the process is spoiled. Pour distilled vinegar on this calcined fast, and separate the solution from the dregs; let the decanted liquor stand six days in an earthen veffel, to give time for the finer fediment to subfide; filter this liquor, and evaporate it in a glass body, and there will remain a most pure fatt of lead; dry this well, then dissolve it in fair water; let the solution stand fix days in a glazed pan; let it subside, then filter the clear folution, and evaporate it to a yet more pure white and fweet falt; repeat this operation three times; put the now perfectly pure salt into a glass veffel, let it in a fand heat for several days, and it will be calcined to a fine impalpable powder of a lively red. Take all the ingredients as in the common composition of the pastes of the several colours, only instead of red lead, use this powder; and the produce will well reward the trouble of the operation. A paste proper for receiving colours may be readily made by pounding and mixing 6 lb. of white fand cleanted, 3 lb. of red lead, 2 lb. of purified pearl-aines, and 1 lb. of nitre. A softer passe may be made in the same manner, of 6 lb. of white fand cleanfed; red lead, and purined pearl-ashes, of each 3 lb.; 1 lb. of nitre, half a pound of borax, and 3 oz. of arfenic. For common use a pound of common falt may be subfituted for the borax. This glass will be very foft, and will not bear much wear if employed for rings, buckles, or fuch imitations of stones as are expofed to much rubbing; but for ear-rings, ornaments worn on the breaft, and those little used, it may

last a considerable time. (6.) Pastes, method of colouring. To give pastes different colours, the process is as follows: For Ametbyst. Take 10 lb. of either of the compositions described under Glass-Making, Sect. XIV. one ounce and a half of manganese, and one dram of zaffer,; powder and fufe them together. Black. Take 10 lb. of either of the compositions just referred to, one ounce of zaffer, fix drams of manganele, and five dr. of iron, highly calcined; and proceed as before. Blue. Take of the fame composition to lb. of zaffer 6 dr. and of manganele 2 dr. and proceed as with the foregoing. Chrysolite. Take of either of the compofitions for paste above described, prepared without faltpetre, 10 lb. and of calcined iron 5 drams; and purfue the same process as with the rest. Red Cornelian. Take of the compositions mentioned under GLASS-MAKING, Sed. XIV, 2 lb. of glass of antimony 1 lb. of the calcined vitriol called fearlet ochre 2 lb. and of manganese one dram. Fuse the glass of antimony and manganese with the composition; then powder them, and mix them with the other, by grinding them together, and full them with a gentle heat. White Cornelian. Take of the composition just referred to 2 lb. of yellow ochre well washed two drams; and of calcined bones 1 oz. Mix them, and fuse them with a gentle heat. Diamond. Take of the white fand 6 lb. of red lead 4 lb. of pearl ashes purified 3 lb. of nitre 2 lb. of arfenic 5 oz. and of manganese one scrupie. Powder and sufe them. Eagle marine. Take ten pounds of the composition under Glass-making; 3 oz. of copper highly calcined with fulphur; and one scruple of zaffi Proceed as before. Emerald. Take of the fat composition with the last 9 lb.; 3 oz. of copy precipitated from aquafortis; and two drams precipitated iron. See GLASS-MAKING, Si XIV, § 13. Garnet. Take 2 lb. of the compo tion under GLASS-MAKING; 2 lb. of the glats antimony, and a drams of manganete. For vit gar garnet, take of the composition for paste, bove described in § 5, two pounds; one pour of glass of antimony, and haif an ounce iron, highly calcined; mix the iron with the coloured paste, and fuse them; then add glass of antimony powdered, and continue th in the heat till the whole is incorporated. Gl or full yellow. Take of the composition for pa 10 pounds; and 13 oz. of iron strongly calcing proceeding as with the others. See also GLA MAKING, Sed. XIV, § 12. Deep purple. Take either of the compositions for patte 10 lb. of m ganele one ounce; and of zaffer half an our Ruby. Take 1 lb. of either of the compositions palle, and two drams of precipitation of gold tin; powder the paste, and grind the calx of g with it in a glass, flint, or agate mortar, and t fuse them together. A cheaper ruby passe a be made with half a pound of either of the ab compositions, half a pound of glass of antimo and one dram and a half of the calk of gold; ceeding as before. See GLASS-MAKING, S XIV, § 18: Sappbire. Take of the composit tor patte 10 lb. of zaffer 3 drains and 1 ferus and of the calx Cassi one dram. Powder and Or the same may be done, by mit with the paste ; of its weight of smalt. To Take of the compositions under GLASS-MARI (Set. XIV, § 20.) 10 lb. omitting the faltpe and an equal quantity of the Gold-coloured GLASS. Powder and fufe them. Turquoife. T of the composition for blue paste already de bed, 10 lb. of calcined bone, horn, or ivory, a pound. Powder and fuse them. Opake w Take of the composition for paste 10 lb. and of calcined horn, ivory, or bone; and procee before. Semitransparent white, like opal. GLASS-MAKING, Sed. XIV. 9 15.

(7.) Pastes, method of making, in FORM OF DOUBLETS. Let the crystal or glat first cut by the lapidaries in the manner of a liant, except that, in this case, the figure mul composed from two separate stones, or part stones, formed in the manner of the upper under parts of a brilliant, if it was divided it horizontal direction, a little lower than the dle. After the two plates of the intended f are thus cut, and fitted fo exactly that no divi can appear when they are laid together, the per part must be polished ready for setting; and then the colour must be put betwixt the plates by this method. Take of Venice or prus turpentine two feruples; and add to it scruple of the grains of mastich chosen perfe pure, free from foulnels, and previoully pow ed. Melt them together in a small silver or l spoon ladle, or other vessel, and put to them dually any of the coloured fubftances below t tioned, being first well powdered; stirring t together as the colour is put in, that they

le florenghly commixed. Warm then the doubto to the time degree of heat as the melted mixhe; and paint the upper furface of the lower t, and put the upper one instantly upon it, seefing them to each other, but taking care that they may be conjoined in the most perfectly even When the cement or paint is quite cold All the redundant part of it, which has been and out of the joint of the two pieces, should kepsy scriped off the fide, till there be no appage of any colour on the outlide of the cloubin they should then be skilfully set; obsermounting over the joint, that sper piece may be well fecured from fepatake from the under one. The colour of the Illi may be best imitated, by mixing a fourth med careine with some of the finest crimson that can be procured. The SAPPHIRE may a conterfeited by very bright Prussian blue, with a little of the above mentioned crimin like, to give it a cast of the purple. The but hould not be very deep-coloured, The little of it should be used: for otherwise, it prea black shade that will be injurious to the for the doublets. The EMERALD may counterfeited by distilled verdigrease, with a The purdered aloes. But the mixture should be arongly heated, nor kept long over the wifer the verdigreafe is added: for the colour be soon impaired by it. The resemblance of GULLET may be made by dragon's blood; it cannot be procured of fufficient: may be helped by a very small quandemine. The AMETHYST may be imita-The mixture of some Prussian blue with town lake; but the proportions can only replaced by direction, as different parcels of be beard Pruffian blue vary extremely in the deof trength of the colour. The yellow To-. bus may be counterfeited by mixing the powalors with a little dragon's blood, or by ingly used, or the tinge will be too strong opearance of that stone. The CHRYSObracinth, vinegar garnet, eagle marine, er fuch weaker or more diluted colours, formed in the fame manner, by leffening. portions of the colours, or by compoundtogether correspondently to the hue of to be imitated; to which end it is proper Las original sone, or an exact imitation of # hand when the mixture is made, in order more certain adapting the colours to the kired: and when these precautions are tad the operation well conducted, it is pracbring the doublets to fo near a refemthe true stones, that even the best judot diftinguish them, when well fet, withcour manner of inspection; viz, by bethen betwint the eye and light, in such that the light may pass through the upand corners of the stone; when it will perceived that there is no colour in the

ATTES, M. FORTANTEU'S METHOD OF THE BASES OF. M. Fontanieu of the Royal of Sciences at Paris, proposed, the folcesses, which were approved. Although

the different calces of lead are all adapted to produce the fame effect in vitrification; yet M. Fontanieu prefere lead in scales, and next to that minium, as being the most constantly pure. Sift. through a filk fieve the preparations of lead to be used in the vitrification, to separate the grosser parts; as also the lead in a metallic state when white lead in scales is employed. The base of factitious gems is calx of lead and rock-crystal. Pure fand, flint, and the transparent pebbles of rivers, are substances equally fit to make glass: but as it is first necessary to break mailes of crystal, ftones, or pebbles, into fmaller parts; so by this operation particles of iron or copper are frequently introduced, and to these dust or greafy matters are also apt to adhere. Our author therefore begins by putting the pounded crystal or pebbles into a crucible, which he places in a degree of heat capable of making the mass red-hot; he then pours it into a wooden bowl filled with very clear water; and shaking the bowl from time to time, the small portions of coals furnished by the extraneous bodies fwim on the furface of the water, and the vitrifiable earth, with the iron, &c. rests on the bottom. He then decants the water; and having dried the mass, pounds it, lifts the powder through the finest filk fieve; then digefts the powder 4 or 5 hours with muriatic acid, shaking the mixture every After having decanted the acid from the vitrifiable earth, he washes the latter until the water no longer reddens the tincture of turnfol. earth, being dried, is passed through a silk sieve, and is then fit for use. Nitre, salt of tartar, and borax, are the three species of salts that enter with quartz and the calces of lead into M. Fontanieu's vitrifications. The fuccess depends much on the accurate proportion of the substances made use of to form the crystal which serves as a base. After having tried a great variety of receipts, our author recommends the following: 1. Take two parts and a half of lead in scales, one part and a half of rock-crystal or prepared flints, half a part of nitre, as much borax, and a quarter part of glass of arse-These being well pulverized and mixed together are put into a Hessian erucible, and submitted to the fire. When the mixture is well melted, pour it into cold water: then melt it again a ad and a ad time; taking care after each melting to throw it into fresh cold water, and to separate from it the lead that may be revived. The fame crucible should not be used a 2d time. as the glass of lead is apt to penetrate it, and lose the contents. Cover the crucible well, to prevent any coals getting into it, which would fpoil the composition. 2. Take two parts and a half of white cerufe, one part of prepared flints, half a part of falt of tartar, and a quarter part of calcined borax: melt the mixture in a Heshan crucible, and then pour it into cold water; then melt it again, and wash it a 2d and a 3d time, the same precautions being observed. 3. Take two parts minium, one part rock-crystal, half a part of nitre. and as much falt of tartar: this mixture being melted, must be treated as the former. 4. Take three parts of calcined borax, one part of prepared rock-crystal, and one part of falt of tartar: thefe being well mixed and melted together, must be poured into warm water; the water being de-..

canted and the mass dried, an equal quantity of minium must be added to it; it is then to be melted and washed several times as directed above. 5. That called by our author the Mayence base, and which he confiders as one of the finest crystalline compositions hitherto known, is thus compofed: Take three parts of fixed alkali of tartar, 1 part of rock-crystal or slint pulverized: the mixture to be well baked together, and then left to cool. It is afterwards poured into a crucible of hot water to dissolve the fritt; the solution of the fritt is then received into a stone-ware pan, and aquafortis added gradually till it no longer effervesces: this water being decanted, the fritt must be washed in warm water till it has no longer any take: the fritt is then dried, and mixed with one part and a half of fine ceruse or white lead in scales; and this mixture must be well levigated with a little distilled water. To one part and a half of this powder dried add an ounce of calcined borax: let the whole be well mixed in a marble mortar, then melted and poured into cold water. These fusions and lotions having been repeated, and the mixture dried and powdered, a 12th part of nitre must be added, and then melted for the last time; when a very fine crystal will be found in the crucible. 6. For very fine white stones: take 8 oz. of ceruse, 3 oz. of rock crystal pulverized, 2 oz. of borax finely powdered, and half a grain of manganese; hav-ing melted and washed this mixture as above, it

produces a very fine white crystal. (9.) PASTES, M. FONTANIEU'S PROCESS FOR COLOURING. On the preparation of the calces of metals depends the vividness of the colours. a, From Gold. To obtain the mineral purple named precipitate of Cassius: 1. Dissolve some pure gold in aqua regia, prepared with 3 parts of precipitated mitrous acid and one part of muriatic acid; to haften the dissolution, the matrass should be placed in a fand-bath. Into this pour a folution of tin in aqua regia. The mixture becomes turbid, and the gold is precipitated with a portion of the tin, in the form of a reddish powder; which after being washed and dried, is called precipitate of Cassius. The aqua regia employed to diffolve the tin is composed of 5 parts nitrous acid and one part of muriatic acid: to 8 oz. of this aqua regia are added 16 oz. of distilled water. Some leaves of Malacca tin, about the fize and thickness of a sixpence, are then put into this diluted aqua regia, till it will diffolve no more of them: which operation requires commonly 12 or 14 days; though it might be hastened by beating the tin still thinner, and then rolling it into the form of a hollow cylinder, or turning it round into spiral convolutions. prepare more readily the precipitate of Cassius, M. Fontanieu puts into a large jug eight ounces of folution of tin, to which he adds four pints of distilled water: he afterwards pours into this metallic lyc fome folution of gold, drop by drop, taking care to ftir the whole with a glass tube: when the mixture becomes of a deep purple colour, he ceafes dropping the folution of gold; and to hasten the precipitation of the mineral purple, pours into the mixture a pint of fresh urine. Six or seven hours after, the precipitation is collected at the bottom of the veilel: the fluid is then decanted; and the precipitate, washed once or twice, is dried

till it becomes a brown powder. 2. Pour into vessel of sine tin with a thick bottom 4 oz. of the folution of gold; three minutes after add two pin of distilled water. Let this mixture stand in the tin veffel 7 hours, taking care to ftir it every hot with a glass tube; afterwards pour it into a con cal glass jug, and add to it a pint of new urine; the mineral purple is foon precipitated, and then is be washed and dried. 3. Distil in a glass cornu placed in a bath of ashes, some gold dissolved aqua regia, made with three parts nitrous and o part muriatic acid; when the acid is passed or and the gold contained in the cornute appears di leave the vessel to cool, then pour into it for new aqua regia, and proceed to distil as before Replace the aqua regia twice upon the gold a distil the same. After these four operations, po by little and little into the cornute fome oil of t tar per deliquium, which will occasion a brisk est vescence: when this ceases, distil the mixture it becomes dry, and then put fome warm wa into the cornute. Shake the whole and pour into a cucurbit, when a precipitate is deposit the colour of which is sometimes brown and so times yellow: After having washed this pred tate, dry it. This mineral purple is much sup or to the foregoing, two grains of it only w fufficient to an ounce of the base, whilst it requ ed of the other two a 20th part of the base. found a means of exalting the colour of the cipitate of Cassius, by putting to it a fixth part of weight of glass of antimony finely powdered, of nitre in the proportion of a dram to 8 oz. the base. b, From Silver. The calk of fin being vitrified, produces a yellowish grey con This calx enters only into the composition of yellow artificial diamond and the opal. tanieu introduces it into the base in the form luna cornea. To prepare it, dissolve the five precipitated nitrous acid, and afterwards p into it a folution of fea-falt: a white precipi is obtained; which, being washed and dried, m very readily in the fire, and is foon volating if not mixed with vitritiable matters. the yellow diamond, 25 grains of this luna co are put to an ounce of the bale: the dofe of fi may be diminished according to the shade of low that one wishes to procure. c, From Con The calx of copper imparts to white glass finest green colour; but if this metal be not actly in a state of calx, it produces a brow red colour. Mountain blue, verdigris, and the fidue of its distillation, are the different prep tions of copper which our author employ to make the artificial emeralds. d, From Although it has been afferted, that the calci iron introduce a very fine transparent red cd into white glass, M. Fontanicu could only of from it a pale red, a little opake. The cal iron that he employed was in the proportic the 20th part of the base. There are several of preparing the caix of iron called erocus M or faffron of Mars. One may use the scales of found upon the bars of the furnaces, which I to distil aquafortis. By digesting filings of with distilled vinegar, then evaporating and r cing the vinegar 10 or 12 times upon these fil

and drying them alternately, a calk of iron is obtained, which must be fifted through a filk sieve, and then calcined. The calx of iron thus obtained by the vinegar, introduced a green colour inclining to a yellow. By the following process a lation of Mars of the finest red colour is obtained: Let an ounce of iron filings be diffolved in nitrous acid in a glass cornute, and distilled over a find-bath to dryness. After having replaced the and or the dry calx, and re-diffilling it a 2d and id time, it is then edulcorated with spirit of wine, and alterwards washed with distilled water. from the Magnet. Calcine the magnet before it be istroduced into the vitrifications: Having tornied the magnet two hours, it must be washed and dried. It is only employed in the composition of the opal. f, From Cobalt. The calx of cobut is only proper to introduce a blue colour into rule; but this metal is rarely free from iron and bimuth, and therefore it is first necessary to separue them from it. This is done by calcining the ore of cobalt to disengage the arsenic; afterwards the cala must be distilled in a cornute with sal armoniae, and the iron and the bismuth are suband with this falt. The distillation must be repeated with the sal ammoniae till this salt is no laga coloured yellow. The cobalt which remusin the cornute is then calcined in a potsherd, and becomes a very pure calx; which being introduced into the base, in the proportion of a part, gives it a very fine blue colour, the citrity of which may be increased at discretion by the addition of cals of cobalt. To prepare har nevel refembling that which is called black ment keland; melt together 1 lb. of one of the lake, 1 oz. of the calx of cobalt, 2 oz. of croas Meriu, prepared with sinegar, and 2 oz. of From Tin. The calk of tin is not miniable alone, it renders opake the glass with this melted, and forms white enamel. For this purpose, calcine the putty of tin; then wash and dry it, and fift it through a filk fieve. Take 6 th of the 2d base, the same quantity of the calread putty of tin, and 48 grains of manganese. h from Animony. If the antimony be in a state e absolute calx, such as the diaphoretic antimony, 2320 longer vitrifiable, and may be substituted walk of tin, to make white enamel. M. Fonthree introduces the glass of antimony in the emposition of artificial topazes. For the oriento loraz, he takes 24 oz. of the first bases and five caches of the glass of antimony. To imitate the logar of Saxony, he adds to each ounce of the his ine grains of the glass of antimony. For the of Brazil, he takes 24 oz. of the first base, me ounce 24 grains of glass of antimony, and tran of the precipitate of Cassius. i, From Man-This mineral, employed in a small quantry, renders the glass whiter; a larger quantity present a very fine violet colour, and a still larcole of it renders the glass black and opake. are two ways of preparing manganese: 1. not fimple confifts in exposing it to a red and then quenching it with distilled vinegar; alterwards dried and powdered, to pals it ha file fieve. 2. Haudiquer de Blancour AL XVIL PART I.

nese, proper to furnish a red colour, and names it fusible manganese. Take of manganese of Piedmont one pound; torrify and pulverize it; then mix it with a pound of nitre, and calcine the mixture during 24 hours; afterwards wash it repeatedly in warm water, till the water of the lyes has no longer any tafte; dry the manganese, and mix with it an equal weight of fal ammoniac; levigate this mixture on a flab of porphyry with oil of vitriol diluted with water to the strength of vinegar. Dry the mixture, and introduce it into a cornute; distil by a graduated fire; and when the fal ammoniac is fublimed, weigh it, and add to the mixture an equal quantity. Then distil and fublime as before, and repeat the operation fix times; at each time mix the sal ammoniac and the manganese upon the porphyry with diluted oil of vitriol. At Tournhault in Bohemia, there is fold a fufible glass of a yellow colour, very like that of the topaz of Brazil, which, when exposed to a degree of fire in a cupel fufficient to redden it, becomes of a very fine ruby colour, more or less deep according to the degree of fire to which it has been exposed. Our author assayed this glais, and found it to contain a great deal of lead, but was not able to discover any gold in it.

(10.) Pastes, M. Fontanieu's Rules, Re-SPECTING THE FIRE, FURNACE, AND COMPOSI-TIONS FOR. There are three degrees of heat very different in their energy. The tire kept up in the wind-furnaces in the laboratories of chemists, is less active than that whose effect is accelerated by the means of bellows; and a fire supported by wood, and kept up during 60 hours without interruption, produces singular effect in vitrification, and renders the glass finer and less alterable. When recourse is had to the forge, in order to operate a vitrification, it is necessary to turn about the crucible from time to time, that the mass may melt equally. Some coal aifo should be replaced, in proportion as it confumes towards the nozel of the bellows; for without this precaution. we should run the risk of cooling the crucible opposite to the slame, and probably of cracking it, when all the melted mass running among the coals would be totally loft. Though this is the readiest way of melting, it should not be employed out of choice; for the crucible often breaks, or coals get into it, and reduce the calx of lead to a metallic state. The wind furnace is either square or A finall cake of baked clay or brick, of round. the thickness of an inch, is placed upon the grate; and upon this cake is placed the crucible, fur-rounded with coals. The degree of heat produced by this furnace is much less than that of the forge: but to succeed in the vitrification, M. Fontanieu recommends a furnace described by Kunckel, which, with some necessary alterations, is represented on Plate CCLXIX. The interior part is so disposed, that we may place crucibles at three different heights; and the name of chambers is given to those steps upon which the crucibles are placed. Fig. 1. is a plan of the kiln at the first chamber, and fig. 2. a plan of the kiln where the fire is placed. Fig. 3. exhibits the elevation; A the ash-pit; B the door to put in the wood; C the door of the sirst chamber; D the

door of the fecond chamber; E the third chamber; F the flue or chimney; GG iron hoops which furround the kiln to strengthen it. Fig. 4. is a section of the kiln: H the alli-pit with its air-hole; I the chamber for the fire, with an air-hole; K the first chamber for the crucibles; L the second chamber; M the dome; N the chimney; OO air-holes. The degree of heat cannot be equal in the 3 chambers. The chamber K is that where the heat is greatest, afterwards in that of L, and laftly, in that of M. Begin by planing the crucibles according to their fize, in thefe different chambers; by which means the best effect in vitrification is produced. To conduct the fire well, only three billets of white wood should be put into the furnace at a time for the first 20 hours, four billets at a time for the next 20 hours, and fix billets for the last 20 hours; in all 60 hours. The furnace is then left to cool, care being taken to stop the air-holes with some lute; and, in about 48 hours after, when the kiln is quite cold, the crucible is to be withdrawn. Compositions. 1. For the white dia-mond: Take the base of Mayence. This crystal is very pure, and has no colours. 2. For the sellow diamond: to an ounce of the 4th base, add for colour 25 grains of luna cornea or 10 grains of glass of antimony. 3. For the emerald: 1. To 15 oz. of either of the bases, add for colour one dr. of mountain-blue and fix gr. of glass of antimony; or, 2. To 1 oz. of the 4d base, add 20 gr. of glass of antimony and 3 gr. of calk of cobait. 4. For the japphire: To 24 oz. of the Mayence base, add 2 dr. 64 gr. of the calx of cobalt. 5. For the ange thift: To 24 oz. of the Mayence base, add 4 dr. of prepared manganese and 4 gr. of precipitate of Cassius. 6. For the beril: To 24 oz. of the 3d bale, add 96 gr. of glass of antimony and 4 gr. of calx of cobalt. 7. For the black agaic: To 24 oz. of either of the bases, add 2 oz. of the mixture directed above in par. f. 8. For the opal: To 1 cz. of the 3d base, add 10 gr. of luna cornea, 2 gr. of magnet, and 26 gr. of absorbent earth. 9. For the oriental topaz: To 24 oz. of the first or third bale, add 5 dr. of glass of antimony. For the topaz of Saxony: To 240z. of the same bale. add fix dr. of the glass of antimony. 11. For the topaz of Brazil: To 24 oz. of the 2d or 3d base, add 1 02. 24 gr. of the glass of antimony, and 8 gr. of precipitate of Cassius. 12. For the byacinth: To 24 oz. of the base made with rock-crystal, add 2 dr. 48 gr. of glass of antimony. 13. For the oriental ruby: 1. To 16 oz. of the Mayence base, add a mixture of 2 dr. 48 gr. of the precipitate of Cafe has, the same quantity of crocus Martis prepared in aquafortis, the fame of golden fulphur of antimony and of fulible manganete, with 2 oz. of mi-peral crystal; or, 2. To 20 oz. of the base made with flint, add half an ounce of fufible manga-. se and 2 oz. of mineral crystal, 14. For the 22-Life ruby: 1. To 16 oz. of the Mayence base, add he above colouring powder, but diminified part; or, 2. To 20 oz. of the base made with mints, add the fame colouring powder, but with ath lefs of the manganete. The full tions gema are easily distinguished from the natural, by their, formers and fulibility; by their folubility in acids;

by their causing only a single refraction of the rays of light; and, in many cases by their specialic gravity, which exceeds 2.76 in all precious gems of the first order, as the diamond, ruby, say, phire, &c.

(11.) PASTES, REVIVED ART OF MAKING, I IMITATION OF ANTIQUE GEMS. There has been at different times a method practifed by partical lar persons of taking the impressions and figure of antique gems, with their engravings, in glasses the colour of the original gem. This has alway been effected a very valuable art, and great preferable to the ordinary method of doing it fealing-wax or brimstone; but this art, being a cret in the hands of particular persons, who their bread by it, died with them, and every no artist was obliged to re-invent the method; at length Mr Homberg, having discovered it great perfection, gave the whole process to world to be no more loft; and fince that time has been practifed in France and other place Mr Homberg was favoured in his attempts w all the engraved gems of the king's cabinet; took such elegant impressions, and made such act resemblances of the originals, and that in fes fo artfully tinged to the colour of the ge themselves, that the nicest judges were decein in them, and often took them for the true antique flones. These counterfeit gems also serve, 23 V as the original ones, to make more copies free fo that there is no end of the numbers that be made from one; and there is this farther vantage, that the copy may be made perfect, the original should not be so, but should have tained some damage. The chief care in the ration is to take the impression of the gem very fine earth, and to press down upon the piece of proper glass, softened or half me ed at the fire, so that the figures of the imput of the made in the earth may be nicely and so soften approximate the control of fectly expressed upon the glass. In general, whole process much resembles that of the co mon founders: although in this nice founder there is a number of difficulties which would at all affect the common founder. For his pole, every earth will ferve that is fine enough receive the impressions, and tough enough not crack in the drying; these all serve for their because the metals which they cast are of a ture incapable of mixing with earth, or receive it into them, even if both are melted together, that the metal always easily and perfectly ke rates itself from the mould; but it is very diffic in these casts of glass. They are composed of matter which differs in nothing from that of mould, but that it has been run into this form the force of fire, and the other has not yet h fo run, but is on any occasion ready to be for and will mix itself inseparably with the glass i large fire: confequently, if there be not great of used, as well in the choice of the glass as in manner of using it, when the whole is finish there will be found great difficulty in the sepa ing the glass from the mould, and often this not be done without wholly destroying the pression. All earths run more or less easily in fire as they are more or less mixed with faline

teles. As all falts make earths run into giafs, and ait is necessary to use an earth on this occasion for the making a mould, it being aifo necessary to the perfection of the experiment, that this earth hould not melt or run, some earth must be got which enturally contains very little falt. the order which Mr Homberg examined, none good much divested of falts, or so fit for the mpd, is the common Tripoli, or Tripela, adhplish glass and stones. Of this earth there m in common kinds; the one reddish, and actional of feveral flakes or firata; the other yelbond, and of a simple structure. These are both to be lad in shops. The latter is from the Leret: the former is found in England, France, ed many other places. This tripela must be chofa fat and smooth to the touch, and not mixed and findy or other extraneous matter. The yelknih kind, commonly called Venetian tripoli, is the left receives the impreffions very beautiin the opeame, which the red kind sometimes does. land usually employed both kinds at once in actioning manner: first, powder a quantity of 6 red tripda in an iron mortar, and fifting it finglia fire fiere fet it by for ute; then furape was test a quantity of the yellow tripela into and afterwards rub it till very len z glafs mortar with a glafs postle. The to be powder is, the finer will be the imprefthe more accurately perfect the caft. The minima might naturally suppose, that the to obtain a perfect fine powder of water; but against this. There is natube wellowish tripela a fort of uncluofity, was it is formed into a mould keeps its together, and gives the whole an uniform fefer: now the washing the powder takes my the unduofity; and though it renders it iner, it makes it leave a granulated furface, fronth one, in the mould; and this must the furface of the cast less smooth. in airelas are separately powdered, the red and be mixed with fo much water as will to the confidence of pate, fo that it may mided like a lump of dough between the this paste must be put into a small cruof a flat shape, and about half an inch or more in depth, and of fuch a breadth at exe as is a little more than that of the stone mpression is to be taken. The crucible is early filled with this paste lightly pressed it, and the furface of the paste must be a over with the fine powder of the yellow When this is done, the stone, the impression is to be taken, must be To the furface, and preffed evenly down pate with a finger and thumb, to as to free frong and perfect impression; the then to be preffed nicely even to its fides fagers, or with an ivory knife. be thus left a few moments, for the of the paste to moisten the dry powder of tripela which is strewed over it : then to be carefully raised by the point of fied in a handle of wood; and the cru-

cible being then turned bottom upwards, it will fall out, and the impression will remain very beautifully on the tripela. If the fides of the cavity have been injured in the falling out of the ftore, they may be repaired; and the crucible must then be fet, for the paste to dry, in a place where it will not be incommoded by the dust. The red tripoli being the more common and the cheaper kind, is here made to fill the crucible only to fave the other, which alone is the fubstance fit for taking the impression. When the stone is taken out. it must be examined, to see whether any thing be lodged in any part of the engraving, because if there be any of the tripela left there, there will certainly be so much wanting in the impression. When the crucible and paste are dry, a piece of glass must be chosen of a proper colour, and cut to a fize proper for the figure; this must be laid over the mould, but in fuch a manner that it does not touch the figures, otherwise it would spoil them. The crucible is then to be brought near the furnace by degrees, and gradually heated till it cannot be touched without burning the fingers \$ then it is to be placed in the furnace under a muffle, furrounded with charcoal. Several of these finall crucibles may be placed under one muffle; and when they are properly disposed, the aperture of the muffle thould have a large piece of burning charcoal put to it, and then the operator is to watch the process, and see when the glass begins to look bright: this is the fignal of its being fit to receive the impression. The crucible is then to be taken out of the fire; and the hot glass must be pressed down upon the mould with an iron instrument, to make it receive the regular impression: as foun as this is done, the crucible is to be fet at the fide of the furnace out of the way of the wind, that it may cool gradually without breaking. When it is cold, the glass is to be taken out, and its edges should be grated round with pincers, which will prevent its flying afterwards, which is an accident that fometimes happens when this caution has been omitted, especially when the glass is naturally tender. The different coloured glasses are of different degrees of hardness, according to their composition; but the hardest to melt are always the best for this purpose, and this is known by a few trials. If it be defired to copy a stone in relief which is naturally in creux, or to take one in creax which is naturally in relief, there needs no more than to take an impression first in waz or fulphur, and to mould that upon the paste of tripela inftend of the ftone itself: then proceeding in the manner before directed, the process will have the defired fuccess. A more simple and easy method than the above is by taking the casts in gypfum, or plafter of Paris, as it is commonly cal-For this purpole, the gyplum must be finely pulverifed, and then mixed with clear water to the confishence of thick cream. This is poured upon the face of the gem or feal of which the impression is wanted, and which must be previously moistened with oil to facilitate the separation of the cast; and to confine the liquid plaster, it is only necessary to pin a slip of oiled paper round the fides of the feal, by way of a cape or rim. When the plaster is dry, it is to be taken off, and

fet before the mouth of the furnace, to free it entirely from moisture; when it is fit to be used as a matrix in the same way as that formed with the tripela earths. Only no crucible or other receptacle is at all necessary; the casts being formed like so many small cakes half an inch thick, and thus put into the furnace with the bits of glass upon them. The glass, after coming to the proper heat, is pressed down upon the mould with an iron fpatula to receive the defired impression, the pressure requisite being more or less according to the size of the stone. This method has been long practifed very fuccessfully, and with no small emolument, by Mr Deuchar of Edinburgh. The only respect in which it is inferior to the other more operose and expensive methods, consists in the chance of air-bubbles arifing in pouring on the plaster; which chance, however, is less in proportion to the fineness of the gypfum employed. When air-bubbles occur, the carts may be laid a-fide, as it is fo easy to renew them. The applifide, as it is fo easy to renew them. cation of pastes to multiply and preserve the impressions of camaieux and intaglios, is an object very interesting to artists and to antiquaries, as well as to men of learning and tafte in the fine arts. This art, though only lately restored in any degree of perfection, is of very confiderable antiquity, The great prices which the ancients paid for the elegant gems engraved by the celebrated Greek artists, could not but early suggest to them the idea of multiplying their numbers, by taking off their impressions in wax, in sulphur, in plaster, or in clay; but more particularly in coloured glass, or that vitrified substance commonly called paste. As the impressions on paste/are durable, and imitate the colours and brilliancy of the original stones, they serve the same purposes as the gems This art was therefore practifed not themselves. only by the Greeks, but by all the nations who cultivated Grecian taste. Many of the finest gems of antiquity are now loft, and their impreffions are to be found only on ancient pastes. Great therefore is the value of these pastes. merous collections of them have been formed by the curious. Instances of this are found in the Florentine Museum, in Stosch's work on ancient gems with inferiptions, in Winckelmann's description of Stosch's cabinet, and in the noble collection of Mr Charles Townley in London. The art of taking impressions of gems seems not to have been altogether loft even in the Gothic ages; for Heraclius, who probably lived in the 9th century, and wrote a book De coloribus et artibus Romanorum, teaches in very plain terms how to make Indeed, fome of the few, who then posfessed this art, taking advantage of the ignorance of the times, fold pastes for original gems. Thus the famous emerald of the abbey of Reichnaw near Constance, although a present made by Charlemagne, is now found to be a piece of glass. thus the celebrated emerald vafe in the cathedral of Genoa is likewise found to be a paste. The Genoese got this vase at the taking of Cesarea, in 1101, as a equivalent for a large fum of money;

nor was any imposition then suspected, for in 1319

they pawned it for 1200 marcs of gold. But this ingenious art, revived indeed in Italy in the time

of Laurence De Medicis, and Pope Leo X. was

not cultivated in an extensive manner till the be ginning of the 18th century, when M. Homber restord it. In this he is said to have been great affifted and encouraged by the then duke of O leans regent of France, who amused himself wi that celebrated chemitt, in taking off impression in paste from the king of France's, his own, at other collections of gems. According to t French Encyclopedifts, M. Clachant the elder, engraver of some note, who died at Paris in 178 learned this art from his royal highness, to who household his father or he seems to have belong Mad. Feloix next cultivated this art. She h been taught by her father, who, in quality of g con de chambre to the regent had often affifted the laboratory of his mafter, where he acquir this knowledge. Her collection confifts of 18 articles. Baron Stosch, a Prussian, who travel over Europe in quest of original engraved sto and impressions of ancient gems, for the eleg work which he published and Picart engrave entitled Gemmæ antiquæ coloratæ, was well quainted with this art. He had taught it to fervant Christian Dehn, who settled at Ro where he made and fold his well known fulp impressions and pastes. He had collected 2500 ticles. Dolce has arranged them in a scientific der, and given a descriptive catalogue of the It was chiefly from Dehn's collection that the t for fulphurs and pastes has become so univer They are great objects of study, and often required hearning to explain them. They have questionably served to extend and improve the of engraving on stones; and have been of infi use to painters, to statuaries, and to other art as well as to men of claffical learning and tafte. It is very difficult to take off impression and perfectly to imitate various coloured cam It cannot be properly done in wax, fulphur, I ter, or glass of one colour only. The difficu arising from their size and form, and from the rious nature of the different forts of glass, w do not well unite into different strata, are very merous: nor could the completeft success in chemical and mechanical branch of the art duce a tolerable cameo. Imprettions or imitati if unaffifted by the tool of the engraver, do fucceed: because the undercutting and deep v of most of the originals require to be filled up clay or wax, that the moulds may come off without injuring them. Hence the impres from these moulds come off hard and destitu delicacy, sharpness, and precision of outline the underworking of the moulder is cut a But Mr Reiffenstein at Rome, by his genius, severance, and the assistance of able artists, overcome these difficulties; and has had the sati tion of fucceeding, and producing variegate meos which can hardly be diftinguished from originals. Mr Lippart of Dresden, an inger glazier, and an enthufiast in the fine arts, prac this branch not unfuccessfully; but not fir fufficient encouragement for his pastes of loured glass, or perhaps from local diffici in making them well and cheap, he aban ed this art. He substituted in its place imp ons of fine white alabafter or of felenite ter. Such impressions, when carefully soake

85 thation of white Castile soap, then dried, and mibbed over with a foft bruth, take a very agreethe polish. They show the work perhaps to betis advantage than red or white fulphurs do; but my are not so durable, and are liable to be deby rubbing. Of these impressions Mr Light published 3 different collections, each of the entaining 1000 articles; and to the merit is him increased the number of Mad. Feloix and definin Dehn's collections, which are all and his, he added, that of employing two Germans to arrange and describe them. The were arranged and described by the late Christ at Leipfic, and the 2d and 3d 2000 by hat Heine at Goettingen. Nor did Mr Lippart iphere; but to make the fludy of antiquity more and acceptable to artists, he selected out of whole collection of 3000, a finaller one of 2000 the best and most instructive subjects, of which Latelf drew up and published a description in But of all the artists who have taken and one feems to have carried that art to perfection as Mr James Tassie, a native of who has refided in London fince 1766. howledge in various branches of the fine arts, talry in that of drawing, naturally led him The elegant portraits which he models in and afterwards moulds and casts in paste, atirdy resemble cameos, are well known public. Mr Taffie, proliting of all the forreplacions of this fort, and by expence, inaccess to many cabinets in England and bydoms, to which former artists had durid admission, has now increased his colread in pressions of ancient and modern gems of above 15,000 articles. It is the collection of this kind that ever existed; antiqua-Cholars, men of tafte, and philosophers. red demand for his pastes was perhaps owthe beginning to the London jewellers, who them into fashion, by setting them in lab, bracelets, necklaces, and other trin-The reputation of this collection having the empress of Russia, the ordered a comthe; which being accordingly executed in and most durable manner, were arranged cabinets, and placed in the apartments of palace at Czariko Zelo. Mr Taffie, in this committee, availed himfelf of all which the improved state of chethe various ornamental arts, and the knowthe age, afforded. The impressions were a beautiful white enamel composition, and fubject to thrink or form air-bladders; the fire when ftruck with fteel, and takes ; and which shows every stroke and artic in higher perfection than any o-When the colours, mixed colours, ereof the respective originals, could be atthey were imitated as completely as art them; infomuch that many of the Thus and cameos in this collection are d initations, that artifts themselves they could hardly be diffinguished nginals. And when the colour and nagens could not be authenticated, the

pastes were executed in agreeable, and chiefly transparent, colours; constant attention being beflowed to preferve the outlines, extremities, attributes, and inscriptions. It was the learned Mr Rafpe (from which this account is taken) who arranged this great collection, and made out the defcriptive catalogue. His arrangement is nearly the same with that of the late Abbe Winckelmann, in his description of the gems which belonged to Baron Stosch. But as modern works were inferted in this collection, he found it necessary to make a few alterations, and added fome divisions to those of M. Winckelmann, as will appear from the following confpectus; I. Ancient Art and Engravings. Egyptian. Hieroglyphics, facred animals, divinities, priefts. Bafilidian, Gnostic, and other talifmans, &c. Oriental and barbarous ancient and modern engravings. Greek and Roman originals, copies, and imitations (the Etruscan are classed with the Greek works.) A, Mythology or fabu-Gods, inferior divinities, religious celous age. remonies. B, Heroic age before the fiege of Troy. C, Siege of Troy. D, Historic age. Of Carthage, Greece, Rome, subjects unknown. E, Fabulous animals and chimeras. F, Vafes and urns. II. Modern Art and Engravings. A, Religious fubjects. B, Portraits of kings and fovereigns. C, Portraits of illustrious men in alphabetical order. D. Portraits unknown. E, Devices and emblems. F, Cyphers, arms, supporters, and medley of modern

\* To Paste. v. a. [paster, Fr. from the noun.] To fasten with paste. By pasting the vowels and confonants on the fides of dice, his eldeft fon played himself into spelling. Locke.-Young creatures have learned their letters and fyllables, by having them pasted upon little flat tablets. Watts.

(1.) \* PASTEBOARD. n. f. [pufte and board.] Maffes made anciently by patting one paper on another: now made fometimes by macerating paper and cafting it in moulds, fometimes by pounding old cordage, and casting it in forms.-Tintoret made chambers of board and pasteboard, proportioned to his models. Dryden.-I would not make myfelf merry even with a piece of pafleboard, that is invefted with a publick character. Addition.

(2.) \* PASTEBOARD. adj. Made of patteboard. -Put filkworms on whited brown paper into a pasteboard box. Mortimer.

(3.) PASTEBOARD is chiefly used for binding books, making letter-cases, &c. See PAPER-MA-

KING, Sect. II, § 5.
(1.) \* PASTEL. n. f. [glastum.] An herb. Air s.

(2.) PASTEL. See PASTIL.

(1.) \* PASTERN. n. f. [pasturon, Fr.] 1. That part of the leg of a horse between the joint next the foot and the hoof .- I will not change my horse with any that treads on four posterns. Shak. Henry V .-

Upright he walks on pasterns firm and straight.

-Being heavy, he should not tread sliff, but have a pastern made him, to break the force of his weight. Greav. 2. The legs of an human creatme in contempt .--

So strait the walk'd, and on her patherne high.

(2.) PASTERN, in the manege. See FARRIF-Y.

Fart I, Sca. I. This part should be short, especially in middle-sized horses; because long pasterns are weak, and cannot so well endure travelling.

(3.) PASTERN JOINT, the joint next a horse's

foot.

(1.) \* PASTIL. n. f. [pafiillus, Lat. pafiille, Fr.] A roil of pafte.—To draw with dry colours, make long pafiils, by grinding red lead with strong wort, and io roll them up like pencils. Peacham.

(2.) PASTIL, or PASTIL, among painters, is a paste made of different colours ground up with gum-water, to make CRAYONS. See PAINTING,

Part II, Self. V, § II.

(3.) PASTIL, in pharmacy, is a dry composition of sweet-smelling refins, aromatic woods, &c. fometimes burnt to clear and scent the air of a chamber.

(1.) \* PASTIME. n. f. [pass and time.] Sport; amusement; diversion.—It was more requisite for Zelmane's hurt to rest, than fit up at those pastimes. Sidney.—

I'll be as patient as a gentle stream,

And make a passime of each weary step. Shak.

Passime passing excellent.

Shakesp.

Find passime, and bear rule.

Milton.

A man, much addicted to luxury, recreation

and passime, should never pretend to devote him-

felf entirely to the sciences. Watts.

(2.) PASTIMES of some kind seem to be absolutely necessary, and to none more than to the man of fludy; for the most vigorous mind cannot bear to be always bent. Constant application to one pursuit, if it deeply engage the attention, is apt to unhinge the mind, and to generate madnefs; of which the Don Quixote of Cervantes, and the aftronomer of Johnson, are two admirably conceived instances; confirmed by too many facts in real life. See PASCAL, SWIFT, &c. But though pastime is necessary to relieve the mind, it indicates great frivolity when made the business of life; and yet the rich and the great, who are not obliged to labour for the means of subfishence, too often rove from pastime to pastime with as conftant assiduity as the mechanic toils for his family, or as the philosopher devotes himself to science. When those pastimes tend to give elasticity to the mind or strength to the body, such conduct is not only allowable, but praise-worthy; but when they produce effects the reverse of these, it is both hurtful and criminal. The gaming-table, the masquerade, the midnight affembly of any fort, must of necessity enfeeble both the body and the mind; and yet fuch are the fashionable amusements of the prefent day, to which many a belle and many a beau facrifice their beauty, their health, their quiet, and their virtue. Far different were the pastimes of our wifer ancestors: Remote from effeminacy, they were innocent, manly, and gene-rous exercises. From ancient records, it appears, that the fports, amufements, pleasures, and recreations, of our ancestors, as described by FITZ-STEPREN, added strength and agility to the wheels of state mechanism, while they had a direct tendency towards utility. For most of these ancient recreations are refolvable into the public defence of the flate against the attacks of a foreign enemy. The play at ball, derived from the Romans, is first introduced by this author as the common exerciof every school-boy. The performance was in field, where the refort of the most substantial at confiderable citizens, to give encouragement a countenance to this feat of agility, was splend and numerous. The intention of this amuseme was to make the juvenile race active, nimble; a vigorous; which qualities were requifite whene their assistance should be wanted in the protect of their country. The next species of pastime l a fimilar tendency, although it was only co FIGHTING, held annually in the afternoon Shrove-Tuefday; for the amazing spirit and c rage displayed by these animals tended to ins the youth of a warlike nation with a heroic di gard of life itself, when put in competition w honour and patriotism. Another species of ma exercife was truly martial, and intended to qua the adventurers for martial discipline. It is reli by Fitz-Stephen thus: " Every Friday in Len company of young men comes into the field horseback, attended and conducted by the horsemen: then march forth the sons of the zens, and other young men, with disarmed la and thields; and there practise feats of war. N courtiers likewise, when the king is near the and attendants upon noblemen, do repair to exercises; and while the hope of victory doc flame their minds, they show by good proof ferviceable they would be in martial affairs." evidently is of Roman descent, and immedi brings to our recollection the Ludus Troja, in fed to be the invention, as it was the commo ercise, of Ascanius. The common people, in age of masculine manners, made every amuse where strength was exerted the subject mat instruction and improvement: instructed to their hodily strength in the maintenance of country's rights; and their minds improve fuch exertion, into every manly and gen principle. In the vacant intervals of industr labour, commonly called the holy-days, inde and inactivity, which now mark this porti time, were found only in those who were d pered with age or infirmity. Fitz-Stephen "In Easter holydays they fight battles upo water. A shield is hanged upon a pole, fix the middle of the stream. A boat is pre without oars, to be borne along by the vi of the water; and in the fore part thereof fta a young man, ready to give charge upon the with his lance. If fo be that he break his la gainst the shield, and doth not fall, he is the to have performed a worthy deed. If w breaking his lance he runs strongly again shield, down he falleth into the water; f boat is violently forced with the tide: but of fide of the shield ride two boats, furnished young men, who recover him who falleth i they may. In the holydays all the fumn youths are exercised in leaping, dancing, the wreftling, casting the stone, and practising fhields; and the maidens trip with their time and dance as long as they can well fee. In every holyday before dinner, the boars pr for brawn a e fet to fight, or elfe bulls o are baited." Such were the laudable puri which leifure was devoted by our forefath

for back as 1130. Their immediate successors breathed the same spirit. In 1222, the 6th year Heavy III. certain masters in exercises of this and a public profession of their instructions ad dicipline, which they imparted to those who tele honourable atchievements. About this perod persons of rank and family introduced the ind Taxxis; and erected courts or oblong e-Lo is the performance of it. About 1253, le d Henry III. the QUINTAN was a sport a faihion in almost every part of the king-This contrivance confifted of an upright I straig fixed in the ground, upon the top of \*25 a cross piece of wood, moveable upon like; one end of which was broad like the flat of an halberd, while at the other end was burklack. The mafterly peformance was, spou the broad part being struck with a which fometimes broke it, the affailant rode m, to as to avoid being struck on the back beg of fand, which turned round instantly the stroke given with a very swift motion. and executed this feat in the most dexterous was declared victor, and the prize to which entitled was a peacock. But if, upon taken, the contender miscarried in striking the buddede, his impotency of skill became and contempt of the spectators. Dr Mat. Hift. of Oxford/h. tells us, that was in practice in his time at Ded-He and Matthew Paris give fimilar acin all the manly pastimes seem to have has to one indeed no less manly, which MEREIT. This had a continuance to the Ad Caries I. It appears from 33 Hen. VIII, the intrusion of other pernicious games, been for a long time difused; to re-Towards the beof James I.'s reign, military prowers feems founded a retreat. There are only two species:

WHACL PANAX. Dr Woodville, in his gives the following account of this The root is perennial, thick, flethy, the garden parfnep: the stalk is aded, rough towards the bottom, and I affect in height; the leaves are pinnated,

confilling of feveral pairs of pinux, which are oblong, ferrated, veined, and towards the base appear unformed on the upper fide: the flowers are fmall, of a yellowish colour, and terminate the stem and branches in flat umbels; the general and partial umbels are composed of many radii; the general and partial involucra are commonly both wanting; all the florets are fertile, and have an uniform appearance; the petals are 5, lance-shaped, and curled inwards; the 5 filaments are fpreading, curved, longer than the petals, and furnished with roundish antheræ; the germen is placed below the corolla supporting two reflexed ftyles, which are supplied with blunt stigmata; the fruit is elliptical, compressed, divided into two parts containing two flat feeds, encompaffed with a narrow border. (See Plate CCLXIX.) It is a native of the fouth of Europe, and flowers in June and July. This species of parsnep was cultivated in 1731 by Mr P. Miller, who observes, that its 'roots are large, fweet, and accounted very nourishing,' therefore recommended for cultivation in kitchen-gardens. It bears the cold of our climate very well, and commonly maturates its feeds; and its juice here manifests some of those qualities which are discovered in the officinal opoponax; but it is only in the warm regions of the east, and where this plant is a native, that its juice concretes into this gummy refinous drug. Opoponax is of thined by means of incitions made at the bottom of the flalk of the plant, whence the juice gradually exudes; and by undergoing spontaneous concretion, assumes the appearance under which we have it imported from Turkey and the East Indies. It readily mingles with water, by triture into a milky liquor, which on standing deposits a portion of resinous matter and becomes yellowish: to rectified spirit it yields a gold-coloured tincture, which taftes and fmells frongly of opoponax. Water diffilled from it is impregnated with its fmell, but no effectial oil is obtained on committing moderate quantities to the operation. See Opoponax.

2. PASTINACA SATIVA, garden parsnep: is an exceeding fine esculent root. It is propagated by feeds fown in Feb. or March, in a rich mellow foil, which must be deep dug, that the roots may be able to run deep without hinderance. It is common to fow carrots at the fame time, upon the fame ground with the parfneps; and if the carrots are defigned to be drawn young, there is no harm in it. The parfneps, when they are grown up a little, must be thinned to a foot distant, and kept clear of weeds. They are finest tasted just at the feafon when the leaves are decayed: and fuch as are defirous to eat them in spring should have them taken up in autumn, and preferved in fand. When the feeds are to be faved, some very strong and fine plants should be left 4 feet distant; and towards the end of Aug. or beginning of Sep. the feeds will be ripe; they must then be gathered, and dried on a coarse cloth. They should always be fown the fpring following; for they do not keep well. Hints have been given and experiments made by agricultural focieties, respecting parsneps, to raise them for winter food to cattle. It has long been a custom in some parts of Brittany, to fow parfuens in the open field for the

food of cattle; as we are informed by the Transactions of a fociety instituted in that province, (Vol. 1.) for the encouragement of the economical and commercial interests of their country. " It is of great importance (fay they) that parfneps should be universally cultivated; because they afford an excellent and wholesome food for all kinds of cattle during winter, and may be used to great advantage to fatten them. Hogs have no other food in all that feafon, and our bullocks and oxen thrive well upon it. Cows fed with parfneps give more milk than with any other winter fodder, and that milk yields better butter than the milk of cows nourified with any other substance. Horses fatten with this food; though some pretend that it renders them less mettlesome, and hurts their legs and eyes. Cattle eat thefe roots raw, at first liced lengthwise; and when they begin not to relish them, they are cut in pieces, put into a large copper, pressed down there, and boiled with only so much water as fills up the chasms between them. They then eat them very greedily, and continue to like them."

PASTO, or ST JUAN DE PASTO, a town of Terra Firma, in Popayan; feated in a valley, watered by several rivers; 80 miles NNE. of Quito, according to Mr Cruttwell; but Dr Brookes makes it 120 miles N. of it, and 120 S. of Popay-

an. Lon. 76. 55. W. Lat. 1. 50. N.

PASTOPHORI, among the ancients, priests whose office it was to carry the images, along with the shrines of the gods, at solemn sestivals, when they were to pray for rain, fair weather, or the like. The Greeks had a college of this order of priests in Sylla's tune.

PASTOPHORIA, the cells or apartments near the temples where the pastophori lived. There were several lodging rooms for the pricits of a si-

milar kind in the temple of Jerusalem.

PASTOR. n. f. [paflor, Latin; pafleur, Fr.]

The pipe on which the Ascræan pastor play'd.

The pastor shears their hoary beards. Dryd.

2. A clergyman who has the care of a flock; one who has souls to feed with sound doctrine.—The pastor maketh suits of the people, and they with one voice testify a general assent thereunto. Hooker.—The first branch of the great work belonging to a pastor of the church, was to teach. South.—All bishops are pastors of the common flock. Lesse.—Neither was the expedient then sound out of maintaining separate pastors out of private purses. Swift.

PASTORA. See Pastaro.

(1.) PASTORAL. adj. pasteralis, Latin; pasteral, French.] 1. Rural; rustick; beseeming shepherds; imitating shepherds.—In those pasteral pastimes, a great many days were sent to follow their slying predecessors. Sidney. 2. Relating to the care of souls.—Their lord and master taught concerning the pasteral care he had over his own shock. Hooker.—The bishop of Salisbury recommendeth the tenth satire of Juvenal in his pasteral letter. Dryden.

(2.) \* PASTORAL. n. f. A poem in which any action or passion is represented by its effects upon a country life: or according to the common

practice, in which speakers take upon them character of shepherds; an idyl; a bucolick Passoral is an imitation of the action of a sherd; the form of this imitation is dramatick narrative, or mixed of both; the fable simple, manners not too polite, nor too rustick. Pope The best actors in the world, for tragedy, cordy, history, passoral. Shak.—There ought to the same difference between passorals and elegas between the life of the country and the cost he latter should be smooth, clean, tender, passonate: the thoughts may be bold, more and more elevated than in passoral. Walso.

(3.) PASTORAL LIFE may be confidered three different views; either fuch as it now a ally is; when the state of shepherds is reduce be a mean, fervile, and laborious state; w their employments are become disagreeable, their ideas gross and low; or such as we s suppose it once to have been, in the more e and fimple ages, when it was a life of ease an bundance; when the wealth of men confi chiefly in flocks and herds, and the sheph though unrefined in his manners, was refped in his state: or, lastly, such as it never was, never can in reality be, when, to the ease, it cence, and simplicity of the early ages, we tempt to add the polished taste, and cultiv manners, of modern times. Of thefe three fit the first is too gross and mean, the last too ref and unnatural, to be made the ground-worl pastoral poetry. Either of these extremes is a 1 upon which the poet will split, if he approach near it. We shall be disgusted if he give us much of the fervile employments and low of actual pealants, as Theocritus is centured having fometimes done; and if, like fome of French and Italian writers of pastorals, he m his shepherds discourse as if they were coul and scholars, he then retains the name only wants the spirit of pastoral poetry.

From the first passures of our infant age, Tacider cares and man's feverer page. Dryden. [34] PASTURE, or & is that referred for feeding PAITURE LAND, Scattle. Pasture land is of fich adverage to husbandry, that many prefer it the com land, because of the small hazard hour that attends it; and as it lays the findation for most of the profit that is expected from the arable land, because of the manure afforded by the cattle which are fed upon it. Pafthe ground is of two forts; the one is meadow land, which is often overflowed; and the other supland, which lies high and dry. The first of see will produce a much greater quantity of by than the latter, and will not require manuer dreffing so often: but then the hay proand on the upland is much preferable to the **c**; as is also the meat which is sed in the upmore valued than that which is fatted in rich make the fatter will make the fatter M larger cattle, as is feen by those which are meght from the low rich lands in Lincolnshire. where people are nice in their meat, they will give a much larger price for fuch as bath less fed on the downs, or in short upland pas-**L, than for the other, which is much larger.** hades this, dry pattures have an advantage over eadows, that they may be fed all the winw, and are not to subject to poach in wet weather; nor will there be fo many weeds produced; are great advantager, and in a great mearecompense for the smallness of the crop. have already mentioned the advantages of ind; (See Maadow:) therefore shall mention fome methods for improving and pasture.

PASTURE LAND METHODS OF IMPROVING. FOL XVII. PART I.

cing it, and dividing it into finall fields of fours five, fix, eight, or ten, acres each, planting time ber trees in the hedge- rows, which will fereen the grafs from the dry pinching winds of March, which will prevent the grass from growing in large open lands; fo that if April proves a dry month, the land produces very little hay; wheteas in the fheltered fields, the grafs will begin to grow early in March, and will cover the ground, and prevent the fun from parching the roots of the grafs, whereby it will keep growing, so as to afford a tolerable crop if the fpring should prove dry. But in fencing of land the inclosure must not be made too finall, especially where the hedge-rows a e planted with trees; because, when the trees are advanced to a confiderable height, they will spread over the land; and where they are close, will render the grass four; so that instead of being of an advantage, it will greatly injure the parture. The next improvement of upland pasture is, to make the turi good, where, either from the badness of the foil, or want of proper care, the grafs hath been destroyed by rushes, bushes or mole hills. Where the furface of the land is clayey and cold, it may be improved by paring it off, and burning it; but if it is an hot fandy land, then chalk, lime, marle, or clay, are very proper manures to lay upon it; but this should be laid in pretty good quantities, otherwife it will be of little fervice to the land. If the ground is over-run with buthes or rushes, it will be of great advantage to the land to grub them up towards the latter part of fummer, and after they are dried to burn them, and spread the athes over the ground just before the autumnal rains; at which time the furface of the land should be levelled, and fown with grafs-feed, which will come up in a short time, and make good grass the following foring. So also, when the land is full of mole-hills, these thould be pared off, and either burnt for the ashes, or spread immediately on the ground when they are pared off, observing to fow the bare patches with grass-feed just as the autumnal rains begin. Where the land has been thus managed, it will be of great service to roll the turf in the months of February and March with an heavy wood roller; always observing to do it in moift weather, that the roller may make an impression; this will render the surface level, and make it much easier to mow the grass than when the ground lies in hills; and will also cause the turf to thicken, fo as to have what the people usually term a good bottom. The grass likwise will be the sweeter for this husbandry, and it will be a great help to destroy weeds. Another improvement of upland pastures is, the feeding of them; for where this is not practifed, the land must be manured at least every 3d year; and where a far-mer hath much arable land in his possession, he will not care to part with his manure to the pafture. Therefore every farmer should endeavour to proportion his pasture to his arable land, especially where manure is scarce, otherwise he will foon find his error; for the pasture is the foundation of all the profit which may arise from the arable land. Whenever the upland pastures are mended by manure, there should be a regard had to the nature of the foil, and a proper fort of maimprovement of upland patture is, by feu- nure applied; as for inftance, all hot fandy land

fhould have a cold manure; neat's dung and fivine's dung are very proper for such lands; but for cold lands, horie dung, ashes, and other warm manures, are proper. And when these are applied, it should be done in autumn, before the rains have foaked the ground, and rendered it too foft to cart on; and it should be carefully spread, breaking all the clods as fmall as possible, and and then harrowed with bushes, to let it down to the roots of the grass. When the manure is laid on at this feafon, the rains in winter will wall down the falts, fo that the following spring the grass will receive the advantage of it. There thould also be great care taken to destroy the weeds in the pasture every spring and autumn: for, where this is not practifed, the weeds will fipen their feeds, which will spread over the ground, and thereby fill it with such a crop of weeds as will foon overbear the grass, and destroy it; and it will be very difficult to root them out afterwards; especially ragwort, and such other weeds as have down adhering to their feeds. The graffes fown in these upland pastures seldom degenerate, if the land is tolerably good; whereas the low meadows, which are overflowed in winter, in a few years turn to a harsh rushy grass, though the upland will continue a fine sweet grass for many years without renewing. There is no part of husbandry of which the farmers are in general more ignorant than that of the pasture: most of them suppose, that when old pasture is plowed ttp, it can never be brought to have a good fivard again; so their common method of managing their land after ploughing, is to fow with their crop of barley some grass seeds as they call them; that is, either the red clover, which they intend to stand two years after the corn is taken off the ground, or rye-grass mixed with trefoil; but as all these are at most but biennial plants, whose roots decay foon after their feeds are perfected, fo the ground, having no crop upon it, is again ploughed for corn; and this is the constant round which the lands are employed in by the better fort of But whatever may have been the practice of these people, it is certainly possible to lay. down lands which have been in tillage with grafs, in fuch a manner as that the fward shall be as good, if not better, than any natural grass, and of as long duration. But this is never to be expected in the common method of fowing a crop of corn with the grass seeds; for, wherever this has been practifed, if the corn has succeeded well, the grass has been very poor and weak; so that if the land has not been very good, the grass has scarcely been worth saving; for the following year it has produced but little hay, and the year after the crop is worth little, either to mow or feed. Nor can it be expected to be otherwise, for the ground cannot nourish two crops; and if there were no deficiency in the land, yet the corn, being the first and most vigorous of growth, will keep the grass from making any considerable progress; fo that the plants will be extremely weak, and but very thin, many of them which come up in the fpring being destroyed by the corn; for whenever there are roots of corn, it cannot be expected there should be any grass. Therefore the grass must be thin; and if the land is not in

good heart to supply the grass with nourishment that the roots may branch out after the com-gone, there cannot be any confiderable crop ( clover; and as their roots are biennial, many the strongest plants will perish soon after they a cut; and the weak plants, which had made be little progress before, will be the principal part the crop for the fucceeding year; which is man Therefore, who times not worth flanding. ground is laid down for grass, there should be crop of any kind fown with the feeds; or at le the crop should be fown very thin, and the la should be well ploughed and cleaned from week otherwise the weeds will come up first, a grow to strong as to overbear the grass, and they are not pulled up, will entirely spoil it.

(4.) PASTURE LAND, SEASON AND SEEDS PR PER FOR SOWING IN. The best scason to sowt grafs feeds upon dry land, when no other crop fown with them, is about the middle of Septe ber or fooner, if there is an appearance of rai for the ground being then warm, if there happ forme good Riowers of rain after the feed is for the grafs will foon make its appearance, and fufficient rooting in the ground before winter; will not be in danger of having the roots turn out of the ground by frost, especially if the grou is well rolled before the frost comes on, whi will press it down, and fix the earth close to roots. Where this hath not been practifed, frost has often loosened the ground so much to let in the air to the roots of the grass, and de it great damage; and this has been brought as objection to the autumnal fowing of graft; but will be found to have no weight if the above rection is practifed: nor is there any hazard fowing the grass at this feason, but that of weather after the feeds are fown; for if the g comes up well, and the ground is well rolled the end of October, or the beginning of Nove ber, and repeated again the beginning of Mar the sward will be closely joined at bottom, an good crop of hay may be expected the time if mer. But where the ground cannot be prepa for fowing at that feafon, it may be performed the middle or end of March, according as feafon is early or late; for, in backward sprii and in cold land, we have often fowed the gral the middle of April with fuccess ; but there is ge, in fowing late, of dry weather, and especi if the land is light and dry; for we have seen ny times the whole furface of the ground rema by firong winds at that feafon; fo that the fe have been driven in heaps to one fide of the f Therefore, whenever the feeds are fown lat the fpring, it will be proper to roll the gra well foon after the feeds are fown, to fettle furface, and prevent its being removed. forts of feeds which are the best for this purp are, the best fort of upland hay-feeds, taken t the cleanest pastures, where there are no weeds; if this ked is fifted to clean it from bish, three bushels will be sufficient to sow an The other fort is the srifolium pra of land. album, commonly called aubite Dutch clover enough for one acre. The grafs feed 8lb. wi fown first, and then the Dutch clover-feed ma

streams fown; but they should not be mixed, because the clover feeds being the heaviest will fall to the bottom, and confequently the ground will be unequally fown. When the feeds are come up, if the land should produce many weeds, the bould be drawn out before they grow fo tal as to overbear the grass; for where this has beautifelted, the weeds have taken fuch pos-Effor of the ground as to keep down the grafs, and threit; and when these weeds have been fand to remain until they have fined their feeds, the last has been fo plentifully stocked with them is estudy to destroy the grass; therefore it is a pracipal care in hulbandry, never to fuffer weeds to grow on the land. If the ground is rolled two or three times at proper distances after the grass is an it will prefs down the grafs, and cause it to make a thicker bottom: for, as the Dutch clover will put out roots from every joint of the brandes which are near the ground, fo, by prefling down of the Ralks, the roots will mat 'to closely together, as to form a fward fo thick as to cover the whole furface of the ground, and form a green espe and will better relift the drought. For if secumine the common pastures in summer, in most of which there are patches of this white horeyluckle grais growing naturally, we shall find the patches to be the only verdure remaining in the fields. And this, the farmers in general achowledge, is the sweetest feed for all forts of talk; jet they never thought of propagating it by web, nor has this been long practifed in Enghad be white clover is an abiding plant, to it is certainly the very best fort to sow, where [ are had down to remain; for as the hayfacts which are taken from the best pastures will be computed of various forts of grafs, some of which may be but annual, and others biennial; fo, wien theie go off, there will be many and large Pades of ground left bare and naked, if there is not a sufficient quantity of the white clover to forced over and cover the land. Therefore a good frad can never be expected where this is not for in most of the natural pastures, we find plant makes no small share of the sward; and equally good for wet and dry land, growing arrally upon gravel and clay in most parts of and: which is a plain indication how eafily plant may be cultivated to great advantage in and forts of land throughout this kingdom. Descret the true cause why the land which has her is tillage is not brought to a good turf again, the usual method of husbandry, is, from the and not distinguishing which grasses are anto for those which are perennial: for if annual beanial graffes are fown, these will of course decay; fo that, unless where some of their may have ripened and fallen, nothing can be specied on the land but what will naturally come Therefore this, with the covetous method of down the ground with a crop of corn, has sentenced the general failure of increasing the Mare in many parts of Britain, where it is now more valuable than any arable land. yound has been fown in the manner before and brought to a good fward, the way priese it good is, by conftantly rolling the with a beavy roller, every spring and au-

tumn, as hath been before directed. This piece of husbandry is rarely practifed by farmers; but those, who do, find their account in it, for it is of great benefit to the grass. Another thing should also be carefully performed, which is, to cut up docks, dandelion, knapweed, and all fuch weeds, by their roots, every spring and autumn; this will increase the quantity of good grass, and preserve the pastures in beauty. Dressing of these pastures every 3d year is also a good piece of husbandry; for otherwife it cannot be expected the ground should continue to produce good crops. Besides this, it will be necessary to change the seasons of mowing, and not to mow the same ground every year, but to mow one featon and feed the next: for where the ground is every year mown, it must be constantly dressed, as are most of the grass grounds near London, otherwise the ground will be soon exhausted.

(1.) \* To PASTURE. v. a. [from the noun.] To

place in a pasture.

. (2.) \* To PASTURE. v. s. [from the noun.] To graze on the ground.-

Those rare and solitary; these in slocks Pasturing at once.

\* PASTY. n. s. [paste, Fr.] A pie of crust raised

without a dish.

Of the paste a coffin will I rear, And make two passies of your shameful heads.

-If ye pinch me like a pasty, I can say no more.

If you'd fright an alderman and mayor, Within a pasty lodge a living hare. Not quite a madman, though a pafty fell,

And much too wife to walk into a well. (1.) \* PAT. adj. [from pas, Dutch, Skinner.] Fit; convenient; exactly fuitable either as to time or place. This is a low word, and should not be used but in burlesque writings.—Pat, pat; and here's a marvellous convenient place for our rehearfal. Shat. Midf. Night's Dream.

Now I might do it pat, now he is praying.

They never faw two things so pat, In all respects, as this and that. Hudibras. -Zuinglius dreamed of a text, which he found very pat to his doctrine of the Eucharift. Atterb .-

He was forely put to't at the end of a verse, Because he could find no word to come pat in.

(2.) \* PAT. n. f. [patte, Fr. is a foot, and thence pat may be a blow with the foot.] r. A light quick blow; a tap. - The least noise is enough to disturb the operation of his brain; the pat of a shuttle-cock, or the creaking of a jack will doit. Cal. lier. 2. Small lump of matter beat into shape with the hand.

To PAT. v. a. [from the noun.] To strike lightly; to tap.-Children prove, whether they can rub upon the breast with one hand, and pat upon the forchead with another, and straightways they pat with both. Bocon's Wat. Hift.— Gay pats my thoulder, and you vanquish quite.

PATACHE. n. f. A small ship. Ainsworth. \* PATACOON. n. f. A Spanish coin worth four shillings and eight pence English. Ainsworth. M 2 PATÆCI

( 92 )

PATÆCI, in mythology, images of gods which the Phænicians carried on the prows of their gallies. Herodotus, lib. iv. calls them raleixos. The word is Phœnician, and derived from pethica, i. e. titulus, a title, or mark of dignity. See Bochart's Chanaan, lib. ii. cap. 3. But Scaliger does not agree. Morin derives it from widnes, monkey, this animal having been an object of worship among the Egyptians, and hence might have been honoured by their neighbours. Mr Elfner has observed, that Herodotus does not call the patæci gods; but that they obtained this dignity from the liberality of Hefychius and Suidas, and other ancient lexicographers, who place them at the stern of ships; whereas Herodotus placed them at the prow. Scaliger, Bochart, and Selden, have taken some pains about this subject. Mr Morin has also given us a learned differtation on this head in the Memoires de l'Acad. des Inscript. & Belles Lettres, tom. i.; but Mr Eliner thinks it wants evidence.

PATAGONIA, a country of South America, comprehending all that country from Chili and Paraguay to the utmost extremity of S. America: that is, from 35° almost to 54° of latitude: being furrounded by Chili, Paraguay, the South and North Seas, and the Straits of Magellan, which separate it from Terra del Fuego, and extend about 116 leagues in length from sea to sea, but only from half a league to 3 or 4 in breadth. This country had the name of TERRA MAGELLANICA, from Magellan See MAGELLANIA. The lofty mountains of Andes, which are covered with snow a great part of the year, crosling the country from N. to S. the air is much colder than in the N. under the same latitude. Towards the N. it is covered with wood, but on the S. not a fingle tree fit for any mechanical purpose is to be seen: yet there is good pasture, and incredible numbers of wild horned cattle and horfes. The E. coast is mostly low land, with few or no good harbours; one of the best is Port St Julian. Patagonia is inhabited by a variety of Indian tribes; as the PA-TAGONS, from which the country takes its name; the Pampas, the Coffaces, &c. of whom we know very little. From the accounts of Com. Byron and his crew, and the testimonies of other navigators, some of them are of a gigantic stature, and clothed with skins; others go almost quite naked, notwithflanding the inclemency of the climate. Some of them also, who live about the Straits, are perfect savages: but those with whom Com. Byron and his people converfed, were gentle and humane. They live on fish and game, and what the earth produces ipontaneously. On the coasts of Patagonia lie a great number of islands. On the west coasts are the islands Madre de Dios. Fanta Trinidad, Santa Cruz, the ifies of the Chunians and Huillans, the Sarmientos, and many others; to the number of 8c in all. Of those on the S. coast, the most considerable are TERRA DEL FUEGO, and STATEN LAND. See these articles. A vast deal has been said respecting the stature of the Patagonians, by people of different nations, and on various occasions. Mr Charles Clarke, who was on board Byron's ship in 1764, says that some of them are certainly nine feet, if they do not exceed it. Captain Wallis, on the other hand, 11 to went out to the Straits of Magellan after By-

ron's return, found that the tallest man amo thein measured only 6 feet 7 inches high; seve were within an inch or two as tall; but the or nary fize was from 5 feet 10, to 6 feet. All agr however, that the hair is black, and harsh li briftles; that they are of a dark copper color that their features are rather handsome than ug that they clothe themselves with skins; that the paint themselves variously; and there is reason fuspect, that by that variety they distinguish the tribes. One remarkable observation made by voyagers is, that the Patagonians could rep whole fentences after our men, more diffine than almost any European foreigner of what tion foever. Another very remarkable particu is, that they had none of the characters of a fe cious people; there was no offentive weapon mong them, except the fcimitar, and a kind fling, which they use in hunting, contisting of t round stones of about a pound weight each, o nected together by a thong. There flores w fastened to the extremities of the thong; a when they threw them, they held one stone in hand, and fwung the other about the head.

PATAGONIANS, the natives of PATAGONIA.

PATAGONS, a nation of Patagonia. PATAGONULA, in botany; a genus of monogynia order, and pentandria class of plan in the natural method, ranking in the 41st on Afperifolia. The characters are thefe: the cu an extremely fmall perianthium, divided into fegments, and remains after the flower is fall the flower confifts of a fingle petal, with all no tube, the margin of which is divided into acute oval fegments; the stamina arc five filami of the length of the flower; the anthuz im the germen of the piftil is oval and pointed; ftyle is slender and slightly bitid, its ramificat are also bifid; this is of the same length with ftamina, and remains when the flower is ial the stigmata are simple; the fruit is an eval pointed capfule, flanding on a large cup, made of five long fegments emarginated or rim round their edges; the feeds of this plant are unknown; but the construction of the cup which the capfule stands, is alone a sufficient tinction for this genus. PATCH. n. f. [pezzo, Ital.] 1. A piece 🏣 on to cover a hole.

Process fet upon a little breach,

Directed more in hiding of the flaw, That did the flaw before it was so patch'd. Sbak. If the thoe be ript, or patches put;

Ee's wounded! fee the plaister on his foot.

Dryden. \$4 piece inferted in mofaick or variegated work. They fuffer their minds to appear in a pie-bald of coarfe patches and borrowed flireds. Locke. \$4 fmail spot of black filk put on the face.-

Madam nature wears black patches too. Cleav. If to every common funeral,

by your eyes martyr'd, fuch grace were allow'd, Your face wou'd wear not patches, but a cloud.

Suckling. Teir patches were placed in different fituations ty fignals to diftinguish friends from foes.

Thrice from my trembling hand the patch-box Pope.

6 4 fault particle; a parcel of land,—

We go to gain a little patch of ground, That hath in it no profit but the name. Sbak. 5. A paltry fellow. Obfolete.-

What a py'd ninny's this? thou scurvy patch!

\* To PATCH. v. n. [pudtzer, Danish; pezzare, Italian.] 1. To cover with a piece fewed on .-They would think themselves miserable in a patched coat, and yet their minds appear in a pie-bald livery of coarse patches and borrowed shreds. Locke. 2. To decorate the face with small spots of black filk .- In the middle boxes, were feveral ladies who patched both fides of their faces. Spect.

We begg'd her but to patch her face, She never hit one proper place. 3. To mend clumfily; to mend fo as that the original strength or beauty is lost.

Any thing mended, is but patch'd. Patch an old building, not a new create. Dryd. Broken limbs, common prudence fends us to the furgeons to piece and patch up. L'Estrange. 4. To make up of shreds or different pieces. Sometimes with up emphatical.—If we feek to judge of those times, which the scriptures set us down without error, by the reigns of the Affyrian princes, we shall but patch up the story at adventure. Raleigh's Hiftory.

His glorious end was a patch'd work of fate, Ill forted with a foft effeminate -e. -There is that visible symmetry in a human body, as gives an intrinsick evidence, that it was not formed fucceffively and patched up by piece-meal. Bentley.- Enlarging an author's lense, and building fancies of our own upon his foundation, we may call paraphrafing; but more properly chan-

ging, adding, patching, piecing. Felton.
\* PATCHER. n. f. [from patch.] One that patch-

es; a botcher.

\* PATCHERY. n. f. [from patch.] Botchery; bungling work. Forgery. A word not in ufe.-You hear him cogg, see him dissemble,

Know his gross patchery, love him, and feed him, Yet remain atlur'd that he's a made-up villain.

\* PATCHWORK. n. f. [patch and work.] Work made by fewing finall pieces of different colours interchangeably together. - When my cloaths were finished, they looked like patchwork. Swift .-Whoever only reads to transcribe thining remarks, without entering into the genius and spirit of the author, will be apt to be milled out of the regular way of thinking; and all the product of all this will be found a manifest incoherent piece of patchwork. Savift.

Foreign her air, her robe's discordant pride In patchwork flutt'ring.

To patch-work learn'd quotations are allied, Both ferve to make our poverty our pride.

(1.) \* PATE. n. f. [This is derived by Skinner from tête, Fr.] The head. Now commonly used in contempt or ridicule, but anciently in ferious language.-

Here take thy lover's token on thy pate. Spens. By customs and covetous pates,

By gaps and opening of gates. Tuffer. He is a traitor, fet him to the tower, And crop away that factious pate of his. Sbak, Steal Steal by line and level is an excellent pass of are crossed by other streaks nearly parallel to the Sbak.

That broker that still breaks the pate of faith, That daily breakyow. Sbak.

The learned pate This man's a flatterer. Ducks to the golden fool. Shak.

Thank your gentler fate, That, for a bruis'd or broken pate, Has freed you from those knobs that grow Much harder on the married brow. Hudibras.

-Many will rather chuse to neglect their duty, than to get a broken pate in the church's service. Sourb.—If any young novice happens into the neighbourhood of flatterers, prefently they are plying his full purse and empty pate with addresses fuitable to his varity. South.

(2.) PATE, in fortification, a kind of platform,

resembling what is called an borse's shoe

(3.) PATE, in geography, an illand of France, in the Gironde, near Blaye.

\* PATED. adj. [from pate.] Having a pate. It is used only in composition: as long-pated or cunning; shallow-pated or foolish.

PATEE, m. f. or Pattee, in heraldry, a cross, fmall in the centre, and widening to the extremities, which are very broad.

\* PATEFACTION. n. f. [patefallio, Latin.]

Act or state of opening. Ainfavorth.

PATEHUCA, a town of Mexico, near a fil-

ver mine. Lon. 99. 55. E. Lat. 21. o. N. PATELI, or PUTALA, a town of Thibet, in Lassa, near a mountain, on which is seated the temple of palace of the Grand Lama. (See La-MA, N° 1.) It is 3 miles E. of Lassa, and 272 NNW. of Ghergong.

(I.) PATELLA, the Knee-pan. See Anato-

MY, Index.

(IL) PATELLA, in zoology, the LIMPET, a gemus of infects belonging to the order of vermes teltacea; the animal is of the faail kind. The shells are of that class which is called univalves; they have no contour, and are in the form of little pointed cones. They are always attached to some Their summit is sometimes acute, hard body. fometimes obtufe, flatted, turned back, or perforated. The rock or other bard body to which they are always found adhering, serves as a kind of second or under shell to preserve them from injury; and for this reason Aldrovandus and Rondelet have classed them among the bivalves; but in this error they have not been followed. The in this error they have not been followed. diftinguishing mark or characteristic of the lepas is to have but one convex thell, which adheres by its rim to a rock, or some other hard substance. There are 36 species of this genus, which are principally diftinguished by peculiarities in their shells. The limpet, fig. 1. Plate CCLX. has large yellow furrows and ridges from the centre to the circumference, which is indented; the eye is perfectly white and shaped like a popple. Fig. 2. is perfettly fmooth, but radiated with brown streaks, and perforated in the fummit. Fig. 3. is ribbed, and indented at the circumference; its coat is spotted with brown, in a zig-zag form, and its eye is of a ruby colour. Fig. 4. is a small brown shell, the ribs or ftrize of which are armed with imall white points. Fig. 5. is striated with radii, reaching from the eye to the circumference, which

circumference; it is of the ufual colour, and i eye is perforated. Fig. 6. This is white, the fomething like an hand-bell, and has within a tuberance resembling a clapper. Fig. 7. 10 ven-fided limpet, divided at each angle by from the fummit, which form a star on a ground, variegated with black spots. Fig. 1 finall ribbed thell, of a brown colour and the it has a chamber, and a beak-fashioned eye ced at one of its extremities. Fig. 9. is the shell of this species: its fize, the fine mot pearl colour on the infide, and the beauty red spots without, which have the appear tortoife-shell, give it the pre-eminence over thers. It is called the Tartoife-shell buckler. bius Columna diftinguishes 4 species of the or limpets:

J. PATELLA LEPAS AGREA, OF SYLVESTRIS a finall fhell, irregularly oval, of an afh colo marked with radii and zones crosling each of and perforated at the top by an aperture with

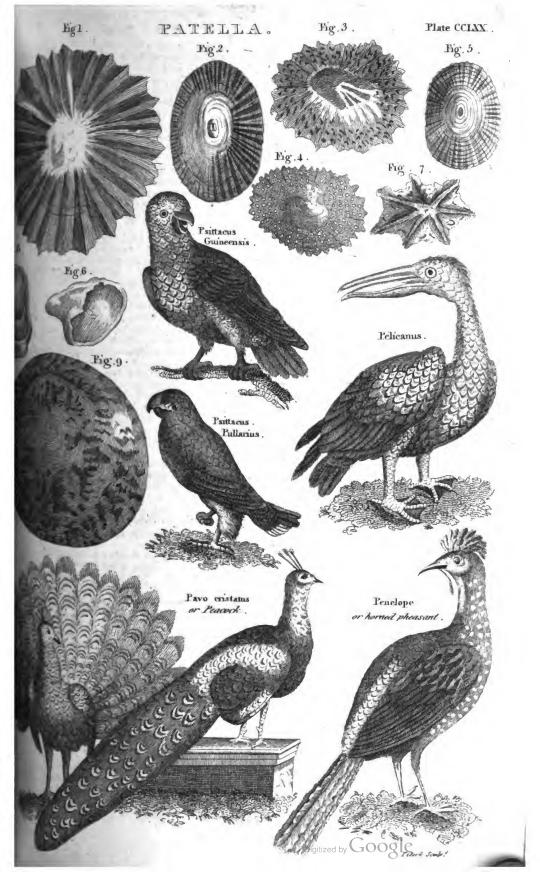

ferves the fifth for a vent.

2. Patella lepas major, of exotica, of from Spain; the shell is hard, thick, and right in angles, and the rim is denticulated.

3. PATELLA LEPAS REGALIS, so called as ing thought fit for a king's table, is of a mi of-pearl colour within, and is ribbed and ted in many places; these shells have been on the back of the sea-tortoide, or turtley a large pinna marina,

4. PATELLA LEPAS VULGARIS, very e at Naples, is of an oval figure and all-col

(1)1.) PATELLA, in zoology, or ento is also a name given by Lister and others hulk or shell, found on the bark of the plum, role, and other trees, containing within, and useful in colouring. The are of the form of globes, except when here to the tree, and are for the mod fhining chefnut colour. The husk itse very fine crimfon colour on paper, and w is found a white maggot which is of no this, in time, hatches into a very small but b tiful bee. The fize of this bee is about half of an ant. They have a sting like bees, and spots in a triangle on the forehead, supposed eyes. They are black, and have a large whitish or pale yellow spot on the backupper pair of wings are shaded and spotter the under pair are clear. It might be worth to try whether the colour they yield might finest and deepest purple: they must be use the animal in them is in the maggot for when it is changed into the bee state the Lifter, who first of dry and colourless. these patellæ, went so far on comparing with the common kermes, as to affert the were of the same nature with that produ but his account of their being the working of a bee, to preferve her young maggot in, is agreeable to the true history of the kermes that is an infect of a very peculiar kind. It is fible that these patellæ may be the same gem animals with the kermes, but then it produc young within this fliell or hulk, which is not

has the fkin of the body of the mother animal; but as there are many flies whose worms or magnots are lodged in the bodies of other animals, perhaps this little bee may lay its egg in the body of the proper infect, and the maggot hatched from that egg may eat my the proper progeny, and, undergoing its own natural changes there, iffue out at length in form of the bee. This may have been the cake in some few which Dr Lister examined; and he my have been misled by this to suppose it the natural change of the insect.

(IV.) PATELLA FERA, the wild limpet, a name wy improperly applied by Rondilitius and Aldrand to the aures marine, or conche veneris, which certainly are not of the patella kind.

PATEN. n. f. [patina, Lat.] A plate. Not

B ulc.—

The floor of heav'n

Is thick inlaid with patens of bright gold. Shak-PATENODE, a town of Ceylon, near the E.

mut, 78 miles E. of Candy.

(1.) PATENT. edj. [patens, Lat. patent, Fr.]

3. Open to the perulal of all: as letters patent.—
In Irland, where the king difpoles of bithopricks
mody by his letters patent, without any Congé
febre. Lefter. 2. Something appropriated by letlers patent.—Madder, in king Charles the first's
line, was made a patent commodity. Mort. Hufb.

(1) PATENT. n. f. A writ conferring some extake right or privilege.—If you are so fond over ber signey, give her a patent to offend. Sbak.—

So will I grow, fo live, fo die,

Ene I will yield my virgin patent up. Shah.

We see confured as obstinate, in not complying
with 2 voyal patent. Savift.

(3-) PATENT LEAF, in botany, a leaf that stands

a right angles with the stalk.

A. PATENT LETTERS. See LETTER, § 8.

PATENTEE. n. f. [from patent.] One who a patent.—If his tenant and patentee dispose of gift, without his kingly consent, the lands revert to the king. Bacon.—In the patent to load Dartmouth, the securities obliged patentee to receive his money back upon every and. Swift.

PATER NOSTER, in geography, islands of me the East Indian sea, so called because of me at number of rocks, which failors have likenable beads with which the Papists tell their softer. They abound in corn and fruits, a very populous.

SPATER PATRATUS, the first and principal in the college of heralds, called Feciales.

Some fay he was a constant officer and perpetual chief of that body; and others suppose him to have been a temporary minister, elected upon account of making peace or denouncing war, which were both done by him. See FEGIALES.

(7) PATER, ST, a town of France, in the dep-

of the Sarte, 3 miles S. of Alençon.

(1.) PATERA, in antiquity, [from Pateo, Latto be open,] a large open goblet or veilel, used by the Romans in their facrifices; wherein they offered their confecrated meats to the gods, and wherewith they made libations. See Labation, and SACRIFICE. On medals the patera is seen in the hands of feveral deities; and often in those of princes, to mark the facerdotal authority joined. with the imperial, &c. F. Joubert observes, that belides the patera, there is frequently an altar upon which the patera feems to be pouring its contents. The patera was of gold, filver, marble, brass, glass, or earth; and they used to inclose it in urns with the ashes of the deceased, after it had ferved for the libations of the wine and liquors at the funeral. The patera is an ornament in architecture, frequently seen in the Doric freeze, and the tympans of arches; and they are fometimes used by themselves, to ornament a space. In this case it is common to hang a ftring of hulks or drapery over them: fometimes they are much enriched with foliage, and have a mask or a head in the centre.

2.) PATERA, the modern name of PATARA.

PATERCULUS, Caius Velletus, an ancient Roman historian, who sourished in the reign of Tiberius Cæsar, was born A. U. C. 735. His anceftors were illustrious for merits and offices. His grand-father espoused the party of Tiberius Nero, the emperor's father; but being old and infirm, and not able to accompany Nero when he retired from Naples, he killed himself. His father was a foldier of rank, and so was Paterculus. He was a military tribune when Caius Cæfar, a grandfon of Augustus, had an interview with the king of the Parthians, in an island of the Euphrates, in 753-He commanded the cavalry in Germany under Tiberius; and accompanied that prince for 9 years fuccessively in all his expeditions. He received honourable rewards from him; but was preferred to no higher dignity than the prætorthip. praises he bestows upon Sejanus make it probable that he was a friend of this favourite, and was involved in his ruin., His death is placed by Mr Dodwell in A. U. C. 784, when he was in his 50th year. He wrote an Abridgement of the Roman Hiftory in two books, in which many particulars are related that are nowhere else to be found; which makes it the more valuable. It was first published, from the M3. of Morhac, by Rhenanus, at Basil in \$520: afterwards by Lipsius at Leyden in 2582; by Gerard Vossius in 2639; by Boeelerus at Strasburg in \$642; by Thysius and others; and, laftly, by Peter Burman at Leyden, 1719, in 8vo. To the Oxford edition in 1693, 8vo, were prefixed the Annales Velleiani of Mr Dodwell, which show a great knowledge of antiquity. Lipsius centures him feveraly for his prating Tiberius.

PATERNA, a town of Spain, in New Castile;

3 miles E. of Alcaraz.

\*PATERNAL.adj.[paternw, Lat, paternel, Fr,]

z. Fatherly; having the relation of a father; pertaining to a father.

I disclaim all my paternal care,

Propinquity and property of blood. K. Lear. -Grace fignifies the paternal favour of God to his elect children. Hammond.-Admonitions fraternal or paternal of his fellow christians. Hammond.-

They spend their days in joy unblam'd; and

Long time in peace, by families and tribes, Milton's Par. Loft. Under paternal rule. 2. Hereditary; received in succession from one's

father.

Men plough with oxen of their own

Their small paternal field of corn. Dryd. -He held his paternal estate from the bounty of the conqueror. Dryd.-

Retreat betimes

To thy paternal feat, the Sabine field. Addison. PATERNE, ST, a town of France, in the de-partment of Morbihan, and diffrict of Vannes.

PATERNIAN, ST, a town of Germany, in Ca-

rinthia; 6 miles ESE. of Spital.

\* PATERNITY. n. f. [from paternus, Lat. paternite, Fr.] Fathership; the relation of a father. -The world, while it had scarcity of people, underwent no other dominion than paternity and eldership. Raleigh .- The paternity and filiation leave very fensible impressions. Arbutbnot .- This origination in the divine paternity, as bishop Pearson fpeaks, hath antiently been looked upon as the affertion of the unity. Waterland.

PATERNO, a town of Sicily, in the valley of Demona, built on the ruins of the ancient Hybla; 15 miles W. of Catania. See HYBLA, No 1.

(1.) PATERSON, the rev. Alexander, a Scottish clergyman of uncommon abilities, born at Skipmyre, in the parish of Trailflat, now annexed to that of Tinwald, in Dumfries-shire, about 1660. He not only suggested the plan of the BANK OF England, but proposed a national object of still greater importance to Great Britain, had it been carried into execution, by the settlement of a Scottish colony at Darien. The history of that fettlement, the luminous ideas conceived by Paterson, the shameful opposition it met with from a mean spirit of commercial jealousy, and the consequent destruction of the infant colony, with Sir John Dalrymple's judicious remarks on the whole infamous transaction, are inserted under the article DARIEN, No I, o i, 1-5. The rev. James Laurie, minister of Tinwald tays, Paterson was not an obscure Scotchman, as a certain writer stiles him; he more than once represented Dumfries, &c. in the Scotch Parliament. The same house gave birth to his grand-nephew, Dr James Mounfey, first physician for many years to the empress of Ruffia. The widow, who now enjoys the farm, is lister to Dr John Rodgerson, who succeeded Dr Mounsey, as first physician to the empress." J. Sinclair's Stat. Acc. Vol. 1. p. 165.

(2.) PATERSON, Samuel, was born in 1725. His father died when he was very young, and his guardian failing, he lost his fortune. Being maimed, and not having been brought up to any profession, he chose that of a bookseller, in which he was unsuccessful. He then commenced auction-

eer, and after struggling with much diffres, appointed librarian to the Marquis of Launfde He died 29th Oct. 1802. He wrote and pub ed 1. A differtation on the Equestrian figure of George and of the Garter; by Dr Pertingall, 17 2. The travels of Caiat Junior, 1767: 3. Jan na, or a book of scraps: 4. The Templar, a we paper: and 5. Speculations on law and lawyers what rendered him chiefly famous was his t at drawing up catalogues. The catalogues w he made of many valuable libraries, being raisonnée, sell at high prices.

(3.) PATERSON, in geography. See PATTER (1.) \* PATH. n. f. [path, Saxon.] Way; r track. In conversation it is used of a narrow to be passed on foot; but in solemn lang means any passage.—For darkness, where it place thereof,-that thou floulds know the to the house thereof. Job. xxxviii. 20.-

> When in the middle pathway basks the fnake;

O lead me, guard me from the fultry hours.

Gay.

PATI. See PATTA, and PATTI.

PATIBLE. adj. [from patior, Lat.] Sufferable; toierable. Dia.

\*PAT!BULARY. adj patibulaire, Fr. from patibulum, Latin. Belonging to the gallows. Dic.

(1.) PATIENCE. n. f. (patience, French; patientia, Latin.) 1. The power of suffering; calm endurance of pain or labour.-

Devotion, patience, courage, fortitude;

I have no relish of them. -Christian fortitude and patience have their opportunity in times of affliction and perfecution. Spratt.—

Patience of toil, and love of virtue fails.

Prior.

2. The quality of expecting long without rage or discontent; long-suffering.—Necessary patience in seeking the Lord, is better than he that leadeth his life without a guide. Ecclus. xx. 32.-Have patience with me, and I will pay thee all. Matthew. 3. Perseverance; continuance of labour.-

He learnt with patience, and with meekness taught.

4. The quality of bearing offences without reyenge or anger.-

His rage was kindled, and his patience gone.

5. Sufferance; permission .- By their patience, the apostles preached as well when they wrote, as when they spake the gospel. Hooker. 6. An herb. A species of duck.—Patience, an herb, makes a good boiled fallad. Mortimer.

(2.) PATIENCE is that calm and unruffled temper, with which a good man bears the evils of life, from a conviction that they are at least permitted, if not fent, by the best of Beings, who makes all things work together for good to those who love and fear him.

(3.) Patience, in botany, (§ 1, Def. 6.) See

RUMEX, Nº 4.

(4.) PATIENCE, in geography, an island near Rhode Island, in Narraganset Bay, SE. of Warwick Neck: a miles long, and I broad.

(1.) \* PATIENT. adj. [ patient, Pr. patiens, Lat.] Having the quality of enduring: with of before the thing endured .- To this outward ftructure was joined strength of constitution, patient of severest toil and hardship. Fell.-Wheat, which is the best fort of grain, of which the purest bread is made, is patient of heat and cold. Ray. 2. Calm under pain or affliction.-

Be patient, and I will flay. Griev'd, but unmov'd, and patient of your

I die. Dryden. 3. Not revengeful against injuries. 4. No: easily provoked .- Be patient toward all men. I Theff. v. 14. 5. Persevering; calmly diligent.—Whatever I have done is due to patient thought. Newton, 6. Not hafty; not viciously eager or impetuous. Nut

Not patient to expect the turns of fate,
They open'd camps.
(2.) \* PATIENT. n. f. [patient, Fr.] I. That
which receives imprefilions from external agents.

Malice is a passion so impetuous and precipitate, that it often involves the agent and the parient. Gov. of the Tongue.—

To proper patients he kind agents brings.

Craech. -When a fmith with a hammer strikes a piece of mon, the iron is the patient or the subject of passion, in a philosophical sense, because it receives the operation of the agent. Watts. 2. A person diseased. It is commonly used of the relation between the fick and the physician.-You deal with me like a physician, that seeing his patient in a pestilent sever, should chide instead of adminifiring help. Sidney .- Through ignorance of the disease, instead of good, he worketh hurt, and out of one eyil throweth the patient into many miseries. Spenser - A physician uses various methods for the recovery of fick persons; and though all of them are difagreeable, his patients are never angry. Addison. 3. It is sometimes, but parely, utcd absolutely for a siek person.-

The poor patient will as foon be found On the hard matrefs. Dryden.—It is wouderful to observe, how inapprehensive

these patients are of their disease. Blackmore.

\* To PATIENT. v. a. [patienter, Fr.] To compose one's self; to behave with patience. Obsolete.—

Patient yourself, madam, and pardon me.

\* PATIENTLY. adv. [from patient.] 1. Without rage under pain or affliction.

Lament not, Eve, but patiently refign

What justly thou hast lost.

Ned is in the gout,

Lies rack'd with pain, and you without, How patiently you hear him groan!

How glad the case is not your own. Swift.

a. Without vicious impetuosity; with calm disfigence.—That which they grant, we gladly accept at their hands, and wish that patiently they would examine how little cause they have to deny that which as yet they grant not. Hooker.—Could men but once be persuaded patiently to attend to the discases of their own minds, religion would gain more proselytes. Calamy.

PATIGUMO, a. f. (a corruption of the words pate de guimauve), a fort of paste or cakes much assed on the continent, as an agreeable and useful remedy for satarrhal defluxions, and supposed by Dr Percival to consist of gumerable combined with sugar and the whites of eggs. But it is said that the powdered substance of the marshmallow is the chief ingredient of the composition. The Dr recommends it as an antidote against Humber. His receipt is this: "Fine sugar 4 oz. gumerabic, 1 oz. rose water, half an ounce; white of eggs. a. s.

white of eggs, q. s.

(1.) PATIN, Guy, professor of physic in the royal college of Paris, was born in 1602. He made his way into the world merely by the force of his genus, being at first corrector of a printing house. He died in 1672, and his letters, which

appeared after his death, have rendered his na

(2.) PATIN, Charles, M. D. the fon of G made a great figure in the world, and excelled the knowledge of medals. He was born in P in 1633. He fludied physic, took his degrand practised with great success. In 1676 was appointed prosection of physic in Padua; in 1679 was created a knight of St Mark. died in that city in 1694. His works are nu rous. His wife too, and his daughters, were thoresses.

PATIVILCA, a town of Peru. in Santa. PATIZITHES, one of the Persian Magi, whrother having a strong resemblance to Sme the 2d son of Cyrus the Great, he raised hit the throne on the death of Cambyses, preten that he was prince 8 merdis. See Persia.

dot. iii, c. 61. PATKUL, John Reinhold, Count, a brave accomplished nobleman, born in Livonia. He employed to represent the grievances of that vince to Charles XI. of Sweden; which he with fuch intrepidity and freedom, that the professed to esteem him for it. But, being i ality highly incenfed against him, he caused to be profecuted for high treason; when he condemned to lofe his right hand and his Patkul, however, eleaped, and entered into Service of Peter the Great; but, while achie the Czar's ambassador to Augustus, K. of Pu whom he had formerly ferved, was most ung fully delivered up a prisoner, by that monard Charles XII.; who caused him to be broken on the wheel, with every circumstance of miny and aggravated crucity, on the 30th

\* PATLY. adv. [from pat.] Commodio

(1.) PATMOS, in ancient geography, of the Storades, so miles in compass, accord Dionysius and Priny. It was rendered so the exile of St John, and the Revelation set him there. Most of interpreters think St wrote them in the same place during his Patmos lies between the island of Scaria and promontory of Miletus. It is now called Passine, Patmol, or Palmosa. Its circuit is so-miles. It belongs to the Turks. It is detable for its harbours; but the inhabitants been obliged by the pirates to quit the cannot retire to a hill on which St John's costands. This convent is a citadel confishis several irregular towers, and is a substantial the

ing fested on a very steep rock. The island is sery buren, and without wood; but abounds with partridges, rabbits, quails, turtles, pigeons, and singles. Their corn does not amount to 1000 bires in a year. In the whole island there are true geomen; but there are above 40 women to me num. To the memory of St John is an hemistee on the fide of a mountain, where there is above for the fide of a mountain, where there is above for the fide of the above island. It is also before the steep of the above island. It is a steep of the steep of

MINA, a town of Indostan, in the dominions of the Great Mogul, N. of Bengal, where the Light have factories for faltpetre, borax, and gwish. It is the capital of Bahar, a dependent of Bengal, and is situated in a pleasant county, as miles E. of Agra. It is 7 miles tong, on the backs of the Ganges, and about half a mile lead. Mr Rennel gives strong reasons for supposite to be the ancient Palibothem. The beau large and populous, but the houses are libertion each other. Lon. 85, 40. E. Lat. 45.

PATOECI. See PATÆCI.

PATOMA, a river of Russia, which runs into Belcu; in Lon. 134. 20. E. of Ferro. Lat. 59.

PATOMACK, a large river of North America, Tipina, which rifes in the Alleghany mountains, spirits Virginia from Maryland, and falls to Octipeak hay. It is about 7 miles broad, salaungable for near 200 miles.

PATONCE, or POTENCE, n. f. in heraldry, is said, by at the ends; from which it differs with that the ends, instead of turning down her furdelis, are extended fomewhat in the limitum. See Plory.

PATONG, a town of China, of the 3d rank, flouquing, on the Yang-tie; 15 miles WNW.

PATQUASHAGAMÁ, a lake of Canada; 450

In W. of Quebec. MIRE, a city of Achaia, at the NW. of Perefus, anciently called Aroe. It was visited Chandler, who gives the following account "It has been often attacked by enemies, and pillaged. It is a confiderable town, diance from the fea, situated on the side of wich has its summit crowned with a ruicale. This made a brave defence in 1447 Fil Sultan Morat, and held out until the peace concluded, which first rendered the Morea Lay to the Turks. A dry flat before it was the port, which has been choked with mud. now, as in the time of Strabo, only an into road for vessels. It is a place of some and is inhabited by Jews, Turks, and The latter have several churches. One caled to St Andrew, who fuffered martyrface. It had been recently repaired. The the fears supposed that of the temple of yans a fountain. The air is had, and in round about over-run with the gly-Figuorice. Patrze affifted the Ætoliinvaded by the Gauls under Brennus; and was reduced to extreme poverty, and ahandoned. Augustus reunited the

scattered citizens, and made it a Roman colony. fettling a portion of the troops which obtained the victory of Actium, with other inhabitants from the adjacent places. Patræ reflourished and enjoyed dominion over Naupactus, Œanthéa, and feveral cities of Achaia. In the time of Paulanias, it was adorned with temples and porticoes, a theatre, and an odéum which was superior to any in Greece, but that of Atticus Herodes at Athensa In the lower part of the city was a temple of Bacchus Æsymnetes, in which was an image preferred in a cheft, and conveyed from Troy by Eurypylus. By the port were temples; and by the sea, one of Ceres, with a pleasant grove and a prophetic fountain of unerring veracity in determining the event of any illuels. After supplicats ing the goddess with incense, the sick person appeared, dead or living, in a mirror fulpended for as to touch the furface of the water. In the cia tadel of Patras was a temple of Diana Laphria, with her statue in the habit of a huntress, of ivory and gold, given by Augustus Casfar, when he laid walte Calydon and the cities of Ætolia to people Micopolis. The Patrenfians honoured her with a yearly festival, which is described by Pausanias who was a spectator. They formed a circle round the altar with pieces of green wood, each 16 cubits long, and within heaped dry fuel. The folemnity began with a most magnificent process fion, which was closed by the virgin priestels in a chariot drawn by stage. On the following days the city and private persons offered at the altar ruits, and birds, and all kinds of victims, wild bours, flags, deer, young wolves, and beafts full grown; after which, the fire was kindled. It was not remembered that any wound had ever been received at this ceremony, though the spectacle and facrifice were as dangerous as favage. number of women at Patræ was double that of the men. They were employed chiefly in a manufacture of flax which grew in Elis, weaving garments, and attire for the head."

PATRANA. See PASTRANA.

PATRAS, an ancient and flourishing fown of European Turkey, in the Morea, capital of a duchy, with a Greek archbishop's see. It is pretty large and populous; and the Jews, who are one 3d part of the inhabitants, have four synagogues. There are several handsome mosques and Greek churches. The Jews carry on a great trade in filk, leather, honey, wax, and cheese. There are cypress trees of a prodigious height, and excellent pomegranates, citrons, and oranges. It has been several times taken and retaken, and is now in the hands of the Turks. It is seated in I on. 21. 45. E. Lat. 38, 17. N.

SENATOR.

PATRIA, a town and lake of Naples, in Lavora; 13 miles NW. of Naples.

(1.) \* PATRIARCH. n. f. [patriarche, French; patriarche, Latin.] 1. One who governs by paternal right; the father and ruler of a family.—

So spake the patriarch of mankind. Milton. The monarch oak, the patriarch of the trees, Shoots rifing up.

2. A hishop superior to archbishops.—The patriarch; for 299 years had been of one house. Raliciph.

leigh.—Where secular primates were heretofore given, the ecclesiastical laws have ordered patriarchs and ecclesiastical primates to be placed. Assiste.

(2.) PATRIARCH, one of those first fathers (2.) PATRIARCHA, who lived towards the beginning of the world, and who became famous by their long lines of descendants. Abraham, Isaac, and Jacob, and his 12 sons, are the patriarchs of the Old Testament; Adam, Seth, Enoch, &c. were antediluvian patriarchs. See Antedluvians. The authority of patriarchal government existed in the fathers of families, and their sirst-born after them, exercising all kinds of eccleratical and civil authority in their respective households; and to this government, which lasted till the time of the Israelites dwelling in Egypt, some have ascribed an absolute and despotic power, extending even to the punishment by death.

(3.) PATRIARCHS, among Christians, are ecclefiaftical dignitaries, or bifhops, so called from their paternal authority in the church. The power of patriarchs was not the fame in all, but differed according to the customs of countries, or the pleasure of kings and councils. Thus the patriarch of Constantinople grew to be a patriarch over the patriarchs of Ephefus and Cæfarea, and was callled the acumenical and univerfal patriarch; and the patriarch of Alexandria had some prerogatives which no other patriarch but himself enjoyed, such as the right of confecrating and approving every fingle bishop under his jurisdiction. The patriarchate has been ever esteemed the supreme dignity in the church: the bishop had only under him the territory of the city of which he was bishop: the metropolitan superintended a province, and had for fuffragans the bishops of his province; the primate was the chief of what was then called a DIOCESE, and had feveral metropolitans under him; and the patriarch had under him feveral dioceses, compofing one exarchate, and the primates themselves were under him. Usher, Pagi, De Marca, and Morinus, attribute the establishment of the grand parfiarchates to the aposties themselves; who, in their opinion, pitched on the three principal cities in the three parts of the known world; viz. Rome in Europe, Antioch in Asia, and Alexandria in Africa: and thus formed a trinity of patriarchs. Others maintain that the name patriarch was unknown at the time of the council of Nice; and that long afterwards patriarchs and primates were confounded together, as being all equally chiefs of dioceles, and superior to metropolitans, who were only chiefs of provinces. Hence Socrates gives the title patriarch to all the chiefs of dioceses, and reckons ten of them. It does not appear that the dignity of patriarch was appropriated to the five grand fees of Rome, Con-Rantinople, Alexandria, Antioch, and Jerusalem, till after the council of Chalcedon in 451; for when the council of Nice regulated the iimits and prerogatives of the three patriarchs of Rome, Antioch, and Alexandria, it did not give them the title of patriarchs, though it allowed them the pre-eminence and privileges thereof. Nor is the term patriarch found in the decree of the councilof Chalcedon, whereby the 5th place is affigned to the bishop of Jerusalem; nor did these five patriarchs govern all the churches. There were I fides many independent chiefs of diocefes, wh far from owning the jurifdiction of the grand I triarchs, called themselves patriarchs; such that of Aquileia; nor was Carthage ever fubi to the patriarch of Alexandria. Motheim imagil that the bishops, who enjoyed a certain degree pre-eminence over the rest of their order, w distinguished by the Jewish title of patriarch the fourth century. The authority of the triarchs gradually increafed, till, about the cl of the 5th century, all affairs of moment wit their patriarchate came before them. They c fectated bishops; affembled yearly in council clergy of their respective districts; pronounce decifive judgment in those cases where accusati were brought against bishops; and appointed cars or deputies, clothed with their authority, the preservation of order in the remote provin In fhort, nothing was done without conful them; and their decrees were executed with fame respect as those of the princes. But the thority of the patriarchs was not acknowled through all the provinces. Several diffricts, & in the easter, and western empires, were exen ed from their jurisdiction. The Latin church no patriarchs till the 6th century; and the c ches of Gaul, Britain, &c. were never fubject the authority of any patriarch. There was primacy, no archate nor patriarchate, owned h but the bishops, with the metropolitans, gov ed the church in common. Du Cange fays, fome albors have born the title of patriarchs.

(4.) PATRIARCHS, JEWISH, a dignity, respect the origin of which there is a variety of opini The learned authors of the universal History th that the first appearance and institution of t patriarchs happened under Nerva the fuccess Domitian. It feems probable that the patria were of the Aaronic or Levitical race; the of Judah being at that time too much depre and too obnoxious to the Romans to be abl affume any external power. But of whatever they were, their authority came to be very c derable. Their principal bufiness was to inf the people; and for this purpole they inflit schools in several cities. And having gained reputation for their extraordinary learning, and piety, they might, in time, not only br great concourse of other Jews from other p as from Egypt and other western provinces of dispersion, but likewise prove the means of patriarchal authority being acknowledged t From them they ventured at length to levy a of tribute, to defray the charges of their dig and of the Apostoli, or Legati, under them, w butiness it was to carry their orders and deci through the other provinces of their difper and to fee them punctually executed by all, fome shadow of union might be kept up an the western Jews. They likewise nominated doctors who were to preside over their sc-1 and academies; and these were in process of ftyled chiefs and princes, in order to raife the dit of that dignity, or to imply the great re which their disciples were to pay to them. chiefs became at length rivals of the patriaand some of them possessed both dignities at o

PAT

n compation which caused not only great confasion amongst them, but, oftentimes violent and bloody contests. However, the Jewish Rabbies have trumped up a much older era for this patriarchil dignity, and have given us a fuccession of them down to the 5th century, in which it was abound. According to them, the first patriarch was fillel, furnamed the Babylonian, because he was ket for from Babylon to Jerusalem about 122 pas before the ruin of their capital, or 30 beint the birth of Christ, to decide a dispute abut the keeping of Easter, which on that year fell out on the Sabbath day; and it was on account of his wife decision that he was raised to that dignity, which continued in his family till the 1th century. He was likewife looked upon 23 fecond Moses, because he lived like him 40 year in obscurity, 40 more in great reputation for kwang and fanctity, and 40 more in possession of the surfacehal dignity. They make him little into that law-giver in other of his excellencies. a rell as in the great authority he gained over the whole Jewish nation. The wonder is, how limithe Great, who was so jealous of his powa cald fuffer a stranger to be raised to such a hight of it, barely for having decided a dispute of link importance. Hillel was fucceeded by his on Numeon, whom many Christians pretend to have been the venerable old person of that name, who recoved the divine infant in his arms. kn pre him but a very obscure patriarchate; the Christian authors make him chief of the limited run; and Epiphanius says, that the Find thated him so much for giving so ammmon burial. But it is hardly credi-Luke should have so carelessly passed two-fold dignity, if he had been really Me was fucceeded by Jochanand in right of descent, but of his extraordi-Tacil, which the Rabbies describe in terms the not extravagant hyperboles. He enjoyed but two years, or at most 5 years, and to have fortold to Titus, that he was orto destroy the temple; on which account pretend that general gave him leave to rethe finhedrim to Japhne. The Jewith writhat he erected an academy there, which fied till the death of Akiba; was the feat of pariarch; and confifted of 300 schools; and maker at Lydda, near Japhne, and where the ad St George is buried. He lived 120 years being asked, what he had done to prolong Mac? he gave this answer; " I have taken care all festivals: and my mother even fold omaments to buy wine to make me merleft me at her death 300 of it, to fantify the Sabbaib!"-The that flourished in his time were no less bable, particularly the famed Rabbi Chaniwhom the Bath Col was heard to fay, that was preferred for the fake of him; and Teodemus, who, they pretend, stopped the of the fun, like Joshua. He was succeeded amaliel, a man of unfufferable pride; and to univerfal authority over all the Jews, not the west, but over the whole world, that

by monarchs fuffered his laws to be obey-

ed in their dominions. In his days flourished Samuel the Less, who composed a prayer full of the bitterest curses against heretics, by which they mean the Christians; and which are still in use. Gamaliel was no less an enemy to them; and yet both have been challenged, the former as the celebrated mafter of our great apostle, the other as his disciple in his unconverted state. Simon II. his fon and fuccessor, was the first martyr who died during the fiege of Jerusalem. The people so regretted his death, that an order was given, instead of 10 bumpers of wine, which were usually drank at the funeral of a faint, to drink 13 at his, on account of his martyrdom. These are the patriarchs, who, the Rabbies tell us, preceded the destruction of the temple; and we need no farther confutation of this pretended dignity, than the filence of the facred historians, who not only make not the leaft mention of it, but affure us all along that they were the high-priefts who prefided in the fanhedrim; and before whom all cases relating to the Jewish religion were brought and decided. It was the high-priest who condemned our Saviour and St Stephen; who forbad the apostles to preach in Christ's name; and who sat as judge on St Paul. The same may be urged from Josephus, who must have known and mentioned this pretended dignity, if any fuch there had been; and yet is fo far from taking the least notice of it, that, he places the pontiffs alone at the head of all the Jewish affairs; and names the high-priest Ananus as having the care and direction of the war against the Romans;—which is an evident proof that there were then no fuch patriarchs in being. If there had been any fuch remarkable fuccession, the Ta!mudifts would have preferved it; whereas, neither they, nor any of the ancient authors of the Jewish church, make any mention of it; but only fome of their doctors, who have written a confiderable time after them, to whom little credit can be given, as there are fuch unfurmountable contradictions between them, as no authors either Jewish or Christian have been able to reconcile. Their fuccession, according to those rabbic., ftands as follows: 1. Hillel the Babylonian. 2. Si meon the fon of Hillel. 3. Gamatiel the fon of Simeon. 4. Simeon II. the fon of Gamaliel. 5. Gamaliel II. the fon of Simeon II. 6. Simeon III. the fon of Gamaliel II. 7. Judah the fon of Simoon III, 8. Gamaliel III. the fon of Judah. 9. Judah II. the fon of Gamaliel III. 10. Hillel II. fon of Judah III. 11. Judah III. fon of Hillel II. 12. Hillel III. fon of Judah III. 13. Gamaiiel IV. fon of Hillel III. But Gants Tzemach David hath reduced them to 10. On the whole, it cannot be doubted but that their first rife was in Nerva's time, however much Jewish pride may have prompted them to affert their origin to have been more ancient than it really was. They have also exaggerated their power beyond all bounds, for the purpose of repelling the arguments of Chris. tians. In time however, they certainly imposed upon the people; and what power they did poffess (which the Romans only allowed to be in religious matters, or in fuch as were connected with religion) they exercifed with great rigour. Their pecuniary demands became very exorbitant; and was the cause of their suppression in the year 429. (1.) \* PA.

(1.) \* PATRIARCHAL. adj. [patriarchal, Fr. from patriorch.] 1. Belonging to patriarchs; fuch as was possessed or enjoyed by patriarchs.

Such drowfy fedentary fouls have they,

Who would to patria chal years live on. Norris. -Nintrod enjoyed this patriarchal power; but he against right enlarged his empire. Locke. Belonging to hierarchical patriarchs.—Archbishops or metropolitans in France are immediately fubject to the pope's jurifdiction; and, in other places, they are immediately subject to the patriarthal sees. Ayliffe.

(2.) PATRIARCHAL CROSS, in heraidry, is that where the shaft is twice crossed; the lower arms being longer than the upper ones.

PATRIARCHATE. n. f. [patriarchat, [Fr. \* PATRIARCHSHIP. from patriarch.] A hishoprick superior to archbishopricks .- The questions are as ancient as the differences between Rome and any other of the old patriarchates. Selden.—Prelacies may be termed the greater benefices; as that of the pontificate, a patriarchship and archbishopric. Aylisse.

\* PATRIARCHY. n. f. Jurisdiction of a patriarch; patriarchate.—Calabria pertained to the patriarch of Constantinople, as appeareth in the novel of Leo Sophus, touching the precedence of metropolitans belonging to that patriarchy. Brere-

PATRICA, a town of Italy, in the territory of the Church, and Campagna of Rome, towards the sea-coast, 8 miles E. of Ostia, and 13 S. of Rome. About a mile from it is a hill called Monte de Livana, which fome have thought to be the fite of the ancient Lavinium, founded by Æneas.

(1.) \* PATRICIAN. ad/. | patricien, Fr. patrieius, Lat.] Senatorial; nobie; not plebeian.

Th' infulting tyrant prancing o'er the field, His horses hoofs wet with patrician blood.

Addison.

(2.) \* PATRICIAN. n. f. A nobleman. Noble patricians, patrons of my right,

Defend the justice of my cause with arms. Shak. You'll find Gracchus, from patrician grown A fencer and the scandal of the town.

-Your daughters are all married to wealthy pa-

tricians. Savift.

(3.) PATRICIAN was a title given, among the ancient Romans, to the descendants of the 100 or 200 first senators chosen by Romulus; and by him called patres, fathers. Romulus established this order after the example of the Athenians; who were divided into two classes, viz. the suraleidas, patricios, and dandlineus, populares. Patricians, therefore, were originally the nobility; in opposition to the Piebeians. They were the only persons whom Romulus allowed to aspire to the magistracy; and they exercised all the functions of the priesthood till A.U.C. 495. But the cognizance and character of these ancient families being almost lost by a long course of years, and frequent changes in the empire, a new kind of patricians were afterwards fet on foot, who had no pretenfions from birth, but whose title depended entirely on the emperor's favour. This new patriciate, Zozimus telis us, was erected by Constantine, who conferred the quality on his counfellors, not because they were descended from the ancient fathers of the senate, but because they were the fathers the republic or of the empire. This dignity time became the highest of the empire. Justini calls it fummam dignitatem. In effect, the pat cians feem to have had the precedence of the e fulares, and to have taken place before them in t fenate; though F. Faber afferts the contra What confounds the question is, that the two d nities often met in the tame person; because patriclate was only conferred on those who gone through the first offices of the empire, or been confuls. Pope Adrian made Charlema take the title of patrician before he affumed quality of emperor; and other popes have gi the title to other kings and princes.

(4.) PATRICIAN was also a title of honour of conferred on men of the first quality in Engla in the time of the Anglo Saxon kings. See THA

(5.) Patrician Deities, Patricii Dii mythology, were Janus, Saturn, the Genius, I to, Bacchus, the Sun, the Moon, and the Ear

6.) PATRICIANS, in eccleliastical writers, v ancient sectaries, who disturbed the peace of church in the beginning of the third century : 1 called from their founder PATRICIUS, prece of a Marcionite called Symmachus. His di guishing tenet was, that the substance of the is not the work of God, but that of the devil: which account his adherents bore an implac hatred to their own flesh; which sometimes ried them so far as to kill themselves. They also called Tatianites, and made a branc the Encratitæ.

PATRIC DEI. See Patrician, § 5. PATRICIUS. See Patrician, § 6; and I

KICK, No

(1.) PATRICK, Peter, a native of Theffa ea, who was fent by the emp. Justinian 1. and fador to Amalasuntha, Q. of the Goths, A 534; and in 550 to Chofroes, K. of Perfia, to clude a peace. On his return he was appoi mayor of the palace. He wrote a work enti The History of Ambassadors, part of which is ex and was published in the Collection of Byza

Historians; in 1648, foilo.

(2.) PATRICK, Simon, D. D. a very lea English bishop, born at Gainsborough in Lin shire in 1626. In 1644 he was admitted Queen's college, Cambridge, and entered holy orders. After being for fome time cha to Sir Walter St John, and vicar of Batter Surry, he was made rector of St Paul's, Co garden, London. In 1678 he was made dea Peterborough where he was much beloved. ring the reign of K. James II. he boldly pre and wrote against the church of Rome. he was appointed Bp. of Chichester, and wa ployed with others of the new bishops to lett affairs of the church in Ireland. In 1601 h. translated to the see of Ely: He died in after having published various works; which the most distinguished are, Paraphra fe Commentaries on the Holy Scriptures, 3 vol 2. Tracts against popery: 3. Sermons: 4. 🕞 of the Church of Peterborough.

(3.) PATRICK, ST, the apostle of Ireland 2d bishop of that country. He was born 5th A. D. 373, of a good tamily, at Kirk-Pa

103 sear Dumbarton, now in Scotland, but then comprehended under Britain .- His baptismal name Sarat, fignifies, in the British language, valiant n car. On some inroad of certain exiles from leand be was taken prisoner, and carried into the linedom, where he continued fix years in the ferna of Milcho, who had bought him, when Pamck amired the new name of Cothraig, or Ceathe Tigh, i. e. four families. In this time he makehoulelf mafter of the Irish language, and at life saide his escape, and returned home on board About two years after, he formed a defor of converting the Irith, either in consequence ha a dream, or of what he had observed during ha acquaintance with them. To qualify himself for this, he travelled to the continent, where he continued 35 years, purfuing his studies under his mother's uncle, St Martin Bp. of Tours, who had entaised him deacon; and after his death with RGerman, bishop of Auxerre, who ordained him picil, and gave him his 3d name Mawn or Magi-Pope Celeffine consecrated him bishop, and se him his most familiar name Patricius, expresand his honourable descent; and to give lustre wright to the commission which he now based him with to convert the Irish. Palladius ben there a year before him, but with little accis: the faints Kieran, Ailbe, Decian, and Ibar but there before them both. But the great office Fapolic of Ireland was referred for Patrick, who mediathe country of the Evolein, or at Wickby, & D. 441. His first convert was Sinell, the The Mont from Cormac king of Leinster. the proceed to Dublin, and thence to Ulfter, plet befounded a church (afterwards the famous they of Saul, in the county of Down), remarkfor its polition and being made out of a barn. Meriaboning 7 years indefatigably in his great the returned to Britain, which he delivered the berefies of Pelagius and Arius; engaged eminent persons to assist him; visited the of Man, which he converted in 440, when the sopric was founded; and A. D. 448, returned the fee of Armagh, which he had founded in ; and in 13 years more completed the converof the whole island. After giving an account is commission at Rome, he once more returnation of his life. ledand, and spent the remainder of his life the monafteries of Armagh and Saul, fumicriding and enforcing the doctrine and difwhich he had established. After having and the february of an academy, he died at Saul aged 120, March 17. A. D. 493, and was at Down atterwards, in the fame grave S Briget and St Columb. His genuine works collected and printed by Sir James Ware, His immediate successor in this see was St Begnus.

#Platrick, ST, order of, an inflitution which place in Ireland in 1783. On the 5th of Feb. the king ordered letters patent to be pailed If the great seal of the kingdom of Ireland, for a fociety or brotherhood, to be called of the illustrious order of St Patrick, of which dy, his heirs, and successors, shall perpe-The lovereigns, and his majesty's lieutenantand general governor of Ireland, &c. for time being, that officiate as grand-mafters; and also for appointing prince Edward, and several of the prime nobility of Ireland, knights companions of the faid illustrious order.

PATRICK'S EA, OF ISLE. See BATTERSEA. PATRICK'S ISLE, ST. an island of Ireland, on the coast of Dublin, opposite Balruddery.

(1.) PATRICK'S, ST, a town of Ireland, in the county of Waterford, and province of Munster.

(2.) PATRICK's, ST, a town of Georgia, capital of Cainden county, feated on the Great Satilla, 32 miles above its mouth.

PATRICK'S WELL, ST, a town of Ireland, in / the county of Limerick, and province of Munfter. PATRIMONIA, a town of Corfica, 4 miles V. of Bastia

\* PATRIMONIAL. adj. [patrimonial, Fr. from Possessed by inheritance.-The expati imony.] pence of the duke of Ormand's own great patrimonial estate, that came over at that time, is of no fmall confideration in the flock of this kingdom. Temple.

Their patrimonial sloth the Spaniards keep.

\* PATRIMONIALLY. adv. [from patrimonial.] By inheritance. Good princes have not only made a distinction between what was their own patrimonially, as the civil law books term it, and what the state had an interest in. Davenant.

PATRIMONIO, or ST PETER'S PATRIMONY, province of Italy in the Pope's dominions; fo called, because it was granted by the emperor Conftantine, to support a church, which he built in honour of St Peter, and for the use of the It is bounded on the N. by Orvietano and Pope. part of Umbria; E. by Sabina and Campagna di Roma; SW. by the Mediterranean; and NW. by the duchy of Castro. It is about 43 miles long, and 32 broad; and is fertile in corn and fruit. It also produces great quantities of alum. Viterbo is the capital; the other chief cities are Boslena, Castellana, Civita Vecchia, and Monte Fiascone.

(1.) \* PATRIMONY. n. f. [patrimonium, Lat. patrimoine, Fr.] An estate possessed by inheritance.-Inclosures they would not forbid, for that had been to forbid the improvement of the patrimony of the kindgom. Bacon .-

So might the heir, whose father hath, in play, Wasted a thousand pounds of ancient rent,

By painful earning of one groat a day, Hope to restore the patrimony spent. Davies.

Posterity stand curs d! fair patrimony Milton. That I must leave ye, sons.

For this redemption, all my patrimony Milton. I am ready to forego and quit. Their ships like wasted patrimonies shew.

Dryden.

The shepherd last appears, And with him all his patrimony bears. Dryden. (2.) PATRIMONY, has been also applied to church estates or revenues; in which sense authors say, the patrimony of the church of Rimini, Milan, &c. The church of Rome had patrimonies in France, Africa, Sicily, and many other countries. To create the greater respect to the estates belonging to the church, it was usual to give their patrimonies the names of the faints they held in the highest veneration; thus the cstate of the church of Ravenna was called the patrimony of St Apollinarius; that of Milan, the patrimony of St Ambroie; and the estates of the Roman church were called the patrimony of St Peter in Abruzzo, the patrimony of St Peter in Sicily, and

(3.) PATRIMONY OF ST PETER. See PATRI-MONIO.

PATRINGTON, a town of Yorkshire, near the mouth of the Humber, anciently called P . E-TORIUM. It is feated at the place where the Roman road from the Picts wall ended. It has a market on Sat. and lies 18 miles ESE. of Hull, 50 SE. of York, and 192 N. of London. Lon. o. 8.

E. Lat. 53. 49. N. (1.) \* PATRIOT. n. f. 1. One whose ruling

paffion is the love of his country.-

Patriots who for facred freedom flood. Tickel.

The firm patriot there,

Who made the welfare of mankind his care, Shall know he conquer'd. Addison.

Here tears thall flow from a more gen'rous caule,

Such tears as patriots shed for dying laws. Pope. 2. It is fometimes used for a factious disturber of the government.

(2.) PATRIOTS, EMINERT. For instances of eminent ancient patriots, See Aristides, Aris-TOMENES, BRUTUS, CINCINNATUS, CODRUS, Decius Mus, Epaminondas, Fabricius, Lycurgus, Pelopidas, Timoleon, &c. For modern examples, See TELL, WALLACE and WASH-INGTON.

PATRIOTIC, adj. Actuated by the love of one's country; belonging to a patriot, or patri-

(1.) \* PATRIOTI-M. n. f. [from patriot.] Love

of one's country; zeal for one's country.

(2.) PATRIOTISM. Numberless instances of the most exalted patriotism are recorded in the histories of ancient Greece and Rome. But no event, in ancient or modern history, ever did or can exceed that well authenticated fact, that occurred in 1347, at the fiege of Calais. See CALAIS, No 1, Nor has our own country been deficient in examples of the most difinterested Patriotism. Thall only refer to WALLACE.

PATRIPASSIANI, A feet of Christians, who PATRIPASSIANS, appeared about the end of the 2d century, so called from their ascribing pasfion or fuffering, to the Father; for they afferted the Unity of God in such a manner as to destroy all distinction of persons, and to make the Father and Son precifely the same; in which they were The aufollowed by the Sabellians and others. thor of this herefy was PRAXEAS, a philosopher of Phrygia. Swedenbourg and his followers feem to hold the same faith.

PATRIX, Peter, a French poet, born at Caen, in 1585. Several of his poems are on religious subjects; but one of them, entitled the Dream, has been often translated and imitated. He died

at Paris, in 1673, aged 88.

(1.) PATRIZI, Francis, Bp. of Gayette, an Italian author of the 15th century. He wrote feveral works besides Ten Dialogues in Italian, on the manner of writing and fludying Hiftory; which are much effecmed. He died in 1494.

(2.) PATRIZI, Francis, a learned Italian, be in 1530, at Cherlo, in Istria; who taught ph fophy at Rome, Ferrara and Padua with great putation. He was an opponent of the Peripa tics. He wrote many works; but his Para Militari, or Parallel of the ancient Military with the modern, Rome, 1994, fol. is effect his most capital piece. He died in 1597, aged

\* To PATROCINATE. v. a. [putrocinor, ] patrociner, old French.] To patromie; to tect; to defend. Dia.

PATROCLES, an ancient author, mention by Strabo, who wrote a History of the World PATROCLI, an island on the coast of At

Paulan. iv. C. 5 PATROCLUS, a Grecian chief at the Tr He was the fon of Menœtius king of O by Sthenele, Philomela or Polymela. The ki of Clyfonymus, the fon of Amphidamas, by dent, in his youth, made him fly from Opus. went to the court of Peleus king of Phthia; cordially received, and contracted the most mate friendship with Achilles the king's When the Greeks went to the Trojan war troclus went with them at the express defin his father, and embarked with ten thips Phthia. He was the constant companion of A les; lodged in the fame tent; and when he i ed to appear in the field of battle, on accou Agamemnon's injustice, Patroclus invitates example, and his absence was the cause of loss to the Greeks. At last Nestor prevailed him to return to the war, and Achilles perm him to appear in his armour. The brave Patrocius, with the terror which the fight of arms of Achilles inspired, soon routed the jans, and obliged them to fly to the city. would have broken down the walls; but A opposed him; and Hector, at the infligation that god, difmounted from his chariot to a him as he attempted to ftrip a Trojan who had flain. This engagment was obstinate Patrocius was at length overpowered by H with the aid of Apoilo. His body was at I. covered, and carried to the Grecian camp, Achilles received it with the loudest lamenta His funerais were observed with the great lemnity. Achilles facrificed near the burning 12 young Trojans, 4 of his horses, and two dogs; and the whole was concluded by the bition of funeral games, in which the conq were liberally rewarded by Achilles. laying, aside his resentment against Agame entered the field to avenge the fall of his f and his anger was gratified only by the fla of Hector, who had kindled his wrath by a ing at the head of the Trojan armies in the a taken from Patroclus. The patronymic of rides is applied to Patroclus, because Acto father to Menœtius.

(1.) \* PATROL. n. f. [patrouille, patozal French.] 'r. The act of going the rounds in rison to observe that orders are kept. that go the rounds.-

Send forth the faving virtues round th In bright patrol.

(2.) The Patrol, in war, (§ 1, Def. 2.) 8 ly confifts of 5 or 6 men, detached from a Prior.

on grand, and commanded by a ferjeant. They go every hour of the night, from the beating of the tattoo until the reveille: they weak in the freets in garnfons, an over the camp in the field, to preent difforders, or any number of people from affembling together; they are to fee the lights in the folders burracks put out, and to take up all the folders they find out of their quarters. Sometimes patrols condift of an officer and 30 or 40 mm, is well infantry as cavalry; but then the enemy is generally near at hand, and confequently the dunger greater.

\*To Patrol. v. n. [patrouiller, Fr.] To go the rounds in a camp or garrifon.—

Thefeourguards of the mind are fent abroad, And fill patrolling beat the neighb'ring road.

Blackmore.

(L) PATRON. n. f. [patron, Fr. patronu, Lun.]

1. One who countenances, supports or protest. Commonly a wretch who supports with making, and is paid with flattery.

I'll plead for you, as for my patron. Shak. Neer let me pass in filence Dorfet's name; Neer cease to mention the continu'd debt, Which the great patron only would forget.

& A greatdian faint .-

Thou amongst those faints, whom thou do'st fee,

Shat be a faint, and thine own nation's friend Add paron.

Spenjer.

Machael is mentioned as the patron of the Jon, and a now taken by the Christians. Dryd.

Adveste; defender; vindicator.—We are no parous of those things. Hooker.—Whether the most of men have naturally imprinted on them the seas of extension and number, I leave to those who has donation of ecclesialtical preference.

Far more the patrons than the clerks inflame: Farms of lense afraid, but not of vice. Wesley.

(a) Patron, among the ancient Romans, was cocilation given to a master who had freed that. As soon as the relation of master expitiat of patron began: for the Romans, in their slaves their freedom, did not despoil relates of all rights and privileges in them; the full subjected them to considerable services duties towards their patrons, the neglect of act was very severely punished.

3.) Parkon was also a name, which the anci-Romans gave to fome great man, under protection they usually put themselves; him all kinds of honour and respect, and onating theinfelves his CLIENTS; while the on his fide, granted them his credit and They were therefore mutually atand mutually obliged to each other; and m consequence of reciprocal ties, all those m consequence or reciprocal which are the effect of a difference of rank, were woided: for it was the duty of the pabadvile his clients in points of law, to maar funts, to take care of them as of his own and secure their peace and happiness. were to affift their patrons with mooccasions; to ransom them or their, TOL XVII. PART I.

children when taken in war; to contribute to the portions of their daughters; and to defray in part, the charges of their public employments. They were never to accuse each other, or take contrary fides; and if either of them was convicted of having violated this law, the crime was equal to that of treason, and any one was allowed to kill the offender with impunity. This patronage was a tie as effectual as any confanguinity or alliance, and had a wonderful effect towards maintaining union and concord among the people for the space of 600 years; during which time we find no diffentions nor jealousies between the patrons and their clients, even in the times of the republic, when the populace frequently mutinied against those who were most powerful in the city.

(4.) PATRON, in the church of Rome; (§ 1, defi 2.) a faint whose name a person bears, or under whose protection he is put, and whom he takes particular care to invoke; or a faint in whose name

a church or order is founded.

(5.) PATRON, in the canon or common law, (§ 1, def. 4.) is a person who, having the advowation of a parsonage, vicarage, of the like spiritual promotion, belonging to his manor, hath on that account the gift and disposition of the benefice, and may present to it whenever it becomes vacant. The patron's right of disposing of a benefice originally arises either from the patron or his ancestors, &c. being the sounders or builders of the church; from their having given lands for the maintenance thereof; or from the church's being built on their ground; and frequently from all three together. See Patronage, § 2.

(6.) Patron, in geography, or Padron, a town of Syria, on the fea coaft, 20 miles SW. of Tripoli. It is faid to have been founded by K. Itobalus, the ally of Ahab, K. of Ifrael; and was anciently called Botrys or Botryum: See Botrys.

(i.) \* PATRONAGE. n. f. [from patron.] 1. Support; protection.—Lady, how fads it out, that you, in whom all virtue formes, will take the patronage of fortune, the only rebellious handmaid against virtue? Sidney.—

Here's patronage and befe our heart deferies, What breaks us bonds. Greech.

2. Guardianship of saints:—Among the Roman Catholicks every vessel is recommended to the patronage of some particular saint. Addison. 3. Donation of a benefice; right of conterring a bene-

(1.) PATRONAGE, [Lat. patronatus] or ADVOWson, (\$ 1. def. 3.) is a fort of incorporeal hereditament, confishing in the right of PRESENTATION to a church or ecclefiaftical benefice. Advowson, advocatio, fignifies the taking into protection; and therefore is fynonymous with patronage, and he who has the right of advowton is called the Pa-TRON of the church. For when lords of manors first built churches on their own demesnes, and appointed the tithes of those manors to be paid to the officiating ministers, which before were given to the clergy in common, the lord who thus built a church, and endowed it with a glebe or land, had of common right a power annexed of nominating fuch minister as he pleafed (provided he were canonically qualified) to officiate in that church, of which he was the founder, endower, maintainer

maintainer, and patron. Advowinhs are either advowtons appendant, or advowtons in gro's. They are also either prejentative, collative, or donative. See Advowson. As the law now stands, if the true patron once waves his privilege of donation, and prefents to the bifliop, and his clerk is admitfeel and inflituted, the advowson becomes for ever presentative, and shall never become donative any more. For these exceptions to general rules and common right are ever looked upon by the law in an unfavourable view, and construed as strictly as possible. If therefore the patron, in whom fach peculiar right resides, does once give up that right, the law, which loves uniformity, will interpret it to be done with an intention of giving it up for ever; and will therefore reduce it to the Randard of other ecclefiaftical livings. See Law, Part III. Chap. I. Sect. iv. ∫ 5-10.

those on the top of which are some marks of subjection and dependence; thus the city of Paris lately bore the sleurs-de-lis in chief, to show her subjection to the king; and the cardinals, on the top of their arms, bear those of the pope, who gave them the hat, to show that they are his creatures.

\* To PATRONAGE. v. a. [from the noun.] To patronife; to protect. A bad word.—

Darft thou maintain the former words thou fpak'ft?

Yes, fir, as well as you dare patronage
The envious barking of your faucy tongue.

Shak-

An out-law in a castle keeps,

And uses it to patronage his theft. Shak.

\* PATRONAL. adj. [from patronus, Lat.] Protecting; supporting: guarding; defending; doing the office of a patron. +The name of the city being discovered unto their enemies, their penates and patronal gods might be called forth by charms.

Brown's Vulg. Err.

\* PATRONESS. n. f. [feminine of patron; patrona, Lat.] 1. A female that defends, countenan-

ces, or supports.—
Of close escapes the aged patrone/s,

Blacker than erft, her fible mantle spread, When with two trusty maids in great distress, Both from nine uncle and my realm I fled.

Fairfax.

All things should be guided by her direction,

—All things should be guided by her direction, as the fovereign patrone/r and protectives of the enterprise. Bacon.—

Befriend me night, best patrone's of grief.

—He petition'd his patroness, who gave him for answer, that providence had assigned every bird its proportion. L'Estrange.—It was taken into the protection of my patronesses at court. Swift. 2. A semale guardian saint.

\*To PATRONISE. v. a. [from patron.] To protect; to support; to defend; to countenance.—
If a clergyman be look and scandalous, he must not be patronifed nor winked at. Bacon.—All tenderness of conscience against good laws, is hybocrify, and patronifed by none but men of design. South.—I have been esteemed and patronifed by the grandfather, the father, and the son. Dryden.

(1.) \* PATRONYMICK. n. f. [ wortenums, patronymique, Fr.] Name expressing the name of the

father or ancestor: as, Tylides, the son of Tydes—It ought to be rendered the son, Tectonic being a patronymick. Broome.

(2.) Patronymics, among grammarians, : derived, 1. From the name of the father; as P. des, i. e. Achilles the fon of Peleus. 2. From t mother; as Philyrides, i. e. Chiron the fon of P lyra. 3. From the grandfather on the father's fic as Earides, i. e. Achilles the grandfon of Eac 4. From the grandfather by the mother's fide; Attantiades, i. e. Mercury the grandion of Att And, 5. From the kings and founders of nation as Romulide, i. e. the Romans, from their found king Romulus. The terminations of Greek a Latin patronymics are chiefly four, viz. des. which we have examples above; as, as Thaum tous, i. e. Iris the daughter of Thanmas; ii, as. lantis, i. e. Electra the daughter of Atlas; and as Nerine, the daughter of Nereus. Of thefet minations des is masculine; and as, is, and ne, minine: des and ne are of the first declension, and is of the third. The Russians, in the usual mode of address, never prefix any title appellation of respect to their names; but perf of all ranks, even those of the first distinction, a each other by their Christian names, to wh they add a patronymic. These patronymics formed in some cases by adding Vitch same as our Fitz, as Fitzherbert, or the fon of !! bert) to the Christian name of the fathers others by Of or Ef; the former is applied only persons of condition, the latter to those of inf Thus, Ivan Ivanovitch, Ivan Ivano or rank. Ivan the fon of Ivan, or John the fon of John; ter Alexivitch, Peter Alexiof, Peter the fon of Ale The female patronymic is Efna, Ofna, or Oa as Sophia Alexeofna, or Alexiowna, Sophis daughter of Alexis; Maria Ivanofna or Ivanou Mary the daughter of John.

PATROS, a country mentioned by Jerem and Ezekiel, appears from the context to ment part of Egypt. Bocchart thinks it denotes Higher Egypt: the Septuagint translate it country of Pathure, Pliny mentions Normal Phrites in the Thebais; and Ptolemy, Pathyris, a bably the metropolis. From the Hebrew applation Patros, comes the gentilitious name Parls Moses. Moses.

PATROUS, [Патемо:.] a suname of Jupiter. PATRU, Oliver, a counsellor in parliam and dean of the French Academy, born at I in 1604. He had an excellent faculty both fpeaking and writing. Upon his admission the Prench academy in 1640, he made an ora of thanks, which gave rife to the custom of miffory speeches. He died very poor on the Jan. 1681. The prodigious exactness, with w he finished every thing he wrote, did not pe him to publish much. His miscellaneous w were printed at Paris in 1670, 4to; the 3d edit in 1714, 4to, was augmented with feveral pic They confift of Pleadings, Orations, Letters, I of some of his Friends, Remarks upon the Fre Language, &c.

PAVIER. See PAVER.

(1.) PAVILION. n. s. [pavilion, Fr.] A tent; Imprary or moveable house.—Flowers being the trees, the trees were to them a pavilion, the flowers to the trees a mofaical floor. Sidney.

She did lie her pavilion, cloth of gold, of tiffue. Shak. e, only he, heav'n's blew parilion spreads, and the ocean's dancing billows treads.

Sandys. -k == wheal for the enemy, when there was a

\* PAVER. PAVIER. n. f. [from pave.] One king in the field, to demand in what part of the camp he refided, that they might avoid firing upon the royal pavilion. Addison.—
The glowing fury springs,

Once more invades the guilty dome, and shrouds Its bright pavilions in a veil of clouds.

(2.) PAVILION, in architecture, fignifies a kind of turret or building, ufually infulated, and contained under a fingle roof; fometimes fquare, and fometimes in form of a dome: thus called from the refemblance of its roof to a tent. Pavilions are sometimes also projecting pieces, in the front of a building, marking the middle thereof; fometimes the pavilion flanks a corner, in which case it is called an angular pavilion. The Louvre is flanked with four pavilions: the pavilions are usually higher than the rest of the building. There are pavilions built in gardens, commonly called fum-mer-houses, pleasure-houses, &c. Some castles or forts confift only of a fingle pavilion.

(3.) PAVILION, in heraldry, denotes a covering in form of a tent, which invests or wraps up the armories of divers kings and fovereigns, depending only on God and their fword. The pavilion confifts of two parts; the top, which is the chapeau, or coronet; and the curtain, which makes the mantle. None but fovereign monarchs, according to the old French heralds, may bear the pavilion entire, and in all its parts. Those who are elective, or have any dependence, fay the heralds, must take off the head, and retain nothing

but the curtains.

(4.) Pavilion, in military affairs, fignifies a tent raised on posts, to lodge under in the summer-

(5.) PAVILION is also sometimes applied to flags,

colours, enfigns, flandards, banners, &c.

(6.) PAVILIONS, among jewellers, the undersides and corners of the brilliants, lying between the girdle and the collet.

\* To Pavilion. v. a. [from the noun.] 1. To

furnish with tents.

Jacob in Mahanaim saw The field pavilion'd with his guardians bright. Milton.

2. To be sheltered by a tent.-

With his batt'ning flocks the careful fwain

Abides pavilion'd on the graffy plain. PAVILLAC, a town of France, in the dep. of Gironde, 102 miles SE. of Lesparre, and 24 N. of

Bourdeaux.

PAVILLON, Stephen, a French lawyer, born at Paris, in 1652. He was advocate general to the Parliament of Metz, and was admitted a member of the French Academy, and of hose of Inscriptions and Belles Lettres. He had a pension of 2000 livres from Lewis XIV; and died in 1725,

of Caudebec.

PAVIN. See Pavan, No 1.

PAVING, n. f. the construction of groundfloors, streets, or highways, in such a manner that they may be conveniently walked upon. In Britain, the pavement of the grand streets, &c. are usually of flint, or rubble-stone; courts, stables, kitchens, halls, churches, are paved with tiles,

bricks, flags, or fire-stone; fometimes with a kind of free-stone and rag-stone. In some streets, e.g. of Venice, the pavement is of brick: churches fometimes are paved with marble, and fometimes with mosaic work, as the church of St Mank at Venice. In France, the public roads, streets, courts, &c. are all paved with gres or gritt, a kind of free-stone. In Amsterdam and the chief cities of Holland, they call their brick pavement the burgher-master's pavement, to dilinguish it from the stone or flint pavement, which usually takes up the middle of the street, and which serves for carriages; the brick which borders it being deftined for the passage of people on foot. Pavements of free-stone, slint, and slags, in streets, &c. are laid dry, i. e. in a bed of fand; those of courte, stables, ground-rooms, &c. are laid in a mortar of lime and fand; or in lime and cement, especially if there be vaults or cellars underneath. masons, after laying a floor dry, especially of brick, foread a thin mortar over it; fweeping it backwards and forwards to fill up the joints. veral kinds of pavement are as various as the materials of which they are composed, and whence they derive the name by which they are diffinguifhed; as,

1. PAVING, GRANITE. Granite is a hard material, abounding in Scotland, of a reddish colour, very fuperior to the blue whynn quarry, and at present much used in London. See GRANITE.

2. PAVING, GUERNSEY, is the best, and very much in use; it is the same stone with the pebble. (see No 6.) but broken with iron hammers, and iquared to any dimensions required of a prisinoidical figure, fet with its finallest base downwards. The whole of the foregoing paving should be bedded and paved in finall gravel.

3. PAVING, KNOB, is done with large gravelftones, for porticoes, garden-feats, &c.

4. PAVING, MARBLE, is mostly variegated with different marbles, fometimes inlaid in mofaic.

5. PAVING OF CHURCHES, &c. is often performed with stones of several colours; chiefly black and white, and of feveral forms, but chiefly squares and lozenges, artfully disposed. Indeed, there needs no great variety of colours to make a furprifing diversity of figures and arrangements. M. Truchet, in the Memoirs of the French Academy, has thown by the rules of combination, that two square stones, divided diagonally into two colours, may be joined together chequerwife 64 different ways: which appears furprifing enough; fince two letters or figures can only be combined two ways. The reason is, that letters only change their fituation with regard to the first and fecond, the top and bottom remaining the fame; but in the arrangement of these stones, each admits of four feveral fituations, in each whereof the other square may be changed 16 times, which gives 64 combinations. (See CHANGE, § 2.) Indeed, from a farther examination of thele 64 combinations, he found there were only 32 different figures, each figure being repeated twice in the fame lituation, though in a different combination; to that the two only differed from each other by the transposition of the dark and light parts.

6. PAVING, PEBBLE, is done with stones collected from the fea-beach, mostly brought from , which forms part of the line of division be

the illands of Guernfey and Jerfey: they are durable, indeed the most so of any stone used this purpose. They are used of various sizes, those, which are from fix to nine inches deep, estcemed the most serviceable. When they a bout 3 inches deep, they are denominated ba or bowlers; these are used for paving court-y; and other places not accustomed to receive of ages with heavy weights; when laid in geom cal figures, they have a very pleafing appear

7. PAVING, PORTLAND, is done with stone the island of Portland; sometimes ornance

with black marble dots.

8. PAVING, PURBECK, for footways, is is neral got in large furfaces about 2½ inches the the blue fort is the hardest and the best of

kind of paving. See N° 15.
9. PAVING, RAG, was much used in Lor but is very inferior to the pebbles; it is dug vicinity of Maidstone in Kent, from which the name of Kentisk rag-slone; there are squ Rones of this material for paving coach-track

10. PAVING, RYEGATE, OF FIRE-STONE, IS for hearths, stoves, ovens, and such places: liable to great heat, which does not affect the

if kept dry.

11. PAVING, SQUARED, for distinction by called Scotch paving, because the first of the paved in the manner that has been and coul to be paved, came from Scotland; the first clear close stone, called blue aubynn, which is disused, because it has been found inferior thers fince introduced. See § 1, 2, 4, 7, 8, 1

12. PAVING, SWEDLAND, is a black flat in Leicestershire, and looks well for paving

or in party-coloured paving.

13. PAVING WITH BRICKS. 1. Flat brid ving, is done with brick laid in fand, mort groute, as when liquid lime is poured int joints. 2. Brick-on-edge paving, done with laid edge-wife in the same manner. 3. Brich alfo laid flat or edgewife in herring-box Bricks are also sometimes set endwise in mortar, or groute. 5. Paving is also perfe with paving bricks.

14. PAVING WITH NEW-CASTLE FLAG ftones about two feet square, and rag or two thick; they answer very well for paving ( fices: they are somewhat like the Yorkshire

15. PAVING WITH PURBECK PITCHERS; stones used in footways; they are brought the island of Purbeck, and also frequently t court-yards; they are in general from fix inches square, and about five inches deep.

16. PAVING WITH TILES, &c. 1. Wi inch tiles: 2. With foot tiles: 3. With c for stables and outer offices: 4. With the

of animals, for gardens, &c. 17. Paving, Yorkshire affe exceeding good material for foot-ways, an got of almost any dimensions, of the same ness as the Purbeck. This stone will not the wet to pais through it, nor is it affect the frost.

PAUKATUCK, a river of the United Conn Consellent and Rhode Island, and falls into Ston-

(a) MUL, formerly named SAUL, was of the tibe aniamin, a native of Tarfus in Cilicia, a in the profession; furft a persecutor of the coch and afterwards a disciple of Jesus Christ, at polle of the Gentiles. It is thought he was lati heat two years before our Saviour, suppoin the lived 68 years, as is mentioned in a was the fixth volume of St Chrysostom's men lie was a Roman citizen, because Augusraid given the freedom of the city to all the Tarfus, in confideration of their firm Expect to his interests. His parents sent him an to Javialem, where he studied the law at to feet of Gamaliel, a Camous doctor. He made to great progress in his studies, and his life was Prays biameleis before men; being very zealous the whole observation of the law of Moses. in teal carried him too far; he persecuted becauch, and when the protomartyr St Stephen maked, Saul was not only confenting to his be we even took care of the clothes of the that flowed him. This happened A. D. 33, a feet time after our Saviour's death. After the of & Stephen, Saul showed the utmost viobeen difficulty the Christians; and having got adding from the high-priest Caiaphas, and the denothe Jews, to the chief Jews of Damascus, with power to bring to Jerusalem all the Christihe hould find there, he went away full of breathing nothing but blood. But as kission the road, and drawing near to Daman a fudden about noon, he perceived 252 to come from heaven, which encomand all those that were with him. This thew them on the ground; and Saul are rule faying to him, "Saul, Saul, why have thou me?" His answer, with his blindhis cure, and the other furprifing circummarded in the 9th chapter of the Acts. correction of fuch a man, at fuch a time, and tel means, furnishes one of the most complete dut have ever been given of the divine oriperfecutor of the disciples of Christ, bewith once a disciple himself, is a fact which to be controverted without overturning the tadal history. He must therefore have been med in the miraculous manner in which he ti faid he was, and of course the Christian be a divine revelation, or he must have aber an importor, an enthusiast, or a dupe trand of others. There is not another alpossible. If he was an impostor, who that he knew to be false, he must have Managed to act that part by some motive: Four imposture are, the hopes of advancing emporal interest, credit, or power; or the ad of gratifying forme passion or appetite unattenty of the new religion. That none wald be St Paul's motive, for professing Christ crucified, is plain from the state and Christianity at the period of his the former and embracing the latter lase whom he left were the disposers of

wealth, of dignity, of power, in Judea: those to whom he went were indigent men, oppressed, and kept from all means of improving their fortunes. The certain consequence therefore of his taking the part of Christianity was the loss not only of all that he possessed, but of all hopes of acquiring more; whereas, by continuing to persecute the Christians, he had hopes rising almost to a certainty of making his fortune by the favour of those who were at the head of the Jewish state, to whom nothing could fo much recommend him as the zeal which he had shown in that perfecution. As to credit or reputation, could the scholar of Gamaliel hope to gain either by becoming a teacher in a college of fithermen? Could he flatter himfelf, that the doctrines which he taught would, either in or out of Judea, do him Honour, when he knew that "they were to the Jews a stumbling block, and to the Greeks foolishness?" Was it then the love of power that induced him to make this great change? Power! over whom? over a flock of fheep whom he himself had assisted to destroy, and whose very Shepherd had lately been murdered! Perhaps it was with the view of gratifying some licentious passion, under the authority of the new religion, that he commenced a teacher of that re-ligion! This cannot be alleged; for his writings breathe nothing but the strictest morality, obedience to magistrates, order, and government, with the utmost abhorrence of all licentioniness, idleness, or loose behaviour, under the cloke of religion. We nowhere find in his works, that faints are above moral ordinances; that dominion is founded in grace; that monarchy is despotism which ought to be abolished; that the fortunes of the rich ought to be divided among the poor; that there is no difference in moral actions; that any impulses of the mind are to direct us against the light of our reason and the laws of nature; or any of those wicked tenets by which the peace of fociety has been often disturbed, and the rules of morality often broken, by men pretending to act under the fanction of divine revelation. He makes no diffinctions like the impostor of Arabia in favour of himfelf; nor does any part of his life, either before or after his convertion to Christianity, bear any mark of a libertine disposition. As among the Jews, fo among the Christians, his conversation and manners were blameless.-It has been fometimes objected to the other apostles, by those who were resolved not to credit their testimony, that, having been deeply engaged with Jefus during his life, they were obliged, for the fupport of their own credit, and from having gone too far to return, to continue the fame profession s after his death; but this can by no means be faid of St Paul. On the contrary, whatever force there may be in that way of reasoning, it all tends to convince us, that St Paul must naturally have continued a Jew, and an enemy to Christ Jesus. If they were engaged on one fide, be was as firongly engaged on the other. If shame withheld them from changing fides, much more ought it to have stopped him; who, from his superior education, must have been vastly more sensible to that kind of shame, than the mean and illiterate fishermen of Galilee. The only other difference was, that there by quitting their mafter after his death, might

have preserved themselves; whereas be, by quitting the Jews, and taking up the cross of Christ, certainly brought on his own destruction. As St Paul was not an impostor, so it is plain he was not an enthuliast. Heat of temper, melancholy, ignorance, and vanity, are the ingredients of which enthuliasm is composed; but from all these, except the first, the apostle appears to have been wholly free. That he had great fervour of zeal, both when a Jew and when a Christian, in maintaining what he thought to be right, cannot be denied; but he was at all times fo much mafter of his temper, as, in matters of indifference, to " become all things to all men," with the most pliant condescension, bending his notions and manners to theirs, as far as his duty to God would permit; a conduct compatible neither with the stiffness of a bigot, nor with the violent impulses of fanatical delusion. That he was not melancholy, is plain from his conduct in embracing every method which prudence could fuggest to escape danger and shun perfecution, when he could do it without betraying the duty of his office or the honour of his God. A melancholy enthuliast courts perfecution; and when he cannot obtain it, afflicts himself with absurd penances: but the holiness of St Paul confifted only in the simplicity of a godly life, and in the unwearied performance of his apostolical duties. That he was ignorant, no man will allege who is not grossly ignorant himself; for he appears to have been mafter not only of the Jewish learning, but also of the Greek philosophy, and to have been very conversant even with the Greek poets. That he was not credulous, is plain from his having refifted the evidence of all the miracles performed on earth by Christ, as well as those that were afterwards wrought by the apostles; to the fame of which, as he lived in Jerusalem, he could not possibly have been a stranger. And that he was as free from vanity as any man that ever lived, may be gathered from all that we fee in his writings, or know of his life. He reprefents himself as the least of the apostles, and not meet to be called an apostle. He says that he is the chief of sinners; and he prefers, in the strongest terms, universal benevolence to faith, prophecy, miracles, and all the gifts and graces with which he could be endowed. Is this the language of vanity or enthuliasm? Did ever fanatic prefer virtue to his own religious opinions, to illuminations of the fpirit, and even to the merit of martyrdom? Having thus shown that St Paul was neither an impostor nor an enthusiast, it remains only to be inquired, whether he was deceived by the fraud of others: but this inquiry needs not be long, for who was to deceive him? A few illiterate fishermen of Galilee: It was morally impossible for such men to conceive the thought of turning the most enlightened of their opponents, and the crueliest of their perfecutors, into an apostle, and to do this by fraud in the very inflant of his greatest fury against them and their Lord. But could they have been so extravagant as to conceive such a thought, it was physically impossible for them to execute it in the manner in which we find his conversion to have been effected. Could they produce a light in the air, which at mid-day was brighter than the fun? Could they make Saul hear words from

out of that light, which were not heard by then of the company? Could they make him blind! three days after that vision, and then make sca fall off from his eyes, and reftore him to fight a word? Or could they make him and those w travelled with him believe, that all these this had happened, if they had not happened? M unquestionably no fraud was equal to all t Since then St Paul was neither an impost nor an enthusiast, nor deceived by the sraud others, it follows that his conversion was m culous, and that the Christian religion is a die revelation. See Lord LYTTLETON'S Observat on the Conversion of St Paul; a treatise to which has been truly said, that infidelity has never be able to fabricate a specious inswer, and of wh this is a very short and impersect abridgmen The escape of St Paul from Damascus, where Jews had influenced the governor to feize h his meeting at Jerusalem with the disciples, were still afraid of him; the plot of the Jew kill him; his journey to Cæfarea, and thence Tarfus, where he continued from A. D. 37 to his journey thence with Barnabas to Antioch, from that city to Jerusalem, with supplies to disciples during the famine, A. D. 44. when met with the prophets, Simeon, Lucius, and naen, and when he is supposed to have had hi effable vision of heaven; (2 Cor. xii, 2-4.) his ney with Barnabas to Cyprus; the opposition Barjesus; his blindness; the conversion of Sc Paulus, A. D. 45; the change of Saul's name Paul; his journey to Perga, and preaching it fynagogues there, as well as Antioch, Icon Lystra and Derbe; the miracles he wrought persecutions he suffered at these places; his very after being stoned, and supposed dead diffention about circumcifion at Antioch; his fion with Barnabas to Jerusalem for the op of the other apostles on this subject, with the cition; his censure of St Peter for his distimul; his separation from Barnabas, and junction Silas; their journey through Lycaonia, Ph Galatia, Mysia, Troas, to Macedonia; thei prisonment, &c. at Philippi; the conversi Lydia and the jailor, and their spirited expe tion with the magistrates; their journey the Amphipolis and Apollonia, to Thessaionic Berea; the tumults raised by the Jews a them in these cities; Paul's voyage to Athe D. 52; his disputes there with the philosof his defence before the Areopagus; the conv of Dionysius and Damaris; his journey to Cu where he continued 8 months; and when from Athens, he wrote his two epifiles Thesialonians; his accusation before Gallic acquittal; his voyage to Ephefus, Catare Jerusalem; his journey through Antioch, G Phrygia, and the higher provinces of Asia; turn to Ephefus, where he continued 3 from A. D. 54, to 57; wrote his epiftle ! Galatians, and performed many miracles where he fays, he also fought with beafts whether he did this literally in the amphith in confequence of a fentence of the heather gistrates, or whether the expression is only taphorical allusion to the scuffle he had wit metrius and the filver-fmiths, commentato

tot agreed: His journey after this to Philippi in Macedonia along with Timothy, whence he wrote his two epifles to the Corinthians; thence to Adan, Curnth, Affos, Mitylene, Miletus, Coos, Rider, Patara, Tyre, Ptolemais, and Caefarea; where he met with Phillip the evangelist, and the mana Agabus, who foretold his future fufferage; Rejourney thence to Jerufalem, where by traine of St James, he took the vow of a NAsum; the riot vailed in the temple against him by Delews; his rescue from their fury by Lysias; is used treatment by Ananias the high priest; te distion between the Pharifees and Sadducees t feeling him; the bloody yow of the Jewith afis to murder him; his transmission to Felix by Lin, his accusation by Tertullus, and his aniand defence; the injustice of Felix; Paul's spimed aution before Pestus and Agrippa; its elthe latter; Paul's appeal to Czefar, and original voyage from Adramyttium over the a Cilkia and Pamphylia, to Myra, and thence to Cete; the storm of 14 days; the thipwreek on the coult of Malta, with all the interesting partimes attending it; the cure of l'ublius, &c. his re-embarkation and voyage to Syracuse; Pure, and Puteoli, with his final arrival at lead and reception there by his countrymen, are simply recorded by St Luke, in the Acts of the and from chap. ix. to xxviii. Paul dwelt whole years at Rome, from A. D. 61 to hird lodging; where he received all that him, preaching the religion of Jesus Christ, interruption. His captivity contributed to the advancement of religion; for he Milip. i. 12-18. and iv. 22.) The Chris-Philippi, hearing that St Paul was a pri-Rame, sent Epaphroditus to him, with to shift him in their name. (Phil. ii. 25.) haditus fell fick at Rome; and when he back to Macedonia, the apostle sent by him back to the Philippians. It is not known by mans St Paul was delivered from his prison, is certain that he was fet at liberty, after been two years a prisoner at Rome. He the the during this imprisonment, his Epiftles Remon and the Coloffians. He was still in at least in Italy, when he wrote his Ethe the Hebrews. He travelled over Italy; cording to some of the fathers, passed into then into Judea; went to Ephefus, and cf. Timothy; (Heb. xiii. 24, and r Tim. i. 3.) Faled in Crete, and there fixed Titus, to culthe church in that place. Probably he might The the Philippians; (Phil. i. 23, 26. and ii. " and it is believed, that it was from Macedobe wrote the First Epistle to Timothy. time after, he wrote to Titus, whom he in Crete; defiring him to come to Nicowhence, probably, he fent this letter. The following, that is A. D. 65, he went into A-Thence ant to vifit Timothy at Epheius, and from Miletus. (2 Tim. iv. 20.) Lattly, he went wae; and St Chryfortom fays, that it was rethat having converted a cup-bearer and a that he caused St Paul to be apprehended, HOL XVIL PART L

and put in prison. It was in this last place of confinement, that he wrote his ad Epiftle to Timothy; which Chrysoftom looks upon as the apostle's last testament. See TIMOTHY and TITUS. This great apostle at last consummated his martyrdom; the a9th of June, A. D. 66, by having his head cut off, at a place called the Salvian Waters. He was buried on the way of Oftium, and a magnificent church was built over his tomb, which is ftill in existence. Calmet's Diff. &c.

(2.) PAUL, first bishop of Narbonne, or Sekcius Paulus the proconful, converted and made, bithop by St Paul, was descended from one of the best families of Rome. It is said the apostle called himself Paul from his name. The Spaniards venerate him as their apostle; and fay he

died a martyr at Narbonne.

(3.) PAUL I. Pope of Rome, succeeded his brother Stephen II. A. D. 757; governed with great

moderation, and died in 767.

(4.) PAUL II. Pope, a noble Venetian, was nephew of Pope Eugene IV. who made him a cardinal in 1440. He was elected pope in 1464, and

died in 1471, aged 54.

(5.) PAUL III. Pope, whose original name was Alexander Farnese, was born in 1467, and elect? ed pope, in 1534. He established the inquisition, approved of the Society of the Jefuits, and acted with great violence against Henry VIII. of Eng-land. The famous council of Trent was held in his reign. He died in 1549, aged 82.

(6.) PAUL IV. Pope, whose original name was John Peter Caraffa, was born in 1475. He was a learned man, and wrote on the Creed and other subjects; but was very violent against the reformers. He was elected pope in 1555, when he was

80, and died in 1559, aged 84.
(7.) PAUL V. Pope, was born in 1552, at Rome; was first clerk of the chamber, and afterwards nuncio to Clement VIII. in Spain, who made him a cardinal. He was elected pope on the 16th May 1605, atter Leo XI. The ancient quarrel between the fecular and ecclefiaffical jurifdictions, which formerly had occasioned much bloodshed, revived in his reign. The fenate of Venice had condemned by two decrees, 1. The new foundations of momasteries made without their concurrence. 2. The alienation of the effates both eccleliaftical and fecular. The first decree passed in 1603, and the ad in 1605. About this time a cinon and abbot; accused of rapine and murder, were arrested by order of the fenate, and delivered over to the fecular court; which gave offence to the court of Rome. Clement VIII. took no notice of the affair; but Paul V. who had managed the Genocle upon a fimilar occation, hoped that the Venetians would be equally pliant. But the fenate maintained that they held their power to make laws of God only; and therefore refused to revoke their decrees, and deliver up the ecclehaftical prifoners to the nuncio. Paul, provoked at this behaviour, excomm micated the doge and fenate; and threatened to put the whole state under an interdict, if fatisfaction was not given him within 24 hours. The finate protested against this menace, and forbad the publication of it in their domimons. A number of pamphlets were published on both fides. The Capuchins, Thealins, and

Jesuits, were the only religious orders who ob-ferved the interdict. The senate shipped them all a magnificent monument was erected to his off for Rome, and banished the Jesuits for ever. Meantime Paul was preparing to make the refractory republic submit to his tyranny by force of He levied troops against the Venetians; but he foon found his defign baulked, as the cause of the Venetians appeared to be the common cause of all princes. He had recourse, therefore, to Henry IV. to settle the differences; who soon brought about a reconciliation. His ambassadors at Rome and Venice began the negociation, and Card. de Joyeuse finished it in 1607. Paul was strongly solicited to make the immaculate conception of the holy wirgin an article of faith, but he only prohibited the contrary doctrine to be publickly ' faught. He afterwards embellished Rome, and collected the works of the most eminent painters and engravers. Rome is indebted to him for its most beautiful fountains, especially that where the water spouts out from an autique vase taken from the hot baths of Vespasian, and the aqua Paola, an ancient work of Augustus, restored by Paul V. He brought water into it by an aqueduct 35 miles long. He completed the frontispiece of St Peter, and the magnificent palace of Mount Cavallo. He also restored and repaired several ancient monuments. His pontificate was honoured with feveral illustrious embassies. The kings of Japan, Congo, and other Indian princes, fent ambassadors to him. He fent missionaries, and founded bishopricks in these countries. He showed the same attention to the Maronites and other eastern Christians. He also knt legates to different orthodox princes. He died 28th Jan. 1621, aged 69; after having confirmed the French Oratory, the Urfulines, the Order of Charity, and some other institutions. He enjoined all the religious in the profecution of their studies to have regular professors for Latin, Greek, Hebrew, and Arabic.

(8.) PAUL, Father, whose name, before he entered into the monastic life was Peter Sarpi, was born at Vienna, Aug. 14, 1552. His father was a merchant, who died leaving his family unprovided for, but his uncommon abilities under the tui-tion of a maternal uncle rendered him master of languages and science at a very early age. At 14 he took the habit of the order of the Servites, and at 22 was made a prieft. After paffing successively through the dignities of his order, he was chofen provincial for Venice at 26 years of age; and discharged this post with such honour, that in 1579 he was appointed, with two others, to draw up new regulations and statutes. This he executed with great fuccess; and when his office of provincial was expired, he retired to the fludy of experimental philosophy and anatomy, in which he is faid to have made some useful discoveries. In the dispute between the pope and the senate of Venice, (see Paul V.) his controversial writings irritated the papal court to highly, that they hired affaifins to murder him, but he escaped with severe This, and other attempts upon his life; wounds. obliged him to confine himself to his convent, where he engaged in writing the History of the Council of Trent, on which, and other works of less consequence, he spent the remaining part of his life. He died on Saturday the 14th Jan. 1623. He was

a magnificent monument was erected to his mory.

(9.) PAUL, Mark. See Paulo.

(10.) PAUL of Samolata. See PAULUS, No (11.) PAUL, late emperor of Russia, the for the unfortunate Peter III. by Catherine II. born Oct. 1, 1754; and maxried Oct. 10, 1; to Wilhelmina, daughter of Lewis, landgrave Heffe-Darmstadt, who died in childhed April 1 1776, without leaving iffue. He next man Oct. 7th 1776, Sophia Augusta Dorothea, dat ter of Pr. Charles of Wirtemberg, by whom had Alexander, the present emperor, Constant Alexandra, Helen, and Anne. He took an ac part in the late war; but was murdered on 23d March, 1801. See Russia.

(12.) PAUL, in sea language, is a short ba wood or iron, fixed close to the capstern or w las of a ship, to prevent those engines from rol back or giving way, when t'ey are employed heave in the cable, or otherwise charged with

great effort.

(13.) PAUL, in geography, a town of Yorks feated on the Humber, S. of Headon.

(14.) PAUL, ST, a province of S. America Brazil, which is a kind of independent reput originally colonized, in 1570, by a fet of bank of feveral nations, who were transported from tugal; and the country being furrounded thick forests and inaccessible mountains, they threw off all dependence on the mother cour However they now pay a small tribute of gol Portugal. The climate is excellent.

(15.) PAUL, ST, the capital of the above re lic, was built in 1570; and lies 12 miles from coast, and 210 W. of Janeiro. Lon. 45. 52. W.

23. 25. S.

He published Flora Danica; and on the use and abuse of Tobacco and He died in 1682, aged 77.

ULAGUET, a town of France, in the dep. par Lore; 71 miles SE. of Brioude, and 18 of Puv.

BULANIST E, ) a feet of heretics, so called BULANISTS, from their founder Pau-AMOSATENUS, a native of Samosata, electof Antioch in 262. His doctrine ato this: that the Son and the Holy a God in the same manner as reason may do in man; that Christ was born a but that the reason or wisdom of the defended into him, and by him wrought apon earth, and instructed the nations; y, that, on account of this union of the and with the man Jefus, Christ might, properly, be called God. He did not the name of the Father and the Son, hich reason the council of Nice orderaptized by him to be re-baptized. Beaned by Dionysius Alexandrinus in 2

council, he abjured his errors, to avoid deposition; but foon after resumed them, and was depefed by another council in 269.—He may be confidered as the father of the movern Socinians; and his errors are feverely condemned by the council of Nice, whose creed differs a little from that now uled, under the fame name, in the church of England.

PAULICIANS, a branch of the ancient Manichees, so called from their founder, one PAULUS, an Arminian, in the 7th century; who, with his brother John, both of Samolata, formed this feet: though others are of opinion, that they were thus called from another Paulus; an Armenian by birth, who lived in the reign of Justinian II. In the 7th century, a zealot called Constantine revived this drooping sect, which was ready to expire under the feverity of the impenal edicts. The Paulicians, however, by their numbers, and the countenance of the emperor Nicephorus, became formidable to all the Eaft. But the cruel rage of perfecution, which had for fome years been suspended, broke forth with redoubled violence in the reigns of Michael Curopatates and Leo the Armenian, who inflicted capital punishment on such of the Paulicians as resused to return into the bosom of the church. Under the empress Theodora, tutoress of the Emp. Michael, in 845, several of them were put to death, and more retired among the Saracens; but they were neither all exterminated nor banished. Upon this they entered into a league with the Saracens; and choosing for their chief an officer of the greatest resolution and valour, whose name was Carbeas, they declared against the Greeks a war, which was carried on for 50 years with the greateft vehemence and fury. During these commotions, some Paulicians, towards the conclusion of this century, fpread abroad their doctrines among the Bulgarians; many of them; either from zeal, or to avoid perfecution, retired, about the close of the 11th century, from Bulgaria and Thrace, and formed fettlements in other countries. Their first migration was into Italy; whence they sent colonies into most of the other provinces of Europe, and formed gradually a confiderable number of religious affemblies, who adhered to their doctrine, and who were afterwards perfecuted with the utmost vehemence by the Roman pontiffs. In Italy they were called Patarini, from Pataria, in Milan, where they held their afsemblies; and Gathari or Gazari, from Gazaria, or the Leffer Tartary. In France they were called Albigenses, though their faith differed widely from that of the Albigenses, whom Protestant writers generally vindicate. (See Albigenses.) The first religious affembly the Paulicians formed in Europe, was at Orleans in 2017, in the reign of Robert, when many of them were burnt alive. The ancient Paulicians, according to Photius, expressed the utmost abhorrence of Manes and his doctrine. The Greek writers comprise their errors under the fix following particulars; I. They denied that this inferior and visible world is the production of the supreme Being; and they distinguish the Creator of the world and of human bodies from the most high. God who dwells in the beavens; and hence some think that they

116 were a branch or to Guoffics rather than of the Manichaans. 2. They refused to worship the Virgin Mary. 3. They refused to celebrate the institution of the Lord's supper. 4. They refused to follow the practice of the Greeks, who paid to the pretended wood of the cross a fort of religious homage. 5. They rejected the books of the Old Teltament; and looked upon the writers of that facred history as inspired by the Creator of this world, and not by the supreme God. 6. They excluded presbyters and elders from all part in the administration of the church.

PAULIEN, ST, a town of France, in the dep. of Upper Loire; 6 miles NNW. of Puy, and 21 SE. of Briande.

PAULIN, a town of France, in the department

of the Tarn; 12 miles E. of Alby.

(1.) PAULINA. a Roman lady, wife of Saturpinus, governor of Syria, in the reign of the empeyor Tiberius. Her conjugal peace was difturbed, and violence was offered to her virtue, by a young man named Mundus, who fell in love with her, and had caused her to come to the temple of Isis by means of the priefts of that goddess, who declared that Anubis wished to communicate to her fomething of moment. Saturninus complained to the emperor of the violence which had been offered to his wife; and the temple of Ilis was overturned, and Mundus banished, &c.

(2.) PAULINA, wife of the philosopher SENECA. She attempted to kill herself when Nero had ordered her husband to die. The emperor, however, prevented her; and she lived some few years

after, in the greatest melancholy.

PAULINGSTOWN, a township of New York, in Duchels county, on the W. bank of the Connecticut. In 1790, it contained 4288 citigens, and 42 flaves; and in 1796, it had 560 qua-

PAULINIA, in botany, a genus of the trigynia order, belonging to the octandria class of plants; and in the natural method ranking under the and order, Tribilata. Its characters are these: the flower has a permanent empalement, composed of 4 fmall oyal leaves; it has 4 oblong oval per tals, twice the fize of the empalement; and § short stamina with a turbinated germen, having 3 thort stender styles, crowned by spreading stigmas; the germen turns to a large three-cornered capfule with 3 cells, each containing one aimost oval feed. Linuzus reckons 7, and Miller 9 spe-

cies, natives of the West Indica.
PAULIN'S KILL, a river of New Jersey, which is navigable for small vessels, 15 miles to

Suffex county.

(1.) PAULINUS, bishop of Nola, was born at Bourdeaux, about A. D. 353. He was conful of Rome, and married Therafia, who converted him to Christianity. He was made bishop of Nula, where he continued, till it was taken and facked by the Goths, in 410. He wrote Letters and Poems, with elegance, and died in 431.

(a.) PAULINUS, an English bishop, who flourilled in the early part of the 7th century. He was the apostle of Yorkshire, and the first archibishop of York, about A. D. 626. He built a church at Almonbury, and dedicated it to St Alban, where he converted the Brigantes. Camd mentions a crofs at Dewfborough, which h been crected to him with this infcription, Pauli bic praedicavit et celebravit. York was so smal bout this time, that there was not fo much a fmall church in it, in which K. Edwin could baptized. Confrantius made it a bishopric. P Honorius made it a metropolitan fee. Pauli baptized in the river Swale, in one day, io men, besides women and children, on the convertion of the Saxons to Christianity, bell many at Halystone. At Walstone, in North berland, he baptized Segbert, king of the Saxons. Bede fays, "Paulinus coming with king and queen to the royal manor called Ad brin (now Yeverin), staid there 36 days them, employed in the duties of catechizing, firucting, and baptizing the people in the ne bouring river Glen." He adds, that "he pre ed the word in the province of Lindiffi; and verted the governor of the city of Lindocol whose name was Biecca, with all his family. this city he built a stone church of exqu workmanship, whose roof being ruined, only wails are now standing." He also founded a legiate church of prebends near Southwell Nottinghamshire, dedicated to the Virgin M when he haptized the Coritani in the Trent.

(II.) PAVO, in ichthyology. See PEACOCK FISH.
(III.) PAVO, the PEACOCK, in ornithology; a genus belonging to the order of galling. The head is covered with feathers which bend backwards; the feathers of the tail are very long, and beautifully variegated with eyes of different co-lours. Latham enumerates 8 species:

1. PAVO ALBUS, the white peacock, is, as its name imports, entirely white, not excepting even the eyes of the train, which it is nevertheless easy to trace out. This variety is in Latham's opinion met with two instances of the females of this species having the external marks of the plumage of the male.

2. PAVO BICALCARATUS is larger than the common pheasant. The bill is black, but from the nostrils to the tip of the upper mandible rede The feathers on the The irides are yellow. erown of the head are fufficiently long to form a creft, of a dull brown colour. The space between the bill and eyes is naked, with a few feattered hairs: the fides of the head are white: the neck is bright brown, fixiated across with dusky brown; the upper parts of the back, scapulars, and wing coverts, are dull brown, dotted with paler brown and yellowish; besides which, each feather is marked near the end with a roundish large spot. of a gilded purple colour, changing into blue and green in different lights: the lower part of the back and rump are dotted with white; all the under parts are brown, striated transversely with black: the quills are dusky; the secondaries are marked with the same spot as the rest of the wing: the upper tail coverts are longer than the tail, and each marked at the end with a spot like the

wing feathers, each of which is furrounded first with a circle of black, and ultimately with an orange one: the legs and claws are brown, and on the back part of each leg are two spurs, one above the other. The female is a third smaller than the male. The head, neck, and under parts are brown; the head fmooth: the upper parts are also brown, and the feathers marked with a dull blue spot, furrounded with dirty orange: the feathers which cover the tail are fimilar; but marked at the end with an obscure dull oval spot of blue: the legs have no spurs. This species is of Chinese origin, and some of them have been brought from China to England alive, and have been for some time in the possession of Dr James Monro. The male is now in the Leverian Mufeum, in the finest preservation. Sonnerat ob-serves, that the bird from whence his description was taken had two fours on one leg, and three on the other. This must furely be a hifus natura; especially as he says, it is the same as that in

Edw. pl. 67. 3. Pavo Cristatus, the common peacock of English authors, has a compressed crest and solisary spurs.—It is about the fize of a turkey; the length from the tip of the bill to the end of the tail being 3 feet 8 inches. The bill is nearly two inches long, and is of a brown colour. The irides are yellow. On the crown there is a fort of creft, composed of 24 feathers, which are not webbed except at the ends, which are gilded green. The thafts are of a whitish colour; and the head, neck, and breaft, are of a green gold colour. Over the eye there is a streak of white, and beneath there in the same. The back and rump are of a green gold colour, gloffed over with copper: the feathers are diffinct, and lie over each other like shells. Above the tail springs an inimitable set of long beautiful feathers, adorned with a variegated eye at the end of each; these reach considerably beyond the tail; and the longest of them in many birds are four feet and a half long. This beautiful train, or tail as it is improperly called, may be expanded quite to a perpendicular upwards at the will of the bird. The true tail is hid beneath this group of feathers, and confifts of 18 grey brown feathers, one foot and a half long, marked on the fides with rufous grey the scapulars and deffer wing coverts are reddiff cream-colour, variegated with black: the middle coverts deep blue, gloffed with green gold: the greatest and baftard wing rufous; the quills are also rufous; fome of them variegated with rufous, blackish, and green: the belly and vent are greenish black: the thighs yellowish: the legs flout; those of the male furnished with a strong spur three quarters of an inch in length; the colour of them grey brown. The female is rather less than the male. The train is very short, being much shorter than the tail, and scarcely longer than its coverts; neither are the feathers furnished with eyes. The creft on the head is fimilar to that on the head of the male: the fides of the head have a greater portion of white: the throat and neck are green: the reft of the body and wings are cinereous brown: the breaft is fringed with white: the bill is the fame; the irides are lead-coloured, the legs are as in the male; but the spur is generally wanting, though in fome birds a rudiment of one In some male birds, all the wing cover and scapulars are of a fine deep blue green, to gloffy; but the outer edge of the wing and qu are of the common colour. These birds, now common in Europe, are of eastern origin. The are found wild in the islands of Ceylon and J in the East Indies; and at St Helena, Barbu and other West India in ands. They are not tural to China; but the are found in many pla of Asia and Africa. They are, however, nowh fo large or fo fine as in India, in the neighbor hood of the Ganges, whence they have spread to all part, increasing in a wild state in the wa er climes; but requiring care in the colder regid In ours, this species does not come to its plumage till the 3d year. The semale lays; greyish white eggs; in hot climates 20, the of those of a turkey. These, if let alone, the in some secret place, at a distance from the u refort, to prevent their being broken by them which he is apt to do if he find them. The of fitting is from 27 to 30 days. The young be fed with curd, chopped leeks, barley-u &c. moistened; and are fond of grashoppers, fome other infects. In 5 or 6 months they feed as the old ones, on wheat and barley, what else they can pick up in the circuit of t confinement. They seem to prefer the most vated places to rooft on during night; fuc high trees, tops of houses, and the like. cry is loud and inharmonious; a perfect con to their external beauty. They are caught i dia, by carrying lights to the trees where rooft, and having painted representations of bird presented to them at the same time; they put out the neck to look at the figure sportsman slips a noofe over the head, and set his game. In most ages they have been ested a falutary food. Hortenfius gave the examp Rome, where it was carried to the highest lu and fold dear: and a young pea-cock is thou dainty even in the present times. The li these hirds is reckoned by some at about 25 y by others roo. So beautiful a species of bin the peacock could not long remain unknown early as the days of Solomon, we find, amon articles imported in his Tarshish navies, apes peacocks. Ælian relate, that they were bro into Greece from fome barbarous country that they were held n fuch high efteem, t male and female were valued at Athens at drachmæ, or 321. 58. 10d. At Samos were preserved about the temple of Juno, facred to that goddess; and Gellius, in his ! Attica, c. 16. commends the excellency of Samian peacocks. When Alexander was in he found vast numbers of wild ones on the of the Hyarotis; and was fo ftruck with beauty, as to appoint a fevere punishment o person that killed them. Peacocks crests, t cient times, were among the ornaments of kings of England. Ernald de Aclent was fir king John in 140 palfries, with fack-buts, lo gilt spurs, and peacocks crests, such as wou for his credit. See Plate CCLXX.

4. PAVO MUTICUS is about the fize of crefted peacock; but the bill is larger and colo

coloured: the irides are yellow, and round the ensisted; on the top of the head is an upright creft 4 inches long, and thaped formewhat like an erof com. The colour is green mixed with blue. The top of the neck and head are greenish, markel with spots of blue, which have a streak of white down the middle of each: the back is greenish the: the breast is blue and green gold mixed: the bely, fides, and thighs are ash-colour, marked with the fpots, ftreaked with white on the belly; the way coverts and secondaries are not unlike th hei: the greater quills are green, transversely hand with black lines, but growing yellowish towastite ends, where they are black; the upper the common the common prock, but much longer than the tail; they are didnt brown, with white shafts, and have at and of each a large spot gilded in the middle, her blue, and surrounded with green: the legs theolowed, and not furnithed with spurs, or by twe been overlooked by those who have seen hen. The female is finaller than the male; and be belly quite black, and the upper tail comuch thorter: the tail is green, edged with white shafts. It inhabits Japan, and is bown to Europe by a painting, fent by the poor of Japan to the pope.

5. PATO TIBETANUS is about the fize of a being about two feet and nearly two inch-The bill is above an inch and a half long, corrors: the irides are yellow: the head, and under parts are ash-coloured, marked which lines: the wing coverts, back, and athe wing coverts and back are large that of a fine blue, changing in different be notet and green gold: the quills and upmore are also grey, marked with black-Les; the quilts have two round blue spots on the coverts; on the outer webs, m each tail feather, there are four of the two on each fide the web; the middle co-I the longest, the others shorten by dethe legs are grey, furnished with two spurs he the species No 2.: the claws are black-This species inhabits the kingdom of Thibet. give it the name of Chin-tehien-Khi. And VARIATUS, the variegated peucock, is breed between the common and white and of course varies very considerably

ATOASAN, or a town of Africa, in the ATOASSAN, island of St Thomas, be-to Portugal, the relidence of the goverthe billiop; with a fort and a good harbles under the equator. Lon. 8. 30. W. DNA, a town of the Italian republic, in 🚰 of Mella, district of Brescia, and late e de Bresciano.

METUS, OF TIMOR, FEAR, a Rowhose worship was introduced by Mohitus, who, in a panic, vowed a shripe and one to PALLOR, Paleness; and thereare found on the coins of that family. of Sparta erected a temple to Fear, tribunal, to ftrike an awe into those reched it. Fear was likewise worship-Countly. The poets did not forget this imaginary deity. Virgil places him in the entrance of hell, in company with diseases, old age, &c.  $E_n$ . vi. 273. Ovid places him in the retinue of Tifiphone one of the furies, Met. iv. 485.

\* PAUPER. n. s. [Latin.]. A poor person; one

who receives alms.

PAURÆDASTYLÆ, in the old mineralogy, a genus of perfect crystals with double pyramids, and no intermediate column, composed of 12 planes, or two hexangular pyramids, joined base to base.

PAUSA, a town of Upper Saxony, in Vogtland; 13 miles NNW. of Plauen, and 72 WSW.

of Drefden.

PAUSANIA, in Grecian antiquity, a festival in which were folemn games, wherein nobody contended but free-born Spartans; in honour of Paufanias the Spartan general. See PAUSANIAS, No 1.

(1.) PAUSANIAS, a Spartan king and general, who fignalifed himfelf at the battle of Platæa against the Persians. The Greeks, sensible of his fervices, rewarded his merit with a tenth of the spoils taken from the Persians. He was afterwards appointed to command the Spartan armies, and he extended his conquests in Atia; but the haughtinels of his behaviour created him many enemies; and the Athenians foon obtained a fuperiority in the affairs of Greece.-Paufanias, distatisfied with his countrymen, offered to betray Greece to the Persians, if he received in marriage, as the reward of his perfidy, the daughter of their king. His intrigues were discovered by a young man who was intrusted with his letters to Persia, and who refused to go, on recollecting that such as had been employed in that office before had never returned. The letters were given to the Ephori of Sparta, and the perfidy of Paulanias was thus difcovered. He fled for fafety to a temple of Minerva; and as the fanctity of the place foreened him. from the violence of his pursuers, the sacred building was furrounded with heaps of stones, the first of which was carried there by the indignant mother of the unhappy man. He was starved to death in the temple, and died about A. A. C. 474. There was a festival instituted to his honour, and an oration spoken in his praise, in which his actionswere celebrated, particularly the battle of Platæa, and the death of Mardonius. See PAUSANIA.

(2.) PAUSANIAS, a learned Greek historian and orator, in the 2d century, under Antoninus the philosopher. He was the disciple of Herodes Atticus; he lived for a long time in Greece; and afterwards went to Rome, where he died at a great age. He wrote an excellent description of Greece, in ten books; in which we find not only the fitteation of places, but the antiquities of Greece, and every thing most curious and worthy of knowledge. Abbe Gedoin has given a French translation of it, in a vols 4to.

(3.) PAUSANIAS, the murderer of Philip II. of.

Macedon. See MACEDON, § 9.
(1.) \* PAUSE. n. f. [pause, Fr. pausa, Latin; waw.] I. A stop; a place or time of intermission. -Neither could we ever come to any pause, whereon to rest our assurance this way. Hooker .-

This gentleman Steps in to Cassio, and intreats his pause. Sbak. Some pause and respite only I require. Denb. The punishment must always be rigorously exacted, and the blows by pauses laid on till they reach the mind. Locke.—

Whilst those exalted to primeval light,

Only perceive form: little paufe of joys. Prior.
What paufe from woe, what hopes of comfort bring

The names of wife or great? Prior.

Our discourse is not kept up in conversation, but falls into more pauses and intervals than in our neighbouring countries. Speciator. 2. Suspense; doubt.—

I stand in pause where I shall first begin. Shak.

3. Break; paragraph; apparent separation of the parts of a discourse.—He writes with warmth, which usually neglects method, and those partitions and pauses which men, educated in the schools, observe. Locke. 4. Place of suspending the voice marked in writing thus —. 5. A stop or intermission in musick.

(2.) A Pause is a ceffation in speaking, finging, playing, or the like. One use of pointing in grammar is to make proper pauses. There is a pause in the middle of each verse; in an hemistich, called a rest or repose. See POETRY, and READING.

\* To Pause. v. n. 1. To wait; to ftop; not to proceed; to forbear for a time, used both of speech and action.—

Tarry; paufe a day or two. Shak. While I paufe, ferve in your harmony. Shak. Paufing a while, thus to herfelf the mus'd.

Milton
Here th' archangel paus'd,

Between a world destroy'd and world restor'd.

Milton.

2. To deliberate .-

Other offenders we will pause upon. Shak.
—Solyman pausing a little upon the matter, suffered himself to be intreated. Knolles. 3. To be intermitted.—

The pealing organ, and the paufing choir, And the last words, that dust to dust convey'd!

\* PAUSER. n. f. [from paufe.] He w!:0 paufes; he who deliberates.—

The expedition of my violent love

Outruns the paufer, reason. Macbeth. PAUSIAS, a famous ancient painter, the inventor of ENCAUSTIC PAINTING, was a native of Sicyon. He was a disciple of Pamphilus, and flourished about A. A. C. 332. He drew a beautiful picture of his mistress Glycere, for which Lucillus gave two talents. The Sicyonians being obliged to sell his pictures to clear an enormous debt, they were all purchased by M. Scaurus, the Roman.

PAUSILIPPO, a celebrated mountain of Naples, 5 miles from Puzzoli, famous for its grotto, or rather its fubterranean passage through it, near a mile long, about 20 feet broad, and from 30 to 40 in height. The gentry generally drive through it with torches; but the country people find their way with little difficulty, by the light which enter at each end; and by two holes pierced throthe mountain from the top, near the middle of the passage. On this mountain is the tomb of

Virgil, overgrown with ivy, and overshaded an ancient laurel tree.

(4.) PEACE, a river of N. America, which rune into Slave River, 20 miles N. of Lake Athapel-

(5.) PEACE, TEMPLE OF, a celebrated temple at Rome, which was confumed by fire A.D. 191; produced, as some writers suppose, by a slight earthquake, for no thunder was heard at the time. Dio Cassius, however, supp ses that it began in the adjoining houses. Be that as it will, the temple, with all the furrounding buildings, were reduced to ashes. That magnificent structure had been raised by Vespasian after the destruction of Jerusalem, and enriched with the spoils and ornaments of the temple of the Jews. The ancients speak of it as one of the most stately. buildings in Rome. There men of learning used to hold their affemblies, and lodge their writings. as many others deposited their jewels, and whatever else they esteemed of great value. It was likewife made use of as a kind of magazine for the spices brought by the Roman merchants out of Egypt and Avabia; so that many rich persons were reduced to beggary, all their valuable effects and treasures being consumed in one night, with the temple.

\* PEA@EABLE, adj. [from peace.] 1. Free from war; free from tumult.—The reformation of England was introduced in a peaceable manner by the supreme power in parliament. Swift. 2. Quiet; undiffurbed.-The laws were first intended for the reformation of abuses and peaceable conti-

nuance of the subject. Spenser .-

Lie, Philo, untouch'd on my peaceable shelf. 3. Not §. Not violent; not bioody.—The Chaldeans flattered both Cæsar and Pompey with long lives and a happy and peaceable death; both which fell out extremely contrary. Hale. 4. Not quarressome; not turbulent.—The most peaceable way for you, if you do take a thief, is to let him shew himself, Sbak.—These men are peaceable. Genefis xxxiv. 21.

PEACEABLENESS. n. f. (from peaceable.)
Quietness; disposition to peace.—Plant in us all those precious fruits of piety, justice, and charity, and peaceableness. Hammond.

\* PEACEABLY. adv. [from peaceable.] 1.

Without war; without tumult .--

It should to her remain,

Who peaceably the same long time did weld,

Spenfer.

8. Without tumults or commotion.—The balance of power was provided for, eife Pififtratus could never have governed to peaceably. Swift. 3. Without diffurbance.—

Diffurt him not, let him pass peaceably. Shak. \*PEACEFUL. adj. [peace and full.] 1. Quiet; not in war; a poetical word.—

. Peaceful Italy involv'd in arms. Dryden.
s. Pacifick; mild,—.

As one difarm'd, his anger all he loft; And thus with peaceful words uprais'd her foon.

Milden.

The peaceful power that governs love. Dryd. s. Undisturbed; still; fecure.—

Succeeding monarchs heard the fubjects cries, Nor faw displeas d the peaceful cottage rife. Pope.

\* PEACEFULLY. adv. [from peaceful.] 1. Without war. 2. Quietly; without diffurbance. Our loved earth, where peacefully we flept.

Dryden,

3. Mildly; gently.

\*PEACEFULNESS. v.f. [from peaceful.] Quiet; freedom from war or difturbance.

\* PEACEMAKER. u. f. (peace and maker.) One who reconciles differences.—

Bleffed are the peacemakers. Think us,

Those we profess, pedtemakers, friends and servants.

Sbak.

\* PEACE-OFFERING. n. f. [peace and offer.] Among the Jews, a facrifice or gift offered to God for atonement and reconciliation for a crime or offence.—A facrifice of peace-offering offer without blemith, Lev. iii. 1.

\* PEACEPARTED. adj. [peace and parted.] Dif-

mined from the world in peace.-

We should prophane the service of the dead, To fing a requiem, and such rest to her

As to peaceparted fouls. Shak. Hamlet.

(1.) \* PEACH. n. J. [pefche, Fr. malum perficum,
Lat., A tree and frun.—In his left hand a haudful
of millet, withat carrying a cornucopize of ripe

peaches, pears and pomegranates. Peacham.—
The funny wan,
Prefents the downy peach. Thomson's Autumn.

(2.) PEACH. See AMYGDALUS, § 3, 4.

(3.) P. ACH WOLF'S, a species of SOLANUM.

To PEACH. v. n. [Corrupted from impeach.]

To PFACH. v. n. [Corrupted from impeach.] To accuse of some crime.—If you talk of peaching, I'll peach first, and see whose oath will be believed, Dred.

\* PEACH COLOURED, adj. [peach and colour.] Of

a colour like a peach.—One Mr Caper comes jail at the fuit of Mr Threepile the mercer, fome four fuits of peach-coloured fattin, wh now peaches him a beggar. Sbak. Meal. for M.

\* PEACHICK. n. f. [pen and chick.] The chicl of a peacock.—Does the faivelling peachick the to make a cuckold of me? Southern.

(1.) \* PEACOCK. n. f. [pawa, Saxon; par Lat. Of this word the etymology is not know perhaps it is peak cock, from the tuft of featl on its head; the peak of women being an accornament; if it he not rather a corruption of beag, Fr. from the more firthing luftre of its for led train.] A fowl eminent for the beauty of feathers, and particularly of his tail.—

Let frantick Taibot triumph for a while; And, like a peacock, fweep along his tail. S.—The birds that are hardest to be drawn, are tame birds; as cock, turky-cock and pea

Peacham.-

The peaceek, not at thy command, assumed His glorious train.

The peaceek's plumes thy tackle must not

4. Any thing acuminated. 3. The rifing fore part of a head-drefs.

(a) PEAK, a mountain of Ireland, in Cork, Mander; in which there are feveral fubterraneous crems, wherein a great number of human skeletos were discovered in 1755.

137 Prak Bay, a bay on the S. coast of 13322. Lon. 76, 58. W. Lat. 17, 59. N.

(4) PEAR OF DERBYSHIRE, a chain of very bet mountains in Derby, famous for the mines By certain, and for their remarkable caverns. The most remarkable of these are Pool's-hole and liter-hole. The former is a cave at the foot of a high bill called Coitmos, so narrow at the entrace that pattengers are obliged to creep on allkar: but it foon opens to a confiderable height, estending to above a quarter of a mile, with a and former hat referrabling that of an ancient catheiral. By the petrifying water continually dropping in many parts of the cave are formed a way of curious figures and representations of the works both of nature and art. There is a cohere as clear as alabafter, which is called The hang Scots's Pillar, because Q. Mary is said to be proceeded thus far when she visited the cam. After fliding down the rock a little way, house the dreary cavity turned upwards: folbunk its course, and climbing from crag to crag, Immeller arrives at a great height, till the rock, doing over his head on all fides, puts an end to my further subterraneous journey. Just at turnmodescend, the attention is caught by a chaim, which is feen a candle glimmering at a vaft The guides fay, that the depth underneath. htt a a place near Mary Queen of Scots's pilm, and no less than 80 yards below. It appears habitally deep indeed to look down; but perprocessor measure any thing like what it is faid beda. If a pissoi is fired by the Queen of Scots's Mu, it will make a report as loud as a cannon. Sear the extremity there is a hollow in the roof, alled the Needle's Bye; in which if a candle is red, it will represent a star in the firmament to who are below. At a lit le distance from have is a small clear stream consisting of hot mod water, so near each other, that the fin-Find thumb of the same hand may be put, the mater and the other into the cold. Men-hole is a dreadful chasm in the fide of a bontain; which, before the end of the 17th cen-To was thought to be altogether unfathomable. be Elden-Hole.) In 1699 Captain Sturmy, theeded by ropes fixed at the top of an old lead-\* PL 4 fathoms almost perpendicular, and from hoce 3 fathoms more obliquely, between 2 great art. At the bottom of this he found an enmaximto a very spacious cavern, whence he defmidd along with a miner for 25 fathoms perforcular. At last they came to a great water, that he found to be 20 fathoms broad and 8 kep. As they walked by the fide of this water, by observed a hollow in the rock some seet them. The miner went into this place, was the mouth of another cavern; and the for about 70 paces in it. The floor of be caverns is a kind of white stone enamelled the kad ore, and the roofs are encrusted with being spar, Ou his return from this subterraneous journey, Captain Sturmy was feized with a violent head-ach, which, after continuing four days, terminated in a fever, of which he died in a short time.

(7.) PEAR'S HOLE, and POOL'S HOLE, called also the Devil's A—fe, two remarkable horizontal springs under mountains; the one near Castletown, the other just by Buxton. They seem to have owed their origin to the springs which have their current through them; when the water had forced its way through the horizontal fissures of the strata, and had carried the loose earth away with it, the loose smust fail down of course: and where the strata had sew or no fissures, they remained entire; and so formed these very irregular arches, which are now so much wondered at. The water which passes through Pool's Hole is impregnated with particles of lime-stone, and has incrusted the whole cavern in such a manner, that it appears as one solid rock.

(8.) PEAKS OF OTTER, the highest parts of the BLUE MOUNTAINS, in N. America. They are

4000 feet above the fea level.

\*To PEAK. v. n. spequeno, Spanish, little, perhaps lean: but I believe this word has some other derivation: we say a withered man has a sharp sace; Faistast dying, is said to have a nose as sharp sas a pen: from this observation, a fickly man is said to peak or grow acuminated, from pique.] 1. To look fickly.—

Weary fe'nnights, nine times nine, Shall he dwindle, peak and pine. Shak

2. To make a mean figure; to fneak .-

I, a dull and muddy mettled rascal, peak, Like John a dreams, unpregnant of my cause.

The peaking cornuto her husband, dwelling in a continual iarum of jealoufy, comes me in the instant of our encounter. Shak.

\* Peal. n. s. [Perhaps from pello, pellere tympa-na.] 1. A fuccession of loud sounds: as, of belle, thunder, cannon, loud instruments.—They were saluted by the way, with a fair peal of artillery from the tower. Hapsward.—It shall be the last peal to call the judgments of God upon men. Bacon's Essays.—Woods of oranges will smell into the sea perhaps 20 miles; but what is that, since a peal of ordnance will do as much? Bacon.—

A peal shall rouse their sleep. Milt. Par. Reg. Vanquish'd with a peal of words, O weakness! Gave up my fort of silence to a woman. Milt. Peals of shouts that rend the heav'ns. Dryden. Oh! for a peal of thunder that would make Earth, sea, and air, and heaven and Cato

tremble! Addif, 2. It is once used by Sbakespeare for a low dull

noise, but improperly.-

Ere to black Hecate's fummons
The shard born beetle with his drowfy hums,
Hath rung night's yawning peal, there shall be
done

A deed of dreadful note. Shak. Mach. (1.) \* To PEAL. v. n. [from the noun.] To play folemnly and loud.—

Let the pealing organ blow,

To the full-voic'd quire below. Milton. The pealing organ, and the pauling chor.

Tickel. (2.) \* To PEAL. v. a. 1. To affail with noise .-Nor was his ear less peal'd

With noises loud and ruinous. Milt. 2. To ftir with some agitation: as, to peal the pot, is when it boils to stir the liquor therein with a ladie. Ainf.

(1.) PEAN, in heraldry, is when the field of a coat of arms is fable, and the powderings or.

(2.) PEAN. See PEAN.

PEAPS, William, a dramatic writer, in the reign of Charles I. He fludied at Eton, and wrote a piece entitled, Love in its extasy, or the large Pre-

rogative: 4to. 1649.

(1.) \* PEAR. n. f. | poire, French; pyrum, Lat.] The species are 84: 1. Little musk pear, commonly called the supreme. 2. The Chio pear, commonly called the little bastard musk pear. 3. The hafting pear, commonly called the green chiffel. 4. The red muscadelle, it is also called the fairest. 5. The little muscat. 6. The jargoneile. 7. The Windsor pear. 8. The orange musk. 9. Great blanket. 10. The little blanket pear. 11. Long stalked blanket pear. 12. The skinless pear. 13. The musk robin pear. 14. The musk drone pear. 15. The green orange pear. 16. Cassolette.
17. The Magdalene pear. 18. The great onion pear. 19. The August muscat. 20. The rose pear. 21. The persumed pear. 22. The summer bon chrêtien, or good christian. 23. Saviati. 24. Rose water pear. 25. The choaky pear. 26. The russelet pear. 27. The prince's pear. 28. The great mouth water pear. 29. Summer burgamot. 30. The Autumn burgamot. 31. The Swifs burgamot. 32. The red butter pear. 33. The dean's pear. 34. The long green pear; it is called the Autumn month water pear. 35. The white and grey monfieur John. 36. The flowered muscat. 37. The vine pear. 38. Rousseline pear. 39. The knave's pear. 40. The green fugar pear. 41. The marquis's pear. 42. The burnt cat; it is also called the Virgin of Xantonee. 43. Le Besidery; it is so called from Heri, which is a forest in Bretagne between Bennes and Nantz, where this pear was found, The crasane, or burgamot crasane; it is also called the flat butter pear. 45. The lanfac, or dau-phin pear. 46. The dry martin. 47. The villain of Anjou; it is also called the tulip pear and the great orange. 48. The large stalked pear. 49. The Amadot pear. 50. Little lard pear. 51. The good Lewis pear. 52. The colmar pear; it it is also called the manna pear, and the late burgamot. 53. The winter long green pear, or the landry wilding. 54. La Virgoule, or La virgoleuse. 55. Poire d'Ambrette; this is so calied from its musky flavour, which resembles the smell of the fweet fultan flower, which is called Ambrette in France. 56. The winter thorn pear. 57. The St Germain pear, or the unknown of ia Fare ; it being first discovered upon the banks of a river called by that name in the parish of St Germain. 58. The St. Augustine. 59. The Spanish bon chrêtien. 60. The pound pear. 61. The wilding of Cassoy, a forest in Britanny, where it was discovered. 62. The lord Martin pear.

63. The winter citron pear; it is also called t musk orange pear in some places. 64. The w ter rosselet. 65. The gate pear: this was disc vered in the province of Poictou, where it w much esteemed. 66. Bergamotte Bugi; it is a called the Easter buryamot. 67. The winter b chrêtien pear. 68. Catillac or cadillac. 69. pastourelle. 70. The double flowering pear. St. Martial; it is also called the angelic pear. The wilding of Ci aumontelle. 73. Carmel 74. The union pear. 75. The aurate. 76. 7 fine present; it is also called St Sampson. Le rousselet de Reims. 78. The summer the pear. 19. The egg pear; so called from the gure of its fruit, which is shaped like an egg. The orange tulip pear. 81. La mansuette. The German muscat. 83. The Holland but 84. The pear of Naples. Miller.-T would whip me with their fine wits, till I were creft tallen as a dried pear. Shak. Merch. of Vel -August shall bear the form of a young man a choleric aspect, upon his arm a basket of pe plums, and apples. Peach.— The juicy pear

Lies in a foft profusion scatter'd round. To

NUM.

(5.) PEAR, GARLICK. Sec CRATEVA, Nº 2 (6.) PEAR, PRICKLY, a species of CACTUS. PEARCE, Dr Zachary. Bp. of Ruchester, the fon of a distiller in High Holborn. He born in 1690, and educated at Westminster, wi he was diffinguished by his merit, and elected of the king's scholars. In 1710, when he was years old, he was elected to Trinity College, C bridge. During the first years of his relidence the university, he wrote estays, some of which inserted in the Guardian and Spellator. In 19 he published his edition of Cicero de Oratore, luckily dedicated it to Lord Chief Juliice Pal (afterwards Earl of Macclesfield), to whom was a stranger. This laid the foundation of future fortune; for Lord Parker recommen him to Dr Bentley, master of Trinity, to be m one of the fellows. In 1917, Mr Pearce was dained at the age of 27; In 1718, Lord Pai was appointed chancellor, and invited Mr Pc to live with him as chaplain. In 1719, he instituted rector of Stapleford Abbots, in Est in 1720, of St Bartholomew, worth 4001. per num: In 1723, he was prefented to St Martin the Fields. In 1722, he married Mis Adams, daughter of a diffuler, with a confiderable forti who lived with him in the highest connubial ! piness. Mr Pearce soon attracted the notice efteem of persons in the highest stations and the greatest abilities; In 1724, the degree of I was conferred on him by Abp. Wake. The fi year he dedicated to the earl of Macclesfield, edition of Longinus on the Sublime, with a new tin version and notes. When the church of Martin's was rebuilt, Dr Pearce preached a mon at the confecration, which he printed, accompanied with an Effay on the origin and gress of Temples, traced from the rude stones wh

were first used for alters to the noble structure of Solomon, which he confiders as the first temple completely covered. Dr Pearce was appointed dem of Winchester in 1739; and in 1744 he was dided prolocutor of the lower house of convocathat for Canterbury. He was confecrated Bo. of Biver, Feb. 12. 1748. Upon the death of Bp. Wieds he was promoted to the fee of Rocheftrial deancry of Westminster in 1756. In 1768 temped the deanery; in 1773, he loft his lady; as my fome months of lingering decay he died a Line Ealing, June 29, 1774, aged 85. enirent prelate diftinguithed himfelf in every part of he life by the virtues proper to his station. Illu iterary abilities, and application to facred and philosocial learning, appear by his works; the procipal of which are, I. A letter to the clergy of the church of England, on occasion of the Bp. of Rocheffer's commitment to the Tower, 2d edit. 1722 2. Miracles of Jesus vindicated, 1727 and 138. 3. A review of the text of Milton, 1733. 4. Two letters against Dr Middleton, occasioned by the odor's letter to Waterland, on the publicaton of his treatise, intitled, Scripture Vindicated, 1 th. 1752. And 5. fince his death, a commentay with notes on the four Evangelists and the At of the Apostles, with a new translation of Rul's first Epistle to the Corinthians, with a pamake and notes, have been published, with his befored, from original MSS. in 2 vols. 4to.

[1.] PEARCH. n. f. [pertica, Lat.] 1. A long

for various uses. 2. A kind of fish.

(b) Plance, in ichthyology. See PERCA. The parch affords good sport for the angler. The best time for their biting is when the spring and before the heats of fummer come on. time they are very greedy; and the angwith good management, may take at one stanall that are in the hole be they ever fo many. proper baits are minnows or young frogs; but worm called the brandling; well fcoured, is alexcelent at all times of the year. When the bites, he should always have a great deal allowed him to fwallow the bait. The will bite all day if the weather be cloudy; best time is from 8 to 10 A. M. and from III P. M. The pearch is very abstemious in and will feldom bite in this season; if he at all, it is in the middle of the day: at ime indeed all fish bite best. If the bait be which is the bait that affords most dito the angler, it must be fastened to the we, by putting the hook through the upor back-fin; it must be kept at about midmd the float must be a quill and a cork, minnow alone may not be able to fink it. must be of filk, and strong; and the hook with a small and fine wire, that if a pike take the bait, as is not unfrequently the may be taken. The way to carry the was or small gudgeons alive for baits is this: pot is to be provided, with holes in the lid, eled with water; and the fish being put in the water is to be changed once in a quarter hour by the holes, without kking off the lid mime, except when the bait is to be taken A small cafting net, made for these little fish, be taken out with the pearch-tackle; and

one or two casts of this will take baits enough for the day without any farther trouble. When the bait is a frog, the hook is to be fattened to the upper part of the leg. The best place for the fishing for pearch is in the turn of the water near some gravelly scour. A place of this kind being pitched upon, it should be baited over-night with lobworms chopped to pieces; and in the morning on going to it, the depth is to be regularly plumbed, and then the hook is to be baited with the worm or other bait; and as it drags along, the pearch will foon feize upon it.

(3.) PEARCH GLUE, akind of glue, of remarkable strength and purity, made from the skins of pearches. \* PEARCH-STONE. n. f. [from pearch and flone.]

A fort of stone.

PEAR-GLASS, or rather Glass Pear, is synoni mous with GLASS DROPS, or GLASS TEARS,

Prince Rupert's drops. See RUPERT'S DROPS.
(1.) \* PEARL. n. f. [perle, Fr. perla, Spanish: supposed by Salmafius to come from spherula, Latin.] 1. Pearls, though effected of the number of gems by our jewellers, are but a diftemper in the creature that produces them: the fish in which pears are most frequently found is the East Indian berbes or pearl oyster: others are found to produce pearls; as the common oyster, the muscle, and various other kinds: but the Indian pearls are fuperior to all: some pearls have been known of the fize of a pigeon's egg: as they increase in fize, they are less frequent and more valued: the true shape of the pearl is a perfect round; but some of a confiderable fize are of the shape of a pear, and serve for ear rings. Hill .- A pearl-julep was made of a distilled milk. Wifeman .-

Flow'rs purfled, blue and white,

Like sapphire, pearl, in rich embroidery. Shak.-Cataracts pearl-coloured, and those of the colour of burnished iron, are esteemed proper to endure the needle. Sharp. 2. [Poetically.] Any thing round and clear, as a drop .-

Dropping liquid pearl,

Before the cruel queen, the lady and the girl Upon their tender knees begg'd metcy. Draft.

(2.) \* PEARL. 11. S. [albugo, Lat.] speck or film growing on the eye. Ains.

(3.) PEARL, in geography, an island in the Gulf of Mexico, near the mouth of the Missippi; 7 miles long and 4 broad.

(4.) PEARL, another island of the W. Indies; in

Lon. 79. 13. W. Lat. 14. 53. N. (5.) PEARL, a river of W. Fiorida, which runs into Lake Pontchartrain; 13 m. ENE. of New Orleans.

(6.) PEARL, a river of Georgia, which rifes in the W. part of the Chactaw country, runs S. to the Gulf of Mexico, into which it falls by feveral mouths, at the E. end of the Regolets. It is na-

vigable for above 150 miles.
(7.) A PEARL, (§ 1 Def. 1.) in natural history, is a hard, white, thining body, usually roundish, found in a tellaceous fifth refembling an oyster. (See MYA, No 2.) Pearls are analogous to the bezoars and other stony concretions in feveral animals of other kinds. The fish in which these are usually produced is the East Indian pearl-oyster. Besides this shell, there are many others that are found to produce pearls; as the common oyster, the muscle, and several others; the pearls of which are often very good; but those of the true Indian berberi, or pearl oyster, are in general superior to all. The small or seed-pearls, also called ounce pearls, from their being fold by the ounce and not by tale, are vailly the most numerous and common. We have Scotch pearls frequently as big as a little tare, some as big as a large pea, and some few of the fize of a horse-bean; but these are usually of a bad shape, and of little value in proportion to their weight. Philip II. of Spain had a pearl perfect in its shape and colour, and of the fize of a pigeon's egg. Their colour ought to be a pure white; and that not a dead and lifeless, but a clear and brilliant one: they must be perfeetly free from any foulness, spot, or stain; and their furfaces must be naturally smooth and glotly; for they bring their natural polith with them, which art is not able to improve. All pearls are formed of the matter of the shell, and confift of a number of coats spread with perfect regularity one over another, in the manner of the

feveral coats of an onion, or like the feveral strata

of the stones found in the bladders or stomachs

of animals, only much thinner.

(8.) PEARL FISH. See MYA, No 2. Very little is known of the natural history of the pearl fish. Mr Bruce says, that, as far as he has observed, they are all fluck upright in the mud by an extremity: the muscle by one end, the pinna by the small sharp point, and the third by the hinge or fquare part which projects from the round. " In thallow and clear streams (fays Mr Bruce), I have feen fmall furrows or tracks upon the fandy bottom, by which you could trace the muscle from its last station; and these not straight, but deviating into traverses and triangles, like the course of a ship in a contrary wind laid down upon a map, probably in purfuit of food. The general belief is, that the muicle is conftantly stationary in a state of repose, and cannot transfer itself from place to place. This is a vulgar prejudice, and one of those facts that are militaken, for want of fufficient pains or opportunity to make more critical observations. Others, finding the sirst opinion a faile one, and that they are endowed with power of changing place like other animals, have, upon the fame foundation, gone into the contrary extreme, fo'far as to attribute swiftness to them, a property furely inconfiltent with their being fixed to rocks." Our author informs us, that the muscles found in the falt springs of Nubia likewise travel far from home, and are sometimes furprifed, by the ceasing of the rains, at a greater distance from their beds than they have ftrength and moisture to carry them. He assures us, that none of the pearl-fish are eatable; and that they are the only fish he saw in the Red Sea that cannot be eaten. But no attempt towards motion or change of place has ever been observed in the pearl fish of Perthshire. The pearl-fish has been hitherto confidered as an ascidia, (see My-TILUS,) but a late author, who paid great attention to the pearl fishery at Ceylon, denies this, and fays it has no refemblance to the afcidia. He supposes it a distinct genus. The pearis are only found in the foft part of the animal, on both fides of the mouth. From the shells a judgment may be formed, whether they contain pearls. Those

which have a thick calcareous crust on them, which, ferpulæ, Tubuli marini, Cristagalli, Mad pores, Millipores, Spongia, and other zoophy adhere, commonly contain the best pearls: t fmooth ones either none or very small ones.

(Q.) PEARLS, DIFFERENT COLOURS, KINDS A VALUE OF. The colours of pearls are differ according to the shells in which they are fou There are 3 kinds of bivalve shells chiefly fou after by the pearl fishers. The aft is a kind muscle chiefly found in the N. end of the Red! It produces pearls of a fine thape and excell lustre, but seldom of that very tine colour wi enhances their price. The 2d kind called Pix is broad and femicircular at the top, and thar the hinge, the outlide rough and red, the infide? with mother of pearl. It produces pearis ha the reddish cast of the inner shell of the pinna, led mother of pearl; which confirms the opi of Reaumur, that the pearls are formed from glutinous fluid which makes the first rudimen the shell; and this kind of pearl is found t more red as it is formed nearer the broad pa the shell, which is redder than the other The third fort of shell resembles the oyster, produces pearls of extreme whiteness. The of these commodities depends upon their hz gularity of form, whether round or not, we imouthness, colour, and the different thad that colour. The pearl fithers fay, that the shell is smooth and perfect, they expect to find any pearls, but always do lo it has begun to be deformed and difforted. I it would feem, that as the fifh turned olde veffels containing the juice for forming the and keeping it in its vigour, grew weak and tured; and thence, from this juice accumulate the fish, the pearl was formed, and the shell be to decay, as supposed by Mr Reaumur. be the case, it ought to be known by the se the shell whether the pearl is large or linal thus the finalier ones being thrown back in fea, a constant crop of large pearls might tained. Pearls were anciently rated at vi travagant prices. Servilia, the mother of A Brutus, presented one to Cæsar of the vi 50,000 l. of our money; and Cleopatra di one worth 250,000 l. in vinegar, which the at a fupper with Mark Antony!

(10.) PEARLS FISHERIES OF. many rivers great and imail in Eastern confiderable for pearl-fishery; but these though much esteemed by the Tartars, we little valued by Europeans, on account ( defects in thape and colour. The Empero hi had deveral chaplets or strings of these each containing 100, which were very lar exactly matched. There are many rivule vonia which produce pearls, annoit equaand clearness to the oriental ones. Then veral fisheries both on the E. and W. c Africa; the most considerable of which li fome imall iflands, over-against the king Sofala; but the people thus employed, infe poing the oyimrs to the warmth of the ful would induce them to open, lay them upon hers; by which abfurd method, those pear they catch contract a dull kind or redness

rols them of their natural luftre as well as of their vaice. Pearl-filbing is performed by the women as well as the men; both being equally expert. In the ks of California ails there are very rich pearl-fishencs. The most esteemed pearls are those of Asia and the E. coast of Africa. In the kingdom of Maha there are many pearl fisheries. (See Tu-turion.) In Japan likewise there are found press of great price. Pearls are met with in all persof the Red Sea, in the Indian Ocean, on the by part of the coaft of Arabia Felix named Buhora adjoining to the Perlian Gulf. They are likewife found on the low coast about Gunibroom Lof the Perlian Gulf; and many of the finest, and are met with on the coasts of Ceylon. are most plentiful in the Baharen, between the cast of Arabia Felix and Ormus, whence they re transported to Aleppo, then fent to Leghorn, rid then circulated through Europe. Linnauf ticovered a method of putting the pearl muscles izto affate of producing pearls at his pleasure. (See Mrs, No 2.) In Scotland, especially to the authraid, in all rivers running from lakes, there ar found mufcles that have pearls of more than admiry ment, though feldom of large fize. In the county there was a very great fishery of paris, got out of the fresh-water muscles. (See Mts, N'2.) From 1761 to 1764, 10,000l. worth were kent to London, and fold from ros. to Ili in per ounce. One pearl was taken there that withed 33 grains. But this fifthery is at present maded, from the avarice of the undertakers: \* extended as far as Loch-Tay.

ML) Pearls, Manner of fishing for, in THE LIST INDIES .- There are two feafons for hive: the first is in March and April, and min Aug. and Sept. and the more rain there Min the year, the more plentiful are these fish-At the beginning of the season there are sections 150 barks on the banks; the larger have two divers, and the smaller one. As for as the barks arrive at the place where the to, and have east anchor, each diver binds a ix inches thick and a foot long, under his ; which serves him as a ballast, prevents his driven away by the motion of the water, rubles him to walk more steadily under the They also tie another very heavy stone beefoot, by which they are very speedily sent the bottom of the fea; and as the oysters are faily firmly taltened to the rocks, they arm their and with leather mittens, to prevent their bewounded in pulling them violently off; but the some perform with an iron rake. Each carries down with him a large net in the er of a fack, tied to his neck by a long cord, mother end of which is fastened to the fide of This net is to hold the oysters gatherfrom the rock, and the cord is to pull up the when his bag is full, or when he wants air. equipage he sometimes precipitates himwhite under water; and as he has no time to he no fooner arrives at the bottom, than he to run from fide to fide, tearing up all the meets with, and cramming them into indget. At whatever depth the divers are, this is fo great, that they easily fee whatever in the sea; and, to their great consterna-VOL XVII. PART L

tion, fometimes perceive large sharks, from which all their address in muddying the water, &c. will not always fave them, but they unhappily become their prey; and of all the dangers of the fishery, this is one of the greatest and most usual. (See PANAMA, No 1.) The best divers will not keep under water above two minutes, according to M. Le Beck, though others absurdly affirm, that they will continue half an hour. When they find themselves straitened, they pull the rope to which the bag is fastened, and hold fast by it with both hands: when those in the bark, taking the fignal, heave them up into the air, and unload them of their fish; which is sometimes soo oys ters, and fometimes not above so. Some of the divers need a short respite to recover breath; others jump in again instantly, continuing this violent exercise for several hours. On the shore they unload their barks, and lay their oysters in vast number of little pits dug in the fand 4 or 5 feet square, raising heaps of fand over them to the beight of a man; and in this condition they are left till the rain, wind, and fun, have obliged them to open, which foon kills them: upon this the flesh rots and dries, and the pearls, thus difengaged, fall into the pit on their taking out the fhells. After clearing the pits of the groffer filth, they lift the fand feveral times in order to find the pearl; but, whatever care they take, they aiways lose a great number. After cleaning and drying the pearls, they are passed through a kind of sieve, according to their sizes; the smallest are then fold by weight as feed-pearls, and the rest put up to auction, and fold to the highest bidder.

(12.) PEARLS, METHOD OF FISHING FOR, IN PERTHSHIRE. The rev. Dr James Robertson, in his Statistical Account of Callander, describes the pearl fishery as practifed in this county, as follows: "They are fithed with a kind of fpear, confisting of a long shaft, and shod at the point with two iron spoons, having their mouths inverted; their handles are long and elaftic, and joined at the extremity, which is formed into a focket, to receive the shaft. With this machine in his hand, by way of staff, the fisher, being often up to the chin in water, gropes with his feet for the muscles, which are fixed in the mud and fand by one end, and preffes down the iron spoons upon their point; so that by the spring in the handles, they open to receive the muscle, hold it fast, and pull it up to the furface of the water. He has a pouch or bag of net-work hanging by his fide, to carry the muscles till, he come a shore, where they are opened. The operation is much easier in shallow water." Stat. Acc. XI, 599.

(13.) PEARLS, METHOD OF MAKING ARTIFI-CIAL. Attempts have been made to take out stains from pearls, and to render the foul opaque. coloured ones equal in lustre to the oriental. A. bundance of processes are given for this purpose in books of secrets and travels: but they are very far from answering what is expected from them. Pearls may be cleaned indeed from any external foulneffes by washing and rubbing them with a little Venice foap and warm water, or with ground rice and falt, with starch and powder-blue, plaster of Paris, coral, white vitriol and tartar, cut-tler-bone, pumice-stone, and other similar sub-

frances; but a Itain that reaches deep into the fubstance of pearls is impossible to be taken out. Nor can a number of small pearls be united into a maissimilar to an entire natural one, as some pretend. There are, however, methods of making artificial pearls, in fuch a manner as to be with difficulty diftinguished from the best oriental. The ingredient used for this purpose was fong kept a fecret; but it is now discovered to be a fine fiverlike subkance found upon'the under side of the Rales of the blay or bleak fish. The scales, taken off in the usual manner, are washed and rubbed with fresh parcels of fair water, and the siveral liquors fuffered to feitle: the water beingthen poured off, the pearly matter remains at the bottom, of the confisence of oil, called by the French effence d'orient. A little of this is dropped into a hollow head of bluith glass, and shaken about fo as to line the internal furface; after which the cavity is filled up with wax, to give folidity and weight. Pearls made in this manuer are diftinguishable from the natural only by their ha-

ving fewer blemifies. PEARL-ASH, a kind of fixed alkaline falt, prepared chiefly in America, Germany, Russia, and Poland, by melting the falts out of the ashes of burnt wood; and having reduced them again to drynefs, evaporating the moitture, and calcining them for a confiderable time in a furnace mode-The goodness of pearl ashes must be rately hot. distinguished by the uniform and white appearance of them: they are nevertheless subject to a common adulteration, not easy to be distinguished by the mere appearance, which is done by the addition of common falt. In order to find out this fraud, take a finall quantity of the suspected falt: and after it has been foftened by lying in the air, put it over the fire in a shovel: if it contains any common falt, a crackling and a kind of flight explosion will take place as the falt grows hot. Pearl-ashes are much used in the manufacture of glass, and require no preparation, except where very great transparency is required, as in the case of looking-glass, and the best kind of window-glass. For this purpose dissolve them in four times their weight of boiling water: when they are diffolved, let the folution be put into a clean tub, and suffered to remain there 24 hours or more. Let the clear part of the fluid be then decanted off from the fediment, and put back into the iron pot in which the folution was made; in this let the water be evaporated till the falts be left perfectly dry. Keep those that are not defigned for immediate use in stone sars, well secured from moisture and air. Mr Kirwan, who has tried a course of experiments on the alkaline substances used in bleaching, &c. (see Irigh Trans for 2789), tells us, that in 100 parts of the Dantzick pearl-ash, tile vegetable alkali amounted to 10mewhat above 63. His pearl-ash he prepares by calcining a ley of vegetable after dried into a falt to whiteness. In this operation, he fays, " particulay care should be taken that it should not melt, as the extractive matter would not be thoroughly confumed, and the alkali would form such an union with the earthy parts as could not easily be. traces of after and falt obtained from different vegetables: and he concludes from them, r. "Thin general weeds yield much more aftes, and the aftes much more fait, than woods; and the confequently, as to falts of the vegetable alka kind, neither American, Triefte, nor the norther countries, possess any advantage over us. 2. The of all weeds, fumitary produces most fait, as next to it wormwood; but if we attend only the quantity of fait in a given weight of aftes, the man also produces more aftes and fait than tem See Potash.

PEARSON, John, a learned English bist born at Snoring, in 1613. He was educate Eton and Cambridge; entered into orders in 16 and was made prebendary of Netherhaven in church of Sarum. In 1640 he was appoint chaplain to the lord keeper Finch, and by presented to Torrington in Susfolk. In 165 was made minister of St Clement's, East ch London. About 1660 he published at London.

In Exposition of the Cre.d, in folio; also, The Golden Remains of Mr John Hales of Eton; with a preface, and character, drawn with great eleunce. In 1660 he was presented by Juxon, Bp. of London, to the rectory of St Christopher's in tus city; created D.D. at Cambridge, installed prepadary of Ely; archdeacon of Surry; and made matter of Jefus coilege in Cambridge. March ichilli, he was appointed Margaret professor density, and in 1662, one of the commissioners Is the review of the liturgy. April 14th 1662, k # admitted mafter of Trinity college in Camindee; and, in August, resigned his rectory of St Cirilopher's and prebend of Sarum. In 1667 he was admitted F. R. S. In 1672 he published at Cambridge, in 4to, Vindiciae Epiflolarum S. Ignatii, w mirer to M. Daille; to which is subjoined, lisas l'offi epifole due adverfus Davidem Blendel-. Pearlon was appointed fuccetfor to Bp. Willimin the see of Chester, Feb. 9th 1672-3. In 163 his Anules Cyprianici, five tredecim annorum, and S. Cyprian. inter Christianas versutus est, hiswww.coronologica, was published at Oxford, with has edition of that Father's works. He died at Cicle July 16th 1686.

(L) PEARTREE. n. f. [pear and tree.] The tre that bears pears.—The peartree criticks will here to borrow his name of we, fire. Bacon.

PLAS. See PEASBURN, and PEATHS.
(1.) PLASANT. n. f. [pairant, Fr.] A hind; on whose business is rural labour.—He holdeth backingentleman, and scorneth to work, which, be fich is the life of a peasant or churl. Spenser .-

Ilm rather coin my heart, than wring

from the hard hands of peafants their vile trash.

-The poor peasants in the Alpine countries, dirented themselves in the fields. Brown's Travels. - In difficult for a peafant bred up in the obfenties of a cottage, to fancy in his mind the unfram splendours of a court. South.—The citizens hing 1000 men, with which they could make

and against 12,000 peusants. Addison. 12. PEASANTS, being, in general, feeluded ham the means and opportunities of luxury and kentiousness, are an order of men among whom spinsopher would look for innocence and fim-Felly of manners. And indeed the peafantry of Gat Britain ftill retain these virtues in a conficamble degree. But in many other countries, lier are neither so virtuous nor so happy. In med countries, and in most ages of the world, fact the conclusion of the patriarchal age, they been treated as slaves, and their morals of confiquence neglected and corrupted. Even in emebrated state of ancient Sparta, they were besided to a degree of flavery, almost, if not allegether, as intolerable, as the worst that has been referred of the African slaves in the W. Inden (See HILOTS.) And in the greater part a modern Europe, they are still considered as is and their persons transferred as property, wine great landed proprietors along with the foil. Coxe in his Travels in Ruffia, gives a most hor-Pagare of their ignorance and degeneracy in main by incessions marriages, &c. They are, huncers, he fays, well clothed, comfortably lod-

ged, and enjoy plenty of wholesome food, by which they acquire great bodily strength. The pealants of Finland are more civilized than the Russians, and differ widely from them in looks, dreis, and manners. Those of Sweden are still more improved. They are more honest, in better condition, and possess more of the conveniences of life, both in food and furniture, than those of Poland and Russia. Before the late revolutions, the pealants of Holland and Switzerland were all in a very tolerable condition; not fubject to the undifputed controll of a hireling mafter, they were freemen, and enjoyed in their fe-veral flations the bleffings of freedom. In Bohemia, Hungar, and a great part of Germany, they are legally flaves, and fuffer all the miferies attending fuch a condition. In Spain, and Italy, they are little better. In France, their fituation was fuch as to warrant the first Revolution; and indeed these, and a few others of the lower ranks, from now to be the only gainers by it.

\* PEASANTRY. n. f. Peafants; rusticks;

country people.

How much low, peafantry would then be glean-

From the true feed of honour? The peasantry in France, under a much heavier preffure of want and poverty than the day-labonrers of England of the reformed religion, understood it much better than those of a higher condition among us. Locke.

PEAS-BRIDGE. See PEATHS.

PEAS-BURN, a small river in Berwick-shire; which runs through a ravine into the fea, between Berwick and Dunbar. See PEATHS.

\* Peascod. Peashell. n. s. [pea, cod and

The husk that contains peas.

Thou art a sheai'd peascod. —I faw a green caterpillar as big as a finall peascod. Walton .-

As peaseods once I pluck'd, I chanc'd to see. One that was closely fill'd with three times three.

(1.) \* PEASE. n. f. [Pea, when it is mentioned as a fingle body, makes peas; but when spoken of collectively, as food or a species, it is called pease, anciently peason; pisa, Saxon; pois, French; pi,o, Italian; pifum, Latin.] Food of peafe.

Sowe peafon and beans in the wane of the

-Peale, deprived of any aromatic parte, are mild and demulcent; but, being full of aerial particles, are flatuient. Arbuthnot.

(2.) PEASE, in botany. See Pisum.

(1.) \* PEAT. n. f. A species of turf used for fire.—Turf and peat, and cowshicards are cheap fuels, and last long. Bacon .- Carew, in his survey of Cornwall, mentions nuts found in peat-earth two miles East of St Michael's mount. Woodw.

(2.) \* PEAT: n. f. [from petit, Fr.] A little fondling; a darling; a dear play thing. It is now commonly called pet.—

A pretty peat! Shak. The wench a pretty peat. Donne.

(3.) PEAT, (§ 1.) is a well known inflammable fubstance, used in many parts of the world as fuel, There are two species: viz. 1. A yellowish brown

or black peat, found in moorish grounds in Scotland, Holiand, and Germany. When fresh, it is of a viicid confiftence, but hardens by exposure to the air. It confills, according to Kirwan, of ciay mixed with calcareous earth and pyrites; fometimes also it contains common salt. While 10ft, it is formed into oblong pieces for fuel, after the pyritaceous and stony matters are separated. By distillation it yields water, acid, oil, and volatile alkall; the afthes containing a fmall proportion of fixed alkali; and being either white or red, according to the proportion of pyrites The oil obtained contained in the substance. from peat has a very pungent tafte; and an empyreumatic for ell, less fetid than that of animal fubstances, more so than that of mineral bitumens: it congeals in the cold into a pitchy mafe, which liquefies in a small heat: it readily catches fire from a candle, but burns lefs vehemently than other oils, and immediately goes out upon removing the external flame: it diffolves almost totally in rectified spirit of wine into a dark brownish red liquor. 2. The 2d species is found near Newbury in Berkshire. In the Philos. Trans. for 1757, we have the following account of this species: Peat is a composition of the branches, twigs, leaves, and roots of trees, with grafs, firaw, plants, and weeds, which having lain long in water, is formed into a mass so soft as to be cut through with a sharp spade. The colour is a through with a sharp spade. blackish brown, and it is used in many places for firing. There is a stratum of this peat on each tide the Kronet, near Newbury in Berks, which is from about a quarter to half a mile wide, and many miles long. The depth below the furface of the ground is from one foot to 8. Great numbers of entire trees are found lying irregularly in the true peat. They are chiefly oaks, alders, willows, and firs, and appear to have been torn up by the roots: many horses heads, and bones of several kinds of deer; the horns of the antelope, the heads and tulks of boars, and the heads of beavers, are also found in it. Not many years ago, an urn of a light brown colour, large enough to hold about a gallon, was found in the peat-pit in Speen moor, near Newbury, at about 10 feet from the river, and four feet below the level of the neighbouring ground. Just over the spot where the urn was found, an artificial hill was raifed about 8 feet high; and as this hill confifted both of peat and earth, it is evident that the peat was older than the urn. From the fide of the river feveral femicircular ridges are drawn round the hill, with trenches between them. The urn was broken to shivers by the peat-diggers who found it, fo that it could not be critically examined. With peat also may be classed that substance called in England frone-turf; which hardens after its first exposure to the air, but afterwards crumbles down. The other common turf confifts only of mould interwoven with the roots of vegetables; but when these roots are of the bulbous kind, or in large proportion, they form the worst kind of turf. "Although it may appear incredible (fays M. Magellan), it is nevertheless a real fact, that, in England, pit-turf is advantageously employed in Lancashire to smelt the iron ore of that county. Mr Wilkinson, brother-

in-law to Dr Priestley, makes use of pit-turf in his large finelting furnaces. I have feen in the possession of Mr S. More, secretary to the Society of Arts, a kind of black tallow, extracted by the faid Mr Wilkinson from pit-turf. It was very foft, and nearly of the fame confiltence with butter. It burnt very rapidly, with a smoky slame in the fire; but the fmell was very diagreeable, like that of pit-turf." The great cause of the differences of peat most likely arises from the different mineral admixtures. Some forts of peat yield in burning a very difagreeable fineli, which extends to a great diffance; whilft others are inoffenfive. Some burn into grey or white, and o-The ashes thers into red ferruginous aftes. yield, on elixation, a finall quantity of alkaline falt, with fometimes one, and fometimes another falt of the neutral kind. The fmoke of peatitos not preferve or harden fleth like that of wood; and the foot, into which it condenses, is more disposed to liquely in moist weather.

(4.) PEAT ASHES, properly burnt for a manure, are noble improvers both of corn and graft land: but the substance from which they should be got is an under stratum of the peat, where the fibres and roots of the earth, &c. are well decay. ed. Indeed the very best are procured from the lowest stratum of all. This will yield a large quantity of very strong ashes, in colour (when first burnt) like vermission, and in taste very falt and pungent. Great care and caution should be used in burning these ashes, and also in present ing them afterwards. The method of burning them is much the fame as burning charcoal. The peat must be coilected into a large heap, and covered fo as not to flame out, but fuffered to confume flowly, till the whole fubstance is burnt to an afh. The afhes thus burnt are held in mok efteem; but the peat-ashes burnt in common for ing are in many places used for the same purpofes, and fold at the same prices. Peat ashes are excellent in fweetening four meadow land, dostroying rushes, and other bad kinds of grass, and in their stead producing great quantities of nates ral grais. They burn great quantities of peatafter in some parts of Berkshire and Lancashire and efficem them one of the best dressings for their fpring crops. The fulphureous and faline particles with which the affect abound have a mon happy effect in promoting vegetation; and if used with diferetion, the increase procured by them if truly wonderful. All ashes are of a hot, seryi caustic nature: they must therefore be used with With respect to peat-ashes, aimost the caution. only danger proceeds from laying them on in tod great quantities at improper feafons. Nothing can be better than they are for drefling low damp meadows, laying to the quantity of from 15 to 20 Winchester bushels on an acre: it is best to fow them by hand, as they will then be more to gularly spread. This should be done in January or February at lateft, that the ailes may be wath ed in towards the roots of the grafs by the first rains that fall in spring. If they were spread more forward in the year, and a speedy rain should not fucceed, being hot in their nature, they would be apt to burn up the grafs, inflead of doing it and fervice. The damper and stiffer the foil, the more peal-

pertathes should be laid on it; but in grass lands equantity should never exceed 30 Winchester bases, and on light warm lands less than half osantity is fully fufficient. On wheat crops, the after are of the greatest service, but they be laid on with the utmost discretion. Were menube foread in any quantity before winter, datebwing the corn, they would make the whetherank, and do more harm than good; se preading this manure, on the contrary, and till spring, the corn could not possibly the winter season be benefited by it. of November, before the hard frosts fet was to be the proper season for this purpose: at a necessary to fow on every acre of heavy wheat land, about eight Winchester buof their aftes; on lighter warmer lands in west, four will be sufficient for this season. The drelling is thought by practical farmers to and great fervice: trifling as the quantity may it warms the root of the plants, brings it lettely forward, preferves its verdure, and at to get into a growing state the first fine after Christmas. About the end of Feat the beginning of March, on heavy lands another dreffing of ashes, by sowing of every acre 8 bushels more, will do much 100 light lands, in this 2d dreffing, fix buare of the greatest service, without any y of danger: if rain falls within a few the dreffing is laid on, it is washed in, happy effect on the fucceeding crop, with the manure that was laid on in if, on the contrary, dry weather for consuance fucceeds, the first winter drefwas full effect, and the quantity laid on in sin fact fo fmall, that there is very probability of its burning or hurting the This excellent manure is also of great use maip husbandry, particularly as it much to preferve the young crop from bebared by the fly. But one of the princi-Methantages, derived from these ashes, is the That hervice they are of to every kind of ar-Pature. Saintfoin receives great benefit manure, and fo does clover, rye-grafs, bood, provided it is laid on with difcretion: Fra kason is about February. The quanbe regulated by the nature of the crop but it ought scarcely in any instance to Winchester bushels. Clover, with this manure, grows with great luxurimonuch that there have often been two cops of hay from the same field in a year, autumn feed afterwards. They have effect on tares or vetches: to peafe to be hurtful. The effects of this mand be whible at least three years, nor does the land in an impoverished state, when we exhausted and spent. Peat-aihes however, so certain a manure for barley s for winter corn : for as these are quick and occupy the land but a few months, manure is often apt to push them forand make them run too much to tar, yielding only a lean immature grain. bacter, are not so apt to be damaged by

it as barley. Peat-athes approach, in their effects on the feveral crops on which they are laid, to coal foot; but two 3ds of the quantity that is ufed of foot will be fufficient of the afhes, as they are in a much stronger degree impregnated with a vegetative power; and they are befides in most places easier procured in quantities, and at a cheaper rate. Peat-ashes are almost a general manure fuited to every foil. On cold clay they warm the too compact particles, dispose it to ferment, crumble, and of courfe fertilize, and, in fine, not only affift it in disclosing and dispensing its great vegetative powers, but also bring to its aid a confiderable proportion of ready prepared aliment for plants. On light lands thefe ashes have a different effect: here the pores are too large to be affected, or farther separated by the salts or fulphur contained in them; but, being closely attached to the surfaces of the large particles of which this earth is generally composed, this manure disposes them, by means of its faits, to attract the moisture contained in the air: by this operation, the plants which grow on these porous foils are prevented from being fcorched up and burnt; and if they want more nourishment than the land is capable of affording, this is readily and abundantly supplied by this useful manure. In large farms, it is very usual to see all the home fields rich and well mended by the yard dung. &c. whereas the more distant lands are generally poor, impoverished, and out of heart, for want of proper manure being applied in time. See CHE-MISTRY, \$ 1174.

(5.) PEAT LAW, in geography, a hill of Scotland, in Selkirkshire; 2 miles NW. of Selkirk. It

is 1964 feet above the sea level.

PEATHS, PEAS, or PEASE, a vast chasm, or ravine of Scotland, in Berwickshire, in the parish of Cockburnfpath, between Berwick and Dunbar, through which the rivulet PEAS, or PEAS-BURN, runs. An elegant bridge of 4 arches was built over it in 1786, supposed to be the highest in Britain, as it is 200 feet perpendicular above the old road, and 123 feet above the water. It is 300 feet long, and 15 feet wide; and the parapet walls are 6 feet high. Stat. Acc. XIII, 230.

PEATRA, a town of European Turkey, in

Moldavia; 16 miles SSW. of Niemccz.

PEAUCIER, in anatomy, a name given by Winflow, in his Treatife on the Head, and by fome of the French writers, to the muscle called by Albinus latisfimus colli; and by others detrabens quadratus, and quadratus genæ. Santorini has called the part of this which arifes from the cheek musculus risorius novus; and some carl the whole platyfma myoides.

PEAULE, a town of France, in the department of Morbihan; 7 miles S. of Rochefort, and 4½ NW. of Roche Bernard.

(I.) \* PEBBLE. PEBBLESTONE. n. f. [pabol/tana, Saxon.] A stone distinct from flints, being not in layers, but in one homogeneous mafs, tho fometimes of many colours. Popularly a small stone.-The puring noise it made upon the pebblestones it ran over. Sidney .-

The bifhop and the duke of Glo'fter's men, Have fill'd their pockets full of pebblestones.

Shak. -Suddenly -Suddenly a file of boys delivered such a shower of pebbles loose that, that I was fain to draw mine honour in. Shak.—You may see gebbles gathered t gether, and a crust of cement between them, as hard as the pebbles. Bacon.—

As children gath'ring pebbles on the shore.

Milto

Fountains o'er the pebbles chid your stay.

—Another body, that hath only the refemblance of an ordinary pebble, shall yield a metallic and valuable matter. Woodsw.

1(2.) PERBLES, in mineralogy, are a genus of fossils, distinguished from the flints and homocroa by their having a variety of colours. These are defined to be stones composed of a crystalline matter debased by earths of various kinds in the fame species, and then subject to veins, clouds, and other variegations, usually formed by incrusetation round a central nucleus, but fometimes the effect of a simple concretion; and veined like the agates, by the disposition which the motion of the fluid they were formed in gave their differently coloured substances. The variety of publics is so great, that an hasty describer would be aptito make almost as many species as he saw specimens. A careful examination will teach us, howeyer, to diftinguish them into a certain number of effentially different species, to which all the rest may be referred as accidental varieties. When we find the fame colours, or those resulting from a mixture of the fame, fuch as nature frequently makes in a number of stones, we shall easily find that these are all of the same species, though of different appearances; and that whether the matter be disposed in one or two, or 20 crusts, laid regularly round a nucleus; or thrown irregularly, without a nucleus, into irregular lines; or lattly, if blended into an uniform mais. Thefeare the three states in which every pebble is found; for if it has been naturally and regularly formed by incrustation round a certain nucleus, we find that always the fame in the fame species, and the crusts not less regular and certain. If the whole has been more hastily formed, and the refult only of one fimple concretion, if that has happened while its different substances were all moist and thin, they have blended together, and made a mixed mass of the joint colour of them But if they have been fomething harder when this has happened, and too far concreted to diffuse wholly among one another, they are found thrown together into irregular veins. These are the natural differences of all the pebbles; and having regard to these in the several variegations, all the known pebbles may be reduced to 34 species. In all the strata of pebbles, there, are constantly found fome which are broken, and of which the pieces lie very near one another; but as bodies of such hardness could not be broken without fome confiderable violence, their present fituation feems to indicate that they have fuffered that great violence in or near the places where they now lie. Beside these, we often meet with others which have as plainly had pieces broken off from them, though those pieces are nowhere to be found; whence it feems equally plain, that whatever has been the caute of their fracture,

they have been brought broken, as we find the from some other piace, or else that the pie broken from them must at some time or of have been carried from this place to some u distant one. Several of these broken peb have their edges and corners so sharp and e that it seems evident they never can have toffed about or removed fince the fracture made; and others have their fides and come rounded, blunted, and worn away, that feem to have been roughly moved and rolls bout among other hard bodies, either with g violence, or for a very long continuance; fuch hard bodies could not have been reduce the condition in which we now see them with long friction. It may be supposed by so that these stones never were broken, but have naturally formed of this shape; but it will be fily feen, by any one who accurately furveys veins or coats, which furround the nucleus, the annular circles of a tree, that they must been originally entire; and this will be the plain, if they are compared with a stone by by art. Such pebbles as are found in firatathe furface of the earth, are much more b than those which lie in deeper strata; and more clear and transparent the fand is which found among pebbles, the more beautiful the bles are generally observed to be. The m these stones, and their disposition in the carts fubjects worthy of investigation. The surfathe earth is composed of vegetable mould, I up of different earths mixed with the putri mains of animal and vegetable budies, and proper texture and compages for conducting moisture to the roots of trees and plants. I this are laid the fands and pebbles which fer a fort of drain to carry off the redundant ture deeper into the earth, where it may be t to supply the place of what is constantly rife exhalations; and left the strata of fand shou too thick, it is common to find thin ones of between, which serve to put a stop to the de of the moisture, and keep it from passing of foon; and left thefe thin strata of clay if yield and give way, and by their foftness wetted give leave to the particles of fand to themselves with, and even sorce their way the them, there are found in many places thin of a poor iron ore, placed regularly above below the clay; and by these means not ftrengthening and supporting the clay, but tually keeping the fand from making its wa Such is the substance of the distinction rangements, and remarks, of former mineral on this genus of fossils. But in the new and rate lystem of mineralogy, drawn up by Dr T fon, instead of forming a genus, confishing species, pebbles only form 2 or 3 varieties ranged under the species Chalcedony and 3 See MINERALOGY, Part II, Chap. IV, U Ord. I. Gen. VI. Sp. 7. var. 2. and Sp. 8. va (3.) PEBBLES, EGYFTIAN. See MINERAL Ibid.

1v, & XIX.

PECHEM, in the materia medica, a name given by the modern Greek writers to the root called bebem by Avicenna and Serapion. Many have been at a loss to know what this root pechem was; but the virtues ascribed to it are the same with those of the behem of the Arabians; its description is the same, and the division of it into white and red is also the same. The word peebem is formed of betem by changing the b into a p, and the afpirate into  $\chi$ , or  $\epsilon b$ , which are both common. Myrepfus, who treats of this root, fays the fame thing that the Arabian Avicenna fays of behem, namely, that it was the fragments of a woody root, much corrugated and wrinkled on the furface, owing to its being so moist whilst fresh, that it always shrunk greatly in the drying.

PECHYAGRA, a name given by authors to the gout affecting the elbow.

PECHYS, a name used by some anatomical writers for the elbow.

PECHYTYRBE, an epithet used by some medical writers for the fourty.

(1.) PECK, Francis, was born at Stamford, in Lincolnshire, May 4, 1692, and educated at Cambridge, where he took the degrees of B. and M. A. He was appointed rector of Godeby, near Melton in Leicestershire. He was the author of many works; viz. 1. A poem, entitled Sighs on the Death of queen Anne; 1714. 2. " TO TYOE AFION; or an Exercise on the Creation, and an Hymn to the Creator of the World; written in the words of the text, to show the Beauty and the Sublimity of the Holy Scriptures, 1716, 8vo." 3. In 1721, being then curate of King's Clifton in Northamptonshire, he issued proposals for printing the History and Antiquities of his native town, which was published in 1727, in folio, under the title of " Academia tertia Anglicana; or the Antiquarian Annals of Stamford in Lincoln, Rutland, and Northamptonshires; containing the History of the University, Monasteries, Gilds, Churches, Chapels, Hospitals, and Schools there, &c. inscribed to John Duke of Rutland. 4. The History of the Stamford Bull-running. 5. "Queries concerning the Natural History and Antiquities of Leicester-shire and Rutland;" in 1729, and 1740; but the work, though his progress in it was very considerable, never made its appearance. 6. In 1732, he published published vol. I. of " Desiderata Curiosa; or, a

Collection of divers scarce and curious Pieces relating chiefly to Matters of English History; confifting or choice tracts, memoirs, letters, &c. transcribed, many of them, from the originals, and the rest from divers ancient MS. copies, or the MS. collations of fundry famous antiquaries," &c. with notes, contents, and a complete index. This vol. was dedicated to Lord William Manners, and was followed, in 1735, by a 2d vol. dedicated to Dr Reynolds Bp. of Lincoln. 7. A complete catalogue of all the discourses written both for and against popery in the time of K! James II. containing an account of 457 books and pamphlets: &c. 4to, 1735. 8. Nineteen Letters of the rev. Henry Hammond. D. D. to Mr Peter Stainnough and Dr Nathaniel Angelo, on curious subjects, &c. 1739. 9. Memoirs of the Life and Actions of Oliver Cromwell, as delivered in three panegyrics of him written in Latin; supposed by Mr John Milton; with an English version; illustrated with a large historical preface, and notes: &c. 1740, 10. New Memoirs of the Life and poetical Works of Mr John Milton; with 1. An examination of Milton's style; a. Explanatory and critical notes on Milton and Shakespeare: 3. Baptiftes; a facred dramatic poem in defence of liberty, written in Latin by George Buchanan, translated by Mr John Milton, and first published in 1641, by order of the house of commons. 4. The Parallel, or Abp. Laud and Card. Wolfey compared, a Vilion by Milton. 5. The Legend of Sir Nicholas Throckmorton, knt. chief butler of England, who died of poison, anno 1570, an historical poem, by his nephew Sir Thomas Throckmorton, knt. 6. Herod the great, by the editor. 7. the Refurrection, a poem in imitation of Milton. 8. a Discourse on the Harmony of the Spheres, by Milton; with prefaces and notes, 1740, 4to.

He died Aug. 13th 1743, aged 61.

PECQUENCOURT, a town of France, dep. of the North, and ci-devant prov. of H on the Scarpe; 5 miles E. of Donay. Lon E. Lat. 50. 23. N.

(1.) PECQUET, Anthony, a celebrated philosopher, born in 1704. He was app grand mafter of the water-works and for Rouen. His writings on philosophy, polit morals are numerous. His Spirit of Laws Political Maxims, and his Thoughts on A most esteemed. He died in 1762.

(2.) PECQUET, John, a celebrated pl born in Dieppe. He was phyfician in ordi the celebrated Fouquet, whom he entertain experiments in natural philosophy. He as immortal honour by the discovery of a lacte which conveys the chyle to the heart; and from him is called le Reservoir de Pecquet discovery was a fresh proof of the truth of culation of the blood; though it was opp many of the learned, particularly the famo lau, who wrote a treatife against the authorized with this title : Adversus Pecquetum & Pecqu Pecquet's works are, 1. Experimenta nova mita; Paris, 1654. 2. A Differtation, De eis Ladeis; Amsterdam, 1661. He was a a lively and active genius. He recommen a remedy for all diseases, the use of brandy remedy, however, contributed to shorten days. He died at Paris, in 1674. PE

PECTEN, the SCALLOP; a genus of shell-fish. The characters are these: The animal is a tethys; the fiell hivalve and unequal; the hinge toothlefs, a finall ovated hollow. This shell-fish is end the formers, having the power of spinning basilike the mutcles: but they are much shorter as owler than those of that fish; so that they can onk wrought into any kind of work like the grand finer threads of the pinna marina. the threads which are spun upon the scalin to fix the creature to any folid body near its All these proceed, as in the muscle, from has a power of fixing itself at pleasure to would body by means of thefe threads, that afforms the scallops are often found toiled upon ds, where there were none the day before; and their are fixed by their threads, as well as those had remained ever so long in their place. form their threads in the same manner with mask; only their organ for spinning is shortat his a wider hollow, whence the threads medially thicker and shorter. (See MyTi-Mr Barbut divides the genus OSTREA thmilies; which he thus names according to characters. The winged equilateral 2. The pectens, that have one ear inwardminging by being ciliated. 3. The pectens the their valves more gibbous on one fide orsters. Of the locomotive powers the locomotive powers area with the locomotive powers MINAL MOTION. See Motion, 6 2 .fuch as the fole peden, the ducal munthe knotted, and others, feem to be in mabitants of the Indian seas; some of Repent those of Africa and the South Seas. time reden feems to have been given to the fe from the longitudinal strike with which hance is covered, which refemble fomewhat with of a comb; and hence also the Greek By the general character of this shell, denly includes cockles as well as feallops, are the pectens without ears, and having or elated shells. Cockles are called by all by a name which is only a diminutive of PECTURCULUS. The having ears indeed common mark of distinction between the and the cockles, which last usually have If the genera are not diffinct, as fome sined: for there are shells universally alto be pectens or scallops, which have no and others as univerfally allowed to be pecor cockles which have. Hence then aptror of Lifter, who made them two difand gave the ears and the equal conboth shells as the great characteristics of which, though they be good marks to difthe species by, are far from being so unato found different genera upon. Barthe pectens under the genus offrea; but though the generic character of the in both, the animal inhabiting the very different from that of the oyster; rason Linnaus has divided the genus The pectines by some are esteemed a food as the oyster. They differ very in a variety of circumstances. TAL PART I.

pectens fail on the furface of the water; and befides, if they are attacked by a foe, they let down the membrane which nature has provided them for a fail, and drop to the bottom. "Behold (fays Barbut) the splendor of the pectines, which rival the glowing colours of the papilionaceous tribe, as numerous as they are beautiful, fairting from place to place, and may well be called the papiliones of the ocean. What superior qualities does not the pecten enjoy above the OSTREA EDU-Lis, which, conftantly confined to its native bed, feems wholly deftined to afford food to other creatures, not having any means of defence, but its thelly caftle, which is often attacked and ftormed by its numerous enemies? This creature is not only useful to man as adainty food, but the shell being levigated into a fubtle powder, is employed as an abforbent in heart-burns and other like complaints arifing from acidities in the first passages; the hollow shells are generally made choice of, as containing more than the thinner flat ones, of the fine white earth, in proportion to the outer rough coat, which last is found to be considerably impregnated with sea-falt." The grand mark of distinction between the pectens and oyster seems to be the locomotive faculty. It was long supposed, that the oyster possessed no power of motion, that it always remained in the place in which nature or accident had placed it, and that its life differed little from that of vegetables. Experience, however, has taught us to reject these premature conclusions. What Abbe Dicquemare has observed with respect to this circumstance, is worth quoting. (See MOTION, § 2.) " Patting one day (fays he) along the fea-shore, I c bscrved an oyster lying in a fhallow place, and ejecting with confiderable force a quantity of water. It immediately occurred to me, that, if this happened at a sufficient depth, the relistance of the water would have forced the oyster from its place. To be satisfied of this, I took several middle sized oysters with a light shell, and placed them on a smooth horizontal surface, in a sufficient quantity of pure sea-water. Some hours elapsed, and the night came on before any thing remarkable appeared; but next day I found one of the oysters in a place and situation different from that in which I had left it; and as nothing could have discomposed it, I could not doubt but that it had moved by its own powers. I continued, however, to attend my charge; but, as if they meant to conceal their feeret, the oysters always operated in my absence. At last, as I was exploring the coast of Lower Normandy, I perceived in an oyster-bed one of them changing place pretty quickly. On my return, therefore, to Havre, I made new dispositions to discover the means by which the motions of oysters are performed, and I fucceeded. This animal ejects the water by that part of the shell which is diametrically opposite to the hinge; it can also throw it out at the fides, at each extremity of the hinge, or even from the whole opening at once. this purpose, it can vary the action of its internal mechanism; but the fost parts are not the only organs that perform this function; in certain cases the shells assist in forcing out the water. When an oyster thus suddenly, forcibly, and repeatedly, fquirts forth a quantity of water, it repulles the! of its enemies that endeavour to infinuate themselves within the shells while they are open: but this is effectual only against its weakest foes; for there are some so formidable by their strength or their address, that a great number of oysters perish in this way. The animal, therefore, endeavours with all its force to repel them; it does more, it retreats backwards, or flarts afide in a lateral direction. All of them, however, are not placed in circumstances favourable for these motions. They are often fituated in the crevices of rocks, between stones, or among other oysters, some in fand, and some in mud; so that their strength, or powers of motion, are exerted in vain. It is probable, however, that they have the faculty of operating their own relief from these circumstances, and that they may be accidentally affifted by other bodies. It must, however, be acknowledged, that the means of relief cannot be numerous or confiderable in fuch as are attached to other oysters, to a body heavier than themselves, or to a rock; but such fituations are the most uncommon in the oysterbeds that I am acquainted with on the French coasts in the Channel. Perhaps, indeed, a very angular or heavy shell may be sufficient to render an oyster immoveable. This is undoubtedly the case with such of them as have been obliged by worms, or other more formidable enemies, fo to increase their shells as to make them thick and unwieldy. An oyster that has never been attached, may fix itself by any part of the margin of either of its valves, and that margin will become the middle, or nearly fo, if the oyster is young. I have feen them operate upon their shells in fo many different ways, and with fuch admirable contrivance, when those shells have been pierced by their enemies (among whom I must be ranked), that I do not think it a all impossible for them to quit the place to which they are attached. It will eafily be imagined now delicate and difficult such observations and experiments must be, confidering the fenfibility of the animal, the delicacy of its organs, the transparency of the matter that forms the layers of its shells, the opacity of the shells themselves, the vicissitudes of the sea, and the feafons, &c. But it was of use to show, that, contrary to the opinion generally entertained by the learned as well as by fishermen, oysters are endowed with a locomotive faculty, and by what means that faculty is exerted. Those which first thowed me their motions, were brought from the coins of Bretagne, put into a hed at La Hogue, then at Courfeulle, whence they were carried to Havre; and as all these transportations were made in a dry carriage, the oysters could not be in perfect vigour. These animals have much more senfation and more industry than is generally attributed to them. Those authors are not so enlightened as they imagine, who represent the oyster as an animal deprived of fentation, as an intermediate being between animals and vegetables, as a plant, and even in some respects as inferior to a plant, It is thus that the oyster has been made a foundation for many an abourd hypothesis with respect to the nature of animals. The outler is conscious of its existence, and conscious also that something exists exterior to itself. It chooses, it rejects; it varies its operations with judgment, according to

circumstances; it defends itself by means adear and complicated; it repairs its loss; and it be made to change its habits. Oysters newly ken from places which the sea had never left, considerately open their shells, lose the water toutain, and die in a few days; but those have been taken from the same place, and the into beds or reservoirs from which the sea of similar retires, where they are incommoded the rays of the sun, or by the cold, or where are exposed to the injuries of man, learn to themselves close when they are abandoned by water, and live a nuch longer time." See TREA. The most remarkable species is the

PECTEN MAXIMUS, or great scallop, being same with what Barbut calls the ducal-mantle pe It has 14 rays, very prominent and broad, thriated both above and below. They are ru and imbricated with scales. They grow to a size; and sound in beds by themselves; are dred up, and barrelled for sale. The ancients that they have a power of removing themselves that they have a power of removing sor leaps, sifth was used both by the Greeks and Latins stood. When dressed with pepper and cumm was taken medicinally. The scallop was monly worn by pilgrims on their hat, or the of their coat, as a mark that they had crosses the in their way of the Holy Land, or some displect of devotion.

Prouliar, in the canon law, (§ 2. def. 2.) mesa particular parith or church that has juation within itself for granting probates of had administrations, exempt from the ordinar is tissue bishop's court. The king's chapel is a Epeculiar, exempt from all spiritual jurisdichad referred to the visitation and immediate mment of the king himfelf. There is likethe archbishop's peculiar: for it is an ancient mere of the see of Canterbury, that wherever more or advowfone belong to it, they forthbecome exempt from the ordinary, and are Fol peculiars: there are 57 fuch peculiars in are of Canterbury. Besides these, there are peculiars belonging to deans, chapters, and maines, which are only exempted from the dion of the archdeacon: these are derived 18 the bishop, who may visit them, and to on there lies an appeal.

4) Peculians, Court of, is a branch of, and red to, the court of ARCHES. It has a jurifover all those parishes dispersed through posince of Canterbury in the midft of other which are exempt from the ordinary's and fubject to the metropolitan only. faceliaftical causes, arising within these pecumempt jurifdictions, are originally cognizby this court: from which an appeal lay for-

merly to the pope, but now by the stat. 15 He VIII. c. 19. to the king in chancery.

\* PECULIARITY. n. f. [from peculiar.] Particularity; fomething found only in one.-If an author possessed any distinguished marks of style or peculiarity of thinking, there would remain in his least successful writings some few tokens whereby to discover him. Swift.

\* PECULIARLY. adv. [from peculiar.] 1. Particularly; fingly.—That is peculiarly the effect of the fun's variation. Woodward. 2. In a manner not common to others.—Thus Tivy boafts this beaft pecuiarly her own. Deayton.—When this danger increased, he then thought sit to pray

peculiarly for him. Fell.

(1.) PECULIUM, in law, the stock or estate which a person, in the power of another, whether male or female, either as his or her flave, may acquire by his industry. Roman slaves frequently amassed considerable sums in this way. The word properly fignifies the advanced price which a flave could get for his master's cattle, &c. above the price fixed upon them by his mafter, which was the flave's own property.

(2.) PECULIUM, in the Romish church, denotes the goods which each religious referves' and pof-

fesses to himself.

\* PECUNIARY. adj. [pecuniarius, from pecu-nia, Lat. pecuniaire, Fr.] 1. Relating to money. Their impostures delude not only unto pecuniary defraudations, but the irreparable deceit of death. Brown. 2. Confifting of money.—Pain of infamy is a feverer punishment upon ingenuous natures than a pecuniary mulct. Bacon. - The injured perfon might take a pecuniary mulct by way of atonement. Broome.

\* PED. n. /. [commonly pronounced pad.] 1. A finall packladdle. A ped is much shorter than a pannel: and is raised before and behind, and

ferves for finall burdens.—

A pannel and wanty, packfaddle and ped. Tuff. 2. A basket; a hamper.—A hask is a wicker ped,

wherein they use to carry sish. Spenser.
PEDACE, a town of Naples, in Calabria Citras

51 miles S. of Colenza.

\* PEDAGOGICAL. adj. [from pedagogue.] Suiting or belonging to a schoolmaster.

(1.) \* PEDAGOGUE. n. s. [pedagogus, Lat.

raiouywys, rai and ayw.] One who teaches boys; a schoolmaster; a pedant.-

Few pedagogues but curfe the barren chair, Like him who hang'd himfelf

- (2.) A PEDAGOGUE, or PADAGOGUE, is an instructor in grammar and other arts. The word is formed from the Greek waster agages, puerorums ductor, i. e. a leader of boys. M. Fleury observes, that the Greeks gave this name to flaves appointed to attend their children, lead them, and teach them to walk, &c. The Romans gave the fame denomination to the flaves who were intrufted with the care and instruction of their children.
- \* To PEDAGOGUE. v. a. [vadeywy10, from the To teach with superciliousness.

This may confine their younger stiles, Whom Dryden pedagogues at Will's. Prior.
\* PEDAGOGY. n. f. [таварарага.] Preparatory discipline.—The old sabbath appertained to the pedagogy and rudiments of the law. White .-

In time the reason of men ripening to such a pitch, as to be above the pedagog, of Moses's rod and the discipline of types, God thought fit to display the substance without the shadow. South.

(1.) \* PEDAL. n. f. [pedalis, Lat.] Belonging

to a foot. Dia.

(2.) \* PEDALS. n. f. [pedalis, Lat. pedales, Fr.] The large pipes of an organ: fo called because played upon and stopt with the foot. Dia.

(3.) PEDALS are made fquare, and of wood; they are usually 13 in number. They are of modern invention, and serve to carry the sounds of an octave deeper than the rest. See Organ.

PEDALIUM, in botany, a genus of the Angiospermin order, belonging to the Didynamia chas of plants; and, in the natural method, ranking under the 28th order, Luridae.

\* PEDANEOUS. adj. [pedaneus, Lat.] Going

on foot. Dia.

(1.) \* PEDANT. n. f. [pedant, French.] 1. A fchoolmaster.—

A pedant that keeps a school i' the 'church.

The boy who fcarce has paid his entrance

To his proud pedant, or declin'd a noun. Dryd. 2. A man vain of low knowledge; a man awkwardly oftentatious of his literature.—The pedant can hear nothing but in favour of the conceits he is amorous of. Glanville.—The preface has so much of the pedant, and so little of the conversation of men in it, that I shall pass it over. Addison.—

In learning let a nymph delight;

The pedant gets a mistress by't. Swift.
Pursuit of fame with pedants fills our schools.

Young. (2.) PEDANT is also used for a rough, unpolished man of letters, who makes an impertinent use of the feiences, and abounds in unfeafonable criticifins and observations. Madam Dacier defines a pedant, a person who has more reading than good sense. See PEDANTRY. Pedants are ever armed with quibbles and fyllogisms, breathe nothing but disputation and chicanery, and pursue a proposition to the last limits of logic. branche describes a pedant as a man full of false erudition, who makes a parade of his knowledge, and is ever quoting some Greek or Latin author, or hunting back to a remote etymology. Lord Chesterfield justly and successfully ridiculed this species of pedantry, but set the example which has been fince very much followed, of what may be stiled modern pedantry, by constantly interlarding his letters and other works, with French, Spanish and Italian quotations. St Evremont fays, that to paint the folly of a pedant, we must represent him as turning all conversation to some one science or subject he is best acquainted with. There are pedants of all conditions, and all robes. Wicquefort fays, an ambaffador, always attentive to formalities and decorums, is nothing else but a political pedant.

\* PEDANTIC. } adj. [pedante/que, Fr. from PEDANTICAL.] pedant.] Awkwardly oftentatious of learning.—Mr Cheeke had eloquence in the Latin and Greek tongues; but for other fufficiencies pedantick enough. Hayward.—When we fee any thing in an old fatyrist that looks for-

ced and pedantic, we ought to confider how it at peared in the time the poet writ. Addison.—The obscurity is brought over them by ignorance an age, made yet more obscure by their pedantic elucidators. Felton.—A spirit of contradiction is pedantick and hateful, that a man should watch gainst every instance of it. Watts—We now lieve the Copernican system; yet we shall still us the popular terms of sun-rise and sun-set, and n introduce a new pedantick description of the from the motion of the earth. Bentley.

\* PEDANTICALLY. adv. [from pedantical With awkward oftentation of literature.—T earl of Roscommon has excellently readered too faithfully is, indeed, pedantically. Dryden.

(1.) \* PEDANTRY. n. f. [pedanterie, Frence Awkward oftentation of needlets learning.—" a practice that favours much of pedantry. Brow—Horace has entired me into this pedantry quotation. Cower.—It is in Latin, if I may be lowed the pedantry of a quotation, non perficulate etiumfi perivajeris. Addijon.—The young nobil are fent, for fear of contracting any airs of pedantry of the pedantry of the contracting any airs of pedantry of the pedantry o

try by a college education. Swift.

(2.) PEDANTRY, or PEDANTISM, the qual or manner of a pedant. See PEDANT. To fw up little and low things, to make a vain show science, to heap up Greek and Latin, with judgment, to tear those to pieces who differ in us about a passage in Suetonius or other anci authors, or in the etymology of a word, to up all the world against a man for not admir Cicero enough, to be interested for the reputat of an ancient as if he were our next of kin, is w we properly call pedantry. Nor is that species modern pedantry less ridiculous, however of mon, which leads English authors to make an tentatious display of their proficiency in the mod languages, by introducing French phrases, quotations from French, Spanish or Italian write and by writing Jean, Louis, Carlos, Pedro, instead of John, Lewis, Charles, Peter, &c. CI-DEVANT, and LOUI. See also Dr Johns just censure of such pedantry and affectation, un English Language, page 665, 671, and 67

PEDARIANS, in Roman antiquity. dleton thus accounts for the origin of the we He fays, that though the magistrates of Rome a right to a place and vote in the fenate both ring their office and after it, and before they w put upon the roll by the cenfors, yet they not probably a right to speak or debate there any question, at least in the earlier ages of the public. For this feems to have been the orig distinction between them and the ancient senat as it is plainly intimated in the fermule of the fular edict, fent abroad to fummon the fen which was addressed to all fenators, and to those who had a right to vote in the senate. F this diffinction, those who had only a right to were called in ridicule pedarian; because they nified their votes by their feet, not their tong and upon every division of the senate went to the fide of those whose opinion they appro It was in allusion to this old custom, which se to have been wholly dropt in the latter age the republic, that the mute part of the fenate tinued ftill to be called by the name pedarians Coro informs us, who, in giving an account to Atticus of a certain debate and decree of the fenate upon it, fays that it was made with the eager ad general concurrence of the pedarians, though want the authority of all the confulars.

PLDATURA, in Roman antiquity, a space or proportion of a certain number of feet fet out. Thaword often occurs in writers on military aftin: a in Hyginus de Castrametatione, meminemutaque ad computationem cobortis equitate milbu pdaturam ad 1360 dari debere; which is the explained: The pedatura, or space allowed tra cobors equitata or provincial cohort, confistof both horse and foot, could not be the same athe pedatura of an uniform body of infantry, of the same number, but must exceed it by 360 feet; in the proportion of the room of one horseman to one foot foldier he affigns as two and a half to

\* To PEDDLE. v. n. To be bufy about trifles. 4. It is commonly written piddle: as, what work is here!

L. PEDEE, GREAT, a large navigable river of Carolina, which rifes in N. Carolina, in the Aprachian mountains, where it is called YADto, thence it runs E. 50 miles to Mount Ararat, Acce & by E. into S. Carolina, where it is joined wie Ware, the Little Pedee, Lynch's River, Buck River, &c. and falls into the Atlantic, 6 ta below George-town.

[2] Peder, Little, a river of S. Carolina, fereral head waters, that rife in N. Cami; ad after croffing the divisional line, runs La falls into the Great Pedee, 32 miles the mouth and 16 miles below Queenborough.

FEDEMONTE, a town of Naples in Lavora;

nomin NNE. of Capua.

PIDENA, a town and bishop's see of Mari-Autria, in Istria; 25 miles SSE. of Trieste of Cabo de Istria; and 64 NE. of Rovigno. In. 14 30. E. Lat. 45. 34. N.

FEDERASTS, the fame with SODOMITES. PLDERERO. n. f. [pedrero, Spanish, from tone with which they charged it.] cannon managed by a swivel. It is fre-

ERNEE, a town of France, in the dep. of North Coasts; 41 miles NW. of Guingamp,

e SW. of Lannion.

RDERNEIRA, a sea port town of Portugal, Mirmadura, on the W. coast; containing a-1100 inhabitants ; 8 miles SW. of Leyria, II NE. of Peniche. Lon. 9. 40. E. Ferro. 34 11. N.

PEDESTAL. n. f. [piedeftal, Fr.] The rember of a pillar; the bails of a statue.-

The poet bawls hakes the statues and the pedestals. Dryd. he fore part of the pedifial was curioufly emed with a triumph. Addison.

h hif, so mute! some statue would you

Minom it's pedestal to take the air. Pope.

Profestal. See Architecture, Index;

STRIAN, adj. Travelling on foot. See an aticle.

PDESTRIOUS. adj. [pedeskris, Latin.] Not

Winged; going on foot.—Men conceive they neves lie down, and enjoy not the position of rest, ordained unto all pedestrious animals. Brown.

PEDIACI, or \ in Grecian antiquity. The ci-PEDIA ANS, \ ty of Athena was anciently divided into 3 different parts; one on the descent of an hill; another on the sea-shore; and a third in a plain between the other two. The inhabitants of the middle region were called Ilidina, Pedizans, formed from weder, plain or flat, or 28 Aristotic will have it, Pediaci: those of the hill, Diacrians; and those of the shore, i Paralians. These quarters usually composed so many different factions. Pilistratus made use of the Pedizeans against the Diacrians. In the time of Solon, when a form of government was to be chosen, the Diacrians chose it democratic; the Pedizans demanded an aristocracy, and the Paralians a mixed government.

Fr. The footstalk, that by which a leaf or fruit is fixed to the tree.—The cause of the holding green, is the close compact substance of their

leaves and pedicles. Bacon.

(2.) Pedicle. See Botany, § 82, 1.

\* PEDICULAR. adj. [pedicularis, Latin, pediculaire, Fr. Having the phthirialis or loufy dif-

temper. Ainfavortb.

PEDICULARIS, in botany, Rattle Coxcomb, or Loufe-wort, a genus of the angiotpermia order. belonging to the didynamia class of plants; and, in the natural method ranking under 40th order,

Personatæ. PEDICULUS, the Louse, in entomology, 2 genus of infects belonging to the order of aptera-It has fix feet, two eyes, and a fort of fting in the mouth; the feelers are as long as the thorax; and the belly is depressed and subiobated. It is an oviparous animal. They are not peculiar to man alone, but infest other animals, as quadrupeds and birds, and even fishes and vegetables; but these are of peculiar species on each animal, according to the particular nature of each, some of which are different from those which infest the human body. Nay, even infects are invested with vermin which feed on and torment them. Several kinds of beetles are subject to lice; but particularly that kind called the loufy beetle. The lice on this are very numerous, and will not be shook The earwig is often infested with lice, just at the fetting on of its head: these are white, and shining like mites, but they are much smaller; they are round-backed, flat-bellied, and have long legs, particularly the foremost pair. Snails of all kinds, but especially the large naked forts, are very subject to lice; which are continually seen running about them, and devouring them. Numbers of little red lice, with a very small head, and in shape resembling a tortoise, are often seen about the legs of fpiders, and they never leave the animal while he lives; but if he is killed, they almost instantly forsake him. A species of whitish lice are found on humble-bees; they are also found upon ants; and fishes are not less subject to them than other animals. Kircher tells us, that he found lice also on flies. The louse which infests the human body makes a very culicus appearance through a microscope. It has such a trans-

Darcut

parent shell or skin, that we are able to discover more of what passes within its body than in most other living creatures. It has naturally three divisions, the head, the breast, and the tail part. In the head appear two fine black eyes, with a horn that has five joints, and is furrounded with hairs Randing before each eye; and from the end of the nose or snout there is a pointed projecting part, which ferves as a sheath or case to a piercer or fucker, which the creature thrusts into the skin to draw out the blood and humours which are its deftined food; for it has no mouth that opens in the common way. This piercer or fucker is judged to be 700 times smaller than a hair, and is contained in another case within the first, and can be drawn in or thrust out at pleasure. breaft is very beautifully marked in the middle; the skin is transparent, and full of little pits; and from the under part of it proceed fix legs, each having five joints, and their skin all the way refembling shagreen, except at the ends where it is fmoother. Each leg is terminated by two claws, which are hooked, and are of an unequal length and fize. These it uses as we would a thumb and middle finger; and there are hairs between these claws as well as all over the legs. On the back part of the tail there may be discovered some ring-like divisions, and a fort of marks which look like the strokes of a rod on the human skin; the belly looks like shagreen, and towards the lower end it is very clear, and full of pits; at the extremity of the tail there are two femicircular parts all covered with hairs, which serve to conceal the anus. When the louse moves its legs, the motion of the muscles, which all unite in an oblong dark spot in the middle of the breast, may be distinguifhed perfectly, and so may the motion of the muscles of the head when it moves its horns. We' may likewife fee the various ramifications of the veins and arteries, which are white, with the pulse, regularly beating in the arteries. But the most forprising of all the fights is the peristaltic motion of the guts, which is continued all the way from the Romach down to the anus. If one of these creatures, when hungry, be placed on the back of the hand, it will thrust its sucker into the skin, and the blood which it fucks may be feen paffing in a fine stream to the fore part of the head; where, falling into a roundish cavity, it passes again in a fine stream to another circular receptacle in the middle of the head; thence it runs through a small vessel to the breast, and then to a gut which reaches to the hinder part of the body, where in a curve it turns again a little upward; in the breast and gut the blood is moved without intermission, with a great force; especially in the gut, where it occasions such a contraction of the gut as is very furprifing. In the upper part of the crooked ascending gut abovementioned, the propelled blood stands still, and feems to undergo a feparation, fome of it becoming clear and waterish, while other black particles are pushed forward to the anus. If a louse is placed on its back, two bloody darkish spots appear; the larger in the middle of the body, the lesser towards the tail; the motions of which are followed by the pulfation of the dark bloody

spot, in or over which the white bladder see to lie. This motion of the systole and diast is best seen when the creature begins to gr weak; and on pricking the white bladder, wh feems to be the heart, the creature instantly d The lower dark spot is supposed to be the ext ment in the gut. Lice have been supposed to hermaphrodites: but this is erroneous; for Lieuwenhoeck observed, that the males have fii in their tails, which the females have not. A he supposes the smarting pain which those ci tures fometimes give, to be owing to their sti ing with these stings when made uneasy by p fure or otherwise. He says, that he feit little no pain from their fuckers, though fix of th were feeding on his hand at once. To know true history and manner of breeding of these co tures, M. Lieuwenhoeck put two female into a black flocking, which he wore night day. He found, on examination, that in fix d one of them had laid above 50 eggs; and, up diffecting it, he found as many yet remaining the ovary: whence he concludes, that in 12 d it would have laid 100 eggs. These eggs na rally hatch in fix days, and would then proba have produced 50 males, and as many femal and these females coming to their full growth 18 days, might each of them be supposed a 12 days more to lay 100 eggs; which eggs, tix days more, might produce a young brood 5000: fo that in eight weeks, one louie may 5000 of its own descendents. Signior Rhedi, has more attentively observed these animals t any other author, has given feveral engraving the different species of lice found on different mals. Men, he observes, are subject to t kinds; the common loufe and the crab-loufe. observes also, that the fize of the lice is not at proportioned to that of the animal which t infeft; fince the flarling has them as large as Some kinds of conflitutions are m apt to breed lice than others: and in fo places of different degrees of heat, they are d tain to be destroyed upon people who in of climates are over-run with them. Cleanlin is doubtlefs the grand fecret by which to k clear from lice, especially when we wear we len cloths: It is also necessary where then any danger, to take nourishing, succulent so and to use wholesome drink; to rub with ga and muttard, to take treacle inwardly, also fall and acid food, to bathe, and to foment the be with a decoction of lupines, or of gail nuts; the most effectual remedies are fulphur and bacco, mercurial ointment, black pepper, and negar. Monkeys and fome Hottentots, we told, eat lice; and are thence denominated PHT ROPHAGES. On the coast of the Red Sea if reported, that there is a nation of fmali flat and of a black colour, who use locusts for greatest part of their food, prepared only w fait. On fuch food there men live till 40, 4 then die of a pedicular or loufy disease. Ak of winged lice devour them, their body putref and they die in great torment. It is also a that the negroes on the west coast of Africa t great delight in making their women clear th

bodies of lice, and those latter devour them with predicts as fast as they find them. In ancient adicine lice were effectmed aperient, febrifuge, al proper for curing a pale complexion. suml repugnance to those ugly creatures (fays Lenery) perhaps contributed more to banish the for that the remedy itself. In the jaundice five wistere swallowed in a fift egg. In the supperson of urine, which napperson and their birth, a living louie is introduced makurethra, which, by the tickling which it actions in the canal, forces the sphincter to re-Led permits the urine to flow. A bug promothetame effect. Farriers have also a custom M. Bourgeois) of introducing one or two a mo the urethra of horses when they are had with a retention of urine, a difease pretty many among them. But, according to the binuation of the Materia Medica, to use the femir medicine with the preatest advantage, twoild need to be in Africa, where those inare carefully fought after and fwallowed as cons morfel. The great diffinction between which infest mankind is into the head and laufe. The former is hard and high coid, and the latter less compact and more of colour. If it were possible to give a reathe head and others to the clothes, &c. it Malo in all probability be possible to underthe nature of many contagious difeases.

Prediction of defent.—I am length of men. I am length of men's pedigree. Sidney.—

You tell a pedigree

Gondore and two years.

Shak.

Andons of firnames, which in former ages

has very common, have obscured the truth

pages. Camden.—

To the old heroes hence was giv'n heaven which reach'd to heav'n. Waller. I was preserved the pedigrees of their severals, with a more scrupulous exactness than

Mer nation. Atterbury.

PEDIGREE. See CONSANGUINITY, DE-GENEALOGY, and INHERITANCE, § 3. MLUVIUM, BATHING OF THE FEET. of warm bathing in general, and of the mon in particular, are so little understood, be are often prepofteroully used, and fomeunjudiconfly abstained from. Warm ba-In of no service where there is an irresoluble though, by its taking off from a eneral, it may feem to give a moment's or does it draw from the distant parts, but herts by pushing against matter that will with a stronger impetus of circulation fretched and diseased vessels can bear: there there is any suspicion of scirrhus, tabling of any fort should never be used. other hand, where obstructions are not of hand, and the impacted matter is not obwarm baths may be of great use to resolve iy. In recent colds, with flight hum-Acumonies, they are frequently an im-This they effect by increasing the the circulation, opening the skin, and haly through the lungs that lentor which stagnated or moved slowly in them. As thus conducing to the resolution of obstructions, they may be confidered as thort and fafe fevers: and in using them we imitate nature, which by a fever often carries off an obstructing cause of a chronical ailment. Borelli, Boerhaave and Hoffman, are all of opinion, that the warm pediluvium acts by driving a large quantity of blood into the parts immersed. But arguments must give way to fact: the experiments related in the Medical Effays feem to prove to a demonstration, that the warm pediluvium acts, by rarifying the blood. A warm pediluvium, when rightly tempered, may be used as a fafe cordial by which circulation can be roufed, or a gentle fever raised; with this advantage over the cordials and fudorifics, that the effect of them may be taken off at pleafure.

(1.) \* PEDIMENT. n.f. | pedis, Lat.] In architecture, an ornament that crowns the ordonnances, finishes the fronts of buildings, and ferves as a decoration over gates, windows and niches: it is ordinarily of a triangular form, but sometimes

makes the arch of a circle. Dia.

(2.) PEDIMENT. See ARCHITECTURE, Index. PEDINAIG DURGUM, a town of Indostan, in Mysore.

PEDIR, a town of Sumatra, on the N. coaft, belonging to the king of Acheen, 40 miles E. of Acheen. Lon. 96. 36. E. Lat. 5. 22. N.

(1.) \* PEDLER. n. f. [a petty dealer; a contraction produced by frequent use.] One who travels the country with small commodities.—

All as a poor pedler he did wend,

Bearing a truffe of trifles at his back. Spenf.—If you did hear the pedler at the door, you would never dance again after a tabor and pipe. Shak.—

He is wit's pedler, and retails his wares At wakes and wassai's, meetings, markets, fairs. Shak.

Had fly Ulysses at the fack

Of Troy brought thee his pedler's pack. Cleavel.

—A narrow education may beget among fome of the clergy in possession fuch contempt for all innovators, as merchants have for pedlers. Swift.—

Atlas was fo exceeding strong,

He bore the skies upon his back, Just as a nedler does his pack

Just as a pedler does his pack. Swift. (2.) PEDLER, or PEDLAR, a travelling foot-tra-See HAWKER. In Britain (and formerly in France) the pedlars are despised; but it is otherwise in other countries. In Spanish America, the business is so profitable, that it is thought by no means dishonourable; and there are many gentlemen in Old Spain, who, when their circumstances are declining, send their sons to the Indies to retrieve their fortunes in this way. most all the commodities of Europe are distributed through the fouthern continent of America by pedlars. They come from Panama to Paita by lea; and in the road from the port last mentioned, they make Peura their first voyage to Lima. Some take the road through Caxamalia; others through Truxillo, along the shore from Lima. They take their passage back to Panama by sea, and perhaps take with them a little cargo of brandy. At Panama they again flock themselves with European goods, returning by sea to Paita, where

they are put on shore; there they hire mules and load them, the Indians going with them in order to lead them back. Their travelling expences are next to nothing; for the Indians are brought under such subjection, that they find lodging for them, and provender for their mules, frequently thinking it an honour done them for their guefts to accept of this for nothing, unless the Rranger now and then, out of generofity or compassion, makes a small recompense. In Poland, where there are few or no manufactures, almost all the merchandite is carried on by pedlars, who are faid to be generally Scotimen, and who, in the reign of Charles II. are faid to have amounted to

no fewer than 53,000 \*PEDLERY. adj. [from pedler.] Wares fold by pedlers.-The sufferings of those of any rank are trifles in comparison of what all those are who travel with ush, poultry, pedlery ware to sell.

\* PEDLING. adj. Petty dealing; fuch as pedlers have. - This pedling profit I may refign. Decay

of Piety.

madura: 27 miles NE. of Thomar. PEDROSA, a town of Spain, in Old Call

5 miles SE. of Najera.

PEDUNCLE, in botany. See BOTANY, In (1.) PEEBLES, or Tweedbale, a count Scotland, 25 miles long and 18 broad; boun on the E. by Ettrick Forest, S. by Annandale, W Ciydesdale, and N. by Mid Lothian. It is a country, well watered by the Tweed, the Yarr and a great number of smaller streams that h lize the valleys, which produce good crop oats, barley, and wheat. All the rivers abo with trouts and falmon. About the middle of county is the mountain of Braidalb, from the of which the fea may be feen on each fide of island. Tweedale abounds with limestone freestone. The hills are generally as green a downs in Suffex, and feed innumerable flock black-faced sheep, that yield great quantitie excellent wool. The country is well shaded woods and plantations, abounds with all the cessaries of life, and is adorned with many feats and populous villages. The earls of M were hereditary sheriffs of Tweedale. In church-yard of Drumelzier, belonging to at cient branch of the Hay family, the famous lin is faid to lie buried. There was an old tional prophecy, that the two kingdoms shou united when the waters of the Tweed and Pansel should meet at his grave. This me happened by an inundation at the accession James VI. to the crown of England.

(2.) PEBBLES, a parish in the above count miles long from N. to S. and 51 broad fro to W. containing 18,210 acres. The Twee through it from E. to W. and divides it into ly two equal parts. The furface confifts of dant hills and excellent pasture; the clim healthy; the foil is clay and fand; and pro excellent crops of barley, oats, peafe, tu potatoes, &c. The population in 1791 was increase 24, since 1755: The number of was 200; of theep, 8000; and black cattle, 500. There are relics of a diffinit Roman Caffin Station at Lyne, 4 miles. W. of the town, 500 feet square, wilk a ditches and 3 ramparts comprehending alsot 7 acres. Renes of 4 British camps are also estant, 3 a fles S. of the Roman, with many others at greater distances, as well as of watch towers,

(ii) PIEBLES, I from the pebbles abounding near e, mancient royal borough in the centre of the simplify, on the Tweed, over which it has ze the aut stone bridge of 5 arches. In ancient based was often a place of royal refidence. K. Ancs I. is faid to have written his poem, entitled Pester to the Play, in it; in which he describes the divertions usually held in it at the great annual latival, at Beltein. Peebles confilts of a new and out town, and has of late been much improved in buildings, trade and manufactures. It is famous he carpets and forges. It has a weekly market by core and cattle, and fairs in Jan. March, May, July, Aug. Sept. Oct. Nov. and Dec. It is 20 \$ \$. of Edinburgh, and 40 WSW. of Berwick. Lea. 3. o. W. Lat. 55. 38. N.

(L.) PEEBL-s, a finall river in the above parish; which runs through the N. part of the town into the Tweed, called also Eddlestone quater.

(1.) PEEK, n. f. in the lea-language, a word nied is various lenfes. The anchor is faid to be speck, when the fhip being about to weigh comes over her anchor in fuch a manner that the cable begs perpendicularly between the haufe and the sactor. To becree a-peck, is to bring the peck fo that the anchor may hang a-peck. A fhip is faid brike aprek, when lying with her main and fore yards locked up, one end of her yards is brought store the fhrouds, and the other raifed up on end; which is chicfly done when the ites in rivers, led other theps falling foul of the yards floud theat them. Riding a broad peck, denotes much the lame, excepting that the yards are only raifed to half the height.

(1.) Peen is also tifed for a room in the hold, Proding from the bitts forward to the flern; in the room men of war keep their powder, and

anchaut-men their victuals.

Misk's Kill, a village of New York, 50 miles of New York, where fome management of the Americans were deftroyed by the British troops,

1777. See America, § 28.

PEEL, in geography, a small island, on the state of the isle of Man. It is naturally very star, but was rendered much more so, by Thomas, but was rendered much more so, by Thomas, Earl of Derby, who encompassed it with a state to the state of the state

(a) Peel, a town of the ifle of Man, formerly Holm-Town, separated from the above seed, by a narrow channel, from 7 to 10 factors deep. It is 14 miles W. of Douglas.

VOL. XVII. PART I.

(3.) \* PEEL. n. f. [pellis, Lat. pelure, French.] The fkin or thin rind of any thing.

(4.) \* PEEL. n. f. [paelle, French.] A broad thin board with a long handle, used by bakers to

put their bread in and out of the oven.

\* To PEEL. v. a. [peler, Fr. from pellis, Lat.]

1. To decorticate; to flay.—

The skilful shepherd peel'd me certain wands, And stuck them up before the sulfome ewes.

2. [from piller, Fr. to rob.] To plunder. According to analogy this should be written pill.—

Who once just and temp'rate conquer'd well, But govern ill the nations under yoke,

Peeling their provinces.

Milton.

To peel the chiefs, the people to devour;

These, traitor, are thy talents. Drydens PEELE, Francis, a dramatic writer, who flourished in the reign of Q. Elizabeth. He was born in Devonshire; studied at Oxford in 1573; and took his degree of M. A. in 1579. He was a good pastoral poet, and his plays were acted, says Wood, with great applause.

\* PEELER. n. f. [from peel.] 1. One who strips

or flays. 2. A robber; a plunderer-

Yet otes with her fucking a p eler is found.

Tuffer.

—As 'tis a peeler of land, fow it upon lands that are rank. Mortimer.

PEEM, a town of Holstein, 9 m. W. of Eutyn. PEENANG, an island in the E. Indian Ocean, in the Straits of Malacca; 30 miles in circumfer-

ence. Lon. 98. 40. E. Lat. 5. 32. N.

PEENE, a river of Germany, which separates Sweden from Prussian Pomerania, and falls into the Bultic, a little W. of the Isle of Usedom: in Lon. 31. 25. E. Perro. Lat. 54. 10. N.

PEENEMUNDE SCHANZ, a town and fort of Saxony, in the ifle of Ufedom, near the mouth of the Peene. In 1715, it was taken by the Pruffians; in 1758 by the Swedes; in 1758 retaken by the Pruffians and its harbour deftroyed; but four after retaken by the Swedes. It is 6 anies N. of Wolgaft. For Lon. and Lat. See PEENE.

\* PEEP. n. f. 1. First appearance: as, at the peep aint first break of day. 2. A fly look.—Would not one think, the aimanackmaker was crept out of his grave to take t' other p.ep at the stars? Swift.

\* To PEEP. v. n. [This word has no etymology, except that of Skinner, who derives it from ophefin, Dutch, to lift up; and of Cafaulin, who derives it from origing, a fpy; perhaps it may come from pip, pipio, Latin, to cry as young birds: when the chickens first broke the shell and cried, they were said to begin to pip or peep; and the word that expressed the act of crying, was by mistake applied to the act of appearing that was at the same time: this is offered till something better may be found.] 1. To make the first appearance.

Seeing at last herself from danger rid, Peeps forth and soon renews her native pride.

The true blood, which peeps forth fairly through it,

Do plainly give you out an unstain'd shepherd. Shak.

From this league
Peop'd harms that menac'd him.
T

Sbak. 1 can I can see his pride

Peep through each part of him. Shak. The tim'rous maiden blossoms on each bough Peept forth from their first blushes. Crashaw. She makes th' obedient ghosts peep trembling

through the ground. Roscommon. Earth, but not at once, her vifage rears,

And peeps upon the feas. Dryden.

Fair as the face of nature did appear,

When flowers first peep'd. Dryden. -Printing and letters had just peeped abroad in the world. Atterbury.—Though but the very white end of the sprout peep out in the outward part of the couch, break it open. Mortimer .-

Hills peep o'er hills, and Alps on Alps artie. Pope. Most souls but peep out once an age. Pope. 2. To look flily, closely or curiously; to look through any crevice .-

Who is the same, which at my window peeps? Spenser.

Come thick night!

That my keen knife see not the wound it makes; Nor heav'n peep through the blanket of the dark, To cry hold. Shak.

Some that will evermore peep thro' their eyes, And laugh like parrots at a bag-piper. Sbak. -A fool will peep in at the door. Ecclus. xxi. 23.-

Lattice-windows give the fpy

Room but to peep with half an eye. Cleavel. All doors are shut, no servant peeps abroad.

Dryden. The darling flames peept in. Dryden. The feather'd people look down to peep on Dryden. -Those remote and vast bodies were formed not merely to be peept at through an optick glass. Bentley.

O my muse, just distance keep ; Thou art a maid, and must not peep. Prior. In vain his little children, peeping out Into the mingling storm, demand their fire.

Thom fon. \* PEEPER. n. f. Young chickens just breaking the shell.-

Snails the first course, and peepers crown the

\* Prephole. In. f. [peep and hole.] Hole Peepinghole. through which one may look without being discovered .- The fox spied him through a peepingbole he had found out. L'Estrange:

By the peepholes in his creft,

Is it not virtually confest,

That there his eyes took distant aim? Prior. (r.) PEER, in geography, a ci-devant county of Germany, in the late bishopric of Liege, now annexed to the imperial French republic, and included in the department of the Ourte.

(2.) PEER, a town of the French republic, late capital of the above county, now in the dep. of Ourte, 30 miles N. of Liege, and 30 NE. of Lou-

(3.) \* PEER. n. f. [pair, French.] 1. Equal; one

of the same rank.-

His peers upon this evidence Have found him guilty of high treason. —Amongst a man's peers, a man shall be sure of amiliarity. Bacon .-

Oh! what is man, great maker of mankind That thou adorn'ft him with so bright a min Mak'st him a king, and ev'n an angel's peer. Davi

2. One equal in excellence or endowments.-All these did wise Ulysses lead, in coun

peer to Jove. Chapma In fong he never had his peer. Drzd

3. Companion; fellow.-

He all his peers in beauty did surpass. Spen In the dances, with what spight

Of your peers you were beheld,

That at every motion swell'd. Ben Jon!
Who bear the bows were knights in thur's reign,

Twelve they, and twelve the peers of Char

4. A nobleman as diffinct from a commoner; nobility we have five degrees, who are all nev theless called peers, because their essential pr leges are the same .-

I fee thee compast with thy kingdom's pe That speak my salutation.

King Henry's peers and chief nobility Destroy'd themselves.

Whatever be your birth, you're fure to b

A peer of the first magnitude to me. (4.) PEER was anciently applied to the va or tenants of the same lord, who were called pe because they were all equal in condition, obliged to ferve and attend him in his cou and peers in fiefs, because they all held fiel the same lord. The term peers is now applie those who are impannelled in an inquest up person, for convicting or acquitting him of any fence laid to his charge: and the reason why jury is so called, is because by the common and custom of this kingdom every person is t tried by his peers or equals; a lord by the k and a commoner by commoners. See Jury

(5.) PEER OF THE REALM, a noble lord has a feat and vote in the House of LORD These lords are called peers, because though there is a distinction of degrees in our nobility, yet in public actions they are equal, their votes in parliament, and in trying any n man or other person impeached by the comn

&c. See Parliament, § 6-11. (6.) PEERS, House op, or House of Lo forms one of the three estates of Parliament LORDS, &, I, II. and PARLIAMENT, & 6-11. judicative capacity, the house of peers is the preme court of the kingdom, having at prefe original jurisdiction over causes, but only appeals and writs of error; to rectify any inj or mistake of the law committed by the below. To this authority they succeeded of c upon the diffolution of the AULA REGIA. as the barous of parliament were constituent i bers of that court, and the rest of its jurisd was dealt out to other tribunals, over which great officers who accompanied those barons respectively delegated to preside, it followed the right of receiving appeals, and superin ing all other jurifdictions, still remained it noble affembly, from which every other court was derived. They are therefore in all the last refort, from whose judgment no st appeal is permitted; but every subordinate tribuild must conform to their determination. LORDS, NOBILITY, &C.

(7.) PLEAS SCOTTILH. See SCOTTISH PEERS. (A) PEERS, THE CI-DEVANT FRENCH, Were 12 gest lords of that kingdom; of whom 6 were bues and 6 counts; and of these 6 were ecclethousand 6 laymen: thus the Abp. of Rheims, Bp. of Laon and Langres, were dukes selpers; and the Bps. of Chalon on the Marn, ligons, and Beauvais, were counts and peers. The dukes of Burgundy, Normandy, and Aquiwere lay peers and dukes; and the counts funders, Champsin, and Toulourie, lay peers recounts. These peers assisted at the coronaof kings, either in person or by their reprefatures, where each performed the functions mached to his respective dignity: but as the fix a parages were all united to the crown, except and the counts of Flanders, fix lords of the first were chosen to represent them; but the madifical peers generally affifted in person. Taule of peer was afterwards bestowed on ereplaced whose estate was erected into a peerthe number of which, as it depended enmy on the king, was uncertain.

97. PLER. v. n. [By contraction from appear.]

1 To come just in fight .-

Homour peereth in the meanest habit. Shak. Ye many of your horsemen peer. Shak. through the hollow eyes of death I'm life peering. Shak.

at low his gorget peers above his gown. Ben Jonson.

2 To bet narrowly; to peep.-

Masfor a clod-like hare in form they peer. Sid. Hell itself will pass away,

were her dolorous mantions to the peer-Milton. Parmy in maps for ports. Shak.

PEERAGE. n. f. [paire, Fr. from peer.] The dignity of a peer .-

Parage is a wither'd flower. The body of peers .- The peerage and comare excluded from parliament. Dryden.

PEERDOM. n. f. [from peer.] Peerage. Ainf. PEERESS. v. f. [female of peer.] The of a peer; a woman ennobled .-

Parefi and butler share alike the box. Po'e. A PEERESS may be noble by descent, or marriage. If a peeres, by descent ration, marries a person under the degree of The fill continues noble: but if the obthat dignity only by marriage, fhe lofes it, brafterwards marrying a commoner; yet by the generally retains the title of her no-Acountess or baroness may not be arrestfedebt or trespass; for though in respect of a, they cannot fit in pariiament, they are beers of the reaim, and shall be tried peers, &c.

TERLESS. adj. [from peer.] Unequalled; 1 No peer.

Land up peerless. Shak. teerless feature, joined with her birth, ses her fit for none, but for a king. Shak. The moon,

ie cloudy majefty, at length,

Apparent queen, unveil'd her peerles light.

Such musick worthiest were to blaze The peerless light of her immortal praise.

With such a peerless majesty she stands, As in that day she took the crown. Dryden. PEERLESSNESS. n. f. [from peerlefs.] Uni-

verfal superiority.

PEER-PUNCHAL, mountains of Asia, which form the S. boundary of Cachemir.

PEER-WARTH, a town of Germany, in Auf-

tria, 13 miles S. of Ips.

PEESE. See PEAS, and PEATHS. \* PEEVISH. adj. [This word Junius, with more reason than he commonly discovers, supposes to be formed by corruption from perverse; Skinner rather derives it from beeish, as we say wafpi/h.] 1. Petulant; waspish; easily offended; irritable; irascible; soon angry; perverse; morose; querulous; full of expressions of discontent; hard to please.

She is pecuifo, fullen, froward. Being wrong'd as we are by this peevish town,

Turn thou the mouth of thy artillery,

As we will ours against these saucy walls. Shak. -Neither will it be fatire or peevish invective to affirm, that infidelity and vice are not much diminished. Swift. 2. Expressing discontent, or fretnef s.-

For what can breed more peevish incongrui-

Than man to yield to female lamentations? Sidney.

I will not presume

To fend fuch peevifb tokens to a king. -Those deserve to be doubly laughed at, that are peevish and angry for nothing. L'Estrange.

\* PEEVISHLY. adv. [from peevifb.] Angrily; queruloully; morosely.—He was so peevishly opinionative and proud, that he would neither ask

nor hear the advice of any. Hagward.
\* PEEVISHNESS. n. f. [from peevi/h.] Irafcibility; querulousnels; fretfulnels; perversenels. -Some miscarriages in government might escape through the peevisbness of others. K. Charles .- It will be an unpardonable, as well as childish peewishness, if we undervalue the advantages of our knowledge. Locke.

From passion then you may be freed,

When peerishness and spleen succeed. Swift. (1.) PEFFER, a small river of Scotland, in E. Lothian, which rifes in the parish of Athelstanford, and falls into the Prith of Forth near Aberlady.

(2.) PEFFER-WASSER. See BATH, § III, No 9. \* PEG. n. f. [peggbe, Teutonick.] 1. A piece of wood driven into a hole, which does the office of an iron nail.—Solid bodies forethew rain; as boxes and pegs of wood, when they draw and wind hard. Bacon .- The teeth are about 30 in each jaw; all of them claviculares or peg teeth. Grew's Mufaum.-If he be cholerick, we shall treat him like his little friend, and hang him upon a peg till he comes to himself. Addison.—The pegs and nails in a great building, though they are but little valued in themselves, are absolutely necessary to keep the whole frame together. Spectator.—A finer petti-T 2 coat goal can neither make you richer, more virtuous or wife, than it it hung upon a peg. Swift. 2. The pins of an inftrument on which the firings are ftrained.—

You are well tuned now; but I'll let down The pegi that make this mufick. Shak. Othel. 3. To take a PEG lower; to deprefs; to fink: perhaps from relaxing the cords of mufical influments.—

Remember how in arms and politicks, We fill have worked all your holy tricks, Trepann'd your party with intrigue,

And took your grandees down a peg. Hudib.

4. The nick-name of Margaret.

\* To Pag. v. a. To fatten with a peg.—

I will rend an oak,

And p/2 thee in his knotty entrails. Shak.
—Taking the shoots of the past spring, and pegging them down in very rich earth, by that time tweivementh they will be ready to remove. Exelys's Kal.

PEGANUM, in botany, WILD SYRIAN RUE, a genus of the monogynia order, belonging to the dodecandria class of plants; and, in the natural method, ranking under the 26th order, Multifilique.

PEGASIDES, a name of the Muses, from Pe-

(1.) PEGASUS, among the poets, a horse imagined to have wings, and sabled to have sprung from the blood of Medusa; being that whereon Bellerophon was sabled to be mounted when he engaged the Chimera. See Chimera, N° 3. He was also mounted by Perseus when he destroyed the sea-monster, that was to devour Andromeda. (Ovid.) The opening of the sountain Hippocreme on mount Helicon is ascribed to a blow of Pegasus's hoof. He was seigned to have slown away to heaven, where he became a constraint.

(22) PEGASUS, in astronomy, the name of a constellation of the northern hemisphere, in form of a slying horse. See ASTRONOMY, § 548.

PEGAU, a town of Upper Saxony, in Leipfic, on the Pifter; 10 miles SSW. of Leipfic, and 58 W. of Drefden.

PEGERSK, a town of Ruffia, in Pskov.

(1.) PEGNA, or PEGNA COVA, a town of Portugal, in Beira; 74 miles NE. of Coimbra.

(2.) PEGNA DA FRANCIA, a town of Spain, in Leon; 24 miles SSE of C. Rodrigo, and 55 SSW of Salamanca.

(3.) PBGNA MACOR, a town of Portugal, in Beira; on the borders of Spain; with a caffle, a churches, a convent, an hospital, and about 2,360 i habitants; 10½ miles SW. of Alfayates, 30 NE. of Caftel Branca, and 40 NW. of Alcantara. Lon. 6. 32. W. Lat. 39. 59. N.

(4.) PEGNA MAYOR, or MAJOR, a town of Span in Gallicia; iz miles ESE, of Lugo.

PEGNAFIEL, a town of Spain, in Oid Caffile, at the foot of a mountain; famous for its palace, castle, fortifications, and cheefes; which are reckoned the best in Spain. It is seated on the Douesto, 25 m es SE. of Valladolid. Lon. 4. o. W. Lat. 41. N.

PEGNAFIRMA, a town of Portugal, on the W. coast; at the mouth of the Mongola; 9 miles S.

et Peniche.

PEGNAFIOR, 2 towns of Spain; 1. in Afteria on the W. bank of the Pravia, 7 miles NW. Oviedo: 2. in Cordova, on the Guadalqu.vir, 1 miles SW. of Cordova.

PEGNARANDA. 2 towns of Spain: 1. in Lea 30 miles SE. of Salamanca: 2. in Old Caffik, miles W. of Ofma, and 30 SW, of Olmedo. Lon. 8. W. Lat. 40. 59. N.

PEGNITZ, a river of Franconia, which ru into the Rednitz; 4 miles W. of Nuremberg.

PEGNON DE VELFZ, a Spanish fortress of frica, on the N. coast of Morocco, built in to by Peter of Navarre; taken by the Moors in 15 and retaken by the Spaniards in 1664. It is miles E. of Gomera, and 68 W. of Mehlla.

PEGNONGMECO, a town of Asia, in B mah, 66 miles SW. of Ava, and 288 ENE. of

racan.

(I, 1.) PEGU, or a very confiderable kingd (I, 1.) PEGUE, of Afia, beyond the Gang The country properly fo called is but about miles long from N. to S. and as much in brea from E. to W. It is fituated on the E. not the bay of Bengal, nearly opposite to Arixa, to the NE. of the coast of Coromandel. It bounded on the N. by the kingdoms of Aria and Ava; E. by the Upper and Lower Simm by Siam and the sea; and W. by the sea and of Arrakan.

(2.) PEGUE, CLIMATE, SOIL, PRODUCE, MINERALS OF. The air of Pegu is very heat and prefently recovers fick firangers. The and prefenly recovers hek ftrangers. alto is very rich and fertile in corn, rice, fruit, roots; being erriched by the inumlations of tiver Pegu, which are almost incredible, exten above 30 leagues beyond its channel. It process also good timber of several kinds. The c try abounds with elephants, buffilloes, goats, b and other animals, particularly game; and de fo plenty in September and October, that one be bought for three or four pence; they are flefly, but have no fat. There is flore of pountry; the cocks are vality large, and the As for fith, there are many very beautiful and well tailed. In Pegu are found mines only of gold, iron, tin, and lead, or rather a of copper or mixture of copper and lead, but of rubies, diamonds, and fapphires. The r are the best in the world; but the diamond finall, and only found in the craws of poultry pheafants. Befides, only one family has th vilege of feiling them; and none dare ope ground to dig for them. The rubies are in a mountain in the province of Kablan, o pelan, between the city of Pegu and the pe

(3.) PEGUE, GOVERNMENT OF. In the goment of this country, despotisin prevails in extent, and despotisin too of the very work for the inhabitants are under the absolute of a set of petty tyrants, who are themselves thing more than flaves to the king of Avithey have little or no emolument, except they can raise by extortion, it is exercised most unlimited manner. They take cognied all disputes between individuals that contheir ears, without their case being laid them by either of the parties; and on wh

bit the cause is determined, there is a never-failing charge brought in against both, for justice, as the expressit; and this price of justice is often time or four times greater than the value of the suter in agitation.

The kingdom of 4) PEGUE, HISTORY OF. Par is faid to have been founded about 1100 ကားမှာ. Its first king was a seaman; concernex stom and his fuccessors we know nothing, till the Howery of the East Indies by the Portuguese one beginning of the 16th century. In 1918 betwee of Pegu was poisefied by Breffagukan, wide whom Anthony Correa the Portuguese ambasher concluded a peace in 1519. This monarch 🖚 policifed of a very large and rich empire, nine Incloses being subject to him, whose revenues apossed to three millions of gold. In 1539 he mendend. Among other princes who were bubutaries was Para Mandara, king of the Bar-These people inhabited the high lands call-lagranas, to the N. of Pegu. Their prince obliged to furnish the king of Pegu with Barmas, to labour in his mines and other works. As the king used often to go and how his works went forward, and in these jourm took along with him none but his women: lamas formed a defign of robbing the ladies the kweis; and the next time the king vifited rois, they murdered him, stripped the ladies, ind to their own country. By this enormity Reg was thrown into confusion: but, instead the death of their king, the people diony where into factions; so that Dacha kwful heir to the crown, was unable to is authority. Of these commotions, the with Barmas taking the advantage, invaded menty with an army of more than a million has, and 5000 elephants; belides a great fleet be lent down the river Ava towards Pegu, capital; while he himself marched thither by Juk at this time Ferdinand de Mirales arat Pegu from Goa, with a large gatieon richhan on account of the king of Portugal. As Dacha Rupi heard of his coming, he fent his iffifiance against the enemy. This he by great presents and promises; and Mikning out in a galliot, joined the king's Had the numbers been nearly equal, the on kill of Mir les would undoubtedly have but the victory: But the fleet of the Barmas the whole river, while that of Dacha Rupi Luce be observed. Mirales did every thing reas could do, and even held out alone after wires had deferted him; but at last, oppresoverwhelmed with numbers, he was killed, 土地 bis men. Thus Para Mandara becamé ror all Pegu; after which he attacked the kry tingdoms. In 1544 he befieged Martathe capital of a kingdom of the same name, my great and flourishing. The land forces be brought against it confisted of 700,000 while by sea he attacked it with a sleet of (i) 100 of which were large galleys, and in Portuguese commanded by John Cayero, and experienced officer. The fiege, howlog 120,000 men; but at last the besieged biding himself straitened for want of provi-

fions, and unable to withstand so great a power, offered terms of capitulation. The befiegers would admit of no terms, upon which the diffrefled king applied to the Portuguele, and offered very advantageous terms, which Cayero would have accepted, but his officers would not permit him. The unhappy king of Martavan had now no other resource but to set fire to the city, make a fally, and die honourably with the few men he had with him: but even here he was disappointed; for by the defertion of 4000 of his troops, the enemy were apprifed of his defign, and prevented it. Thus betrayed, he capitulated with the Barma king for his own life and the lives of his wife and children, with leave to end his days in retirement. All this was readily granted, but without any intention of performance. The city was plundered and burnt, by which above 60,000 persons perished, while as many more were carried into flavery: 6,000 cannon were found in the place; 100,000 quintals of pepper, and an equal quantity of other The day after this destruction, 21 gibbets were erected on an hill adjoining to the city; on which the queen, her children, and ladies, were executed, by hanging them up alive by the feet. The king, with 50 of his chief lords, was cast into the sea, with stones about their necks. monstrous cruelty so provoked the tyrant's soldiers, that they mutinied, but he found means to pacify them; after which he proceeded to befiege Prom, the capital of another kingdom. Here he increased his army to 900,000 men. The queen, by whom it was governed, offered to submit to be his vaffal; but nothing would fatisfy the Barma monarch less than her surrender at discretion, and putting all her treasure into his hands. This she, who knew his perfidy, refused to do; on which the city was fiercely attaulted, but greatly to the disadvantage of the Barmas, who lost near 100,000 men. At last, however, it was betrayed to Mandara, who behaved with his usual cruelty: 2,000 children were flain; the queen was stripped naked, publicly whipped, and then tortured, till fhe died; the young king was tied to her dead body, and both together cast into a river, as were also 300 other people of quality. While the tyrant was employed in fortifying the city, the prince of Ava had failed down the river Queytor with 400 rowing veffels having 30,000 foldiers on board; but hearing of the queen's difaster, he stopped at Meletay, a strong fortress about 12 leagues north of Proni. where he waited to be joined by his father, the king of Ava, with 80,000 men. On thisnews Mandara fent his fofter brother Chaumigrem along the river-side with 200,000 men, while he himself fol-lowed with 100,000 more. The prince in this emergency burnt his barks, forming a vanguard of the mariners, and, putting his small army in the best position he could, expected the enemy. A most desperate engagement ensued, in which only 800 of the prince's army were left, and 115,000 out of 200,000 Barmas who opposed him were The 800 Avans retired into the fort : but killed. Mandara coming up foon after, attacked the fortrefs for 7 days, when the 800, finding themselves unable to hold out, rushed out in a dark and rainy night, to fell their lives at as dear a rate as posli-ble. This last effort was so extremely violent, that

that they broke through the enemy's troops in feveral places, and even preffed fo hard on the king himself that he was forced to jump into the river. However, they were at last all cut off, after they had destroyed 12,000 of their enemies. Mandara having thus become mafter of the fort, commanded it to be immediately repaired; and failed up the river to the port of Ava, about a league from the capital, where he burnt between 2000 and 3000 veffels, and loft in the enterprise about 8000 men. The city itself he did not think proper to inveft, as it had been newly fortified, was defended by a numerous garrison, and an army of 80,000 men was advancing to its relief. The king also, apprehensive of Mandara's power, had implored the protection of the emperor of Siam; offering to become his tributary if he would affift him with his forces in recovering the city of Prom. To this the emperor readily affented; on which Mandara fent ambassadors to the sovereign of a large territory adjacent, requesting him to divert the emperor from his purpose. On the ambassadors return, it appeared that the treaty had taken effect; but as the feafon was not yet arrived for invading Ava-Chaumigrem was fent with 150,000 men to reduce Sebadi, the capital of a fmall kingdom about 130 leagues NE. of Pegu. He, however, failed in his attempt; and afterwards was furprifed by the enemy and put to flight. In the mean time, the empire of Siam fell into great distractions; the king, together with the heir to the crown, were anurdered by the queen, who had fallen in love with an officer, whom the married after her hufhand's death. However, both of them were foon after killed at an entertainment; and the crown was given to a natural brother of the late king, but a coward and a tyrant. On this Mandara collected an army of 800,000 men, with 20,000 elephants. In this army were 1000 Portuguese, commanded by one James Suarez, who had a penfion of 200,000 ducats a-year from the king of Pegu, with the title of his brother, and governor of the kingdom. With this formidable army he fet out in April, 1548. His first atchievement was the taking of a fortress on the borders of the enemy's country; before which, being feveral times repulfed, and having loft 3000 of his men, he revenged himself by putting all the women to the sword. He next belieged the capital; but though the fiege continued 5 months, the affailants were conftantly repulfed with great loss. A mount of earth was then raifed, on which were placed 40 pieces of cannon, ready to batter it anew, when, in October, advice was received of a rebellion having broke out in Pegu. The perfon who headed the rebels was Shoripam Shay, a relation of the former monarch, flain 12 years before. He was a religious person, and esteemed a faint. As he was a preacher, he made a fermon, in which he set forth the granny of the Barmas in such a manner, that he was immediately taken out of the pulpit, and proclaimed king by the people, who, as a token of fovereignty, gave him the title of Shemindoo. that act was to cut in pieces 15,000 Barmas, and Fize on the treasure; and in three weeks all the strong holds of Pegu fell into his hands. On this news, Mandara immediately raifed the fiege in which he was engaged, and in 17 days got to Mar-

tavan. Here he was informed, that Shemind had posted 500,000 men in different places, to tercept his passage; and 50,000 of his best tro deferted. After 14 days stay, he departed fr Martavan, and met Shemindoo at the head 600,000 men. A desperate engagement follow in which Shemindoo was enti ely defeated, w the lofs of 300,000 men. Of the Barma tro were flain 60,000; among whom were 280 Po guese. The morning after this victory, the ty marched to the city; the inhabitants of which rendered, on condition of having their lives effects spared. The kingdom being thus a brought under his subjection, he proceeded to nish the principal persons concerned in the re lion: their heads he cut off, and confifcated t estates, which amounted to no less than ten lions of gold. Others say, that he put all with distinction to the sword, excepting 12,000, took shelter in Suarez's house. The plunder incredible, Suarez alone getting three mill All these cruelties, however, did not secure the legiance of the tyrant's fubjects: for in less three months the city of Martavan revolted; the governor not only declared for Shemin but murdered 2000 Barmas. Mandara then smoned all the lords of the kingdom to meet with their force, within 15 days, at a place of Mouchau, near his capital, whither he himself with 300 men, to wait their arrival. But it meantime he received intelligence that the fi or governor of Zatan, a city of fome confequ had submitted to Shemindoo, and also lent large fum of gold. The shemin was immedi fent for, but he, suspecting Mandara's design gused himself by pretending sickness; after v he drew together about 600 men; and having these privately advanced to the place when king was, he killed him, with his attendants. guards in the court being alarmed with the a skirmish ensued with the shemin's men, in v about 800 were flain on both fides, most of Barmas. The themin then retreated to a called Powel; whither the people of the cou hearing of the death of Mandara, who was versally hated, resorted to him. When he hi sembled about 5000 men, he returned to ke troops which the late king had with him killed all he found, dispersed in several p With the Barmas were flain 80 out of 300 l guese. The remainder surrendered, with S their leader; and were spared, on condition of remaining in the service of the shemin. min, now finding his forces daily increase, all the title of king; and, to render himself the popular, gave out that he would totally ext nate the Barmas. But one of those who were Mandara, when he was murdered, escaped t neral flaughter; and, fwimming over the informed Chaumigrem of the king's death had with him 180,000 men, all natives of excepting 30,000 Barmas. Pretending that h received orders to put garrisons into several p Chaumigrem dispatched all the natives into rent parts; and thus got rid of those whom h most cause to sear. He then turned back the capital; feized the king's treasure, wi the arms and ammunition: fet fire to the

rites, arfenals, palace, fome of whose apartments were ceiled with gold, and 2000 rowing veffels which were on the river. Then destroying all the stillers, he fled with the 30,000 Barmas to his oun country, being purfued in vain by the natives of Pegu. Thus the shemin of Zatan was left in possession of the kingdom; but, by his regold acts of tyranny and cruelty, he fo difgusted which, that many fled to foreign countries, the others went over to Shemindoo. In the ime, James Suarez, the Portuguese, lost by attempting to ravish a young woman of distion; the shemin being unable to protect and obliged to give him up to the mob, who him to death. The shemin himself did not furive him; for, being grown intolerable by sepretions, most of his followers abandoned and he was befreged in his capital by Shewith an army of 200,000 men, and foon is a fally: fo that Shemindoo now feemwe fully established on the throne. But in man time Chaumigrem, hearing that Pegu my ill provided with the means of defence, the kingdom with an army of 300,000 bemindoo met him with three times their but his men, being all natives of Pegu, was, that Shemindoo was defeated with laughter, and Chaumigrem proclaim-Pegu. Shortly after, Shemindoo himiken; and, after being treated with the et coulty, was beheaded. Chaumigrem was son pot conqueror, but not at all inferior in is predecessors. He reduced the emand Arrakan, and died in 1583; be-The about 50 Pranjinoko, then about 50 mage. When this prince ascended the the kingdom of Pegu was in its greatest grandeur; but by his tyranny and obsti-Int all that his father had gained. He 1599, and after his death the kingdom of became subject to Arrakan. For some time he been tributary to the more powerful May Ava; the sovereigns of which country the been extremely cautious of permitlargeans to obtain any fettlement among From the latest accounts, however, we the present monarch of Pegue, who is lorign of Aracan, Ava, Laos, and Siam, altered the barbarous fystem of his and has turned his attention to poimprovement, rather than to conextension of empire. He defires to con-Peguers by mildness, and has acquired Malarity among them by caufing their anal to be rebuilt. He has also abrogated and flatutes against them; caused justice saidered impartially, and no distinction Tade between a Burnnan and a Peguer, but leter is ftill excluded from public offices adpower. In a word he has given every to the descendants of the former well as to new fettlers, to return their deferted city.

DOUE, INHABITANTS, CUSTOMS, MAN-The inhabitants are of an olive, twny complexion. The women are fome travellers as having shook off all

modefty. The Peguers may be ranked among the most superstitious of all mankind. They maintain and worthip crocodiles; and will drink nothing but the waters of the ditches where those monftrous animals harbour, and by whom they are often devoured. They have five principal feftivals in the year, called fapans, which they celebrate with extraordinary magnificence. In one of them the king and queen make a pilgrimage about 12 leagues from the city, riding on a triumphal car, fo richly adorned with jewels, that it may be faid they carry about with them the value of a kingdom. This prince is extremely rich; and has in the chapel of his palace idols of ineftimable value, fome of them being of massy gold and silver, and adorned with all forts of precious stones. The talapoins, or priefts, have no poffessions; but such is the respect paid them by the people, that they are never known to want. They preach to them every Monday not to commit murder; to take from no person any thing belonging to him; to do no hurt; to give no offence; to avoid impurity and fuperfittion; but above all, not to worship the devil: but these discourses have no effect in the last respect. The people, attached to manicheism, believe that all good comes from God; that the devil is the author of all the evil that happens to men; and that therefore they ought to worship him, that he may not affict them. is a common notion among the Indian idolaters. The inhabitants of Pegu are accused by some authors of being flovenly in their houses, and nafty in their diet, on account of their feafoning their victuals with fidol, a composition made of stinking fish, reduced to a consistency like mustard, so naufeous and offensive that none but themselves can endure the smell of it. Balbi says, he could sooner bear the fcent of stinking carrion; and yet with this they feafon their rice, and other foups, inftead of oil or butter. As they have no wheat in this country, their bread is rice made into cakes. Their common drink is water, or a liquor distilled from cocoa-nut water. They are a spirited and warlike people; open, generous, and hospitable; and have neither the indolence nor the jealoufy of most other eastern nations. The men here, as in most eastern countries, buy their wives, or pay their parents a dowry for them. They offer their daughters to strangers, and hire them out for a time: fome fay they hire out their wives in the fame manner. These marriages for a time are well regulated, and often prove very beneficial to the occasional husband. Most of the foreigners who trade hither, marry, a wife for the time of their flay. In case of a separation, the father is obliged to take care of the boys, and the mother of the girls. No woman is looked upon the worfe, but rather the better, for having had feveral European husbands: nay we are told, that no person of fathion in Pegu, from the gentleman to the king, will marry a maiden, till fome person has had the first night's lodging with her. In Pegu, the inheritance of all land is in the king: he is likewise the heir of all his subjects who die without issue; but in case they have children, two thirds go to them, and the rest to the king.

(6.) PEGUE, RELIGION OF THE PEOPLE OF. The religion of the Peguers is the same at bottom with that which prevails over the rest of India and Thibet; only varies somewhat in disterent countries, according to the humour or interest of the priests. They hold the existence of one supreme God, of whom they make no image; but they have many inferior created gods, whose images are set up in the temples for the laity to worship. When a person falls sick, we are told that they generally make a vow to the devil, from whom they believe all evil comes. Then a seafold is built, and victuals are spread on the top of it to solace Old Nick, and render him propitious. This feast is accompanied with lighted candles and music; and the whole is managed by an undertaker called the devil's stater.

(7.) PEGUE, REVENUE OF. 'The king of Pegu's revenues arise chiefly from the rent of lands, of which he is the sole proprietor. Another branch of it are the duties pad for the commodities imported or exported. In a word, he is judged the richest monarch in the world, next to the emperor

of China.

(8.) PEGUE, TRADE OF. The commodities exported from this country are gold, filver, rubies, musk, benjamin, long-pepper, tin, lead, copper; lacka, or guin-lac, whereof they make hard wax; rice-wine; and fome fugar-canes, of which they would have plenty, but that the elephants eat Under the name of rubies, the Peguers comprise topazes, sapphires, amethysts, and other Rones: which they diftinguish by faying the blue. the violet, and the yellow rubies. The true ruby is red, transparent, or sparkling, inclining near the furface to the violet of the amethyst. Cotton eloths from Bengal and Coromandel, with some ftriped filks, are best for the Pegu market, and filver of any fort will go off there: for the king, in return for his eight and a half per cent duty on it, allows the merchants to melt it down, and put what copper alloy they please in it. They wear none of our European commodities in Pegu but hats and ribbons. The gentry will give extravagant prices for fine beaver hats, which they wear without any cocks. They are no less fond of ribbons flowered with gold and filver, which they wear round their hats.

(II.) PEGUE, the ancient capital of the above empire, was one of the most splendid, large, and populous cities in all Asia, before it was destroyed by the Barmans or Birmans. (Sec § 4) It was a quadrangle, each side measuring 1½ miles, and furrounded by a brick wall, and a ditch of 60 yards broad. The wall had bastions 300 yds. assunder; was 25 feet high, and 40 broad at the bottom. The king's palace was built of wood, but like a fort, with walls and ditches: and it was not only gilded all over, but its battlements were covered with plates of solid gold. This sine city was totally destroyed, and every building in it razed in 1757, except the pagolas. The great pagoda of Shoemadoo has been since repaired.

(III.) PLGUE, the present capital of Pegue, is built on the same plan, and on part of the site of the old city. It is a square, but each side does not measure above half a mile. It is senced round by a stockade 12 seet high. The principal street runs from E. to W. intersected by two smaller streets at right angles. At each end of it

is a gate, defended by a piece of ordnance, a centinels. The houses are all made of mats, boar and bamboos; and have earthen pots full of ter on their roofs, to extinguish accidental feel building with stones or bricks is prohibited, the people should fortify the city and throw the Birman yoke. It has the hills of Martabai the E. with the Sitang winding along the pla and has a fine prospect of nature in her ruce picturesque state for above 40 miles to the NN where it is bounded by the Galadzet hills. I 96. 42. E. Lat. 18. 5. N.

(IV.) PEGUE, a river in the above empire, writes in the Galladzet hills; which are chieff markable for the noifome effluvia of their at phere. It often overflows its banks. It falls the Ava, near its mouth, in the bay of Bengi

PEKAN, in zoology. See Mustela, No 3. PEKIN, or the capital of China, where the PEKING, emperor generally refides. it is fituated in a very fertile plain, at leagues from the great wall. This name, which figuifies the northern court, is given to it, to distinguish it from: The em-. the city Nanking, or the foutbern court. peror formerly relided in the latter, but the Tartars, a reftlefs and warlike people, obliged this prince to remove his court to the northern provinces, that he might more effectually repel the incursions of those barbarians, by opposing to them a numerous militia which he generally keeps around his person. It is an exact square, and divided into two parts; namely, that which con-. tains the emperor's palace, which is in the new city, or, as it is called, the Tartar's city, because it is inhabited by Tartars ever fince they conquered this empire; the other, called the Old City, is inhabited by the Chinefe. The circuit of both these together is 52 Chinese lys, each of which contains 240 geometrical paces; being, without the suburbs, full fix leagues in circumference, according to the most accurate measurement made by order of the emperor. The population is generally estimated at 2,000,000, but others state it at double that number. Groffer tells us, " that the height and enormous thickness of the walls of the Tartar city excite admiration; 12 horsemen might eafily ride abreaft upon them; they have spacious towers raised at intervals, a bow-shot distant from one another, and large enough to contain bodies of referve in case of necessity. city has 9 gates, which are lofty and well arched. Over them are large pavilion-roofed towers divided into nine stories, each having several apertures or port-holes: the lower story forms a large hall for the use of the soldiers and officers who quit guard, and those appointed to relieve Before each gate a space is left of more than 360 feet: this is a kind of place of arms, inclosed by a semicircular wall equal in height and The great thickness to that furrounding the city. road, which ends here, is commanded by a pavilion-roofed tower like the first, in such manner, that, as the cannon of the former can batter the houses of the city, those of the latter can sweep the adjacent country. The streets of Pekin are straight, about 120 feet wide, a full league in length, and bordered with shops. The governor of Pekin, who is a Mantchew Tartar, is flyled Governor of the Nine Gates. His jurisdiction extends not only over the foldiers, but all o over the people in every thing that concerns the police. No police can be more active; and it is furprifing to fee, among an infinite number of Tartars and

E Chinese mixed together, the greatest tranquillity prevail. The walls are 50 cubits high. The walls of the emperor's palace, including that and the gardens, are about two miles long. "Although (tays Grofier) the Chinese architecture has no reemblance to that of Europe, the imperial palace of Pekin does not fail to strike beholders by its extent, grandeur, and the regular disposition of its aparaments, and by the fingular structure of its pavilion-roofs ornamented at each corner with a carved plat-band, the lower extremity of which is turned upwards. These roofs are covered with varnished tiles of so beautiful a yellow colour, that, at a distance, they make as splendid an appearance as if they were gilded. Below the upper roof there is another of equal brilliancy, which hangs floping from the wall, supported by a great number of beams, daubed over with green varnish, and interspersed with gilt figures. This ad roof, with the projection of the first, forms a kind of crown to the whole edifice. The palace is a small distance from the S. gate of the Tartars city. The entrance to it is through a spacious court, to which there is a descent by a marble staircase, ornamented with two large copper lions, and a balustrade of white marble. This balustrade runs in the form of a horse-shoe, along the banks of a rivulet, that winds across the palace with a ferpentine course, the bridges over which are of marble. At the bottom of this first court arises a facade with three doors: that in the middle is for the emperor only; the mandarins and nobles pais through those on each fide. These doors conduct to a 2d court, which is the largest of the palace: it is about 300 feet long, and 50 broad. An immenfe gallery runs round it, in which are magazines, containing rich effects, which belong to the emperor as his private property; for the public treasure is entrusted to a sovereign tribunal called The first of these magazines is filled with plate and vessels of different metals; the 2d. contains the finest kinds of furs; the 3d. dresses lined with fable, ermine, minever, and foxes ikins, which the emperor fometimes gives in presents to his officers; the 4th is the depository of jewels, pieces of curious marble, and pearls fished up in Tartary; the 5th confifting of two stories is full of wardrobes and trunks, which contain the filk stuffs used by the emperor and his family; the rest are filled with bows, arrows, and other pieces of armour taken from the enemy or prefented by different princes. The royal hall, called Tai botien, or the Hall of the Grand Union, is in this ad.

court. It is built upon a terrace about 18 feet in

height, incrusted with white marble, and ornamented with balustrades of excellent workman-

tenew their homage, and perform those cere-

monies that are appointed by the laws of the em-

pire. This hall is almost square, and about 130 feet in length. The ceiling is carved, varnished orcen, and loaded with gilt dragons. The pillars

which support the roof within are fix feet in cir-

cumference towards the base, and are coated with

a kind of mastich varnished red; the sloor is partly

covered with coarse carpets, after the Turkish

manner; but the walls have no kind of ornament,

green, and loaded with gilt dragons.

Before this hall all the mandarins range themselves, when they go, on certain days, to neither tapeftry, luftres, nor paintings. The throne, which is in the middle of the hall, confid of a pretty high alcove, exceedingly neat. It h no inscription but the character ching, which t authors of this relation have interpreted by t word boly; but it has not always this fignification for it answers better sometimes to the Latin wo eximitus, or the English words excellent, perfi most wife. Upon the platform opposite to t hall fland large veffels of bronze, in which income is burnt when any ceremony is performing. The are alto chandeliers shaped like birds and paint different colours, as well as the wax-candles the are lighted up in them. This platform is ext ded towards the north, and has on it two let halls; one of them is a rotunda that glitters w varnish, and is lighted by a number of window It is here that the emperor changes his dress fore or after any ceremony. The other is a loon, the door of which opens to the not through this door the emperor must pass, he goes from his apartment to receive on throne the homage of the nobility; he is then ried in a chair, by officers dreffed in long red bordered with filk, and caps ornamented plumes of feathers. It would be difficult to an exact description of the interior apartm which properly form the palace of the empe and are fet apart for the use of his family. are permitted to enter them but women eunuchs." The temples and the towers of city are fo numerous, that it is difficult to them. Provisions of all kinds are exceeding tiful, they being, as well as the merchant brought from other parts by means of canal from the rivers, and always crowded with of different fizes, as well as from the adju country. An earthquake which happened he 1731 buried above 100,000 persons in the rul the houses. The famous Observatory which partly described in its order, (See OBSERVATE No 9.) stands in a court of a moderate extent, is built in the form of a square tower, contin to the city wall on the infide, and raifed 19feet above its bulwark. The afcent up to the is by a very narrow staircase; and on the plat above were placed all the old infirmments, w though but few, took up the whole root Father Verbieft introduced his new appear which he disposed in a more convenient These are large, well cast and embellished; were the neatness of the divisions answeral the work, and the telescopes fastened to the cording to the new method, they would be to those of Europe; but the Chinese arti were either too negligent, or incapable of fo ing his directions. The old infiruments we order of the emperor Kang-hi, fet afide as u and laid in the hall near the tower, where may be feen through a crofs barred window covered with ruft. In this famed observe there are 5 mathematicians employed night day, each in a proper apartment on the top tdwer, to observe all that passes over their one of them is gazing towards the zenith, 25 others towards the four points of the com that nothing may escape their notice. fervations extend not only to the motions of

terrely bodies, but to fires, meteors, winds, rain, tender, hail, florms, and other phenomena of the amosphere; and these are carefully entered a their journals, and an account of them is brought every morning to the surveyor of the materies, and registered in his office." LifeLAGIUS, a native of Great Britain; but the of England, Scotland, or Wales, is un-Dr Henry says, he was born in N. Mor. 13th, 354; and that his real name Lagaz, of which Pelagius is a translation. mucated in the monastery of Banchor, in strhich he became a monk, and afteris in the early part of his life, he The France, and thence to Rome, where pated opinions different from those of dick. His morals being irreproachable, he many disciples; and the heresy made so progress, that it became necessary for the the test his power. Pelagius, to avoid the in 400 passed over to Sicily, attended by and pupil Celeftius. In 411 they land-Mica, continued fome time at Hippo, and dent at the famous conference between Moies and Donatifts, held at Carthage in hom thence they travelled to Egypt; and Mpt. in 415, to Palestine, where they were received by John, Bp. of Jerusalem. In rear Pelagius was cited to appear before of 17 bishops, held at Diospolis. familed with his creed, and absolved him The African bishops, however, being with their proceedings, appealed to pontiff: he first approved, and afterredemned, the opinions of Pelagius, who, popil Celestius, was publicly excommui and all the bishops who refused to subthe condemnation of the Pelagian herely, mediately deprived. What became of he this period, is unknown; but it is probe retired to Banchor, and died abbot matery. He wrote, 1. Expositionum in ib. xiv. 2. Epifiola ad Demetriaoginitate. 3. Explanationis symboli ad 4. Epistole ad viduam due. 5. De lithered among the works of St Jerome. They are also collected by Garnerius, and publish d in Append. op. Mercatoris, p. 373. Gave.

(2.) PELAGIUS I. pope of Rome, was born in Rome, and elected pope in 555. He endeavoured to reform the clergy; and when Rome was belieged by the Goths, obtained many concessions from Totila, in favour of the citizens. He died in 560.

(3.) PELACIUS II. Pope, succeeded Benedict I. in 578. He laboured much to reconcile the bishops of Istria and Venice to the Roman see, but without success, and he opposed John, Patriarch of Constantinople. He died of the plague in

PELAGNISI, an island in the Grecian Archipelago; 8 miles in circuit. Lon. 41. 58. E. Ferro.

Lat. 39. 30. N.

PELAGONIA, a divition of Macedonia.

PELAGOSA, an illand in the Adriatic, near Daimatia, which, together with feveral rocks that appear above water near it, are the remains of an ancient volcano. M. Fortis, (in his Travels into Dalmatia,) fays, " The lava which forms the fubflance of this island, is perfectly like the lava of Vefuvius. If a naturalist should land there, and visit on purpose the highest parts of the island, perhaps we might then know whether it has been thrown up by a fubmarine voicano, as the illand near Santerini was in our age; or if we ought to believe it the top of some ancient volcanic mountain, of which the roots and fides have been covered by the waters, which divided Africa from Spain, forming the straits of Gibraltar; an invafion that no one can doubt of who has examined The Liffan the bottoms and shores of our sea. Fishermen say, that Pelagola is subject to frequent and violent earthquakes; and the aspect of the island proves, at first light, that it has suffered many revolutions; for it is rugged, ruinous, and subverted." It is 16 miles SW. of Agosta, and 30 from the Diomede illes.

PELAIAH, a Levite, one of the chiefs of those who returned from captivity, and who signed the covenant that Nehemiah renewed with the Lord.

Neb. viii, 7. x, 10.

PELASGI, a very ancient people of PELASGIANS, } Greece, originally of Arcadia, according to Hefiod; fo named from PELAS-Gus, their first king, though others derive the name from Midagyes, a ftork, on account of their wandering manner of life. (Strabe.) They first inhabited ARGOLIS, in Peloponnetus, which from them was called PELASGIA. Thence, about A. A. C. 1883, they emigrated into Amonia, and were afterwards dispersed into various parts of Greece; particularly Epirus, Crete, Lemnos. Lefbos, and Argos. Some of them fettled in Maena Græcia, in Italy: others occupied a third part of Theffaly, hence called Pelasgiotis. In fhort, they spread through so many parts of Greece, that the poets give their name to the Greeks in general, and name the whole country from them. Homer. Hefiod.

(1.) PELASGIA, a name given to GREECE,

from the PELASGI. (See the last article.)

(2, 3.) PELASGIA, x. the ancient name of Lefbos; so called from the PELASGI. (Diodorus Siculus, Pling.) 2. The ancient name of Palo-U2

PONNESUS.

FOUNTERS, from Pelasgus, a native of the country. Nicolaus Damafeenus, Ephorus.

(4 5.) PELASGIA was also an ancient name of

Epirus and Peloponnelus.

PELASGICUM, the north wall of Athens; fo called from the builders, the Pelasgi. (Paufanins. Pling.) There was an execration pronounced on any that should build houses under this wail; because the Pelasgi, while dwelling there, entered into a conspiracy against the Athenians. Thursaides.

PELASGIOTÆ. See PELASOI.

PELASCIOTIS, a third part of Theffaly, fituated between Pierla and Macedonia on the N. and W. Theffaliotis on the S. and Magnelia on the E. Strabo, Pliny.

PELASGUS, in fabulous history, a fon of Jupiter and Niobe, who reigned in Sicyon, and from whom his subjects, the PELASGI, derived their

name

PELATE, free-born citizens, among the Athenians, who by poverty were reduced to the necessity of serving for wages. During their servitude, they had no vote in the management of public affairs, as having no estate to quality them; but this restriction was removed, whenever they had released themselves from their service situation, which they were allowed to do when able to support themselves. While they continued servants, they had also a right to change their masters. They were called sometimes There.

(1.) PELATIAH, fon of Hananiah, and father of Ishi, of the fribe of Simeon. He subdued the Amalekites upon the mountain of Seir. 1 Chron.

(2.) PELATIAH, the fon of Benaiah, a prince of the Jews, who lived in the time of Zedekiah king of Judah, and opposed the wholesome advice given by Jeremiah, to submit to king Nebuchadnezzar. (See Jerem. xxxviii, 13—20. and Ezek. xi. 1—4.) Ezekiel's vision, while he was a captive in Mesopotamia, against Pelatiah, Jazzaniah, and 23 other princes who joined with them, is recorded in Ezek. xi. 5—13. with the immediate death of Pelatiah, while Ezekiel was delivering his prophecy.

PELE, two ancient towns of Thessay; the one subject to Eurypylus, the other to Athilles; both extinct. Peleus was the gentilitious name.

Steph.

PELEE, an island of France, in the dep. of the

North : 3 miles NE. of Cherburg.

PELEG, fon of Eber, the 5th in descent from Nonh; was born in A. M. 1757. He was named Pelez, which fignifies division, because in his time the earth began to be divided (Gen. x. 25. xi. 16.) Whether Noah had begun to divide the earth as mong his deteendants, fome years before the building of Babel; or Peleg came into the world the same year that Babel was begun, and at the confusion of languages; or whether Eber, by a spirit of prophecy; gave his son the name of Pehe before the tower of Babel was begun, is not certain. That which here perplexes the interprefers is, first, that Peleg came into the world hot above 100 years' after the deluge. But it should feem, that the number of men was not then fufficient for such an undertaking as that of Babel. 2d. Joktan, the brother of Peleg, had ready 13 fons at the time of this dispersion, wh happened after the confusion of Babel (Gen 26-29.) Peleg being born in the 34th year Eber (Gen. xi. 16.), it is impossible that Jok should have bad such a number of children at birth of Peleg. It feems therefore probable, t be was not born at the time of the dispersion. this may be answered, that Moses has there e merated the names of the 13 fons of Joktan way of anticipation, though they were not b till a good while after the confusion at Bal but as they possessed a very large country, it proper to take notice of them, among the o defeendants of Noah, who divided the proviof the east among themselves. However this have been, at the age of 30, Peleg begat Reu; he died at the age of 239.

PELEGRINO, a promontory on the N. of Sicily; 2 miles W. of Palermo; famous its cavern, church, and relics of St Rosolia,

died in it.

PELENGON, or Gelengon, a town of Pe

in Laristan; 66 miles NE. of Sar.

PELETHITES, and CHERETHITES, mer mous in the reign of K. David. They were most variant men in the army of that prince, had the guard of his person. See 2 Sem. 11 XX. 7. Patrick's Comm. Pool's Annot. and Del Hist. of David.

PELETHRONII, a name given to the I THE, either from their town of PELETHRON or from their leader PELETHRONIUS. To mankind are indebted for the invention of the with which they tamed their hoifes.

PELETHRONIUM, a town of Thesaly, slowery part of mount Pelios; so named Pelios and seems, sowers. (Nicarder.) I says the Centaurs were natives of that plac whom Virgii assigns mount Othrys. See TAURS, 6 3. LAPITHE, and LAPITHUS.

TAURS, § 3. LAPITHE, and LAPITHUS.
PELETHRONIUS, a leader of the Lapi PFLEUS, in fabulous hiftory, a king of T ly, fon of Æacus and Endeis, the daugh Chiron. He was the only mortal man who married an immortal. He was concerned murder of his brother Phocus, and was the obliged to leave his father's dominions. H to the court of Eurytus the fon of Actor reigned at Phthia; or, according to Ov Ceyx king of Trachinia. He was purified muider by Eurytus, who gave him his dat Antigone in marriage. As Peleus and El went to the chace of the Calydonian box father-in-law was accidentally killed by an which his fon-in-law had aimed at the beaft obliged him to banish himself from Phthi he went to Iolchos, where he was purified homicide by Acastus the king of the co His refidence at Iolchoo was short: Afty the wife of Acastus, fell in love with him when the found him infentible to her patho accused him of attempts upon her virtue. king partly believed the accuration; but no ing to violate the laws of hospitality, by p him to death, he ordered his officers condu to mount Pelion, and there tie him to a tre leave him to the wild beafts. The orders

callys were obeyed; but Jupiter knowing the inrecence of his grandson Peleus, ordered Vulcan to let him at liberty. Peleus then affembled his mends to punish Acastus. He took lolchos, crove the king from his possessions, and put to send the wicked Astydamia. On the death of astrone, Peicus made love to THETIS, but the saids fled from him; and the more effectually ti michis pursuit, she assumed the shape of a indatree, or a typicals. Peleus offered a facrihave the gods; and Proteus informed him, that trokan Thetis, he must surprise her while she «Bulleep in her grotto, near the shores of Thesin. This advice was followed, and Thetis, un-Me to escape, at last consented to marry him. Their nuprisis were celebrated with extraordinarefinements, all the gods attending and making tiem valuable prefents. ATE, the goddels of Ducord, was the only one who was not invited, and the punished this neglect by throwing an appeinto the midst of the assembly, with this in-Trackbrited Achiles was the fruit of this mar-। भा whole education was early entrufted to his prograndfather Chiron, and afterwards to thems, the son of Amyntor. (See ACHILLES.) His death was the fource of great grief to Peleus; bit Thetis, to comfort her hulband, promifed his immortality, and ordered him to retire into motion of the island of Leuce, where he beed fee and converse with the manes of his son. him had a daughter cailed Polydora, by Anti-

PELEWISLANDS, a cluster of small islands, situ-Methanen lat. 5° and 9° N. and lon. 13° and 136° L The natives are all of a deep copper colour, profestly naked. They are of a middling staturn very firaight, museular, and well formed; hather legs, from a little above their ancles to the middle of their thighs are tattooed to very that, as to appear dyed of a far deeper colour hei, long, and rolled up behind, in a simple manto the back of their heads, which appear at and becoming; but few of them have bads a being the general custom to pluck them mthe roots. The island Coorooraa, of which her is the capital, produces plantains, bana-En Scrille oranges and lemons, but neither of on 12 any considerable quantity. None of the that which the English visited had any kind of Fig. As to birds, they had plenty of common existed here, which, though not domesticated, karunning about near their houses and plantaand what appears extremely fingular is, the natives had never made any use of them, me people told them they were excellent eat-Pigeons they account a great dainty; but the but those of a certain dignity were permittaous; but the vaileys are extensive and beautral affording many delightful prospects. bules are raised about 3 feet from the ground, upon which appear as if hewn from the quarry. Reinterior part of them is without any division, be whose torming one great room, which rife in indte like our barns, the outlide being thatch-A bick and close with bamboos or palm leaves. All their implements, utenfils, weapons of war, and canoes, are much of the same kind with those in the South Sea islands. In their marriages they allow a piurality of wives, though in general not more than two.

\* PELF. n. f. [In low Latin, pelfra, not known whence derived; peuffe, in Norman, is frippery.] Money; riches.—

The thought of this doth pass all worldly pelf. Sidney.

I read thee, rash and heedless of thyself,
To trouble my still seat and heaps of precious

pelf.

Spenser.

Not provident of pelf as many islands are.

Immortal gods, I crave no pelf;
I pray for no man but myself.

He call'd his money in;

But the prevailing love of pelf Soon split him on the former shelf:

He put it out again. Dryden's Horaco. To the poor if he refus'd his pelf;

He us'd them full as kindly as himself. Swift. (1.) PELHAM, a township of Massachusietta, in Hampshire county, 85 miles W. of Boston. It had 1040 citizens in 1795.

(2.) PELHAM, a township of New Hampshire, in Rockingham county, on the S. state line, on the banks of Beaver river, 36 miles N. of Boston. It had 791 citizens in 1795.

(3.) Pelham, a township of New York, in W. Chester county; containing 199 citizens, and 27 electors in 1795.

PELIADES, the daughters of Pelias were Alcette, Polidice, Pelopea, and Hippothoe, to whom Hyginus adds Medula. Their mother's name was Anaxibia, the daughter of Bias and Philomache, the daughter of Amphion. After their particide, (See Pelias.) the Peliades fled to the court of Admetus, where Acastus, the son-in-law of Pelias, pursued them, and took their protector prisoner. The Peliades died, and were buried in Arcadia.

PELIAS, in fabulous history, the twin-brother of Neleus, was fon of Neptune by Tyro, daughter of Salmoneus. Their birth was concealed by their mother, who wished their father to be ignorant of her incontinence. They were exposed in the woods, but were preferred by shepherds; and Pelias received his name from a fpot of the colour of lead in his face. Some time after Tyro married Cretteus, fon of Æolus, king of Iolchos, and became mother of three children, of whom Ælon was the eldeft. Pelias vilited his mother, and was received in her family; and after the death of Cretheus, he unjustly seized the kingdom, which belonged to the children of Tyro by Cretheus. To strengthen himself in his usurpation, Pelias confuited the oracle; and when he was told to beware of one of the descendants of Æolus, who should come to his court with one foot shod and the other bare, he privately removed the son of Æion, and declared that he was dead. These precautions proved vain. Jason, the fon of Æfoe. who had been educated by Chiron, returned to Iolchos, when come to years of maturity; and having loft one of his shoes in crossing the Anaurus or the Evenus, Pelias perceived that this was the person whom he had so much dreaded. He

was unwilling to act with violence to a stranger, who had excited the admiration of the people. But when Jason arrived at his place with his friends, and boldly demanded the kingdom, Pelias faid, that he would voluntarily refign the crown to him, if he would go to Colchis to avenge the death of Phryxus, the fon of Athamas, whom Æetes had cruelly murdered; adding, that the expedition would be attended with the greatest glory, and that nothing but the infirmities of age had prevented himself from punishing the affassin. This patriotic proposal was accepted by the young hero, and his intended expedition was made known all over Greece. (See Argonauts, Jason and MEDEA.) According to Ovid, Æfon was still living when the Argonauts returned, and was restored to youth by the magic of Medea. This change in the vigour and the conflitution of Æ fon aftonished all the inhabitants of lolchos; and the daughters of Pelias, expressed their define to see their fathers Infirmities vanish by the same powerful magic. Medea, who wished to avenge the injuries which her hulband Jason had received from Pelias, raifd the defires of the Peliades, by cutting an old ram to pieces, and boiling the flesh in a cauldron, and then turning it into a fine young lamb. After they had feen this successful experiment, the Peliades cut their father's body to pieces, after they had drawn all the blood from his veins, on the affurance that Medea would replenish them by her wonderful power. The limbs were immediately put into a cauldron of boiling water; but Medea suffered the flesh to be totally consumed, and refuted to give the promifed affiftance, and the bones of Pelias did not even receive a burial.

(1.) PELICAN. n.f. [pelicanus, low Lat. pellican, Fr.] There are two forts of palicans; one lives upon water and feeds upon fift; the other keeps in deferts, and feeds upon ferpents and other reptiles: the pelican has a peculiar tendernefs for its young; it generally places its neft upon a craggy rock: the pelican is supposed to admit its young to suck blood from its breast. Calmet.—

'Twas this flesh begot those pelican daughters.

Shak.

The pelican hath a beak broad and flat, like the

flice of apothecaries. Hakewill on Prov.

PELICANUS, in ornithology, a genus belowing to the order of anferes. The bill is fitting without teeth, and crooked at the point; the is laked, and the feet are palmated. Mr Latin enumerates no lefs than 30 different species of tigenus besides varieties. The most remarkables these:

1. Pelicanus Aquilus, or the man-of-BIRD, is in the body about the fize of a late towl; in length 2 feet, and in breadth 14. fowl; in length 3 feet, and in breadth 14. bill is stender, 5 inches long, and much curved the point; the colour is dufky; from the a reddish dark-coloured skin spreads on each of the head, taking in the eyes: from the un mandible hangs a large membrana eous bag tached fome way down the throat, as in the can, and applied to the same uses; the coloni this is a fine deep red, sprinkled on the sides # a few feattered feathers: the whole plumage brownish black, except the wing coverts, will have a rufous tinge: the tail is long, and me forked; the outer feathers are 18 inches or 10 in length; the middle ones from seven to eigh the legs are small, all the toes are webbed to ther, and the webs are deeply indented; the lour of them is dusky red. The female differ wanting the membranaceous pouch under chin; and in having the belly white: in of things is like the male. The frigate pelican man-of-war bird, is chiefly, if not wholly, with between the tropics, and ever out at being only seen on the wing. It is usual other birds, when fatigued with flying, to res the furface of the water; but nature, from exceeding length of wing ordained to this made the rifing therefrom utteriy impof though perhaps this is no defect, as it scan feems to require much reft; as from the lengt wing, and its apparent eafy gliding motion (m like that of the kite), it appears capable of taining very long flights; for it is often feen al 100, and sometimes above 200, leagues from It also attacks gulls and other birds which I caught a fish, when it obliges them to disgorg and then seizes it before it falls into the wi They make nests on trees, and on the ro They iay one or two eggs of a flesh-colour meed with crimson spots. The young birds are ed with crimfon spots. vered with greyish white down: the legs at the same colour, and the bill is white. a variety of this species, which is less, measu

trac birds, in different periods of age. 2. Pelicanus Bassanus, the GANNET, or wisk coose, weighs feven pounds; the length wittee feet one inch; the breadth fix feet two insta. The bill is fix inches long, straight almost to the point, where it inclines down a and the be are irregularly, jagged, that it may hold its were with more security: about an inch from the we of the upper mandible is a sharp process posting forward; it has no nostrile; but in their ize long furrow, that reaches almost to the and of the bill: the whole is of a dirty white, tinpu with ash-colour. The tongue is very small, missioned low in the mouth; a naked skin of a he bloc furrounds the eyes, which are of a pale John, and are full of vivacity: this bird is remitable for the quickness of its light. Martin us that solan is derived from an Irish word the of that quality. From the corner of the worth is a narrow flip of black bare skin, that which with hind part of the head; beneath the dismother, that, like the pouch of the pelion wellable, and of fize sufficient to contain fraircherings; which in the breeding feafon it I once to its mate or young. The young his during the first year, differ greatly in colour the old ones; being of a dusky hue, speckwith numerous triangular white spots; and at time refemble in colours the speckled diver. hind, if left undifturbed, would only lay one on the year; but if that be taken away, they his mother; if that is also taken, then a third; were more that season. Their egg is white, mimber less than that of the common goofe; starge, and formed of any thing the bird histing on the water, fuch as grafs, fea-plants, , &c. These birds frequent the Isle of 4 in the Frith of Clyde; the rocks adjacent 🖢 🕏 Kilda; the Stalks of Souliskerry, near the Others; the Skelig Isles, off the coasts of Kerry ; and the Bass Ise, in the Frith of Forth: multitudes that inhabit these places are pro-These birds are well known on most of coasts of England, but not by the name of Man geefe. In Cornwall and in Ireland they resied gannets; by the Welsh, gan. We are motain whether the gannet breeds in any other tiof Europe besides our own islands; except, Mr Ray suspects, the sula (described in Clusius's **L**.

PELICANUS CARBO, the CORVORANT, fome-exceeds 7 lb. in weight; the length 3 feet defitute of nostrils; the bill dusky, 5 inches readible is covered with a naked yellow skin,

that extends under the chin, and forms a fort of pouch; a loofe skin of the same colour reaches. from the upper mandible round the eyes and angles of the mouth; the head and neck are of a footy blackness, but under the chin of the male the feathers are white; and the head in that fex is adorned with a short, loose, pendant crest: in some both the crest and hind part of the head The coverts of the are Areaked with white. wings, the scapulars, and the back, are of a deep green, edged with black, and gloffed with blue; the quill-featherrs and tail dusky; the legs are flort, strong, and black; the middle claw serrated on the infide; the irides are of a light affi-colour. These birds occupy the highest parts of the cliffs that impend over the sea: they make their nefts of flicks, sea-tang, grass, &c. and lay 6 or 7 white eggs of an oblong form. In winter they disperse along the shores, and visit the fresh waters, where they make great havoc among the fish. They are remarkably voracious, having a most sudden digestion promoted by the wast quantity of small worms that fill their intestines. corvorant has the rankest and most disagreeable fmell of any bird, even when alive. Its form is dilagreeable; its voice hoarse and croaking, and its qualities base. The Chinese make great use of these birds, or a congenerous fort, in fishing : not for amusement, but profit. See CHINESE,

4. Pelicanus graculus, the shag, called in the north of England the crane, is much interior in fize to the corvorant: the length is 27 inches; the breadth 3 feet fix; the weight 31 lb. The bill is four inches long, and more slender than that of the preceding: the head is adorned with a crest two inches long, pointing backward; the whole plumage of the upper part of this bird is of a fine and very fining green; the edge of the feathers a purpish black; but the lower part of the back, the head, and neck, wholly green; the belly is dusky; the tail of a dusky hue, tinged with green; the legs are black, and like those of the corvorant. Both these kinds agree in their manners, and breed in the fame places; and what is very strange in web-footed birds, will perch and build in trees: both swim with their head quite erect, and are very difficult to be that; for, like the grebes and divers, as foon as they fee the flath of the gun, they pop under water, and never rife but at a confiderable distance.

5. Pelicanus onocrotalus, or the pelican of Afia, Africa, and America; though Linnaus thinks that the pelican of America may be a diffinct varicty. This creature, in Africa, is much larger in the body than a fwan, and fomewhat of the fame shape and colour. Its four toes are all webbed together; and its neck in some measure resembles that of a swan: but the singularity, in which it differs from all other birds, is in the bill and the great pouch underneath. This enormous bill is which breeds in Feroe Illes) be the same . 15 inches from the point to the opening of the mouth, which is a good way back behind the eyes. See Plate 270. At the base the bill is somewhat greenish, but varies towards the end, where it hooks downwards. The under chap is still more

extraordinary; for to the lower edges of it hang 2

bag, reaching the whole length of the bill to the

neck, which is faid to be capable of containing 15 quarts of water. This bag the bird has a power of wrinkling up into the hollow of the under chap; but by opening the bill, and putting one's hand down into the bag, it may be distended at pleafure. The skin of which it is formed will then be feen of a bluish ash colour, with many fibres and teins running over its furface. It is not covered with feathers, but with a fhort downy substance as smooth and as soft as sattin, and is attached all along to the under edges of the chap, is fixed backward to the neck of the bird by proper ligaments, and reaches near half way down. When this bag is empty, it is not feen; but when the bird has fished with fuccess, it is then incredible to what an extent it is often feen dilated. For the first thing the pelican does in fishing is to fill up the bag; and then it returns to digeft its burden at leifure. When the bill is opened to its wideft extent, a perion may run his head into the bird's mouth, and conceal it in his monstrous pouch, thus adapted for very fingular purposes. Tertre affirms, that it will hide as many fish as will ferve 60 hungry men for a meal. This pelican was once also known in Europe, particularly in Russia; but it seems to have deserted our coasts. This is the bird of which fo many fabulous accounts have been propagated; fuch as its feeding its young with its own blood, and its carrying a. provision of water for them in its great reservoir in the desert. But the absurdity of the first account answers itself; and as for the latter, the pelican uses its bag for very different purposes than that of filling it with water. Clavigero, in his Hiftory of Mexico, fays that "there are two species, or rather varieties, of this bird in Mexico; the one having a fmooth bill, the other a notched one." The pelican, fays Labat, has strong wings, furnished with thick plumage of an ash-colour, as are the reft of the feathers over the whole body. Its eyes are very fmall, when compared with the fize of its head; there is a fadness in its countenance, and its whole air is melancholy. It is flow of flight; and when it rifes to fly, performs it with difficulty and labour, but when it perceives a fish fufficiently near the furface, it darts down upon it with the swiftness of an arrow, seizes it with unerring certainty, and stores it up in the pouch. It reposes for the night; and often spends a great part of the day, fitting in difmal folemnity, and, as it would feem, half affeep, on a tree. The fame indolence attends them even in preparing for incubation, and defending their young when ex-cluded. The native Americans kill vaft nymbers; not to eat, for they are not fit even for the banquet of a favage, but to convert their large bags into purses and tobacco pouches. Some authors fay the pelican lives 60 or 70 years. Capt. Keeling, in his voyage to Sierra Leona, fays the pelicans there are as large as Iwans, of a white colour, with exceeding long bills; and M. Thevenot, in his Travels to the Levant, obfirves that the pelicans about fome part of the Nile near the Red Sea fwim by the bank fide like geefe, in fuch great numbers that they cannot be counted. F. Morolla, in his voyage to Congo, fays pelicans are often met with in the road to Singa, and are all over black, except on their breast, which is of a sless

colour like the neck of a turkey. He adds, the father Francis de Pavia informed him, that on he journey to Singia he observed certain large whi birds, with long beaks, necks, and feet, whice whenever they heard the sound of an infrumed began immediately to dance, and leap about the rivers, where they always reside, and where they were great lovers: this, he said, he tool great pleasure to contemplate, and continued of upon the banks of the rivers to observe.

6. PELICANUS Pussus, or the great booby, a ed by Linnæus Pelicani Baffani puffus, frequet the rivers and fea-coafts of Florida, pursuing a devouring fishes. Mr Catesby informs us, that has feveral times found them difabled, and for times dead, on the shore; whence he thinks t they meet with sharks or other voracious filt which destroy them. The bird is about the f of a goofe; the head and neck remarkably pro nent; the back of a brown colour; the belly du white; the feet black, and shaped like those of corvorant; the head elegantly spotted with whi the wings extend fix feet when spread. Both fpecies and the sula have a joint in the up mandible of the bill, by which they can rail confiderably from the lower one without open the mouth.

7. Pelicanus sula, the booky, is fomewhat than a goofe; the basis of the bill yellow, bare feathers; the eyes of a light grey colours lower part of the bill of a light brown. The lours of the body are brown and white; but ried fo in different individuals, that they can be described by them. Their wings are very k their legs and feet pale yellow, shaped like the of corvorants. They frequent the Bahama illa where they breed all months in the year, la 1, 2, or 3 eggs, on the bare rock. While yo they are covered with a white down, and co nue fo till they are almost ready to fly. feed on fish, but have a very trot blesome en in the man-of-war bird, which lives on the f obtained from other fea-birds, particularly booby. Such readers as defire further information respecting this numerous genus, may consult ward's Kistory of Birds; Natural History of J. ca : Mem. de l' Academic Royale des Sciences, & 1666 jusqu'à 1699, tom. 3. p. 186; Willows Pennant's British and Artin Zoology; and tham's Synorsis of Birds; the last of which i fullest and most scientifical of any we have yet PELICARO, a town of Naples in Bafilicat

PELLETED. adj. [from pellet.] Confifting

of bullets.

My brave Egyptians all,

By the discandying of this pelleted storm,

Lie graveless. (1.) PELLETIER, Claud, a learned French lawyer, born at Paris, in 1630. He was counsellor of the Chatelet and Prefident of the Merchants; in which office, he constructed the celebrated quay which bears his name. He succeeded M. Colber, as comptroiler general of the finances. He wrote feveral books on Law; also Comes Theologus, Comes Rusticus, &c.

(2.) Pelletier, James, M. D. and an eminent mathematician, born at Mans in 1517. He was an excellent Latin and French poet, a good orator, physician, and grammarian. He wrote Oeuvres Poetiques Gommentaires Latins sur Euclide, and a Treatise on Orthography. He died at Paris, in

1583.

(3.) PELLETIER, Bertrand a late eminent French chemift, born at Bayonne in 1761. He was admitted a pupil in the chemical, laboratory of the French college, when very young, and gave early proofs of genius. He studied 5 years under the celebrated prof. Darcet, and at 21 years of age, published Observations on the Arfenical Acid. ter this his discoveries and publications became numerous: on the crystallization of sulphur, cinnabar and the diliquescent salts; on zeolites; on the oxygenated muriatic acid; on æthers, phofphorus, the phosphoric acid, &c. But during his operations on that most astonishing production of chemistry, phosphorus, he burned himself so dangerously, that he was confined to bed for 6

months. On his recovery, he began his ana of the plumbagos of various countries; and ring his analysis of the carbonat of bary discovered by experiments on various ani that this earth is a true poison. He also and ed strontian, verditer, &c. &c. and was goin fuccessfully with his chemical experiments, v he at last fell a facrifice to his thirst after scient by respiring the oxygenated muriatic gas t had almost killed him instantaneously; but he recovered for the moment, it induced a vulfive afthma, and pulmonary confump which cut him off in the flower of his age; he died at Paris, July 21st. 1797. He w member of the Academy of Sciences at Paris

(1.) \* PELLICLE. n. f. [pellicula, Latin.] thin skin .- After the discharge of the sluid pellicle must be broke. Sharp's Surgery. 2. often used for the film which gathers upon h impregnated with falts or other substances

evaporated by heat.

(2.) Pellicle, among physicians, deno thin film or fragment of a membrane.

PELLISON, or Pelisson Pontanier, an author of the 17th century, was born at B in 1624, and educated in the Protestant rel In 1652 he purchased the post of secretary king, and in 1657, became first deputy t Fouquet. He suffered by the disgrace of minister; and in 1661 was confined in the B whence he was not discharged till 1665. I his confinement he applied himself to the of controverly; and in 1670 abjured the P tant religion. Lewis XIV. rewarded him w annual pension of 2000 crowns; and several In 1676 he had the abbey of Giment, and years after the priory of St Orens at Auch died at Versailles, in 1693. His principal are, 1. The History of the French Academ Reflections on religious Disputes, &c. in 12mo. 3. The History of Lewis XIV. 5 torical Letters and Miscellanies in 3 vols 12

When we have dash'd them to the gro Then defie each other, and pell mell Make work upon ourfelves. Shak. King

Never yet did infurrection want Such moody beggars, starving for a time Of pell-mell havock and confusion. -After these senators have battered epi government, with their paper shot, then th pell-mell upon the service book. White-

He knew when to fall on pell-mell, l'udibras. To fall back and retreat as well. (1.) PELLS. n. f. [pellis, Lat.] Clerk of the il, as officer belonging to the exchequer, who sen every teller's bill into a parchment roll calthe full acceptorum, the roll of receipts; and also makes mother roll called pellis exituum, a roll of be abovements. Billey.

(L) Pills, CLERK OF THE. See CLERK, No

FILLUCID. adj. [pellucidus, Lat.] Clear; a frest; not opake; not dark.—This is the in whereof may be extracted, and the by damaging the texture. Woodward.—If water made warm in any pellucid vetfel emptied of the water in the vacuum will bubble and boil ethemently as it would in the open air in a likt upon the fire, till it conceives a much the heat. Newton's Opticks.

MILUCIDITY. n. f. [from pellucid.] MILLUCIDNESS. Transparency; clearwopacity. - The air is a clear and pellucid in which the infentible particles of matter float, without troubling the pelluof the air; when on a fudden by a precipithey gather into visible misty drops that ecouds. Locke.—We confider their pellucidthe vast quantity of light, that passes them without reflection. Keil.

LUSIN, a town of France in the depart-Rhone and Loire; 12 miles E. of St

1001A, in fabulous history, the daughter Artistis, and mother, by him, of ÆGISTHU!. With articles.

BLOPIA, a festival observed by the Eleans in or of Pelops. A ram was facrificed on the thos, which both priefts and people were proof from partaking of, on pain of excommufrom Jupiter's temple; the neck only Matted to the officer who provided wood for office. This officer was called Mukius; and poplar was the only wood made use of at manity.

DOPIDAS, the fon of Hippoclus, a celemeral of Thebes, in Boeotia. He was and of an illustrious family, and had imknows, which he distributed with uncomibrality among the poor citizens. He was Finate friend of Epaminondas, and these two by their valour and public spirit, raised country to a degree of importance and glory, tever enjoyed before or after them. had been for some time under the govern-Spartan tyrants, who exiled Pelopidas and friends of Theban independence; but dus returned from Athens, with a chosen at twelve other exiled Thebans who killed special tyrants, and restored liberty to their The Thebans then elected him gover-Beotia, and affociated Epaminondas with and these two great men immortalized their by the decifive victory at Leuctra. (See In a war which the Thebans aftercarried on against Alexander tyrant of re, Pelopidas was appointed commander, but had nearly loft his life, by trufting himself un-armed in the tyrant's camp. Tho, in the character of an ambassador he was seized as a prisoner, but rescued by Epaminondas. He was afterwards killed in a battle with the fame tyrant, tho' his troops obtained the victory A. A. C. 364; but his death was amply revenged by the Thebans. who took Pheræ, and killed the tyrant. Statues of brass were erected, and every other mark of respect paid to the memory of Pelopidas; and his children were endowed with a large territory of land. Xenopb. Plut. C. Nep. Diod. Polyb.

L

(1.) PELOPONNESIAN, adj. Of or belong-

ing to Peloponnesus.

(2.) PELOPONNESIAN WAR, Peloponnefiacum Bellum, a famous war, which lasted for 27 years between the Athenians and the inhabitants of Peloponnesus, with their respective allies, and which ended in the overthrow of the Athenian Republic, and its subjection to 30 tyrants. It is the most interesting of all the wars, which happened among the inhabitants of ancient Greece. See ATTICA,

PELOPONNESUS, a large peninfula in the S. of Greece; fo called, from Pelopis ween, or in/ula, though properly not an illand, but a peninfula; yet wanting but little to be one, viz. the isthmus of Corin h, ending in a point. (Dionys.) It was anciently called Apia and Prlasgia; and is fituated between the Ægean and Ionian seas, and refembling a plantane-leaf, by its angular recesses or bays. (Pling, Strabo, Mela.) Strabo adds from Homer, that one of its ancient names was Argos, with the epithet Achaicum, to distinguish it from Thessaly, called Pelasgicum. It was divided into fix parts; viz. Argolis, Laconica, Messenia, Elis, Achaia, and Arcadia. (Mela.) It is now called the MOREA. It comprehended the most fouthern parts of Greece; and was 200 miles long, and 140 broad.

PELOPS, in fabulous history, the son of Tantalus king of Phrygia. In his infancy he was murdered by his father, cut in pieces, and ferved up at a feast to the gods, to try their divine omniscience. None of them however eat of him, but Ceres, who eat one of his shoulders. Jupiter restored him to life, and gave him an ivory shoulder which had the miraculous power of healing all discases by its touch; and he punished the impiety of Tantalus, by condemning him to eternal hunger and thirit, in the view of excellent food and drink in hell. (See TANTALUS.) Pelops afterwards went into Elis, where he became a fuitor of HIPPODAMIA, the daughter of OENO-MAUS, K. of Pifa, who being warned by an oracle that he would perish by the hands of his fon-in-law, and, being himself an excellent charioteer, refused to marry her to any person, but the man who should overcome him in a chariot The previous condition being, that those whom he defeated were to forfeit their lives, 13 young princes had already perished. Pelops, however, ventured to compete with him, and having previously bribed MYRTILUS, his charioteer, to mount him on an insufficient chariot, Oenomaus was killed in the course, but with his last breath. requested Pelops to avenge him on Myrtilus; which he accordingly did, by throwing him into the fea, from him named Myrioum Mare. lops then married Hippodamia, by whom he had ATREUS, THYESTES, Pittheus, Troezen, &c. afterwards became so powerful that all the territory of Greece beyond the isthmus of Corinth was from him named Peloponnesus. After his death he received divine honours, and was revered above all the other heroes of Greece. had a temple at Olympia, erected by Hercules pear that of Jupiter.

PELORIAS, in ancient geography, one of PELORIS, or the 3 capes of Sicily, now called PELORUS, FARO. It is faid to have been fo named from Pelorus, the pilot of the ship, which carried Hannibal out of Italy, whom that general, when he found the tide driving the veffel into the ftraits of charybdes, killed, on the supposition that he was going to betray him to the Romans; and therefore to gratify his manes, he named the cape after him.

PELOSO, a town of Naples, 35 miles W. of Bari. Lon. 16. 20. E. Lat. 41. 26. N.

PELOUAILLE, a town of France, in the dep. of Maine and Loire, 5 miles NE. of Angers, and

# PELT. n. f. [from pell'n, Lat.] 1. Skin; hide. -The camel's hair is taken for the skin or pelt with the hair upon it. Brown's Yulgar Errours .-

A scabby tetter on their pelts will stick. Dryd. 2. The quarry of a hawk all torn. Ainfavorth.

To PELT. v. a. [poltern, German, Skinner; contracted from pellet, Mr Lyc. 1. To strike with something thrown. It is generally used of fomething thrown, rather with teazing frequency than destructive violence.-

Poor naked wretches wherefo'er you are That bide the pelting of this pitiless storm! Shak. The chiding billows feem to pelt the clouds.

No zealous brother there would want a stone To maul us cardinals, and pelt pope Joan. Dryd. -Obscure persons have insulted men of great worth, and pelied them from coverts with little objections. Atterbury .- I might eafily with stones pelt the metropolis to pieces. Swift. throw; to cast.—

My Phillis me with pelted apples piles. Dryd. PELTA, a small, light, manageable buckler, used by the ancients. It was worn by the Ama-It is faid to have resembled an ivy leaf in form; by others it is compared to the leaf of an Indian fig-free; and by Servius to the moon in her nrft quarter.

PELTARIA, in botany, a genus of the filiculosa order, belonging to the tetradynamia class of plants; and in the natural method ranking under the 39th order, Siliquo/a. The filicula is entire, and nearly orbiculated, compressed-plane, and not openine.

\* PELTING. adj. This word in Shakespeare fignifies, I know not why, mean; paltry; pitiful.

Every pelting petty officer Would ale his heav'n for thunder. Sbak.

Fogs, falling in the land, Have every pelting river made to proud,

. That they have overborn their continents. Shak. They from theepcotes and poor pelting villages Enforce their charity. Shakespeare.

A tenement or pelting farm. Shak. \* PELTMONGER. n. f. [pellio, Lat. peli; monger.] A dealer in raw hides.
(1.)\* PELVIS. n. f. [Latin.] The lower par the belly.

(2.) PELVIS. See ANATOMY, Index. PELUSIUM, in ancient geography, a m and strong city of Egypt, without the Delta stadia from the sea; tituated amidst marshes; hence its name and its strength. It is called key or inlet of Egypt by Diodorus and Hirt which being taken, the reft of Egypt lay exposed to an enemy. It is called Sin by Eze Pelufiacus the epithet. (Virg. Diod.) From ruins arofe Damietta. Peluhum was often t and pillaged during the wars of the Romans Greeks, and the Arabs. But in spite of so disasters, the preserved to the time of the Cru her riches and her commerce. The Chr princes, having taken it by ftorm, facked it never again role from its ruins; and the in tants went to Damietta. See Damietta.

(1.) PEMBA, or PENDA, an island in t Indian Sea, near the coast of Africa; 100 m circumference; governed by a king, who is tary to the Portuguese. Lon. 40. o. E. Lat. 5.

(2.) PEMBA, a province of Africa, in C Banza, or St Salvador, is the capital, according to Mr Cruttwell; but Dr Brookes fays,

(3.) PEMBA is the capital of the above vince; in Lon. 18. 25. E. Lat. 7. 30. S.

PEMBRIDGE, a town of Herefordibire, Arrow; with an woollen manufacture, market on Tuesday; 12 miles NW. of Her and 145 WNW. of London. Lon. 2. 42. W 52. 14. N.

(1.) PEMBROKE, a city of S. Wales, of of Pembrokeshire. It is fituated upon a of Milford-Haven, about 258 miles from Le It has two handlome bridges over two fmall which run into a creek, forming the W. a promontory. It is well inhabited, has good houses, one church, and a custom-ho has one long ftraight street, upon a narrow of a rock; and the two rivers feem to arms of Milford-Haven, which ebbs and close up to the town. It is governed by or, bailiffs, and burgefics; and fends one ber to the British parliament. It was an fortified with walls, and a magnificent call ed on a rock at the W. end of the town. rock, under the chapel, is a natural cavern Wogan, remarked for a very fine echo: supposed to have been a store-room for the rifon, as there is a staircase leading into the castle: it has also a wide mouth towar river. This structure being burnt a few y ter it was erected, it was rebuilt. It w birth-place of Henry VII. and is memora the brave defence made by the garrison for It is to miles SE, of Haverford-w WSW. of Caermarthen, and 237 W. by Lundon. Lon. 5. 3. W. Lat 51. 37. N. (2.) PEMBROKE, Countefsof. See HERBER

(3.) PEMBROKE, a town of Massachusi Plymouth county, 31 miles S. by E. of I containing 1954 citizens, in 1795.

(4.) Penerous, a township of New

kire, in Rockingham county, on the E. fide of the Merimick, opposite Concord, and 5 miles SE. of

x. In 1795, it had 956 citizens. PEMBROKESHIRE, a county of Wales, bounded on all fides by the Irish sea, except on the E where it joins to Caermarthenshire, and on to Cardiganshire. It lies the nearest to leund of any county in Wales; and extends in from N. to S. 35 miles, and from E. to W. # Ru about 140 in circumference. It is diinto feven hundreds, and contains about 🛺 🚾 acres, one city, 8 market towns, two fomb, and 145 parishes: and, according to the reper made to the imperial parliament, on the 26th me 1801, contained 11,776 houses; 25,165 ics, and 30,650 females; in all, 55,815 fouls. ties in the province of Canterbury, and diocese 2 David's. It fends three members to parliawit, viz. one for the flire, one for Haverfordand one for the city. The air of Pembrokein, considering its fituation, is good; but it is good; but it is good. The foil is peral best farthest from the sea. erally fruitful, especially on the sea-coasts; its mains produce pasture sufficient to maintain sumbers of theep and goats. Its chief comties are corn, cattle, pit-coal, marl, fish, and Among these last are falcons, called here Amongst the birds common here are highway sea-birds, that breed in the Isle of Ramly, and the adjoining rocks called The Bishop and uther. About the beginning of April, such na appear incredible to those who have not There is a division of the county hid his in the Welch, which means a large pro piain. It is inhabited by the descendants ##Femings, placed there by Henry I. to curb e Work, who were never able to expel them, wh they often attempted it. On the coasts the county, is found a kind of alga or laver, have maria of Camden. It is gathered in ing; of which the inhabitants make a fort of ed, called in Welch Ibavan, and in English at batter.

PEMIGEWASSET, a river of New Hampwhich rifes from the E. side of a hill, and running 50 miles, joins the Winipiscogee, at autown, and forms the MERRIMACK.

MUSSISAQUEWAKEE, a river of the Uled States, in Maine, which runs into the Athote, in Lon. 68. 20. W. Lat. 44. 23. N.

it.) PEN, in geography, a town of Somerset-line, in England, on the NE. fide of Wincaunwhere Kenwald, a West Saxon king, so todefeated the Britons, that they were never wable to make head against the Saxons; and many ages after this, Edmund Ironfide before, i. e. in 1001, defeated the Saxons in had fame place.

(2) PEN. n. f. [penna, Latin.] 1. An instru-

lest of writing.

Never durst poet touch a pen to write, Usul his ink were temper'd with love's fighs.

Eternal deities l Who write whatever time shall bring to passa ·With pens of adamant on plates of brafe.

Dryden. He takes the papers, lays them down again ; And, with unwilling fingers, tries the pen.

—He remembers not that he took off pen from paper till he had done. Pell.-I can, by defigning the letters, tell what new idea it shall exhibit the next moment, barely by drawing my pen over it, which will neither appear, if my hands stand still; or though I move my pen, if my eyes be shut. Locke. 2. Feather.-

The pens, that did his pinions bind,

Were like main-yards with flying canvas lin'd.

3. Wing; though even here it may mean fea-

Feather'd foon and fledg'd,

They summ'd their pens. Milton. A small inclosure; a 4. [from pennan, Saxon.] coop.—My father stole two geefe out of a pen. Sbak.-The cook was ordered to drefs capons for supper, and take the best in the pen. L'Estr .-

She in pens his flocks will fold. Dryden. Ducks in thy ponds, and chickens in thy pens,

And be thy turkeys num'rous as thy hens.

King, (3.) A PEN, is usually formed of a goose's quill. Pens are also sometimes made of filver, brass, or iron. Dutch pens are made of quille that have passed through hot ashes, to take off the groffer fat and moisture, and render them more transparent.

(4.) Pen, or Penstock. Sec Penstock.

(5.) Pen, Fountain, is a pen made of filver, brass, &c. contrived to contain a considerable quantity of ink, and let it flow out by gentle degrees, fo as to supply the writer a long time without being under the necessity of taking fresh ink. The fountain pen is composed of several pieces, as in Plate CCLXXI. where the middle piece P carries the pen, which is screwed into the infide of a little pipe, which again is foldered to another pipe of the same bigness as the lid G; in which lid is foldered a male screw, for screwing on the cover, as also for stopping a little hole at the place and hindering the ink from passing through it. At the other end of the piece F is a little pipe, on the outside of which the top-cover H may be ferewed. In the cover there goes a port-crayon, which is to be screwed into the last mentioned pipe, in order to stop the end of the pipe, into which the ink is to be poured by a funnel. use the pen, the cover O must be taken off, and the pen a little shaken, to make the ink run more freely.

(6.) Pan, GEOMETRIC, an instrument in which, by a circular motion, a right line, a circle, an ellipfe, and other mathematical figures, may be described. It was first invented and explained by John Baptist Suardi, in a work intitled Nouvo Istromenti per la Deservazione di diverse Curve Antichi e Moderne, &c. Several writers had observed the curves arising from the compound motion of two circles, one moving round the other; but Suardi first realized the principle, and first redu-

ced it to practice. It has been lately introduced with fuccess into the steam engine by Watt and Bolton. The number of curves this instrument can deferibe is truly amazing; the author enumerates not less than 1273, which (he says) can be described by it in the simple form. It is thus described in Adam's Geometrical and Graphical Estays. Plate CCLXXI. fg. 1. represents the geometric pen; A, B, C, the stand by which it is supported; the legs A, B, C are contrived to fold one within the other for the convenience of packing. A strong axis D is fitted to the top of the frame; to the lower part of this axis any of the wheels (as i) may be adapted; when screwed to it, they are immoveable. EG is an arm contrived to turn round upon the main axis D; two fliding boxes are fitted to this arm; to thefe boxes any of the wheels belonging to the geometric pen may be fixed, and then flid so that the wheels may take into each other, and the immoveable wheel i: it is evident, that by making the arm EG revolve round the axis D, these wheels will be made to revolve also, and that the number of their revolutions will depend on the proportion between the teeth. Fg is an arm carrying the pencil; this arm slides backwards and forwards in the box ed, in order that the distance of the pencil from the centre of the wheel h may be eafily varied; the box ed is fitted to the axis of the wheel b, and turns round with it, carrying the arm fg along with it: it is evident, therefore, that the revolutions will be fewer or greater in proportion to the difference between the numbers of the teeth in the wheels b and i; this bar and focket' are eafily removed for changing the wheeis. When two wheels only are used, the bar fg moves in the same direction with the bar EG; but if another wheel is introduced between them, they move in contrary directions. The rumber of teeth in the wheels, and consequently the relative velocity of the epicycle or arm  $f_g$ , may be varied in infinitum. The numbers we have used are 8, 16, 24, 32, 40, 48, 56, 64, 72, 80, 88, 96. The construction and application of this instrument is so evident from the figure, that nothing more need be pointed out than the combinations by which various figures may be produced. We shall take two as examples: The radius of EG (fig. 2.) must be to that of fg as to to 5 nearly; their velocities, or the number of teeth in the wheels, to be equal; the motion to be in the same direction. If the length of fg be varied, the looped figure delineated at fig. 3. will he produced. A circle may be described by equal wheels, and any radius but the bars must move in contrary directions. To describe by this circular motion a straight line and an ellipsis. For a ftraight line, equal radii, the velocity as r to 2, the motion in a contrary direction; the same data will give a variety of ellipses, only the radii must be unequal; the ellipses may be described in any direction." See fig. 4.

(7.) PEN, SEA. See PENNATULA.

\* To PEN. v. a. pret. and part. past. pent. [pennan and pindan, Saxon.] 1. To coop; to thut up; to incage; to imprison in a narrow

Away with her, and pen her up. Sbak.

(t.) PENANCE. n. f. [penence, old French; in passence.] Infliction either publick or private infered as an expression of repentance for in.

And bitter penance, with an iron whip, Wa wont him once to disciple every day.

Spenser.

Mew her up,

Shak.

No penitentiary, though he had enjoined him been fo fireight penance to expiate his first offence, which have counselled him to have given over the factor of his right. Bacon.—

The scourge hour hour

Cik us to penance. Milton.

A Lorain furgeon, who whipped the naked part

Milton are a state of nettles till all over bliftered,

Modaded him to perform this penance in a sharp

the had. Temple.

(1.) PENANCE is a punishment, either voluntayor imposed by authority, for the faults a permanagements of the Romish church. Besides fasttums, abstinence, and the like, which are the
management of penance, there are others of
management and the like, which are the
management of penance, there are others of
management and the like, which are the
management of penance, there are others of
management of ave-marys, paternosters, and cremanagement of stripes. In Italy and Spain, it
management of stripes. In Italy and Spain, it
management of stripes.

In Italy and Spain, it
management of stripes of stripes of stripes of stripes.

The stripe of stripes of stripes of stripes of stripes of stripes.

PEN-ANGLAS, a cape of S. Wales, on the N. Cart of Pembrokeshire. Lon. 4. 59, W. Lat. 51. S. N.

PENATES, in Roman antiquity, a kind of tukur deities, either of countries or particular

houses; in which last sense they differed in 100thing from the lares. See LARES. They were properly the tutelar gods of the Trojans, and were adopted by the Romans, who gave them the title of penates.

PENAUTIER, a town of France, in the depoof Aude, and ci-devant prov. of Languedoc; 4 miles N. of Carcassone. Lon. 2. 25. E. Lat. 43. 18. N.

PENBRAY, a cape on the S. coast of Wales, and county of Caermarthen, in the Bristol Channel; 3 miles S. of Kidwelly.

PENBUGHTOE HEAD, a cape of S. Walcs, on the N. coast of Pembrokeshire. Lon. 5. 5. E. Lat. 51. 56. N.

(1.) PENCAITLAND, a parish of Scotland, in E. Lothian, nearly in the form of an oblong fquare; 4 miles long from E. to W. and 3 broad. The Tyne divides nearly into 2 equal parts. The foil is wet and clayey, and the old mode of farming prevails. The climate is falubrious; freestone and coals abound; and a coal engine has been erected. There are feveral mineral waters. There are 155 acres under strong oaks, and birch; and 19st under forest trees. Some of the oaks are above 5½ feet thick. At Winton House there are also some fine trees. The population, in 1793, was 1033; increase 147 since 1755. There are 8 corn and barley mills, feveral threshing mills, and 3 for lint, &c. befides a bleachfield.

(2.) PENCAITLAND, EASTER, two villages (3.) PENCAITLAND, WESTER, in the above parish, which, with those of Nisbet and Winton, contained 512 inhabitants in 1793.

PENCARROW, a cape of Cornwall, on the S. coast of the English Channel; 2 miles E. of the mouth of the Forest

mouth of the Fowey.

\* PENCE. n. f. The plural of penny; formed from pennies, by a contraction usual in the rapidity of colloquial speech.—The same servant found one of his fellow-servants, which owed him an hundred pence, and took him by the throat.

(1.) \* PENCIL. n. f. [penicillum, Latin.] 1. A small brush of hair which painters dip in their colours.—The Indians will pericelly represent in feathers whatsoever they see drawn with pencils. Heylyn.—

Pencils can by one flight touch reftore Smiles to that changed face, that wept before. Dryden.

Nature's ready pencil paints the flow'rs.

Dryden.

—A fort of pictures there is, wherein the colours, as laid by the *pencil* on the table, mark out very odd figures. Locke.—

The faithful pencil has defign'd

Some bright idea of the master's mind. Pope. 2. A black lead pen, with which cut to a point they write without ink.—Mark with a pen or pencil the most considerable things in the books you desire to remember. Watts. 3. Any instrument of writing without ink.

(2.) Pencils, (§ 1. Def. 1.) are of various kinds, and made of various materials; the largest forts are made of boars bristles, the thick ends of which are bound to a stick, bigger or less according to the uses they are designed for: these, when

laige,

larges are called brushes. The finer forts of pencils are made of camels, badgers, and squirrels hair, and of the down of fwans; these are tied at the upper end with a piece of strong thread, and inclosed in the barrel of a quill. All good pencils, on being drawn between the lips, come to a fine point.

(3.) Pencies, for drawing, are thade of long pieces of biack lead or red chalk, placed in a groove cut in a flip of cedar; on which other pieces of cedar being glued, the whole is planed round, and one of the ends being cut to a point,

it is fit for use.

\* To Pencil. v. n. [from the noun.] paint.

Since dishonour trafficks with man's nature,

He is but outfide: pencil'd figures are

Ev'n fuch as they give out. Sbak. Nature pencils butterflies on flow'rs. Harte. PENCKUM, a town of Germany, in Anterior

Pomerania; 13 miles SW. of Old Stettin, and 44 NNW. of Custrin. Lon. 31. 59. E. Ferro. Lat. 53. 15. N.

(1.) PENDA, the first king of Mercia, founded that kingdom, A. D. 616. He was killed by Ofwy, K. of Northumberland, A. D. 655. See MERCIA.

(2.) PENDA. See PEMBA, No 1.

PENDALIUM, a promontory of Cyprus.

(1.) \* PENDANT. n. f. [ pendant, French.] 1. A jewel hanging in the ear.

Some hang upon the pendants of her ear.

2. Any thing hanging by way of ornament. The smiling fendant which adorns her so.

Waller. 3. A pendulum. Obsolete.-To make the same bendant go twice as fast as it did. Digby. 4. A. small flag in thips.

(2.) PENDANTS, (§ 1. def. 1.) are often compos-

ed of diamonds, pearls, and other jewels.

(3.) PENDANTS, in heraldry, parts hanging down from the label, to the number of three, tour, five, or fix at most, resembling the drops in the Doric freeze. When they are more than three, they must be specified in blazoning.

(4.) PENDANTS OF A SHIP, are those freamers, or long colours, which are split and divided into two parts, ending in points, and hung at the head

of mafts, or at the yard-arm ends.

\* PENDENCE. n. f. [from pendeo, Lat.] Slopeness; inclination.—The Italians give the cover a

graceful pendence or flopeness. Wotton

\* PENDENCY. n. f. [from pendeo, Lat.] Sufpenfe; delay of decision.-Nor can the appellant

allege pendency of fuit. Ayliffe.

PENDENE-Vow, a town of Cornwall, on the N. coaft, by Morvath. There is here an unfathomable cave under the earth, into which the fea flows at high water. The cliffs between this and St Ives shine as if they had store of copper, of which indeed there is abundance within land.

PENDENNIS, a peninfula of Cornwall, at the mouth of Falmouth-haven, a mile and a half in compass. On this Henry VIII. erected a castle, opposite to that of St Maw's, which he likewise built. It was fortified by Q. Elizabeth, and ferved them for the governor's house. It is one of the largest castles in Britain, and is built on a his rock. It is fronger by land than St Maw's, b ing regularly fortified, and having good or

\* PENDENT. adj. | pendens, Latin; for write pendant, from the French.] 1. Hanging. With ribbons pendent, flaring about her hea

Desperate lady near a purling stream, Or lover pendent on a willow tree. Pbili. 2. Jutting over.

A pendent rock,

A forked mountain, or blue promontory. She 3. Supported above the ground.—

Milt

A ridge of pendent rock Over the vex'd abyss.

PENDERACHIA. See Paphlagonia. PEN-DINAS, a cape of Wales, on the coast of St Bride's Bay. Lon. 5. 10. W. Lat.

\* PENDING. n. f. [pendente lite.] Depci ing; remaining yet undecided.—A person, pc. ing fuit with the diocefan, shall be defended in t

possession. Ayliffe.

(1.) PENĎĽETON, a county of S. Caroli in Washington district, bounded N. by Gre ville, E. by Laurens Co. SE. by Abbeville, S. a W. by the Savannah, which divides it from orgia. It contained 3734 citizens, and 834 fla in 1795. The furface is partly hilly, but fert The court house is 52 miles W. of Cambridge

(2.) PENDLETON, a mountainous county Virginia; bounded on the NW. by Randol NE. by Hardy, E. by Rockingham, and SW. Bath counties. It is 40 miles long, and 30 brox and, in 1795, contained 2306 citizens, and flaves. It is watered by the S. branch of the Prankford is the capital. tomac.

\* PENDULOSITY. n. f. from per \* PENDULOUSNESS. \ lour. \ The fiat hanging; fuspension.—His slender legs he encr ed by riding, that is, the humours descended

on their pendulofity. Brown. \* PENDULOÙS. adj. [pendulus, Lat.] Ha

ing; not supported below-

All the plagues, that in the pendulous air Hang fated o'er men's faults, light on thy dat ters. Sbak.

-Bellerophon's horse, fram'd of iron, and pla between two loadstones with wings expanse bung pendulous in the air. Brown .- The gride are furnished with three roots, and in the jaw often four, because these are pendulous.

(1.) \* PENDULUM. n. f. [pendulus, Lat. dule, Fr.] Any weight hung so as that it may fily fwing backwards and forwards, of which great law is, that its oscillations are alway :

formed in equal time.-

Upon the bench I will fo handle 'em, That the vibration of this pendulum Shall make all taylors yards of one

 Unanimous opinion. (2.) A PENDULUM is a vibrating body fur ed from a fixed point. For the history of the vention, see CLOCK, 1 2. The theory of the dulum depends on that of the inclined p Hence, to understand the nature of the pender it will be necessary to promise some of the parts

ties of this plane; referring however, to Inclinto Plant, and MECHANICS, Part II. Sed. IV. is the demonstration. I. Let AC (fig. 1. Plate CCLXXII.) be an inclined plane, AB its perpendeniar height, and D any heavy body: then the tax: which impels the body D to defeend along the peliced plane AC, is to the absolute force of great as the height of the plane AB is to its lexal AC; and the motion of the body will be imirally accelerated. II. The velocity acquired nergiven time by a body descending on an incan plane AC, is to the velocity acquired in the time time by a body falling freely and perpendicritily as the height of the plane AB to its length AC. The final velocities will be the fame; the faces described will be in the same ratio; and the times of defeription are as the spaces described III. If a body descend along several contiguous panes, AB, BC, CD, (fig. 2.) the final velocity, musely, that at the point D, will be equal to the tal velocity in defeending through the perpendi-AE, the perpendicular heights being equal. box, if there planes be supposed indefinitely and numerous, they may be conceived to has a curve; and therefore the final velocity acd by a body in descending through any curve to be equal to the final velocity acquired in defeeting through the planes AB, BC, CD, or betat in descending through AE, the perpendibeights being equal. IV. If from the upper war extremity of the vertical diameter of a the time of descent along the cod will be equal to the time of defcent the vertical diameter; and therefore the nd of descent through all cords in the same drawn from the extremity of the vertithe lengths of the planes. If, intead of one each be composed of several contiguous es familarly placed, the times of defcent along the planes will be in the same ratio. Hence, althe times of describing similar arches of circles lady placed will be in the subduplicate ratio iengths of the arches. VI. The same things to bodies projected upwhether they afcend upon inclined planes the arches of circles. The point or axis Separation of a pendulum is that point about in it performs its vibrations, or from which it Expended. the if all the matter in a pendulum were col-any force applied at this centre would gethe same angular velocity in a given time as the force when applied at the centre of gra-The length of a pendulum is equal to the te between the axis of fuspension and centre folditation. Let PN (fig. 3.) represent a pendu-fuspended from the point P; if the lower part 🛪 🕳 the pendulum he raifed to A, and let fall, it by its own gravity descend through the circu-Fach AN, and will have acquired the fame veat the point N that a body would acquire aniling perpendicularly from C to N, and will Leavour to go off with that velocity in the tan-VOL. XVII. PART L

gent ND; but being prevented by the rod of cord, will move through the arch NB to B, where, lofing all its velocity, it will by its gravity defeend through the arch BN, and, having acquired the fame velocity as before, will afcend to A. In this manner it will continue its motion forward and backward along the arch ANB, which is called an ofcillatory or wibratory motion; and each twing is called a wibration. PROP. I. If a pendulum vibrates in very fmall circular arches, the times of vibration may be confidered as equal, whatever be the proportion of the arches. Let PN (fig. 4.) be a pendulum; the time of describing the arch AB will be equal to the time of describing CD; these arches being supposed very small. Join AN; CN; then fince the times of defcent along all cords in the fame circles, drawn from one extremity of the vertical diameter, are equal; therefore the cords AN, CN, and confequently their doubles, will be defcribed in the same time; but the arches AN, CN being supposed very small, will therefore be nearly equal to their cords: hence the times of vibrations in these arches will be nearly equal. Prop. II. Pendulums which are of the fame length vibrate in the fame time, whatever be the proportion of their weights. This follows from the property of gravity, which is always proportional to the quantity of matter, or to its iner-When the vibrations of pendulums are compared, it is always understood that the pendulums deferibe either fimilar finite ares, or ares of evaneicent magnitude, unless the contrary is men-tioned. Prop. III. If a pendulum vibrates in the fmall arc of a circle, the time of one vibration is to the time of a body's falling perpendicularly through half the length of the pendulum as the circumference of a circle is to its diameter. Let PE (fig. 5.) be the pendulum which deferibes the arch ANC in the time of one vibration; let PM be perpendicular to the horizon, and draw the cords AC, AN; take the arc Ee infinitely small, and draw EFG, of perpendicular to PN, or parallel to AC; describe the semicircle BGN, and draw er, gi perpendicular to EG: now let i= time of descending through the diameter 2 PN, or through the cord AN: Then the velocities gained by falling through 2PN, and by the pendulum's descending through the arch AE, will be as √2PN and √Bi; and the space described in the time t, after the fall through 2PN, is 4PN. But the times are as the spaces divided by the velocia

Therefore  $\sqrt{\frac{4PN}{2PN}}$  or  $2\sqrt{2PN}$ ;  $t::\frac{E_c}{\sqrt{BF}}$ : time of describing  $E_c = \frac{t \times E_c}{2\sqrt{2PN} \times EF}$ . But in the similar triangles PEF,  $E_{er}$ , and KCF,  $G_{gs}$ , As  $PE = PN : EF :: E_{e:er} = \frac{FF}{PN} \times E_{es}$ . And  $KC = KD : FG :: G_g : G_s = \frac{FG}{KD} \times G_g$ . But  $er = G_s$ ; therefore  $\frac{EF}{PN} \times E_e = \frac{FG}{KD} \times G_g$ . Hence  $E_c = \frac{PN \times FG}{KD \times EF} \times G_g$ . And by substituting this

value of Ee in the former equation, we have the t×PN×FG×Gg time of describing E == 2KD×EF×√BF×2PN:

But by the nature of the circle FG=\sqrt{BF}\timesFN, and EF = VPN+PF×FN. Hence, by fubstitution we obtain the time of describing Ee =

t×PN× VBF×FN×Gg  $_{2\text{KD}} \times \sqrt{\text{PN} + \text{PF}} \times \text{FN} \times \sqrt{\text{BF} \times \text{2PN}} =$  $\frac{t \times \sqrt{PN} \times Gg}{2KD \times \sqrt{PN + PF}} \times \sqrt{2} = \frac{t \times \sqrt{2PN} \times Gg}{4KD \times \sqrt{PN + PF}}$ 

= 2BN × 12PN-NF × Gg. But NF, in its mean quantity for all the arches Gg, is nearly equal to NK; For if the femicirle described on the diameter BN, which corresponds to the whole arch AN, be divided into an indefinite number of equal arches Gg, &c. the fum of all the lines NF will be equal to as many times NK as there are arches in the fame circle equal to Gg. Therefore

t×√2PN the time of deferiting  $E_e = \frac{1}{2BN \times \sqrt{2PN - NK}}$ X Gg. Whence the time of describing the t×√2PN arch AED =  $\frac{1}{2BN \times \sqrt{2PN-NK}} \times BGN$ ; and the time of describing the whole arch ADC,

or the time of one vibration, is = t×√2PN 2BN×√2PN-NK × 2BGN. But when the

arch ANC is very small, NK vanishes, and then the time of vibration in a very small are is

 $\frac{t \times \sqrt{1PN}}{2BN \times \sqrt{2PN}} \times 2BGN = \frac{1}{2}t \times \frac{2BGN}{BN}.$ 

if t be the time of defcent through 2 PN; then fince the spaces described are as the squares of the times, 1 will be the time of descent through 1 PN: therefore the diameter BN is to the circumference 2BGN, as the time of falling through half the length of the pendulum is to the time of one vibration. Prop. IV. The length of a pendulum vibrating feconds is to twice the space through which a body falls in one fecond, as the fquare of the diameter of a circle is to the square of its cireumference. Let d = diameter of a circle = 1, e = circumference = 3'14159, &c. t to the time of one vibration, and p the length of the corresponding pendulum; then by last proposition  $c:d::\mathbf{1''}$ :

= time of falling through half the length of the pendulum. Let s = space described by a body falling perpendicularly in the first second: then fince the spaces described are in the subduplicate ratio of the times of description, therefore

 $1'' : \frac{a}{c} : : \sqrt{s} : \sqrt{\frac{1}{2}p}$ . Hence  $c^* : d^* : : 2s : p$ . It has been found by experiment, that in latitude 5110 a body falls about 16 11 feet in the first second: hence the length of a pendulum vibrating

feconds in that latitude is  $=\frac{32^22}{3.14159}$  = 3 feet

3'174 inches. PROP. V. The times of the vibra-

tions of two pendulums in fimilar arcs of circle are in a subduplicate ratio of the lengths of th pendulums. Let PN, PO (fg. 6.) be two pends lums vibrating in the familiar arcs AB, CD; th time of a vibration of the pendulum PN is to the time of a vibration of the pendulum PO in fabil plicate ratio of PN to PO. Since the arcs Al CO are fimilar and fimilarly placed, the time descent through AN will be to the time of desce through CO in the fubduplicate ratio of AN CO: but the times of descent through the ar AN and CO are equal to half the times of vibration of the pendulums PN, PO respective Hence the time of vibration of the pendulum P in the arch AB is to the time of vibration of t pendulum PO in the fimilar arc CD in the fuld plicate ratio of AN to CO: and fince the ra PN, PO are proportional to the similar ares Al CO, therefore the time of vibration of the pend lum PN will be to the time of vibration of pendulum PO in a fubduplicate ratio of PX PO. It the length of a pendulum vibrating conds be 39'174 inches, then the kingth of a p dulum vibrating half feconds will be 9 793 inch For  $1'': \frac{1}{4}'': : \sqrt{39^{\circ}174} : \sqrt{x}$ ; and  $1: \frac{1}{4}: : 39^{\circ}174$ 

Hence  $x = \frac{39^{\circ}174}{} = 9^{\circ}793$ .

length of pendulums vibrating in the fame to in different places, will be as the forces of gray For the velocity generated in any given time if rectly as the force of gravity, and inversely as quantity of matter. (See MECHANICS, P.I, S. Now the matter being supposed the same in h pendulums, the velocity is as the force of grave and the space passed through in a given time be as the velocity; that is, as the gravity. Since the lengths of pendulums vibrating in fame time in finall arcs are as the gravits forces, and as gravity increases with the latte on account of the spheroidal figure of the and its rotation about its axis; hence the leg of a pendulum vibrating in a given time will variable with the latitude, and the fame per lum will vibrate flower the nearer it is carried the equator. Prop. VII. The time of vibration of pendulums of the fame length, acted upon different forces of gravity, are reciprocally as square roots of the forces. For when the ma is given, the velocity is as the force and the and the fpace described by any given force i the force and square of the time. Hence lengths of pendulums are as the forces and fquares of the times of falling through them. thele times are in a given ratio to the times of bration; whence the lengths of pendulums as the forces and the fquares of the times of vi tion. Therefore, when the lengths are given forces will be reciprocally as the fquare of times, and the times of vibration reciprocal the square roots of the forces. Car. Let p=let of pendulum, g =force of gravity, and t = 1 of vibration. Then fince  $p = g \times t^2$ . Hence

 $p \times \frac{1}{t^2}$ ; and  $t = \sqrt{p \times \frac{1}{t^2}}$  That is, the force different places are directly as the lengths of

pendulums, and inversely as the fquare root the times of vibration; and the times of vi

him are directly as the square roots of the lengths of the pendulums, and inverfely as the square two of the gravitating forces. Prop. VIII. A gestalium which vibrates in the arch of a cyand describes the greatest and least vibrations nuclime time. This property is demonstrated type a supposition that the whole mass of the goddum is concentrated in a point: but this cant take place in any really vibrating body; when the pendulum is of finite magnitude, that is no point given in polition which dethe length of the pendulum; on the conbut the centre of ofcillation will not occupy the expice in the given body, when deferibing from parts of the track it moves through, but continually be moved in respect of the pendu-land during its vibration. This circumstance presented any general determination of the dispration in a cycloidal arc, except in the facts which concur in rendering the applicaof this curve to the vibration of pendulums ped in the measures of time the fource of erfor greater than those which by its peculiar ety it is intended to obviate; and it is now by dissied in practice. Although the times station of a pendulum in different arches be in equal, yet from what has been faid, it will that if the ratio of the least of these arches restell be confiderable, the vibrations will paymed in different times; and the difference, will become fenfible in the course rmore days. In clocks used for aftronopoles, it will therefore be necessary to k are of vibration; which it different te described by the pendulum when the tops time, there a correction must be apwith time shown by the clock. This corsuprefied in seconds of time, will be equal his of three times the difference of the rofthe given are, and of that of the are deby the pendulum when the clock keeps there ares being expressed in degrees; and the clock gain or lose according as the thefe arches is less or greater than the fe-Taus, if a clock keeps time when the penstrates in an arch of 3°, it will lose rot daily in an arch of 4 degrees. For 42-3 i=1 X 1 = 101 feconds. The length of a rod increases with heat; and the quanof expansion answering to any given degree of acperimentally found by means of a pyro-File Pyrometer;) but the degree of heat piren time is shown by a thermometer: but infirument should be placed within the at a height nearly equal to that of the a the pendulum; and its height, for this hould be examined at least once a day. by a table constructed to exhibit the daily of acceleration or retardation of the clock to every probable height of the thermothe corresponding correction may be ob-it is also necessary to observe, that the the of the thermometer during the inter-to be used. In Six's thermometer this may be easily obtained; but in thermomethe common construction it will be more to find this mean. It has been found, by

repeated experiments, that a brass rod equal in length to a fecond pendulum will expand or contract one rooodth part of an inch by a change of temperature of one degree in Fahrenheit's thermometer; and fince the times of vibration are in a fubduplicate ratio of the lengths of the pendulum, hence an expansion or contraction of one recodth part of an inch will answer nearly to one second daily: therefore a change of one degree in the thermometer will occasion a difference in the rate of the clock equal to one fecond daily. Whence, if the clock be to adjusted as to keep time when the thermometer is at 55°, it will lose 10 seconds daily when the thermometer is at 65°, and gain as much when it is at 45°. Hence the daily va-nation of the rate of the clock from summer to winter will be very confiderable. It is true indeed that most pendulums have a nut or regulator at the lower end, by which the bob may be raifed or lowered a determinate quantity; and therefore, while the height of the thermometer is the same, the rate of the clock will be uniform. But fince the frate of the weather is ever variable, and as it is impossible to be raising or lowering the bob of the pendulum at every change of the thermometer, therefore the correction formerly mentioned is to be applied. This correction, however, is in some measure liable to a small degree of uncertainty; and in order to avoid it altogether, feveral contrivances have been proposed by confiructing a pendulum of different materials, and fo disposing them that their effects may be in opposite directions, and thereby counterbalance each other; and thus the pendulum will continue of the same length. See No 6, 7, 8.

(3.) PENDULUM, ANGULAR, is formed of two pieces or legs like a fector, and is suspended by the angular point. This pendulum was invented with a view to diminish the length of the common pendulum, but at the fame time to preferve or even increase the time of vibration. In this pendulum, the time of vibration depends on the length of the legs, and on the angle contained between them conjointly, the duration of the time of vibration increating with the angle. Hence a pendulum of this construction may be made to oscillate in any given time. At the lower extremity of each leg of the pendulum is a ball or bob as usual. It may be easily shown, that in this kind of a pendulum, the squares of the times of vibration are as the secants of half the angle contained by the legs: hence if a pendulum of this construction vibrates half feconds when its legs are close, it will vibrate whole feconds when the legs are opened, fo as to contain an angle equal to 151° 21'.

(4.) PENDULUM, CONICAL, OF CIRCULAR, is fo called from the figure described by the string or ball of the pendulum. This pendulum was invented by Mr Huygens, and also claimed by Dr Hook. To understand the principles of this pendulum, it will be necessary to premise the following lemma, viz. the times of all the circular revolutions of a heavy globular body, revolving within an inverted hollow paraboloid, will be equal whatever be the radii of the circles described by that body. To construct the pendulum, therefore, so that its ball may always describe its revolutions in a paraboloid surface, it will be necessary that the

E Ngod of the pendulum be flexible, and that it be suspended in such a manner as to form the evolate of the given parazola. Hence, let EH ( fig. 9.) be an axis perpendicular to the norizon, factor a penion at K moved by the last wheel in the tren or the clock; and a landened neel point at H moving in an agate pivot, to reader the motion as free as possible. Now, let it be required that the pendulum mall perform each revolution in a fecond, then the parabolole for face it moves in mult be tuen whose land restant is double the length of the common halt fecond perdulum. Let O be the focus of the parabola MLC, and MC over As reducer and make AlimMOm Memthe length of a common half fecond pendulum. At the point  $\Lambda$  of the verge, let a thin plate  $\Delta R$  be fixed at one end, and at the other end B let it be faftened to a lar or arm BD perpendicular to DH, and to which it is fixed at the point D. The figure of the plate AB is that at the evolute of the given parabola MEC. The equation of this evolute, being also that of the semicubleal parabola, is  $\frac{27}{20}$   $p \times 2 = y^3$ .—Let  $\frac{27}{16}$  p = P; then  $P \times 2 = y^3$ , and in the focus P=2y. In this case  $2x^2=y^2=\frac{1}{2}P^2$ ; hence  $x^2=\frac{1}{2}$  $\mathbb{P}^2$ , and  $x = \mathbb{P}\sqrt{\frac{1}{2}} = \frac{27}{16} \sqrt{\frac{2}{3}}$  = the diffuse of the focus from the vertex A .- By attenting the value of x, the ordinates of the curve may be friend; and hence it may be cally drawn. The flring of the pendulum and be of fuch a length of it when one end is fixed at B, it provide over the

plate AB, and then hang personelization from it, fo that the centre of the belomby be at E svien at reft. Now, the verge KH being put in motion, the ball of the pendumne win legle to gyrate, and thereby contrive a certain, if there which will carry it out from the and to trace point F, where it will circulate accomb on the fecunds, according as the line AE is 90 inches, or 21 m. is, and Ab and enable to it. One au-Vanish to the land by a clock having a pendah m of the ordinary of that the describing discover-bee acceptance, and the maner, without being followed to the land by a shape with common or assignification and the critical facet.

(II.) Penetore, in ornithology, a genus of birds of the order of gallina, the characters of which are: The beak is bare at the base; the head is covered with feathers; the neck is quite bare; the tail confifts of twelve principal teathers; and the feet are for the most part bare. Linnæus, in the Seffema Natura, enumerates fix species.

1. Penelope grax Cumanensis. cailed by Latham, &c. yacou. It is bigger than a common fowl. The bill is black; the head feathers are long, pointed, and form a creft, which can be erected at pleasure. The irides are of a pale rufous colour; the space round the eye is naked, fimilar to that of a turkey. It has also a naked membrane or kind of quartle, of a dull black colour. The blue skin comes forward on the bill, but is not liable to change colour like that of the turkey. The plumage has not much variation; it is chiefly brown, with fome white markings on the neck, breast, wing coverts, and belly; the tail is composed of twelve feathers, pretty long, and even at the end; the legs are red. This species inhabits Cavenne, but is a very rare bird, being met with only in the inner parts, or about the Amazous country, though in much greater plenty up the river Oyapec, especially towards Camoupi; and indeed those which are feen at Cayenne are mostly tame ones, for it is a familiar bird, and will breed in that state, and mix with other poultry. It makes the neft on the ground, and hatches the young there, but is at other times mostly seen on trees. It frequently erects the creft, when pleafed, or taken notice of, and likewife spreads the tail upright like a fan, in the manner of the turkey. It has two kinds of erv; one like that of a young turkey, the other lever and more plaintive; the first of these is thought by the Indians to express the word conyovoit, the other racou.

2. PENELOPE MARALIA, the marail, is about the fize of a fowl, and thaped somewhat like it. The bill and irides are blackish; the space round the eye is bare, and of a pale red; the chin, throat, and fore part of the neck, are fcarcely covered with feathers; but the throat itself is bare, and the membrane clongated to half an inch or more; both this and the fkin round the eyes change colour, and become deeper and thicker when the bird is irritated. The head feathers are longish, so as to appear like a creft when raifed up, which the bird often does when agitated; at which time it also erects those of the whole body; and so disfigures itself as to be scarce known; the general colour of the plumage is a recom obselve the fore part of the neck is tipwhich are even at which are even at ut can be litted

- turkey; the he claws are a collection

viii ş the

the tail is 11 inches long, and rounded at the end; the quills just reach beyond the rump; the legs are brown, and the claws hooked. This foecies is common in the woods of Guiana, at a distance from the sea, though it is left known than could be imagined; and generally found in small flocks, except in breeding time, when it is only feen by pairs, and then frequently on the ground, or on low shrubs; at other times on high trees, where it roofts at night. The female makes her nest on some low bushy tree, as near the trunk as possible, and lays three or four eggs. When the young are hatched, they descend with their mother, after 10 or 12 days. The mother acts as other fowls, scratching on the ground like a hen, and brooding the young, which quit their nuise the moment they can shift for themselves. have two broods in a year; one in Dec. or Jan. the other in May or June. The best time of finding these birds is morning or evening, being then met with on fuch high trees whose fruit they feed on, and are discovered by some of it falling to the ground. The young birds are casily tamed, and seldom forsake the places where they have been brought up: they need not be housed, as they prefer the roofling on tall trees to any other place. Their cry is not inharmonious, except when irritated or wounded, when it is harsh and loud. Their fiesh is much esteemed. Buffon supposes this bird to be the female of the yacou, or at least a variety; but that this cannot be, the anatomical inspection will at once determine. The windpipe of this bird has a fingular conftruction, passing along the neck to the entrance of the breaft, where it arises on the outfide of the flesh, and after going a little way downwards, returns. and then passes into the cavity of the lungs. It is kept in its place on the outfide by a mufcular ligament, which is perceivable quite to the breaftbone. This is found to be the case in both male and female, and plainly proves that it differs from the yacou, whose windpipe has no such circum-volution in either sex. If this be the bird mentioned by Fermin, in his History of Guiana, p. 176, he fays that the creft is cunciform, and of a black and white colour; and observes that they are scarce at Surinam; but it does not seem quite certain whether he means this species or the yacou. Bancroft mentions a bird of Guiana by the name of Marrodée, which he fays is wholly of a brownish black: the bill the fame; and the legs grey. Thefe, he fays, are common, and make a noise not unlike the name given it, perching on trees. The Indians imitate their cry so exactly, as to lead to the discovery of the place the birds are in, by their answering it. The slesh of them is like that of a fowl: it is therefore most likely the marail.

3. PENELOPE MELEAGRIS CRISTATA, called by Ray penelope jacupeme, and by Edwards the guan, or QUAN, is about the fize of a fowl, being about two feet fix inches long. The bill is two inches long, and of a black colour; the irides are of a dirty orange colour; the fides of the head are covered with a naked purplish blue skin, in which the eyes are placed: beneath the throat, for an inch and a haif, the skin is loose, of a fine red colour, and covered only with a few hairs.

The top of the head is furnished with long so thers, which the bird can erect as a crest at ple sure; the general colour of the plumage is brow ish black, glossed over with copper in some light but the wing coverts have a greenish and vio gloss. The quills mostly incline to a purple lour; the fore part of the neck, breast, and by, are marked with white spots; the thighs, and the tail coverts, and the tail itself, are brown black; the legs are red; the claws black. So of these birds have little or no crest, and thence supposed to be females. They inha Brasil and Guiana, where they are often m tame. They frequently make a noise not use the word jacu. Their sless is much esteemed

4. PENELOPE MELEAGRIS SATYRA, the be ed pheafant. Latham calls it the horned turi This species is larger than a fowl, and smaller t a turkey. The colour of the bill is brown; nostrils, forehead, and space round the eyes covered with flender black hany feathers; top of the head is red. Behind each eye the a flethy callous blue substance like a horn, wi tends backward. On the fore part of the and throat, there is a loofe flap of a fine blue lour, marked with orange spots, the lower; of which is befet with a few hairs; down middle it is somewhat looser than on the si being wrinkled. The breast and upper par the back are of a full red colour. The neck breaft are inclined to yellow. The other part the plumage and tail are of a rufous bro marked all over with white spots, encompassed black. The legs are somewhat white, and nished with a spur behind each. A head of bird, Mr Latham tells us, was sent to Dr h from Bengal, together with a drawing of the which was called anpaul pleasant. It is a native Bengal. See plate CCLXX.

5. PENELOPE PIPILE, or crax pipile, is t in the belly, and the back brown, stained black. The flesh on the neck is of a green lour. It is about the bigness of the pacau. No 1.) and has a hissing notic. The head is ly black and partly white, and is adorned a short crest. The space about the eyes, w are black, is white; the feet are red. It inh Guiana.

6. PENELOPE VOCIFERANS, the vociferation nelope. The bill of this bird is of a greenif lour: the back is brown, the breast green, the belly is of a whisish brown. Latham of the erging curaffuev. It is about the bigness crow.

(1.) \* PENITENCE. n. f. [penitence, Fr. panitentia, Lat.] Repentance; forrow for crimes; contrition for fin, with amendment of life or change of the affections.-

Death is deferr'd, and ponitence has room

To mitigate, if not revite the doom. (2.) Penitence is fometimes used for a state of repentance, and fometimes for the act of repenting. See REPENTANCE. It is also used for a discipline, or punishment attending repentance; more usually called PENANCE. It also gives title to feveral religious orders, confifting either of converted debauchees, and reformed profitutes, or of persons who devote themselves to the office of reclaiming them. Of this latter kind are thefe:

(3.) PENITENCE OF ST MAGDALEN, AT PARIS, Congregation of, owed its rife to the preaching of F. Tifferan, a Franciscan, who converted a number of courtezans about the year 1492. Louis duke of Orleans gave them his house for a monastery; or rather, as appears by their constitutions, Charles VIII. gave them the hotel called the Bochaigne, whence they were removed to St George's chapel, in 1572. By virtue of a brief of Pope Alexander, Simon bishop of Paris, in 1497, drew them 'up a body of statutes, and gave them the rule of St Augustine. It was necessary, before a woman con be admitted, that she had first committed the of the flesh. None were admitted who were ab-35 years of age. Till the beginning of the century, none but penitents were admitted; fince its reformation by Mary Alvequin, in 16 none have been admitted but maids, who, he ever, still retain the ancient name penitents.

(4.) PENITENCE OF ST MAGDALEN, ORDER established about the year 1274 by one Bern a citizen of Marseilles, who devoted himself to work of converting the courtezans of that Bernard was feconded by feveral others; v forming a kind of fociety, were at length ere into a religious order by Pope Nicholas III. der the rule of St Augustine. F. Gefnay that they also made a religious order of the s tents, or women they converted, giving them fame rules and observances which they thems

(1.) \* PENITENT. adj. [pænitens, Lat.] pentant; contrite for fin; forrowful for palit greflions, and refolutely amending life.-

Much it joys me To see you become so penitent. Nor in the land of their captivity Humbled themselves, or penitent belought

The God of their forefathers. Provoking God to raise them enemics; From whom as oft he faves them penitent. The proud he tam'd, the peniten the chi

(2.) \* PENITENT. n. f. 1. One forrowfulfo -Concealed treasures shall be brought int by the industry of converted penitents. But The penitent conquers the temptations of fining full force. Rogers. 2. One under centure 4 church, but admitted to penance.—The Cat mens and peniteness were admitted to the and pialms, and then excluded. Stilling h One under the direction of a confesior.

(3.) PENITENTS, an appellation given to tain fraternities of penitents diftinguished I different Thape and colour of their habits. are fecular focieties, who have their rules, fit and churches, and make public proceitions their particular croffes or banners. there are more than 100; the chief of whi 1. the white penitents, of which there are fever ferent forts at Rome, the most ancient of was conflituted in 1264: the brethren of th ternity every year give portions to a certain ber of young girs, in order to their being mo their habit is a kind of white tackeloth, a the shoulder is a circle, in the middle of w a red and white cross. 2. Black peniten chief of which are the brethren of mercy, ted in 1488 by fome Piorentines, to affift nals during their imprisonment, and at their on the day of execution, they walk in pro before them, finging the 7 penitential pish the litanies; and after they are dead, the them down from the gibbet and/bury them habit is black fackcioth. There are others bufiness it is to bury such persons as are dead in the streets: these wear a death's h one fide of their habit. There are also blu red, green, and violet penitents; remarkal EN (177) PE1

line else but the different colours of their habits. Mabilion tells us, that at Turin there are a fet of penteuts kept in pay to walk through the streets in procession, and cut their shoulders with whips, see.

(a) PENITENTS, or CONVERTS OF THE NAME of JESUS, a congregation of rengious at Seville Expan, confifting of women who had led a lignarian ite, founded in 1550. This monafler watered into three quarters: one for professed lignary; another for novices; a third for those who are under correction. When these last give same of a real repentance, they are removed into the quarter of the novices, where, if they do not be have therefelves well, they are remanded to they correction. They observe the rules of St Augustine.

(4.) PENITENTS OF ORVIETO, are an order of rum, influted by Antony Simonocelli, a gentleman of Orvicto in Italy. The monaftery he built was at first designed for the reception of poor girls, anadoned by their parents, and in danger of loaning their virtue. In 1662 it was erected into a monaftery, for the reception of such as having sandoned themselves to impurity, were willing to confectate themselves to God by solemn vows. Their rule is that of the Carmelites. These religious undergo no noviciate. All required is, that they constitue a sew months in the monastery in a secular habit; after which they are admitted to the tows.

(1.) PENITENTIAL. adj. [from penitence.]

I have done penance for contemuing love, Whole high imperious thoughts have punish'd me

Was bitter falts and penitential groans. Sbak.—Is it not iltrange, that a rational man fliould acceededs and garlick, and shed penitential tears at the smell of a deisted onion? South.

(3.) PENITENTIAL. n. f. [positenciel, Fr. panitaniale, low Latin.] A book directing the degrees separance.—The penitentials or book of penance surfamed such matters as related to the imposing separance, and the reconciliation of the person has suffered penance. Aplific.

(a) PENITENTIAL. See PENANCE. There are values penitentials, as the Roman penitential, but of the venerable Bede, that of Pope Gregory

M. &c.

1. PENITENTIARY. n. f. [penitencier, Fr. pa-Meniarius, low Latin.] One who preferibes the tides and measures of penance.—Upon the loss of Whin, the duke's undoubted right, no penitentiary, wash he had enjoined him never to strict pesince to expiate his first offence, would have countelled him to have given over purfuit of his halt, which he prosperously re-obtained. Bacon. The great penitentiary with his counfellers pre-Inbes the measure of penances Ayliffe's Pareigon. LA penitent; one who does penance.—A prison marined John Northampton's liberty, who, for shalor the fame in his unruly mayoralty of Londin, was condemned hither as a perpetual penistra-Carew.—To maintain a painful fight againft the law of fin, is the work of the penitentiary. Banmend. 3. The place where penaper is enjoinal. dinferentib.

VOL. XVII. PART I.

(2.) PENITENTIARY, in the ancient Christian church, a name given to certain presbyters of priests, appointed in every church to receive the private consession of the people; in order to facilitate public discipline, by acquainting them what sins were to be expiated by public penanee, and to appoint private penance for such private crimes as were not proper to be publicly censured.

(3.) Penitentiary, at the court of Rome, is an office in which are examined and delivered out the fecret bulls, graces, or differhations, relating

to cases of conscience, consessions, &c.

(4.) Penitentiary is also san officer, in some cathedrals, vested with power from the bishop to absolve, in cases reserved to him. The pope has his grand penitentiary, who is a cardinal, and the chief of the other penitentiary priests established in the church of Rome, who consult him in all difficult cases. He presides in the penitentiary, dispatches dispensations, absolutions, &c; and has under him a regent and 4 proctors, or advocates of the facred penitentiary.

\* PENITENTLY. adv. [from penitent.] With repentance; with forrow for fin; with contrition. PENK, a river of Staffordthire, which runs in-

to the Sow; a mile below Stafford.

PENKEMAS, a cape on the W. coast of Wales, and N. point of Pembrokeshire, at the mouth of the Tivy, 4 miles below Cardigan.

\* PENKNIFE. n. f. [pen and knife.] A knife used to cut pens.—Some schoolmen, fitter to tuile penkniv s than swords, precisely stand upon it. Bacon.—We might as soon sell an oak with a penknife. Holjday.

PENKRIDGE, a town of Staffordshire, formerly large but now much reduced, and chiefly noted for its horse fairs, and a market on Tuest day. It is 6 miles Si of Stafford, and 129 NWs of London: Lon: 2. 0. W. Lat. 52. 54. N.

(2.) PENMARCH ROCKS, rocks or small islets, near the W. const of France, and SE. coast of the department of Finisherre; E. of the above Cape.

(1.) PENN, Sir William, was bern at Briftol in 1621, and inclined from his youth to maritime affairs. He was made captain at 21 years of age, 2

178 )

fear-admiral of Ireland at 23, vice-admiral of Ireland at 25, admiral to the Straits at 29, vice-admiral of England at 31, and general in the first Dutch war at 32. Returning in 1655; he was chosen representative for the town of Weymouth; and in 1660 was made commissioner of the admiralty and navy, governor of the town and fort of Kinsale, vice-admiral of Munster, and a member of that provincial council. In 1664, he was chosen great captain-commander under the duke of York, and diftinguished himself in an engagement against the Dutch sleet; after which he took leave of the sea, but continued in his other employments till 1669. He died in 1670.

(2.) PENN, William, an eminent writer among the Quakers, and the founder and legislator of Pennfylvania, was the fon of Sir William Penn, and was born at London in 1644. In 1660, he was entered a commoner of Christ-church, in Oxford; but having previously received an impression from the preaching of one Thomas Loe a Quaker, withdrew with some other students from the national worship and held private meetings, where they preached and prayed among themselves. This giving great offence to the heads of the college, Mr Penn, though but 16 years of age, was fined for nonconformity; and continuing his religious exercifes, was at length expelled his college. Upon his return home, he was treated with great severity by his father, who at last turned him out of doors; but his refentment abating, he fent him to France in company with some persons of quality; where he continued a confiderable time, and returned not only well skilled in the French language, but a polite and accomplished gentleman. About 1666, his father committed to his care a confiderable estate in Ireland. But being found in one of the Quakers meetings in Cork, he, with many others, was thrown into prison: on his writing to the earl of Orrery, however, he was foon discharged. - But his father, being informed that he still adhered to his opinions, fent for him to England, and finding him inflexible to all his arguments, turned him out of doors a fecond time. About 1668, he became a public preacher among the Quakers; and that year was committed close priioner to the Tower, where he wrote feveral treatifes. Being discharged after 7 months imprisonment, he went to Ireland, where he also preached amongst the Quakers. Returning to England, he was in 1670 committed to Newgate, for preaching in Gracechurch-street meetinghouse, London; but being tried at the sessions-house in the Old Bailey, he was acquitted. In Sept. 1670 his father died; and being perfectly reconciled to him, left him his paternal bleffing and a plentiful effate. But his perfecutions were not yet at an end; for in 1671 he was committed to Newgate for preaching at a meeting in Wheeler-street, London; and during his imprisonment. which continued fix months, he wrote feveral treatises. After his discharge, he went into Holland and Germany; and in the beginning of 1672, married and fettled with his family at Rickmanfworth in Herifordshire. The same year he published several picces; particularly one against Reeves and Muggleton. In 1677, he again travelted into Holland and Germany to propagate his o-

pinions; and had frequent conversations with the princels Elizabeth, daughter to the queen of Bo hemia, and fifter to the princess Sophia, mother to K. George I. In 1681, K Charles II. in con fideration of the admiral's fervices, and fever debts due to him from the crown at his deceal granted William Penn and his heirs the province lying on the W. fide of the Delaware, which thence obtained the name of PENNSYLVANIA. pon this Penn published a brief account of the province, with the king's patent: and proposit an easy purchase of lands, and good terms of lettl ment for such as were inclined to remove thithe many went over. But Penn, juftly confident that no European sovereign had a right todispose the property of other nations, however favag without fome compensation, appointed comm fioners to purchase the land he had received for the king of the native Indians, and concluded a tre ty with them. The city of Philadelphia was pla ned and built; and he himfelf drew up the fun mental constitutions of Pennsylvania in 24 articl In 1681, he was elected F. R. S. and in 1682 embarked for Pennsylvania, where he continu about two years, and returned to England August 1684. Upon the accession of King Jam II. he was taken into a great degree of favor which exposed him to the imputation of being Papist; but from which he fully vindicated his However, upon the Revolution, he w examined before the council in 1688, and oblig to give security for his appearance on the first d of next term, which was afterwards continue He was feveral times discharged and examine and at length warrants being iffued out against hi he was obliged to conceal himself for two or the years. Being at last permitted to appear best the king and council, he represented his innoces fo effectually that he was acquitted. In At 1699, he, with his wife and family, embark for Pennsylvania; whence he returned in 1701, vindicate his proprietary right, which had be attacked during his absence. Upon Q. Anne's cession, he was in great favour, and was often court. But, in 1707, he was involved in a fuit with the executors of a person who had be formerly his fleward; and, though many thou him aggrieved, the court of chancery did not: relieve him; upon which account he was oblig to live within the rules of the Fleet for feve months, till the matter in dispute was accomm dated. He died in 1718. Penn's friendly pacific manner of treating the Indians product in them an extraordinary love for him and people; fo that they have maintained a perf amity with the Anglo-Americans in Pennfylvani ver fince. He was the greatest bulwark of the Q kers: in whose defence he wrote numberless pice Belides the above works, he wrote a great numl of others; the most esteemed of which are, Primitive Christianity revived. 2. Defence of paper, intitled Gofpel Truths, against the Except of the Bishop of Cork. 3. Persualive to Moderation 4. Good Advice to the Church of England, man Catholic, and Protestant Dissenter. 5. T Sandy Foundation shaken. 6. No Cross. Crown. 7. The great Case of Liberty of Cons ence debated. 8. The Christian Quaker, and b Tellimon Schimony flated and vindicated. 9. A discourse of the general Rule of Faith and Practice, and Judge of controverfy. 10. England's Present Intereft confidered. 11. An Address to Protestants. 12. Reflections and Maxims. 13. Advice to his Condress 14. Rife and Progress of the People cied Quakers. 15. A Treatise on Oaths. Most of these have passed through several editions, some of them many. The letters between William Praind Dr Tillotson, and William Penn and William Popple, Esq; together with Penn's lettas to the princess Edzabeth of the Rhine, and the countels of Hornes, as also one to his wife on is going to Pennfylvania, are inferted in his works, which were first collected and published is s vols folio; and the parts (ince felected and abidged into a voi. folio, are very much and defenedly admired for the good feufe they contain. (3.) PENN, FORT, a fort of Pennsylvania, in

Northampton county, at the mouth of a fmall rivo, which runs into the Delaware on the W. Me; 70 miles N. of Philadelphia.

(1) Pennaflor, a town of Spain, in Afturias, on the Afta; 14 miles SW. of Oviedo. Lon. 5.

54 W. Lit. 43. 15. N. (1.) PENNANT, Thomas, Efq. LL.D. F. R. S. &c. a late eminent English naturalist, born in first hire, in 1726, and descended of a race of anand Britons, who had fettled in that country for many centuries. He was educated fuccessively z Wrixham, Fulham, and Oxford, where he padvated; and having made confiderable proficarry in the classics, for some time studied law. Bout this time, a present of Willoughby's Orniship, gave him an attachment to Natural Hiftory, which continued through life. After mak-ne a four through Wales, Cornwall, and other parts of England, he travelled to the continent, and flabilihed a correspondence with several of the greatest men of the age, particularly Count Lifon, Dr Pallas, Dr Haller, Linnzeus, and Vol-On his return, he married, and had two chien; but did not succeed to the family forthe till his 37th year, when he settied at Down-Hi, wife dying, he made another tour to the continent; where his reputation as a man of Grave was now established by his British Zoolo-27; which was published in 4 vols. 4to, so early 1750. About 1770, he set out on his Traveia otertaining account of that Tour, in 3 vols. 4to. which gave univerfal fatisfaction, and passed thro' kreral editions. After this tour, he penetrated to the Hebrides, and visited Man. In 1776, he carned his 2d wife, Mis Mostyn, sister of Sir

Roger Mostyn. In 1778, he commenced the publication of his Welch Tour, in 2 vols. 4to. In 1782, he published his Journey from Chefter to London, in one vol. 4to; and in 1784, his Arctic Zoology, an admirable work, highly esteemed both at home and abroad. In 1790, he published another 4to vol. entitled Of London; and with it a farewell address to the public; notwithstanding which, he soon after published The Natural History of the parishes of Holywell and Downing; in one vol. 4to. And even so late as 1797, his 71st year, he published The View of Hindoostan, 2 splendid work in 2 vols. 4to. with 23 plates, admirably engraved. From his apology in the preface, these a vols. appear to be only part of a work of which the remaining vols. may still be expected to be published. He also published the following papers in the Philof. Trans. 1. A Letter on an earthquake felt at Downing in 1753: 2. Another on Coralloid Bodies, (xogallossions,) collected by him: and 3. Synophis of Quadrupeds, 1771: 4. A pamphlet on the Militia: 5. A paper on the Turkey; and, 6. A vol. of Miscellanies. Befides being F. R. S. of London, he was a member of the Society of Antiquaries: F. R. S. of Upfal, in Sweden; a member of the American Philosophical Society, and of the Anglo-Linnæan Society, &c. His ample fortune enabled him to keep a hospitable table; and to dedicate the profits of feveral of his works to charitable inftitutions; particularly the Welch Charity School. He died at Downing in 1798, aged 72. He left feveral works in MS. entitled Outlines of the Globe, of which, the View of Hindoostan composed the 14th and 15th vols. He was endued with a healthy frame of body, an open and intelligent aspect, an active and chearful disposition, and great vi-His heart was kind, benevolent, and vacity. charitable. He was candid and free from prejudices; and Scotland will ever venerate him, as the first traveller from the S. side of the Tweed, who vifited her, with no unfriendly spirit.

(2.) \* PENNANT. n. f. [pennon, Fr.] 1. A small flag, enfign or colours. 2. A tackle for hoisting

things on board. Ainfworth.

(2.) PENNARTH POINT, a cape of Wales, which

bounds Pennarth Bay on the S.

\* PENNATED. adj. pennatus, Latin.] 1. Winged. 2. Pennated, amongst botanists, are such leaves of piants as grow directly one against another on the same rib or stalk; as those of ash and walnut-tree. Quincy.

PENNATULA, the SEA PEN, in natural history, a genus of zoophyte, which, though it swims

about freely in the fea, approaches near to the gorgonia. This genus hath a hone along the middle of the infide, which is its chief support; and this hone receives the supply of its offcons matter by the fame polype mouths that furnish it with pourishment. Linnseus reckons 7 species. See ZOOPHYTES. It partakes both of the animal and vegetable nature; but fome suppose it to be nothing but a fucus or fea plant. It is certainly an animal, however, and as such is locomotive. Its body generally expands into processes on the upper parts, and these processes or branches are furnished with rows of tubular denticles; they have a polype head proceeding from each tube. The sea pen is distinguished from the corallines by this specific difference; corals, corallines, alcyonia, and all that order of beings, adhere firmly by their bases to submarine substances; but the sea pen either swims about in the water, or Boats upon the surface. But there are other kinds of sea pens, or species of this animal, which have no resemblance to a pen: as,

I. PENNATULA DIGITALIS, OF DIGITI-FOR-Mis, the finger shaped sea pen. See fig. 8. pl. 272.

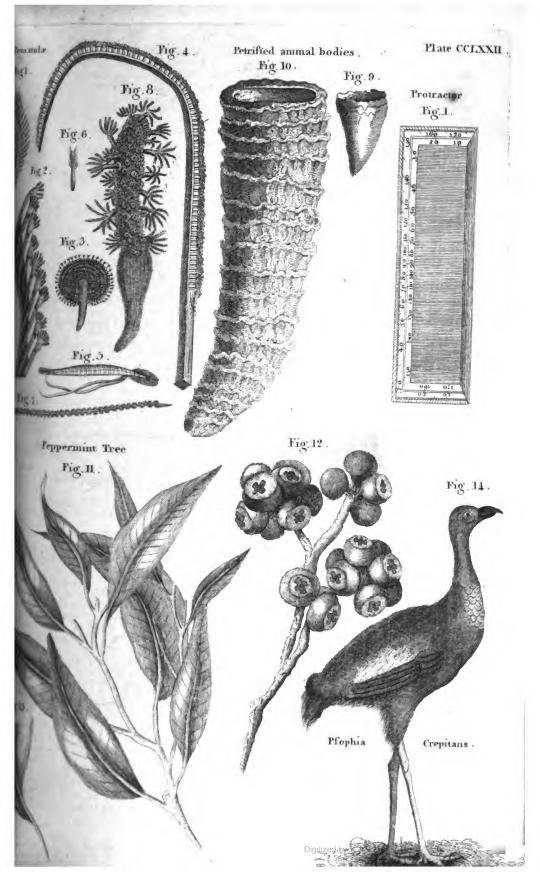

2. PENNATULA FILOSA of Linnaus. See fig. 5. 3. PENNATULA MIRABILIS. See fig. 7.

4. PENNATULA PAVONIS PISCIS, the feather of

the peacock fish. See fig. 4.

5. PENNATULA PHOSPHOREA. Dr. Coote Molefworth fent one of these animals to the ingenious Mr Ellis, the author of many curions papers on the nature of corallines, which was taken In a trawl in 72 fathoms water, near the harbour of Breft, in France: the same species are frequent-Jy found in the ocean from the coast of Norway to the Mediterranean fea, fomctimes at confiderable depths, and sometimes floating on the surface. Mr Ellis déscribes that sent him, as follows: Its general appearance greatly refembles that of a quill feather of a bird's wing; (see Plate CCLXXII. fig. 1.) it is about 4 inches long, and of a reddish colour; along the back there is a groove from the quill part to the extremity of the feathbred part, as there is in a pen; the feathered part confifts of fins proceeding from the Mem, as expressed in the figure. The fins move the animal backward and forward in the water, and are furnished with suckers or mouths armed with filaments, which appear magnified as fig. 2. There is no perforation at the bottom, and therefore Mr Ellis is of opinion, that the exuvize of the animals upon which it feeds are discharged by the same apertures at which the food is taken in; and in this it is not fingular, the fame economy being observed in the Greenland polype, described by Mr Ellis in his Essay on Corallines. Each Tucker has eight filaments, which are protruded when prey is to be caught; but at other times they are drawn back into their cases, which are furnished at the end with spicula, that close together round the entrance, and defend this tender part from external injuries. Dr Bohadfeh of Prague had an opportunity of observing one of these animals alive in the water, and he gives the following account of what he saw: "A portion of the flesh contracted, and became of a flrong purple colour, fo as to have the appearance of a ligature round it; this apparent ligature, or zone,

moved upwards and downwards foccefficely through the whole length of the stem, as we the feathered as the naked part; it began at th hottom, and moving upwards to the other extri mity, it there diffippeared, and at the fame it frant appeared again at the bottom, and afcent ed as before; but as it ascended through the fe thered or pinnated part, it became paler. Who this zone is much confirieted, the trunk above fwells, and acquires the form of an omon; the constriction of the trunk gives the colour to the zone, for the intermediate parts are paier in pr portion as the zone becomes deeper. The e of the naked trunk is fometimes curved like hook; and at its extremity there is a tinus. chink, which grows deeper while the purple if is afcending, and shallower as it is coming dow The fins have four motions, upward and doll ward, and backward and forward, from right left, and from left to right. The flefhy filame or claws, move in all directions: and with cylindrical part from which they proceed, fometimes protruded from the fins, and id times hidden with them. Upon diffecting animal, the following phenomena were diled ed. When the truck was opened lengthwil faltish liquor flowed out of it, so viscid as tob down an inch. The whole trunk of the ftents holiow, the outward membrane being very fire and about a tenth part of an inch thick: with this membrane appeared another much think and between thefe two membranes, in the p nated part of the trunk, innumerable little lowifi eggs, about the fize of a white poppy fe were feen floating in a whitish liquor; about the parts of the cavity within the inner membrane filled by a kind of yellowish bone: this bone about 21 inches long, and 10 of an inch this in the middle it is four-square, but towards ends it grows round and very taper, that end ing finest which is next the pinnated part of trunk. This bone is covered in its whole led with a clear yellowish skin, which at each runs out into a ligament; one is inferted in top of the pinnated trunk, and the other in top of the naked trunk : by the help of the per ligament, the end of the bone is either into an arch, or disposed in a straight line. fins are composed of two skins; the outward is strong and leathery, and covered over wit vaft number of crimfon ftreaks; the inner Ri thin and transparent: the fuckers are also in fame manner composed of two skins, but outward skin is something softer. Both the and fuckers are hollow, fo that the cavity fuckers may communicate with those of the as the cavity of the fins does with that of trunk. Dr Shaw, in his History of Algiers, that these animals are so luminous in the wa that in the night the fishermen discover fi Iwimming about in various depths of the feat the light they give: From this extraordinary lity, Linnæus calls this species of the sea pennatula phosphorea, and remarks, after giving fynonymes of other authors, Habitat in the Of all the pennatulæ fundum illuminans. known, this feather-shaped one, or as it is ca by others, the filver jea pen (fg. 1), is the lar

181 p rell as the most specious in its appearance. It hof a beautiful filvery white, elegantly ftriated a each of the feather-like processes with lines or treats of the deepest black. It is very rare, and namine of the Indian seas. There is a very fæ specimen of this species in the British Mu-

LPERNATULA RENIFORMIS, the kidney-shapthem. See fig. 3. The kidney-shaped sea pen muticovered fome time ago on the coast of South Arona, and fent to Mr Ellis by John Gregg, th of Charlestown. It is of a fine purple mar; the kidney part is about an inch from do end, and about half an inch wide in the narrowest part; a tail proceeds from the like of the body, which is roundish, and but an inch long; is also still of rings like an th num, and along the middle both of the and under part of it there is a small groove the mas from one end to the other, but there imperioration at either extremity. The appear of the body is convex, and about an inch the whole furface is covered with small farry openings, through which little fuckreprotruded, each furnished with fix tentaa filaments, like what are observed on some nk; the under part of the body is quite flat, disful of ramifications of fleshy fibres, which, bearing from the insertion of the tail, as a centre, branch out fo as to communicate the turny openings on the exterior edge and fairce of the animal.

nia, in Cumberland county.

PENNSBURY, a town of Pennsylvania, in Bucks county, on a creek of the Delaware; memorable for being the manor, which the celebrated William Penn reserved to himself. Here he built a house, and planted gardens and orchards; which, with a great number of additional buildings, ftill continue.

(1.) PENNSYLVANIA, one of the 17 United States of North America. It was founded by William Penn, the celebrated Quaker, in 1679.

(See Penn, No 2.)

- (2.) PENNSYLVANIA, BOUNDARIES AND EX-TENT OF. This State is bounded on the N. by New York and Lake Eric: E. by the Delaware rivor and bay, which separate it from New Jersey; S. by part of Virginia, Maryland, and Delaware; W. by part of Virginia, and the North Western Territory, and NW. by part of Lake Erie. It lles in the form of a parallelogram; and comprehends 44,900 square miles; being 288 miles long from E. to W. and 156 broad from N. to S. Lon. from 74.48 to 80. 8. W. Lat. from 39. 43. to 42. o. N.
- (3.) PENNSYLVANIA, CLIMATE, AND GENERAL APPEARANCE OF. The air is fweet and clear. Autumn begins about the both Oct. and talts till the beginning of Dec. when winter fets in, which continues till March, and is sometimes extremely cold and fevere; but the air is generally dry and healthy. The Delaware, though very broad,

is often frozen over. From March to June, (that is, in spring,) the weather is more inconstant than in the other feafons. In July, August, and Sept. the heats would be intolerable, if they were not mitigated by frequent cool breezes. The wind, during fummer is generally SW.; but in winter blows for the most part from the NW. over the knowy mountains and frozen lakes of Canada, which occasions the excessive cold during that season. On the whole, the climate of this state differs not materially from that of Connecticut, exexpt that on the W. fide of the mountains the weather is much more regular. The inhabitants never feel those quick transitions from coid to sheat, by a change of the wind from N. to S. as those fo frequently experience who live E. of the annuntains and near the sea. The hot S. winds get chilled by passing over the long chain of Allegany mountains. Among the Quakers, who are the oldest settiers, there are instances of longevity, occasioned by their temperance and mode of livino. There are fewer long-lived people among the Germans than among other nations, occasioned by their excess of labour and low diet, as they live chiefly upon vegetables and watery food. The furface of the country, towards the coast, is Hat, but rifes gradually to the Apalachian mountains on the W. Nearly one third of this state is anountainous; particularly the counties of Bedford, Huntingdon, Cumberland, part of Franklin, Dauphin, and part of Bucks and Northampton, -through which pass, under various names, the numerous ridges and spurs, which collectively form the great range of Allegany mountains. There is a remarkable difference between the country on the E. and W. fide of these mountains. Between these -mountains and the lower falls of the rivers which run into the Atlantic, are feveral ranges of stones, find, earths, and minerals, in the utmost confusion. Beds of stone, of vast extent, particularly of limeflone, have their feveral layers broken in pieces, and the fragments thrown confusedly in every direction. Between these lower fails and the ocean is a very extensive collection of fand, clay, mud, and shells, partly thrown up by the waves of the Tea, partly brought down by floods from the upper country, and partly produced by the decay of vegetable substances. The country W. of the Allegany mountains in these respects, is totally different. It is very irregular, broken, and variegated, but there are no mountains; and when viewed from the most western ridge of the Allegany, it appears to be a vast extended plain. All the various strata of stone appear to have lain undifturbed in the fituation wherein they were first formed. The layers of clay, fand, and coal, are nearly horizontal. Scarcely a fingle instance is to be found to the contrary. Every appearance, in short, tends to confirm the opinion, that the original crust, in which the stone was formed, has never been broken up on the W. fide of the mountains, as it evidently has been eastward of

(4.) PENNSYLVANIA, DIVISIONS OF. This State is divided into 23 counties; viz. Philadel-phila, Chefter, Delaware, Bucks, Montgomery, Berks, Lancaster, Dauphin, Northampton, Luzerne, York, Cumberland, Northumberland,

Franklin, Bedford, Huntingdon, Midlin, We moreland, Somerfet, Fayette, Washington, All ghany, and Lycoming. These counties are subvided into a great number of townships.

(5.) PENNSYLVANIA, GOVERNMENT AND CO STITUTION OF. The present Conftitution of t State was ratified June 12th 1792. By it, supreme executive power is vested in a governe the legislative in a general affembly, confining d fenate, and a house of representatives. The vernor is elected for 3 years, but cannot be c tinued longer than 9. A majority of votes cides the election. The representatives are c fen for one year; the fenators for 4. The la are divided into 4 classes, of which one posseach year, and their seats are filled by selections. Each county elects its own tepre tatives. The senators are elected in orthods med by the legislature. Once in 7 years the to be an enumeration of the citizens. The m ber of fenators and reprefentatives is to be after each enumeration, by the legislature; apportioned to the population of the fe counties and districts, according to the number taxable citizens. There can be no fewer than nor more than 100 representatives. The nut of Senators cannot be lefs than one 4th or gre than one 3d of the representatives. The cled are made on the 2d Tues. of Oct. The Get Atlembly meets annually on the 1st Tuefof! unless convened earlier by the governor. A jority of each house makes a quorum to do pels; and a less number may adjourn from d day, and compel members to attend. Each h chooles its speaker and other officers; judg the qualifications of its members, and fixed rules of its proceedings. Impeachments made by the House of Representatives and by the Senate. All bills for raising revenue originate in the Lower House, out the Schatt propose amendments. The Senators and r fentatives are tree from arrefts, while atter the public business; except in cases of tre felony, and breach of the peace; and an liable to be questioned respecting any thing s public debate. They are compensated out public treasury, from which no money of drawn, but in consequence of appropriated law. The journals of both houses are published weekly, and their doors kept open, unless th finess requires secresy. All bills which have fed both houses, must be presented to the g nor. If he approve he must fign them; if he must return them within 10 days, with hi jections, to the house in which they origing No bill so returned shall become a law, t it be repassed by two 3ds of both houses. governor is commander in chief of the mi force; he may remit fines and forfeitures grant reprieves and pardons, except in cal impeachment; he may require information all executive officers; he may, on extraord occasions, convene the general assembly, as journ it, for any term not exceeding 4 mont case the two branches cannot agree on the themseives. He must inform the General A bly of the state of the Commonwealth; n mend fuch measures as he shall judge exper

ad fee that the laws are faithfully executed. In nic of vacancy in the office of governor, the spaker of the Senate fills that office. The judical power is vested in a supreme and inferior war, the judges of which, and justices of the part are appointed by the governor, and comnested during good behaviour; but are remake on an address from both houses. The desects of the flate are appointed, fome by क्रिहायाावर, others by the general affembly, and by the people. The qualifications for an and at 21 years of age, 2 years refidence, and ent of taxes. They are privileged from arin civil actions, while attending elections. equilications for a reprefentative are 21 years r, and 3 years inhabitance; for a fenator, 25 notage, and 4 years inhabitance; for a go-7, 30 years of age, and 7 years inhabitance. premor can hold no other office; and the and representatives none but that of atnd hw, and in the militia. No person holmaffice of trust or profit under the United can hold any office in this state, to which y by law annexed. All the officers of me me liable to impeachment; and are by outh, or affirmation, to support the conand perform the duties of their offices. deciration of RIGHTS afferts " the natural and equality of all; liberty of confcience; and of the press; subordinamilitary to the civil powers; trial by fronty from unreasonable searches and inght to an equal distribution of jusbeleard in criminal profecutions; to peredress of grievances; to bear arms; hat liberty to emigrate from the State. Ks that all power is inherent in the people; they may, at any time, alter their form ment; that no person shall be obliged to any religious worthip, or support any It is that all persons, believing in the being. and a future state of rewards and puare eligible to office; that laws canspended but by the Legislature; that all hali be bailable, unless for capital offenery debtor shall be released from priivening his estate to his creditors, aclo law, unless there be strong prefumphand; that the privileges of the writ of thall not be fufpended, but in time or public danger; that no ex post hall be made; that no person shall be by the Legislature, or forfeit his estate from than his own life; that no title of beeditary diftinction, thatlever be granother peciniar laws of this State, are a another for the emancipation of nemakrupt law nearly on the fame model ad England, and a law fubstituting hard lalong period, inflead of death, as a pumany crimes, which are made capihave of England. Murder, however, other crimes are still punished with expence of government is estimated le annually.

MONEYLVANIA, HISTORY OF. Pennfylva-

long with New York, New Jersey, and the reft. of the N. American continent, by Sebastian Cabot, for the crown of England; but Sir Walter Raleigh was the first adventurer that attempted to plant colonies on these shores, in the reign of Q. Elifabeth. Mr Hudfon, an Englishman, failing to that part of the coast which lies between Virginia and New England, in the reign of James I, and being about to make a fettlement at the mouth of Hudson's river, the Dutch gave him a sum of money to dispose of his interest in this country tothem. In 1608 they began to plant it; and, by virtue of this purchase, laid claim to all those countries which are now denominated New York; New Jersey, and Pennsylvania; but there remaining some part of this coast which was not planted by the Hollanders, the Swedes fent a fleet of ships thither, and took possession of it for that crown; but the Dutch having a superior force in the neighbourhood, compelled the Swedes to submit to their dominion, allowing them however, to enjoy the plantations they had fettled. The English, not admitting that either the Dutch or Swedes had any right to countries first discovered and planted by a subject of England, and part of them. at that time possessed by English subjects, under charter from Q. Elizabeth and K. James I. K. Charles II, during the first Dutch war in 1664, granted New York, Jerfey, and Pennsylvania, of which the Dutch had usurped the possession, tohis brother James Duke of York; and Sir Robert Carr being fent over with a fquadron of men of war and land forces, and fummoning the Dutch governor of the city of New Amsterdam, now New York, to furrender, he yielded that capital to the English: the rest of the places in the posfellion of the Dutch and Swedes followed his example; and these countries were confirmed to the English by the Dutch, at the next treaty of peace between the two nations. The Duke of York afterwards parcelled them out to under proprietors; felling, in particular, to William Penn the elder, in 1683, the town of Newcastle, alias Delaware, and a diftrict of 12 miles round the same; to whom his heirs and atligns, by another deed of the same date, he made over all that tract of land from 12 miles fouth of Newcastle to the Whorehills, otherwise called Cape Henlopen, now divided into the two counties of Kent and Suffex, which, with Newcastle district, are commonly known by the name of the Three Lower Counties upon Delaguare River. All the rest of the under-proprietors. fome time after, furrendered their charters to the crown; whereby New York and the Jerseys became royal governments; but Penn retained that part of the country which had been fold to him by the Duke of York, together with what had been granted to him before, in 1680-1, which now constitutes the State of Pennsylvania. As soon as Penn had got his patent, he began to plant the country. Those who went over from England were generally Diffenters and Quakers, whose religion is established by law here, but with full liberty to all other Protestant sects. The Dutch and Swedes, who were fettled before Mr Penn became proprietor, choosing still to reside in this country, as they did in New York and the Jerfeys, obtained the time privileges as the rest of

the king's subjects; and their descendants are now the fame people, speaking their language, and being governed by the same laws. Mr Penn, however, not fatisfied with the title granted him by K. Charles II. and his brother, bought the lands also of the Indians for a valuable confideration, or what they esteemed such (though twenty miles were purchased, at that time, for less than an acre about Philadelphia would cost now), paying them in cloth, tools, and utenfils, to their entire fatisfaction; for they had not hands to cultivate the roodth part of their lands, and if they could have raifed a product, there was nobody to buy; the purchase, therefore, was all clear gain to them; and, by the coming of the English, their paltry trade became so profitable, that they soon found their condition much altered for the better; and are now as well clothed and fed as the Europeans in many places. Pennsylvania is one of the most Rourishing states in North America, having never had any quarrel with the natives. Whenever they defire to extend their fettlements, they purchase new lands of the fachems, never taking any by force; but the Indians now fet a very high price upon their lands, in comparison of what they did at first. In an estimate of the proprietary estate of the province, published above 50 years ago, we find that the proprietaries, who alone can purchase lands here from the natives, had bought 7,000,000 of acres for 750 l. Rerling, which the proprietaries afterwards fold at the rate of 15 l. for every 100 acres. The Indian council at Onondago, however, disapproved of their deputies parting with fo much land; and, in 1755, obliged the proprietaries to reconvey great part of the fame to the Indians. A dispute subsisted a long time between the proprietaries of the province and Lord Baltimore, proprietary of Maryland, about the right to certain lands; which was at last amisably adjusted, greatly in favour of the Penns. About 1704 there happened some alteration in the constitution of the province. The establishment that took place, and subsisted till the American war broke out, confifted of a governor, council, and affembly, each with much the fame power and privileges as in the neighbouring colony of New York. The lieutenant-governor and council were appointed by the proprietors Thomas and Richard Penn, with his majesty's approbation; but if the laws enacted here were not repealed within fix months after they had been prekented to the king for his approbation or difallowance, they were not repealable by the crown after that time. A state of peace and happiness affords few materials for the historian. On the breaking out of the American war, the citizens of Philadelphia took an early and active part. In Sept. 1776, they established a new constitution; which was confiderably altered and improved in June 1792. (See § 5.) In 1793, this state, but particularly the capital was visited by the yellow fever, which in the short space of 3 months carried off about 5000 people. In 1794, an alarming infurrection took place in the western counties, the oftenfible cause of which was an excise upon whisky, but an incendiary letter afterwards discovered, showed that a deep scheme had been laid to ex-

cite a rebellion in the state. But by the wife and

decifive measures adopted by the executive vernment, supported by the great body of the tizens, the infurrection was quelled and tranq lity restored almost without bloodshed.

(7.) PENNSYLVANIA, LITERARY, HUMANE, OTHER SOCIETIES IN. No flate in the Uniq bounds more in Societies instituted for the purposes, than Pennsylvania. 1. The Amer Philosophical society was instituted in 1769, blished by charter in 1780, and consists of members. 2. The Humane Society for the very of persons apparently dead by drow was instituted in 1770. 3. The Pennsylvania ciety for promoting the Abolition of Slavery begun in 1774, and enlarged in 1787. The lature have adopted its humane views, fo far pass an act, March 1, 1788, " for the grade bolition of Slavery," wherein, among other th it was enacted "that no person born within the thall be a llave for life; and all perpetual I is for ever abolished." 4. A Society for prom political inquiries was inflituted in 1787: a alfo 5. a Society for promoting medical, and cal, and chemical knowledge; which was inc rated by act of Atlembly, in March, 1789, College of Physicians. 6. A Society for the ragement of Useful Arts was instituted in 7. The Society of United Brethren for the gation of the gospel among the heathen, w instituted in 1787, and incorporated in 178
The Agricultural Society: 9. The Marine ty: 10. The Charitable Society, for the fi of the widows and families of Presbyterian men: besides many other charitable societi hospital, a public dispensatory, &c. Colleg acad mies, &c. are mentioned under the of the cities. See CARLISLE, PHILADELPHI (8.) PENNSYLVANIA, MANUFACTURES These being generally mentioned under the

of the principal towns, it is only necessary take notice, that manufactures of all kinds late greatly improved and increased in this particularly those of leather, skins, surs, thoes, faddles, harneffes, &c. that iron we of long standing, and that all the varieties branch either of cast or forged iron are mad Europe; that cabinet-making, house car coach-making, ship-building, &c. are carr with equal success; as well as manufact paper, frome and glass wares, earthen wares, gun-powder, and various utenfils in copper and tin. But there is no probability that tizens of this state will be able to rival the facturers of Britain, in their woollen, lin cotton cloths, for a long period. One sp manufacture, peculiar to America, is carrie a great extent; viz. the making of excelle from the maple tree. About 300,000 hats made annually, of wool and fur.

(9.) PENNSYLVANIA, MINERALS OF. I is found in confiderable quantities through flate: copper, lead, and alum in feveral Lime-stone quarries are wrought in manyand various kinds of beautiful marble. Cabound in the middle and western parts.

(10.) PENNSYLVANIA, NATURAL CURI IN. In the Philof. Tranf. for 1757, there i count of a copper fpring in Pennsylvania

being rifes from a copper mine; and will diffolve en in less time by three 4ths than the waters of Wicklow in Ireland, described by Dr William Henry and Dr Bond. From the folution of iron is thek waters, about half the quantity of pure opper is procured by melting it in a crucible: though these waters melt iron sooner than the in waters, yet the folution does not produce fo par proportion of copper; for the pure coprepresented from the folution of iron in the Irish is to the folution as 16 to 20. In the neighbetood of this, which supplies 800 khds. in 24 on, we many ores of vitriol and fulphur; the to it is of a pale green colour, of an acid, fweet, the inky, and naufeous tafte. It is very heavy; the hydrometer, which was immerfed in it, d at the same height as in a solution of one exclix drams of English vitriol in a quart of wa-A very small quantity of the solution of potinfantly precipitates the metallic parts of bruer in three different colours; ochre at the men in the middle, and white at bottom: Laife kept in it a few minutes, is covered hight copper colour. But besides a large that of copper, this water contains also a proportion of vitriol of iron. A pint of it ld by a flow fire left 400 grains of folid conis which appeared to be chiefly faline; for prim of it, diffolved and filtered, did not exore four grains of indiffoluble matter. It therefore, that the proportion of vitriolic in this water is fix drams to a pint; confeis a stronger solution of vitriol than scasummarine falt. So that, besides the copwith obtained by a foliation of iron, it will stat quantities of vitriol, and the great both of water and fuel will make the effa-REG of a copperas work extremely cheap and actions. This water mixed with common ris frequently used as an emetic and catharthe country people, and is found very efin the cure of cutaneous diforders and ge. Amongst the other curiosities of this may be reckoned another spring about 14 and about 100 square, in the neighbour-Reading. A full mill ftream iffues from waters are clear and full of fithes. From eccs it is probable that this spring is the of a very confiderable river, which about bove this place finks into the earth, surreyed to this outlet in a subterranean lo the northern parts of Pennsylvania es acreek called Oil creek, which runs into Memany river. It iffues from a spring, on which floats an oil fimilar to that called mur, and from which one man may gagillons in a day. The troops fent to the western posts hatted at this spring, colfore of the oil, and bathed their joints with Te gave them great relief from the rheumatic with which they were affected. The of which the troops drank freely, operafinde purge. There are three remarkain this state: one near Carille, in Cumcounty; one in the township of Durham, county; and the 3d at Swetara, in Lan-The latter is on the E. bailk of mer, about 2 miles above its confinence OL XVIL PART I.

with the Sulquehannah. Its entrance is spacious and descends so much as that the surface of the river is rather higher than the bottom of the cave, The vault of this cave is of folid limestone rock, perhaps 20 feet thick. It contains feveral apartments, fome of them very high and spacious. The water is incessantly percolating through the roofs and falls in drops to the bottom of the cave. These drops petrify as they fall, and have gradus ally formed folid pillars, which appear as supports to the roof. Forty years ago there were ten fuch pillars, each fix inches in diameter, and fix feet high; all fo ranged that the place they inclosed refen bled a fanctuary in a Roman church. No royal throne ever exhibited more grandeur than this luf is nature. The refemblances of feveral monuments are found indented in the walls on the fides of the cave, which appear like the tombs of departed heroes. Suspended from the roof is the bell (which is nothing more than a stone projected in an unufual form), fo called from the found that it occasions when firuck, which is similar to that of a bell. Some of the stalactites are of a colour like fugar-candy, and others refemble loaf fugar; but their beauty is much defaced. The water, which percolates through the roof, fo much of it as is not petrified in its course, runs down the declivity, and is both pleafant and wholesome to drink. There are several holes in the bottom of the cave, descending perpendicularly, perhaps into an abyfs below, which renders it dangerous to walk without a light. At the end of the cave is a pretty brook, which, after a fhort course, loses' ittelf among the rocks. Beyond this brook is an outlet from the cave by a very narrow aperture. Through this the vapours continually pass outwards with a firong current of air, and afcend, refembling at night the smoke of a furnace. Part of these vapours and fogs appear on ascending to be condensed at the head of this great alembic. and the more volatile parts to be carried off, through the aperture communicating with the exterior air, by the force of the air in its paffage.

(11.) Pennsylvania, population of, and religious sects in. Dr Morfe informs us, that in 1787 the inhabitants of Penulylvania were reckoned at 360,000. They are now more than 460,000. These inhabitants consist of emigrants from England, Ireland, Germany, and Scotland. The Friends and Episcopalians are chiefly of Enga lish extraction, and compose about one third of the inhabitants. They live principally in Philas delphia, and in the counties of Chester, Philadelphia, Bucks, and Montgomery. The Irish are moftly Presbyterians. Their ancestors came from the north of Ireland, which was originally fettled from Scotland; hence they have fometimes been called Scotch Irish, to denote their double descent. But they are commonly and more properly called Irish, or the descendants of people from the north of Ireland. They inhabit the western and frontier counties, and are numerous. The Germans compose one quarter at least, if not a third, of the inhabitants of Pennsylvania. They inhabit the north parts of the city of Philadelphia, and the counties of Philadelphia, Montgomery, Bucks, Dauphin, Lancaster, York, and Northampton; mostly in the four last. They consist of Lutherans (who are the moit

most numerous sect), Calvinists, Moravians, Mennonifts, Tunkers (corruptly ealled Dunkers), and Swinfelters, who are a species of Quakers. These are all diffinguished for their temperance, induftry, and economy. The Germans have usually as of 69 members in the affembly: and fome of them have arisen to the first honours in the state, and now fill a number of the higher offices. the lower class are very ignorant and superstitious. It is not uncommon to fee them going to market with a little bag of falt tied to their horses manes, for the purpose, they say of keeping off the witches. The Baptists (except the Mennonists and Tunker Baptists, who are Germans) are chiefly the descendants of emigrants from Wales, and are not numerous. A proportionate affemblage of the national prejudices, the manners, customs, religions, and political fentiments of all thefe, will form the Pennfylvanian character. As the leading traits in this character, thus constituted, we may venture to mention industry, frugality bordering in some instances on parsimony, enterprise, a taste and ability for improvements in mechanics, in manufactures, in agriculture, in commerce, and in the liberal sciences; temperance, plainness, and fimplicity in drefs and manners: pride and humility in their extremes; inoffensiveness and intrigue; in regard to religion, variety and harmony; liberality, and its opposites, superfittion and bigotry; and in politics an unhappy jargon. Such appear to be the diftinguishing traits in the collective Pennfylvanian character. Of the great variety of religious denominations in Pennsylvania, the Friends or Quakers are the most numerous. They were the first settlers of Pennsylvania in 1682 under William Penn, and have ever fince flourished in the free enjoyment of their religion. See QUARERS. They are generally honest, punctual, and even punctilious in their dealings; provident for the necellities of their poor; friends to humanity, and of course enemies to slavery; strict in their discipline; careful in the observance even of the punctilios in dress, speech, and manners, which their religion enjoins; taithful in the education of their children; industrious in their several occupations. In fhort, they have proved themselves to be good citizens. Next to the Quakers, the Presbyterians are the most numerous. There are upwards of 60 ministers of the Lutheran and Calvinist religion, who are of German extraction, now in this ftate; all of whom have one or more congregations under their care; and many of them preach in fplendid and expensive churches. The Lutherans do not differ in any thing effential from the Epifcopalians, nor do the Calvinists from the Presbyterians. The Moravians are of German extraction. Of this religion there are about 1300 fouls in Pennfylvania, vie. between 500 and 600 in Bethlehem, 450 in Nazareth, and upwards of 300 at Litiz in Lancaster county. They call themselves the United Brethren of the Protestant Episcopal Church. They are called Moravians, because the first settlers in the English dominions were chiefly emigrants from Moravia. See HERNHUTTERS, and UNITAS FRATEUM; and for the Mennonites, see MENNONITES. They were introduced into America by Count Zinzendorf, and settled at Bethlehem, which is their principal fettlement in Ame-

rica, as early as \$741. For the Tunkers, see Tunkers

(12.) PENNSYLVANIA, PRINCIPAL TOWNS O Thefe are PHILADELPHIA, the capital, Lancafte Cartifle, Pittfburg, Sunbury, Bethichem, Naz reth, York-town, Harrifburg, and Washingto See these articles.

(13.) PENNSYLVANIA, QUADRUPEDS, BIRD AND FISH OF. Betides the usual domestic a mals, horses, sheep, and oxen, this state about with deer, beavers, otters, racoons, martins, pt thers, bears, wolves, squirrels, soxes, oposition rabbits, wild cats, &c. Buffaloes seldom or the Ohio. Wild turkeys and pheasants, forme numerous, are now become rare, except in new fettlements. Pigeons, ducks, and wild geefe numerous. Turkeys and other tame poultry numerous and cheap. The rivers abound with the market of the state o

(14.) PENNSYLVANIA, RIVERS OF. The chievers are the Delaware, Schuylkill, Sufqueham Alleghany, Monongahela, and Youghiogany.

thele articles.

(15.) PENNSYLVANIA, SOIL AND PRODUCE The foil is various; fome parts barren; a g proportion good; and a confiderable part commonly fertile. In general it is fitter for ing grain than grafs. The greater part of trees and plants, that grow in the United Sta abound in Pennfylvania. Oak, hiccory, wal fallafras, mulberry, and tulip trees abound in woods. Pines, cedars, red and white, elms maples also are numerous. Wheat, the staple Pennsylvania, Indian corn, buck wheat, rye, ley, oats, potatoes, &c. are cultivated in g quantities.

(16.) PENNSYLVANIA, TRADE OF. The comerce with the E. and S. Rates is chiefly as change. Flour, bar iron, hats, shoes, saddles, riages, spades, axes, hoes, paper, books, the iron wares. &c. are exported; and oil, specti, seal skins, falmon, cod, cheese, tar, pfurniture, India goods, European clothing, are imposted. Its trade with New York depon the sluctuation of the market; but a great is carried on with New Jersey and Delaware well as with the Spanish dominions by the and with the British by the lakes, and both with the Indian nations.

PENNSYLVANIAN, adj. Of or belongit

Pennfylvania.

(1.)\* PENNY. n. f. plural penee. [penig.]
1. A finall coin, of which twelve make a shill a penny is the radical denomination from w English coin is numbered, the copper halfy and farthings being only nummorum famuli, 2 ordinate species of coin.—

No filver penny to reward her pain. Done frugal on his b rth-day fears to dim Does at a penny's cost in herbs repine. Do

a. Proverbially. A small sum.—You shall hear

The legions, now in Galiia, fooner landed In our not-fearing Britain, than have tidin Of any penny tribute paid.

We will not lend thee a penny.

Take not the utmost penny that is lawful although it be lawful, yet it is not fafe. To 3. Money in general.—

PEN

Be fare to turn the penny. Dryden. -It may be a contrivance of some printer, who

hath a mind to make a penny. (L) PINNY, or PENY, in commerce, an ancient Lighth coin, which had formerly confiderable come; but, till of late, was dwindled into an magnary money, or money of account, containinterest part of a shilling, or 140th of a pound. Cases derives the word from the Latin pecunia, my. The ancient English penny, penig, or pure, was the first filver coin struck in England; m4 the only one current among the Anglo fixms: as is agreed by Camden, Spelman, Dr Hicks, &c. The penny was equal in weight to our three-pence; five of them made one shilling, or feiling Sixon; 30 a mark or maneule, equal in our 7s. 6d. Till the time of King Edward L. the penny was firmek with a cross, so deeply indented in it, that it might be easily broke, and puted on occasion, into two parts, thence calki bulf permies; or into four, thence called fourthan, or farthings .- But that prince coined it oftent indenture; in licu of which, he first that round haltpence and farthings. He also naked the weight of the penny to a flandard; rising that it should weigh 32 grains of wheat, tike out of the middle of the ear. This penny wis called the penny flerling. Twenty of these ware were to weigh an ounce; when the penny seares weight as well as a coin. See STERLING, and PERNYWEIGHT. The filver penny is now matted; but in 1797, a new copper coin-are took place, when a great quantity of halfpeny, penny, and two-penny pieces were ftruck; the two latter in quite a new form; the legend Cinedius III. D. G. REX, and BRITANNIA. 1797, "be reverse, being funk, inflead of being raised. (3.) PERNY, in ancient statutes, is used for all first money. And hence the ward-penny, aver-PENNYCUICK, [Gael. i. c. Guckoo's bill.] a paith of Scotland, in Mid Lothian 174 miles long, and 6 broad. The Esk runs through it from W. \*E and nearly divides it. The foil is various; dy, gravel, fand, and moss: Oats, barley, peafe, tarps, and potatoes are the chief crops. drute is healthy, but the air is keen and pierme, the winters are severe, and the changes of maker often sudden and violent. Iron, lime, inclone, granite, petunse pentlandica, peats and mehabound. Silver has also been found in it. There are likewise charybeate, mineral, and pebijing waters. Many petrified theils of the myma, and belix, and figured stones have been bad among various strata. On the N. the pathe scludes a part of the Pentland Hills, which with pafture, and feed about 8000 sheep of this parish. The population in 1793 was 1721; increase 831, fince 1755, chiefly occasioned by the crection of a cotton and 2 paper mills. There at relics of several ancient camps. In this parish the are the feats of New-Hall, Spittal, and Penweich House. This last is an elegant mansion, recled in 1761, by Sir James Clerk of Penneclick, Bart. Its fituation is delightful, commanding a prospect of the valley in which the Esk man, terminated by the W. extremity of Pentand Hills, and the ruins of Brunstone Castle. It has an excellent library of books, paintings, and Roman antiquities, chiefly from Antoninus's wall. The policies around it are highly ornamental, and near the river is Offian's Hall, an admired work of Runciman's: on the opposite fide of the river is an obelifk to the memory of Aian Ramfay, the Scottish poet, who often resided here, and drew the various picturesque scenes of his beautiful pastoral comedy, the Gentle Shepherd, from a number of real scenes still visible on the borders of this parish; as is pointed out at considerable length, in Sir J. Sinclair's Stat. Acc. Vol. RVII. p. 609-616.
(2.) P-NNYCUICK, a village in the above pa-

rish, 9 miles SW. of Edinburgh, seated near Pen-

necuick House.

(3.) PENNECUICK, Alexander, M. D. a Scottish port and physician, who published a small volume of humourous poems in the Scottith dialect, in the 17th century. He was proprietor of New Hall and Romanno.

(1.) \* PENNYROYAL, or pudding graft. n. f. [pur legium, Lat.] 'A plant. Miller.

(2.) PENNY-ROYAL, in botany. See MENTHA. (3.) PENNY-ROYAL, VIRGINIAN. See SATU-

(1.) \* PENNYWEIGHT. n. f. [penny and weight.] A weight containing 24 grains troy weight.— The Sevil piece of eight is 1\frac{1}{2} pennyweight in the pound worfe than the English standard, weighs 14 pennyaveight, contains 13 pennyaveight, 21 grains and 15 mites, of which there are 20 in the grain sterling silver, and is in value 43 English pence. and if hundreds of a penny. Arbuthmot.
(2.) The PENNY-WEIGHT is a Troy weight,

containing 24 grains; each grain weighing a grain of wheat gathered out of the middle of the ear, well dried. The name took its rife hence, that this was formerly the weight of one of our ancient filver pennies. See PENNY. these penny-weights make an ounce Troy.

Pennywise. adj. [penny and wife.] One who faves small sums at the hazard of larger; one who is a niggard on improper occasions.—Be not pennywise; riches have wings and fly away of them-

selves. Bacon.

(E.) PENNY-WORT, MARSH. See HYDROCO-TYLF.

(2.) PENNY-WORT, WALL. See COTYLEDON. (3.) PENNY-WORT, WATER. See HYDROCO-

TÝLE.

\* PENNYWORTH. n. f. [penny and worth.] I. As much as is bought for a penny. 2. Any purchase; any thing bought or fold for money.—As for corn it is nothing natural, fave only for barley and oats, and some places for rye; and therefore the larger pennyworths may be allowed to them. Spenser:

Pirates may make cheap penn'eworths of their pillage,

And purchase friends. Sbak. -You may come into court, and swear that I have a poor pennyworth of the English. Shak. -Lucian affirms, that the fouls of vourers after their death are translated into the bodies of affer, and there remain certain days for poor men to take their pennyworths out of their bones and fixtes by cudgel and spur. Peacham.—Though in purchales of church lands men have usually the cheapest pennymorths, yet they have not always the best bargains. South. 3. Something advantageously bought; a purchase got for less than it is worth.—

For fame he pray'd, but let the event deciare, He had no mighty penn'sworth of his pray'r. Dryd. A fmall quantity.—My friendship I distribute

in pennyavo the to those about me,

(1.) PENOBSCOT, a large river of the United States, in Maine, which is formed by the confluence of two confiderable rivers, called the E. and and W. Forks, that rife on the borders of Canada, and unite below the Moofe-head lake, which is 35 miles long and 15 broad. Thence it runs S. for 60 miles to Indian Oldtown, 40 of which are through a fertile level country. About 300 yards farther down, it has a portage of 120 yards, Thence it continues to run S. 47 miles, and fails into the Atlantic at Fort Pownal, where it forms a large Bay. (No 3.) The tide runs 35 miles up this river, which is navigable 34 miles by veffels of 30 tons.

(2.) PENOBSCOT, a post town and port of entry of the United States, in Maine, capital of Hancock county. It contained 1084 citizens in 1790. It is 141 miles NW. of Portland 262 N. by E. of Boston, and 606 from Philadelphia. Lon. 68. 40.

W. Lat. 44. 24. N.

(3.) PENOBSCOT BAY, a large bay of the Atlantic, on the S. coast of Maine, about 48 miles broad; containing several islands. Lon. 68. 40. to 0.0. W. Lat. 41. 55. to 44. 30.

9 o. W. Lat. 43. 55. to 44. 30.
(4.) Penobscot Hills, mountains of the United States, in Maine, on the W. coaft of Penob-

Scot Bay.

(5.) PENORSCOTS, a nation of N. American Indians who live in Indian Old Town, a town on an ifland in the Penobleot, which they say they have possessed above 500 years. Their island

have possessed above 500 years. contains about 200 acres of ground.

(1.) PENPONT, [from pendens pons, Lat.] a pawish of Scotland in Dumfries-flire, 24 miles long, and above 5 broad. The groun rifes from the SE. by a continual ascent to the NW. where, on the banks of the Scarr, (which rifes there) it is 3,500 feet above the level of the river. The lower part is watered by the Nith. Cairnkinnow is in the middle of the parish. (See Cairnkinnow.) The whole diffrict exhibits a beautiful and romantic prospect. Glenqubargen Craig, a high rock of hard brownish whinstone, is above 1000 feet of The foil is landy and perpendicular height. mostly deep, but has been much improved by dime. All the usual grain are raised, as well as turnips, potatoes, clover, &c. The population in 1790 was 800; decrease 57, fince 1755; the number of sheep was 1200; of black cattle 980,

(2.) PENPONT, a village in the above parille,

containing about 120 inhabitants,

PENRHYN DHA, a cape on the W. coast of Wales, in Caernarvonshire; so m. S. of Pulhey.

PENRISE, a fea port town of S. Wales, in Giamorganinire, with a market on Thursday; 20 miles SE, of Caermarthen, 14 WNW. of Swantea, and 219 W. of London. Lon. 2. 52. W. Lat. 54. 40. N.

PENRITH, an ancient town of Cumberland in

England, feated under a hill called Perritte PELL, near the rivers Eamont and Lowiner. It is a great thoroughfare for travellers; but las little other trade, except tanning, and a final many facture of checks. Formerly it had a cathe, but it is now in rules. In the church-yard is a ma nument of great antiquity, confifting of two fine pillars 11 feet 6 inches high, and 5 in circumfe ence in the lower part, which is rounded; the upper is square, and tapers to a point; in the square part is some fret-work, and the relieve a cross; and on the interior side of one is the said representation of some anima. But these stone are mortified at their lower part into a round of they are about 15 feet afunder, and the space! tween them is inclosed on each fide with two ry large but thin semicircular stones; so t there is left between pillar and pillar a wall two feet in breadth, Two of these leffer se are plain, the others have certain figures, at fent scarce intelligible. Near these pulars is other called the giant's thumb, 5 feet 8 inc high, with an expanded head, perforated on a fides; from the middle the stone rifes again a lesser head, rounded at top; but no part a tendency to the figure of a cross, being in no mutilated. The pillars are faid to have been up in memory of Sir Owen Cefarius, a fam warrior, buried here, who killed to many t bears, which much infested this county, that figures of bears, cut in stone, on each 🜬 his grave, were let there in remembrance of execution he made among those beasts; and likewife faid his body extended from one to the other. In the market-place there is all house of wood, beautified with bears climbin a ragged ftaff. There is a memorandum on the fide of the veftry without, that, in 1598, persons died here of the plague. There is a rity-school in this place for 20 boys, and and for 30 girls, maintained by 551. a year, by the grament money and parish stock. In 171 Scotch Highlanders entered this town, In 1715 quartered in it for a night, in their way to bellion, 1745, they were, it is faid, very cious and cruel. Its handfome spacious ch has been lately rebuilt, and the roof supported piliars, whose shalts are of one entire re Rone, dug out of a neighbouring quarry. Of E. part of the parish, upon the N. bank of the ver Eamont, there are two eaves or grottoes, out of the folid rock, and fufficient to contain men. The pailinge to them is very narrow dangerous; and it is possible that it's periious cels may have given it the name of Ifis Parlisyulgar tell many stories of one list, a grant, lived there in former times. But probably, subterraneous chambers were made for a se retreat in time of fudden danger; and the gates, which were taken away not long ago. to confirm that supposition. Lon. 3. 16. W. 54. 35. N.

PENROSE, Thomas, was the fon of the Mr Penrose, rector of Newbury, Berks, a of great abilities, descended from an ancient cith family. Mr Penrose, jun. being intended

Cristchurch, Oxford, until furnmer 1762, when begger turn to the naval and military line overparaing his attachment to his real interest, he et his college, and embarked in the unfortunate modium against Nova Colonia, in South Atal The Clive (the largest vessel) was burnt; alteigh the Ambiiscade escaped (on board of Mid Mr Penrole, acting as lieutenant of Marines, wounded), yet the hardships which he afterman inframed in a prize floop, in which he was inited, utterly ruined his conflictution. Returnto England with ample testimonials of his galtry and good behaviour, he finished, at Hertwilege, Oxford, his course of studies; and Tay taken orders, accepted the curacy of Newincome of which, by the voluntary fubpoor of the inhabitants, was confiderably aug-After he had continued in that station syears, he was presented by a friend, to a worth near 5001. per annum. It came, too late; for Mr Penrole's health was Maa deep decline, and he died at Bristol The eged 36. In 1768 he married Miss Mary bed of Newbury, by whom he had one child, who was educated at Winton College. Perole was respected for his extensive erudiadmired for his eloquence, and effeeined la social qualities. By the poor, to whom local, he was venerated. To his poetithe public, by their reception of his A Tuney, &c. have given a savourable

DUN, a town of Cornwall, feated on a the entrance of Falmouth haven by Penfreds are broad and well paved. There many gardens and orchards in it, that it be a town in a wood. It is well watered invoicts, and has an arm of the fea on each at, with a good custombouse and quay, the neat buildings. It drives a confiderable puchards, and in the Newfoundland fishwas anciently governed by a portreeve; I made it a corporation, confifting of , 11 aldermen, 12 common councilmen, acorder, fleward, &c. an office of record a priion, and power to try felons. and two aldermen are justices of the peace. k are inciently a monastery in this place, and er full relics of a tower, garden walls, and quite church. It has now neither church nd It has fent members to parliament the first year of Q. Mary; and James it a new charter, but it was never of, all the inhabitants that pay scot and the are about 100, being the electors. tires a very remarkable account how Penwa once faved by a company of strolling He says, that in the end of the 16th the Spaniards were landing to burn the at the players were fetting Samfon upon with such drumming and shouting, that and thought some ambush was laid for mi kampered back to their ships, Q. te church, purfued his studies with success, at lizabeth sounded a fre eschool in this place. Londershine, Oxford, until summer 1762, when 5. 35. W. Lat. 50. 23. N.

PENS, a town of Cuba; 22 m. SW. of Bayamo. PENSACOLA, the capital of W. Florida, is feated at the mouth of a river on the gulf of Mexico. It was established by the French, and ceded to Great Britain in 1763. Its first discover-er was Sebastian Cabot in 1497. It was reduced in 1781, by the Spaniards under Don Bernard Galvez, after the most obstinate defence made by the British troops that is possible to be conceived, against a much superior force of Spanish veterans. The bravery of the British would indeed in all probability have preserved the place had not a shell burst open the door of a powder magazine under the redoubt, by which it was blown up, and 100.inen killed or wounded. A capitulation therefore became absolutely necessary, which was obtained on honourable terms. The town, with the whole province of Well Florida, was confirmed to the Spaniards by the treaty of 1783. Lon.

87. 20. W. Lat. 30. 22. N.

PENSANCE, a town of Cornwall, at the bottom of Mountsbay, about ten miles from the Land's End. It was burnt in 1595 by the Spaniards, who, with four galleys, surprised this part of the coast, and set fire to several villages and farms; but it was soon after rebuilt, made one of the coinage towns, and has now a considerable trade. It lies in the parish of Madern, noted for its restorative spring, famous for curing lameness, cholic, &c. It is well built and populous, and has many ships. The shore abounds so much with lead, tin, and copper ore, that the veins thereof appear on the utmost extent of land at low-water mark. It is 287 miles W. by S. of London.

s. Supported above the ground.—
The marble brought, erects the spacious dome.

Or forms the pillars long-extended rows,
On which the planted grove and penfile garden

grows. Prior,
PENSILENESS. n. f. [from penfile.] The

flate of hanging.
PENSILES HORTI, Hanging Gardens, in antiquity. See Babylon, § 4.

PENSILVANIA, an erroneous spelling. See

PENNSYLVANIA.

\* PENSION. n. f. [penfion, Fr.] An allowance made to any one without an equivalent. In England it is generally underflood to mean pay given to a flate kireling for treason to his country.—A charity bestowed on the education of her property subjects has more merit than a thousand performs

to those of a higher fortune. Guardian.—He has hurt of pensioners, soldiers, and all hired servan liv'd with the great without flattery, and been a friend to men in power without penfions.

Chremes, for airy pensions of renown, Devotes his service to the state and crown.

Young. (2.) A Pension is or ought to be a fum of money paid annually for actual fervices, or confiderations already past. The yearly payment of each member to the houses of the inns of courts are likewise named penfions; and the yearly affembly of the fociety of Gray's Inn, to confult on the affairs of the house, is also called a pension.

To Pension. v. a. (from the noun.) To Support by an arbitrary allowance.—One might expect to fee medals of France in the highest perfection, when there is a fociety penfioned and let

apart for the deligning of them. Addison .-The hero William, and the martyr Charles,

One knighted Blackmore, and one perficu'd Quarles.

PENSIONARY. adj. [penfionmaire, Fr.] (1.) Maintained by pensions.-

His filly plots, and penfionary spies. Donne. They were devoted by penfionary obligations to the olive. Howel's Vocal Forest.

(2.) PENSIONARY, u. f. or PENSIONER, a perfon who has an appointment or yearly fum, payable during life, by way of acknowledgment, charged on the estate of a prince, company, or parti-

cular person.

(3.) PENSIONARY, in the ci-devant government of the United Provinces, was the first minister of the regency of each city in Holland. His office was to give his advice in affairs relating to the government, either of the state in general, or of the city in particular; and in affembiies of the Rates of the province, he was speaker in behalf of his city. The function, however, of these pensionaries was not everywhere alike; in some cities they only gave their advice, and were never found in affemblies of the magistrates, except when expressly called thither: in others they attended conflantly: and in others they made the propositions on the part of the burgomafters, drew up their conclusions, &c. They were called penfionaries, because they received an appointment or penfion-

(4.) Pensionary, Grand, a ci-devant appellation given to the first minister of the States of The grand penfionary was chairman Holiand. in the affemblies of the Rates of that province: he proposed the matters to be consulted on; collected the votes; formed and pronounced the resolutions of the flates; opened letters; conferred with foreign ministers, &c. His business was also to inspect the finances, to maintain the authority of the Rates, and to fee that the laws were observed; and he was perpetual deputy of the states general of the United Provinces. His commission was, however, given him only for five years; after which it was deliberated whether or not it should be renewed; but there is no inflance of its being revoked; therefore death only put an end to the functions of

this important minifler.

(1.) \* PENSIONER. n. f. [from penfion.] 1. One who is supported by an allowance paid at the will of another; a dependant.—Prices of things necessary for sustentation grew excessive to the Caml.-

Hovering dreams,

The fickle pensioners of Morpheus' train. M He would make enquiry for new penfioners. 1 The rector is maintained by the perquitical the curate's office, and therefore is a kind of Foner to him. Collier. 2 A Clave of Rate hired a stipend to obey his master.-

In Britain's sewate he a seat obtains,

And one more pensioner St Stephen gains. I (2.) PENSIONER, in the university of Cambri and in that of Dublin, has a very peculiar m ing; for those Rudents, either under-graduate bachelors of arts, are called penfioners, who wholly at their own expence, and who receive emolument whatever from the college of w they are members. They are divided into kinds, the greater and the less; the forme whom are generally called fellow-commoners, cause they eat with the fellows of their coll the latter are always called penfioners, and eat the scholars, who are those students of the lege, either under-graduates or bachelors who upon the foundation, who receive emolum from the lociety, and who are capable of beledted fellows. See SERVITOR and SIZAR.

(3.) Penseoner, in general denotes a pe who receives a penfion, yearly falary, or a ance from government. Hence

(4.) Pensioners, the BAND OF GENTLEN the nobleft fort of guard to the king's perion, fifts of 40 gentlemen who receive a yearly per of 1001. This honourable band was first infl ed by King Henry VIII. and their office is to tend the king's person, with their battle-are and from his chapel-royal, and to receive him! presence-chamber, or coming out of his privi gings; they are also to attend at all great so nities, as coronations, St George's feat, p audiences of ambaffadors, at the fovereign's to parliament, &cc. They are each oblige keep three double horses and a servant, and properly a troop of horse. They wait half time quarterly; but on Christmas day, Eaker Whitfunday, &c. and on extraordinary occathey are all obliged to give their attend They likewise carry up the sovereign's dimm the coronation-day and St George's feat which times the king or queen usually confi honour of knighthood on two fuch gentlem the hand as their captain presents. Their are gilt battle-ages; and their weapons on I back, in time of war, are cuiraffiers arms sword and pixols. Their Randard, in tie war, is argent, a cross gules. Their captain ways a nobleman, who has under him a lit ant, a standard-bearer, a clerk of the chee cretary, paymatter, and harbinger.

PENSIYE. adj. pensif, French; pensire lian.) r. Sorrowfully thoughtful; mournfully serious; melancholy.—Think it good work, which they in their penfeve ca the well bestowing of time account waste. A

Are you at leifure, holy father?--My leisure serves me, pensive daughter,

Anxious careethe penfive nymph opprest.

alt is generally and properly used of perions; at Prior has applied it to things.

We, at the fad approach of death, shall ] LOOW

The truth, which from these pensive numbers fow,

The we purfue faife joy, and fuffer real woe.

Prior. "ENSIVELY. adv. [from penfive.] With mebody; forrowfully; with gloomy ferioufnefs.-On herbe and flowers the walked penfively.

penfer. PENSIVENESS. z. f. [from penfive.] Melan-An; formwfulnels; with gloomy feriousness.--Concraing the bleffings of God, we should deto making thanks than in making reprison them, inalmuch as the one hath penfiveand fear, the other always joy annexed.

Would'st thou unlock the door ,To cold despairs and gnawing penfeveness?

Herbert. MINTOCK, a. f. a fluice or flood-gate, fervthe retain or let go the water of a mill-pond, ike.

PENT. part. pass. Shut up.-

Cut my lace afunder, That my pent heart may have some scope to br ut.

The fon of Clarence have I pent up close.

Sbak. The fool pure fire, like ours of equal force; ham fie'h, mast issue by discourse. Dryd. mp in Utica, he vainly forms

RTACROSTIC, in poetry, a fet of verses so as that there are always five acrostics of name, in five divisions of each verse. See

TACTINODOS, in natural bifory, a prea by some authors to those species of which are composed of a body divided die rays.

TADACTYLON, FIVE FINGERS, in bothe given by some authors to the ricinus Christi, from the figure of its leaf.

TADACTYLOS PISCIS, the five-fingered chthyology, the name of a fish common in eas about the East Indies, and cailed by Duch there vuf winger visth. See Plate

CCLXVII. It has this name from five black streaks which it has on each side, resembling the prints of five fingers. Its head is flat, convex at the bottom, plain in the fides, and inclined in the fore part. The mout is thick, obtuse, and round; the lower jaw at its extremity bent and rounded: the nostrils are double; the balls of the eyes oval; the iris of a filver colour; the first fin of the back is finall; the fecond is more elevated; those of the breaft are inferted obliquely, that of the anus is greatly extended, and that of the tail much floped. The whole body is covered with scales of a moderate fize, thin, flexible, and flightly indented on their hinder edge; the back is reduifh, the fides of a filver colour, and the fins white. The fifth is described by some as about nine inches long; by others as a foot and a half. It is a dry but not ill-tafted fifh.

PENTAEDROSTYLA, in the old fystem of mineralogy, a genus of spars. (See Spar.) The bodies of this genus are spars in form of pentagonal columns, terminated by pentangular pyramids at one end, and regularly affixed at the other to some solid body

\* PENTAEDROUS. adj. [with and iten.] Having five sides.—The pentaedrow columnar coralloid bodies are composed of plates set lengthways, and passing from the surface to the axis. Woodgvarð.

(1.) \* PENTAGON. n. f. [pentagon, Fr. with and and A figure with five angles. - I know of that famous piece at Capralora, caft by Baroccio into the form of a pentagon with a circle inscribed.

(2.) Pentagon, in geometry, is a figure of five fides and five angles. See GEOMETRY.

(3.) PENTAGON, in fortification, denotes a fort with five baltions.

\* PENTAGONAL. adj. [from pentagon.) Quinquangular; having five angles.—The body being cut transversely, its surface appears like a net made up of pentagonal meshes, with a pentagonal star in each mesh. Woodward.

PENTAGONOTHECA, in botany, the name given by Vaillant to the plant called by Linnzeus,

Plumier, Houston, and others, PISONIA.

(1.) PENTAGRAPH, a. f. an instrument defigned for drawing figures in what proportion you please, without any skill in the art. See MINIA-TURE, § 2. The instrument is otherwise called a PARALLELOGRAM. The common pentagraph (Plate CCLXV, fig. 13.) confits of 4 brais or wooden rulers, two of them from 15 to 18 inches long, the other two half that length. At the ends, and in the middle, of the longer rulers, as also at the ends of the shorter, are holes, upon the exact fixing whereof the perfection of the in-firument chiefly depends. Those in the middle of the long rulers are to be at the fame distance from those at the end of the long ones, and those of the short ones; so that when put together, they may always make a parallelogram. The inftrument is fitted together for use by several little pieces, particularly a little pillar, No 1. having at one end a screw and nut, whereby the two long rulers are joined; and at the other a little knot for the instrument to slide on. The piece, No 2. is a rivet with a screw and out, wherewith each More

fiort ruler is fastened to the middle of each long one. The piece, N° 3. is a pillar, one end whereof, being hollowed into a screw, has a nut sitted to it. At the other end is a worm to screw into the table; when the instrument is to be used, it joins the ends of the two short rulers. The piece, N° 4. is a pen, porterayon, or pencil, screwed into a little pillar. Lastly, the piece, N° 5. is a brass point, moderately blunt, screwed likewise into a little pillar.

(2.) PENTAGRAPH, METHOD OF USING THE. I. To copy a defign in the same scale or bigness as the original: screw the worm N° 3, into the table; lay a paper under the pencil N° 4, and the defign under the point N° 3. This done, conducting the point over the feveral lines and parts of the delign, the pencil will draw or repeat the same on the paper. II. If the design be to be reduced-e. g. into half the space, the worm must. be placed at the end of the long ruler, No 4. and the paper and pencil in the middle. In this fituation conduct the brass point over the several lines of the defign, as before; and the pencil at the fame time will draw its copy in the proportion required; the pencil here only moving half the lengths that the point moves. Hence, on the contrary, if the defign be to be enlarged by one half, the brass point, with the design, must be placed in the middle, at No 3. the pencil and paper at the end of the long ruler, and the worm at the other. III. To enlarge or reduce in other proportions, there are holes drilled at equal diffances on each ruler, viz. all along the short ones, and half way of the long ones, in order for placing the brais point, pencil, and worm, in a right line therein; i.e. if the piece carrying the point be put in the third hole, the two other pieces must be put in its third hole. If, then, the point and defign be placed at any hole of the great rulers, and the pencil with the paper at any hole of the short ruler, which forms the angle therewith, the copy will be less than half the original. On the contrary, if it be placed at one of the holes of that fhort ruler, which is parallel to the long ruler, the copy will be greater than half the original. The construction of this instrument requires a degree of accuracy which most of our instrument-makers are strangers to; for which reason, there are very few of the instruments that succeed. Few will do any thing tolerably but ftraight lines; and many of them not even thefe. To prove that the fagure described by a pentagraph is fimilar to the given figure, let C (fig. 14.) be the fixed centre of motion; P the pencil for tracing the given figure PP, and p the pencil which traces the other figure pp; p, &c. must be so adjusted, that p, C, and P, may lie in one straight line; then, since Bn: Ap:: BP: AC, whatever be the fituation of the pentagraph, the angles PCP and pCp are vertical; and therefore PCp will in every polition of the instrument be a right line: but PC: pC:: BA: Ap, in each of the two politions in the figure, and consequently the triangles PCP, p Cp, are similar; and PP:pp (:: PC:pC):: BA: Ap, or in a given ratio. Hence it appears, that, by moving the pencil p, Ap may be equal to BA, or less in any proportion; and confequently pp may be equal to PP, or less, in the same proportion.

PENTAGYNIA, [from arm, free, and yen, augman, or suife,] in the Linuxan System of E tany, an order in the classes Pentandria, Deciding, Dodecandria, Icofandria, and Polyandri confisting of plants which have hermaphrod flowers, with 5 female organs. See BOTANY, 180, 185, 186, 187, 188.

PENTALUPO, a town of Naples, in Calal

Ultra, 6 miles E. of Reggio.

(1.) \* PENTAMETER. n. f. | pentametre, pentametrum, Lat.] A Latin verse of five see Mr Distich may possibly play some pentame upon us, but he shall be auswered in Alexandri Addison.

(2.) PENTAMETER VERSE. The two first may be either dactyls or spondees at pleasure; third is always a spondee; and the two last pests: such is the following verse of Ovid.

Carminibus vilves tem pus in of mue meis.

A pentameter verfe subjoined to an hexam constitutes what is called elegiae. See Eleg

(1.) PENTANDRIA, [trom ever, five, and a man, or hußband,] the fifth class in Linus fexual method, confisting of plants which hermaphrodite flowers, with five stamina or organs. See BOTANY, Index.

(2.) PENTANDRIA is also the name of and in the ciasses Monadelphia, Diadelphia, Joly phia, Gynandria, Monoecia, and Dioccia. BOTANY, § 191, 192, 193, 195, 196, 197.

\* PENTANGULAR. adj. [www.and angle Five-cornered.—His thick and bony feales in rows, so as to make the flesh almost pentang Grew.

(1.)\* PENTAPETALOUS. adj [wish and parts.] Having her petals or leaves.

PENTAPETES, in botany, a genus of the decandria order, belonging to the monade class of plants; and in the natural methoding under the 37th order, Columnifera. To lyx is quinquepartite; the stamina are 20 in ber, of which five are castrated and long capsule quinquelocular and polyspermous is but one species known; viz.

PENTAPETES PHOENICIA, with halberted, spear-shaped, sawed leaves. It is an a plant, a native of India, and rifes to 2 or adorned with fine scarlet flowers, consists one petal cut into five segments. In the content flower arises a thort thick column, to adhere 15 thort stamina. It is a tender and must be brought up in the hot-house.

(1.) PENTAPOLIS, a name given to the cities, Sodom, Gomoriah, Admah, and Ze and Zoar. (Wisdom x. 6.) They were a condemned to utter destruction, but Lot in ded for the preservation of Zoar, otherwise Bela. The other 4 were destroyed by light (Gen. xix. 24. 25.) and in the place where stood arose the lake Asphaltites, or the lake dom.

(2.) Pentapolis; a district of Cyrenaica ated on the Mediterranean; denominated in five cities; namely, Berenice, Arsinoe, Ptol. Cyrene, and Apollonia. Ptol.

PENTIHER, a cape on the W. coast of France, 21 unles SE, of St Matthieu. Lon. 13. 3. E. Ferro.

Lat. 48. 15. N.

PENTHIEVRÉ, a fort of France, in the dep. of Morbihan, on the penintula of Quiberon; 7 miles N. of Quiberon, and 9 S. of Auray.

PENTHILUS, a fon of Oreftes and Erigone, the daughter of Ægyfthus: who reigned conjunctly with his brother Tifamenes at Argos, till they were expelled by the HERACLIDÆ. He then went to Achaia, and thence to Lesbos, where he planted a colony. Pauf. 4. Patere. 1. c. 1.

PENTHORUM, in botany, a genus of the pentagynia order, belonging to the pentandria class of plants. The calva is quinquefid; there are either 5 petals or none 5 the captule is five-pointed and quinquelocular.

\* PENTHOUSE. n. f. [pent, from pente, Fr. and bouse.] A shed hanging out assope from the main wail.—This is the penthouse under which Lorenzo desir'd us to make a stand. Shak.—

Sieep shall neither night nor day
Hang upon his perthouse lid.

The Tuiks lurking under their penthouse, laboured with mattocks to dig up the foundation of the wall. Knolles.—Those defensive engines, made by the Romans into the form of penthouses to cover the aisallants from the weapons of the besieged, would be presently batter in pieces with stones and blocks. Wilkins.—

My penthonje eye brows, and my shaggy beard,

Offend your fight. Dryden.

The chill rain

Drops from fome penthouse on her wretched head.

Rosse.

PENTHYLUS, a king of Paphos, who affited Xerxes with 12 ships. Being seized by the Greeks, he gave them much useful information as to the situation of the Persians. Herod. vii. 195.

\* PENTICE. n. f. laptentir. French; pendica, Italian. It is commonly supposed a corruption of penthouse; but perhaps pentice is the true word.] A sloping roof.—Climes that fear the falling and lying of much snow, ought to provide more inclining pentices. Wotton.

Bb PEN-

PENTIDATILO, a town of Naples, in Cala-

bria Ustra; 12 miles SE. of Reggio.

\* PENTILE. n. f. [ fent and tile.] A tile formed to cover the floping part of the roof: they are often called pantiles.—Pentiles are 13 inches long, with a button to hang on the laths; they are hollow and circular. Moxon.

PENTIMA, a town of Naples, in Abruzzo Ci-

tra; 5 mile- NW. of Solmona.

PENTLAND, or PICTLAND, names given to a frith, a ridge of hills, and feveral islands of Scotland, in very different parts of the kingdom. These names appear to have the same derivation; Pentland being only a variation in orthography from Paint-land, and Pittland being undoubtedly derived from Piai, the name given by the Romans to our ancestors, the Pias, because, like some other favage nations, they painted their bodies. PICTS.

I. PENTLAND FRITH, OF PICTLAND FRITH, A narrow strait of 12 miles between the main land of Scotland and the Orkney ifles. This strait is the great thoroughfare of shipping between the E. and W. feas, the terror of the boldest mariners, and the grave of thousands. By the meeting of many different tides, the fea runs with fuch impetuofity, that no veffel can withftand it. The spray is often driven feveral miles on land. These storms, however, afford many natives on the opposite fluores a better livelihood than they could obtain by fishing or husbandry. They search from place to place, and from one cavern to another, in the hopes of finding timber, casks, and other floating articles of the wrecked veffels, of which 6 or 8 are often facrificed in one night. The navigation of this pass is rendered more dangerous by the island of Stroma, and two rocks called the Skerries, lying near the middle of it. (See N° 3.) It may be croffed and failed through, however, without danger, at particular times, known to the pilots on that coast. But if the proposed canal from Inverness to Fort William were carried into execution, all danger from this circuitous navigation would be prevented.

2. PENTLAND HILLS, a ridge of hills which begin about 4 miles S. by W. of Edinburgh, and extend 10 miles W. towards the W. borders of Mid Lothian. They are mostly green to the top, and afford excellent pasture to numerous flocks of theep. The valleys between them are watered by feveral romantic streams; particularly the North 1.18, Glencrofs, and Logan water. Some of the hills are very high. Carketon Craig, the most northern is 1450 feet above the fea level; Capelaw, W. of it, is 1550; and Logan-house hill is 1700 In this last is found the stone called PETUNSE PENTLANDICA, from its refemblance to the materials used in China for making china wares. The hold of Braid and Blackford are a continuation of

this ridge.

3. PENTLAND SKERRIES, three islands in the F. end of Pentland Frith; on the largest of which two light-houses were crected in 1794; 4 miles ME. of Duncan's-bay Head. Lon. o. 25. E. of Edichurgh. Lat. 58. 35. N.

PENTSTEMON. See CHELONE, Nº 3. \* PART UP. part. adj. [pent, from pen and up.]

Shut up.-

Close pent up guilts

Rive your concealing continents. PENVENAN, a town of France, in the de of the North Coasts; 3 miles NW. of Tregui

and 7! NE. of Lannion.

PÉNULA, among the ancient Romans, wa coarfe garment or cloak worn in cold or rai weather. It was shorter than the lacerna, a therefore more proper for travellers. It was ge rally brown, and fucceeded the toga after the ft became monarchical. Augustus abolished the tom of wearing the penula over the toga, confid ing it as too effeminate for Romans; and the diles had orders to fuffer none to appear in circus or forum with the larcerna or pen Writers are not agreed as to the precise different between these two articles of dress; but we told that they were chiefly worn by the lower ders of people. See LACERNA.

PENULTIMA, or Penultimate Sylle in grammar, the last sylvable but one of a we PENULTIMATE. adj. [penultimus, Lat]

(1.) \* PENUMBRA. n. f. [pene and unbra, I An imperfect shadow, that part of the shad which is half light .- The breadth of this im answered to the sun's diameter, and was ab two inches and the eighth part of an inch, ind

ing the penumbra. Newton.

(2.) PENUMBRA, in aftronomy, is a partial 🗓 observed between the perfect shadow and the light in an eclipse. It arises from the magnitud the fun's body: for were he only a luminous pa the shadow would be all perfect; but, by re of the diameter of the fun, it happens, that ap which is not illuminated by the whole body fun, does yet receive rays from a part thereof

PENÚRIOUS. adj. [from penuria, Latin] Niggardly; fparing; not liberal; fordidly me What more can our penurious reason gra

To the large whale or castled elephant? 2. Scant; not plentiful.-

and digest crudities. Did. PEPCHIDIACHIC, or Perchidichi, a cape

of New Brunfwick, on Chalcurs Bay. PEPECHAISSINAGAN, a river of Canada, which runs into the St Lawrence: in Lon. 68. 55. W. Lat. 48. 26. N.

PEPHNOS, a town of Laconia. Pauf. iii, 26. (1.) PEPIN DE HERISTAL, OF LE GROS, MAYor of the palace under Clovis III. Childebert, and Dagobert III. (See FRANCE, § 9.) The power of these mayors in France was so great, that they left the fovereign only the empty title, and in the end feized on the throne itfelt.

(2.) PEPIN LE PETIT, or LE BRIEF, (i. c. the short,) grandfon to Pepin le Gros, and first king of the second race of French monarchs, was mayor of the palace to Childeric III. a weak prince: he contrived to confine him and his fon, Theodoric, in different monafteries; and then, with the asiiftance of pope Stephen III. he usurped the fovereign power. He died in 768, aged 54. See FRANCE, § 10-12.

(3.) Pepin, king of Italy. See France, § 16. PEPLIS, in botany, a genus of the monogynia order, belonging to the hexandria class of plants; and in the natural method ranking under the 17th order, Calycanthems. The perianthium is campanulated; the mouth cleft in 12 parts; there are fix petals inferted into the calyx; the capfule is bi-

PEPLOUD, a town of Hindooftan, in Candeish : go miles S. of Indore, and 30 NE, of Burhampour.

PEPLUS, a long robe worn by the women in ancient times, reaching down to the feet, without fleeves, and fo very fine, that the fliape of the bedy might be feen through it. The Athenians used much ceremony in making the peplus, and dreffing the statue of Minerva with it. Homer makes frequent mention of the peplus of that goddefs. Bb 2 PEPONG

PEPONG, two islands in the E. Indian Ocean, near the coast of China. Lon. 124. 46. E. Ferro. Lat. 23. 22. N.

PEPOZIANS, a fect of Christian heretics, who sprung up in the 2d century; a branch of the MONTANISTS.

(1.) \* PEPPER. n. f. [piper, Lat. poivre, Fr.] We have three kinds of pepper; the black, the white, and the long, which are three different fruits produced by three diftinct plants: black pepper is a diled fruit of the fize of a vetch and roundish, but rather of a deep brown than a black colour: with this we are supplied from Java, Malabar and Sumatra, and the plant has the fame heat and fiery talle that we find in the pepper's white pepper is commonly factitious, and prepared from the black by taking off the outer bank, but there is a rarer fort, which is a genuine fruit naturally white: long pepper is a fruit gathered while unripe and dried, of an inch or an inch and half in length, and of the thickness of a large goose quill. Hill.—

Scatter o'er the blooms the pungent dust Of pepper, tatal to the frosty tribe. Thom fon. (2.) PEPPER, PIPER, in natural history, an aromatic berry of a hot dry quality, chiefly used in feafoning. Pepper is principally used by us in food, to affift digeftion: but the people in the East Indies efteem it as a flomachic, and drink a ftrong infulion of it in water by way of giving them an appetite: they have also a way of making a fiery spirit of sermented fresh pepper with water, which they use for the same purposes. They have also a way of preferving the common and long pepper in vinegar, and eating them afterwards at meals. There are 3 kinds of pepper at present used in the shops, the black, the white, and the long pepper. I. PEPPER, BLACK, is the fruit of the piper,

East Indies. See Pipek. II. PEPPER, LONG, is a dried fruit, of an inch or an inch and an half in length, and about the thickness of a large goose quill; it is of a brownish grey colour, cylindrical in figure, and produced

and is brought from the Dutch fettlements in the

on a plant of the fame genus.

III. PEPPER, WHITE, is factitious, being prepared from the black in the following manner: they steep this in sea-water, exposed to the heat of the fun for feveral days, till the rind or outer bark loofens; they then take it out, and, when it is half dry, rub it till the rind falls off; then they dry the white fruit, and the remains of the rind blow away like chaff. A great deal of the heat of the pepper is taken off by this process, fo that the white kind is more fit for many purposes than the black. However, there is a fort of native white pepper produced on a species of the same plant; which is much better than the factitious, and indeed little inferior to the black.

(3.) Pepper, Barbary. See Capsicum, Nº 6.

(4.) PEPPER, BELL. See CAPSICUM, No 10. (5.) PEPPER, BIRD. See CAPSICUM, No 7.

(6.) PEPFER, GUINEA. See CAPSICUM, No I. (7.) Pepper, Hen. See Capsicum, N" 4.

(1.) \* PEPPERMINT. n. f. [pepper and s

piperitis. Mint eminently hot. (2.) Perper-mint. See Mentha, Nº 4 (3.) PEPPER MINT TREE, in botany, the lyptus piperita. In a journal of a voyage to South Wales, by John White, Esq; we be plate of this tree, (See Plate 272.) with the lowing account of it: " This tree grows to height of more than, 100 feet, and is about feet in circumference. The bark is very im like that of the popiar. The younger bra are long and flender, angulated near the top as they grow older, the angles disappear. bark is smooth, and of a reddish brown. leaves are alternate, lanceolate, pointed, vi tire, smooth on both sides, and remarkably qual or oblique at their base; the voi ternate and not very conspicuous. The furface of both fides of the leaves is m with numerous minute refinous spots, in the effential oil relides. The foot-flalks bout half an inch'in length, round on the fide, angular above, quite smooth. The ers we have not seen. What Mr White has as the ripe capfules of this tree (although attached to the specimens of the leaves) in clusters, from 6 to 8 in each, selfile and glomerated. These clusters are supported guiar alternate footstaiks, which form a 🗷 , paniele. Each capfule is about the fize

intern berry, globular, but as it were cut off atherop, rugged on the outfide, hard and woody, and of a dark brown colour. At the top is a Line onfice, which shows the internal part of the capfule divided into four cells, and having a fisue column in the centre, from which the parmoss of the ceil arise. These partitions extend note rim of the capfule and terminate in four fall projections, we ich look like the teeth of a on. The feeds are numerous, finall, and anpair. The name of peppermint tree has been gitesto this plant by Mr White, on account of the very great resemblance between the essential al drawn from its leaves and that obtained from the peppermint, (MENTHA PIPPRITA,) which grows in England. This oil was found by Mr White to be much more efficacious in removing all cholicky complaints than that of the English perpermint, which he attributes to its being lefs suggest and more aromatic. A quart of the oil more fent by him to Mr Wilson. The tree manto be undoubtedly of the fame genus with untivated in some greenhouses in England, Mr L'Heritier has described in his Section Agism by the name of Eucalyptus obliqua, the' knommonly called in the gardens Metrofideros suque; but we dare not affert it to be the same specan list can this point be determined till the flowmadevery part of both be seen and compared; white compared the best specimens we could poset of each, and find no specific difference. The easily ptus obliqua has, when dried, an aromelwour, somewhat similar to our plant. We memarked, indeed, innumerable minute white has blides the reliaous ones, on both furfaces of the leaves in some specimens of the garden pure, which are not to be seen in ours; and the success of the former are rough, with small scahubereles. But how far these are constant, we cannot tell. The obliquity in the leaves, one side bug shorter at the base than the other, as well moment narrower all the way up, as in the Firm milda of the Hortus Kewenfis, is remark-The figure represents a in both plants. of the peppermint tree in leaf; on one fide spart of a leaf teparate, bearing the gall of mich; on the other the fruit above descri-

PIPUSCH, John Christopher, Mus. D. and F. Li one of the greatest theoretic or scientific ians of modern times, was born at Berlin, \* 1667. In 1680, when not 15 years, he had have such proficiency on the harpsichord, that te was appointed to teach mulic to the prince toyal of Piussia. About 1700, he came over to Inkland, and was engaged at Drury-Lane. The popularity of Handel kept him in the secondary bu, but Pepulch chole a new track for himfelf, taught Music in the full sense of the word; i. the principles of harmony and the science of tompolition,—not to children or novices, but to

professors of music themselves, who actually attended him, so much were his talents and judge ment respected. In 1713, the University of Oxford admitted him Doctor of Music. In 1724, heaccepted an offer from Dr Berkeley to go with him to Bermudas, as professor of music in his intended college; but the ship being wrecked, he returned to London, and married Frances Margaret De L'Epine, who had made a fortune of 10,000 guineas by her voice at the operas. (See Music, § 72.) His fortune and reputation were now at a height. At the defire of Meffrs Gay and Rich, he composed the mulic for the Beggar's Overa. In 1737, he was chosen organist for the Charter-house. In 1740, his wife died, a short time after their only fon. He wrote an Account of the Ancient Genera of Music, which was read before the Royal Society. and published in the Philos. Trans. for Oct. Nov. and Dec. 1736; and was foon after chosen F. R. He died July 20, 1752, aged 85.

PEPY's ISLAND, an island in the South Sea. 24 miles E. of Cape Blanco, in Patagonia. Lat. 47. o. S.

PERYS's Islands, a name given to FALK-

LAND ISLANDS PEQUANNOCK, a river of Connecticut, which runs S. through Huntington and Stratford in Fairfield county, and falls into a bay in the Sound.

PEQUIGNY, a town of France, in the dep. of Somme, and late prov. of Picardy; feated on the Somme, 15 miles SE. of Abbeville. It is memorable for an interview between Edward IV. of Englan 1 and Lewis XI. of France, in 1475, on a bridge, erected for that purpose. Lon. 2. 5. E. Lat. 49. 58. N.

PEQUOTS, a nation of North American Indians, extirpated in 1637. See CONNECTICUT, No

PER, prep. [Lat.] By, or through; a word fo completely adopted into the English language, as to be understood by the most illiterate. It is not only used in conjunction with Latin words, as per adnum, by the year, per diem, by the day, per fe, by itself, &c. but with English words, a per bearer, per carrier, per cent, per margin, &c. It is also much used in composition.

(1.) PERA, one of the suburbs of Constantinople, where ambaffadors and Christians usually re-

ude. See Constantinople, f 1.

(2.) Pera, a sea port town of Mulacca, 170 miles NW. of Malacca.

 PERACUTE. n. f. [peracutus, Lat ] Very fharp; very violent.-Matign, continual peracute fevers, after most dangerous attacks, suddenly re-

mit of the ardent heat. Harvey

PERADVENTURE. adv. [par adventure, Fr.] 1. Perhaps; may be; by chance.—That wherein they might not be like unto either, was fuch peradventure as had been no whit less unlawful. Heoker .- As you return, visit my house; let our old acquaintance be renew'd; peradventure I will with you to court. Sbak .- What peradventure may appear very full to me, may appear very crude and maimed to a stranger. Digby. 2. Doubt; question. It is sometimes used as a noun, but not gracefully, nor properly.—Though men's persons ought ought not to be hated, yet without all peradrenture their practices justly may. South.

\* To PERAGRATE. v. a. [peragro, Lat.] To wander over; to ramble through. Dia.

PERAGRATION. n. f. [from peragrate.] The act of passing through any state or space.— A month of peragration is the time of the moon's revolution from any part of the zodiac unto the same again, and this containeth but 27 days and 8 hours. Brown.—The moon has two accounts which are her months or years of revolution; one her periodic month, or month of peragration, which chiefly respects her own proper motion or place in the zodiack, by which she like the sun performs her revolution round the zodiack, from any one point to the same again. Holder.

\* To PERAMBULATE. v. a. [rerambulo, Lat.]

1. To walk through. 2. To survey, by passing through.—Persons the lord deputy should nominate to view and perambulate Irish territories.

Daviet. 2. To visit the boundaries of the parish.

Davies. 3. To visit the boundaries of the parish. \* PERAMBULATION. n. /. (from perambulate.] 1. The act of passing through or wandering over .- The duke looked still for the coming back of the Armada, even when they were wandering and making their perambulation of the northern feas. Bacon. 2: A travelling furvey .-France is a square of 550 miles traverse, thronging with fuch multitudes, that the general calcul, made in the last perambulation, exceeded 18 millions. Howel. 3. A district; limit of jurisdiction.-It might in point of confcience be demanded, by what authority a private person can exsend a personal correction beyond the persons and bounds of his own perambulation? Holyday. 4. Survey of the bounds of the parith annually performed.

PERAMBULATOR, in furveying, an inftrument for measuring distances, cailed also pedomeser, way-wiler, and 'urveying-wheel. See Pano-METER. It confifts of a wheel AA, Plate CCLXVI, fig. 7. two feet seven inches and a half in diameter; consequently half a pole, or eight feet three inches, in circumference. On one end of the axis is a nut, three quarters of an inch in diameter, and divided into eight teeth; which, upon moving the wheel round, fall into the eight teeth of another nut c, fixed on one end of an iron rod Q, and thus turn the rod once round in the time the wheel makes one revolution. This rod, lying along a groove in the fide of the carriage of the inftrument, under the doted line, has at its other end a fquare hole, into which is fitted the end b of a small cylinder P. This cylinder is disposed under the dial-plate of a movement, at the end of the carriage B, in such a manner as to be moveable about its axis; its end a is cut into a perpetual screw, which falling into the 32 teeth of a wheel perpendicular thereto, upon driving the in-Arument forward, that wheel makes a revolution each 16th pole. On the axis of this wheel is a pinion with fix teeth, which, falling into the teeth of another wheel of 60 teeth, carries it round every rooth pole, or half a mile. This last wheel, carrying a hand or index round with it over the divisions of a dial-plate, whose outer limb is divided into 160 parts, corresponding to the 160 poles, points out the number of poles passed o-

ver. Again, on the axis of this last wheel is a pinion, containing 20 teeth, which falling into the teeth of a third wheel which hath 40 teeth, drives it once round in 320 poles, or a mile. On the axis of this wheel is a pinion of 12 teeth, which falling into the teeth of a 4th while having 72 teeth, drives it once round in 12 miles. This 4th wheel, carrying another index over the inner limb of the dial-plate, divided into 12 for miles, and each mile fubdivided into halves, quarters, and furlongs, ferves to register the revolutions of the other hand, and to keep account of the balf mile and miles passed over as far as 12 miles. The use of this instrument is obvious from its construction. Its proper office is in the furveying of road and large diftances, where a great deal of exped tion, and not much accuracy, is required. It evident, that driving it along and observing the hands, has the same effect as dragging the chall and taking account of the chains and links. advantages are its hardiness and expedition; I contrivance is fuch, that it may be fitted to the wheel of a coach, in which flate it performs i office, and measures the road without any troub at all.

PERASTA, a town of Turkey, in Romania. PERCA, the PERCH; a genus of fishes belowing to the order of thoracici. The head is furnified with scaly and serrated opercula; there are ven rays in the membrane of the gills; and this on the back are prickly. There are 38 species, principally diffinguished by peculiarities the back sin. The most remarkable are there:

1. Perca cerva, the Pore, or rife; found in feveral English streams: it is gregated affembling in large shoals, and keeping in the deepest part of the water. It is of a much me stream than the perch, and selicon exceed in inches in length. The teeth are very simple and disposed in rows. It has only one dorsal extending along the greatest part of the back; first rays, like those of the perch, are strong, shall and spiny; the others soft. The body is coned with rough compact scales. The back and selection of a dirty green, the last inclining yellow, but both spotted with black. The dash sin is spotted with black; the tail marked with transverse bars.

2. Perca fluviatilis, or common per hath a deep body, very rough scales, and the much arched. The colours are beautiful; back and part of the fides being of a deep gre marked with five broad black bars pointing down wards; the belly is white, tinged with red; ventral fins of a fine fearlet; the anal fins and I of the same colour, but rather paler. In a la called Llyn Raithlyn, in Merionethshire in Wa is a very fingular variety of this fift; the b part is quite hunched, and the lower part of back-bone next the tail Arangely distorted: in lour and other respects it resembles the comm perch, which are as numerous in this lake as deformed fith. They are not peculiar to this ter; for Linuæus takes notice of them in a la at Fahlun in his country. It is said that they also met with in the Thames near Marlow. perch was much effeemed as food by the Roma nor is it less admired at present as a firm and d of it when made into a dish called water-fouchy. It is a gregarious fish; and loves deep holes and perthe fireams; is exceedingly voracious, and an agar biter: if the angler meets with a shoal of them, he is fure of taking every one. —The perch wery tenacious of life, and has been known to knine a journey of 60 miles in dry straw. It felin mows to a large fize, though Mr Pennant maxions one that weighed 9 lb. but this is very DOM: non.

PERCA LABRAX, the buffe, is a very voracional trong, and active fish. Ovid calls them mid inpi, a name continued to them by after whiles; and they are faid to grow to the weight dub. The irides are filvery; the mouth large; the teeth are fituated in the jaws, and are very foull: is the roof of the mouth is a triangular much space, and just at the gullet are two others of a roundish form. The scales are of a middling to very thick fet, and adhere closely. be a formed formewhat like that of a falmon. The colour of the back is dusky, tinged with blue. The belly is white. In young fish the space ahe the fide line is marked with finall black fpots. -b a effectived a very delicate fish.

A PERCA MARINA, the fea perch, is about a fee long: the head large and deformed; eyes mat; teeth small and numerous. On the head and were of the gills are strong spines. bear red, with a black spot on the covers of the gib, and some transverse dusky lines on the

Lis It is a fish held in some esteem at the table. FICA NILOTICA, the perch of the Nile, is Incur, and is not hard, but very white. face of the best fishes in the Nile; and as it the largest fize in Egypt, it adorns a table if meght upon it entire and well fried. See PILOT-

FERCASE. adv. [par and cafe.] Perchance; was in foiltudine, and not only in theatro, tho? ment will be more strong by glory and fame, Leal which is doubled by reflexion. Bacon.

\* PLRCEANT. adj. [pergant, Fr.] Piercing; Dololete.

Wond'rous quick and perceant was his fpright, Lake's eyes that can behold the fun. Spenfer. \* PERCEIVABLE. adj. [from perceive.] Perpike; such as falls under perception.-The though it really moves, yet not changing as diffance with some other bodies, as the ideas of our own minds will follow one

of the Locke.—That which we perceive when we thec, 23 percein able by fight, is nothing but termination of colour. Locke. PERCEIVABLY. adv. [from perceivable.] In

a manner as may be observed or known. To PERCEIVE. v. a. [percipio, Lat.] 1. To

eaver by some sensible essects.

Consider,

When you above perceive me like a crow, That it is place which leffens and fets of. Shak. To know; to observe.—Jesus perceived in his that they so reasoned within themselves. Est, ii-They are brought low, but he perceiveth

heate fish; and the Dutch are particularly fond it not. Job. xiv. 21.—'Till we ourselves see it with our own eyes, and perceive it by our own understandings, we are still in the dark. Locke.-How do they come to know that themselves think, when they themselves do not perceive it? Locke.
3. To be affected by.—The upper regions of the air perceive the collection of the matter of tempests before the air here below. Bacon.

 PERCEPTIBILITY. n. /. [from perceptible.] 1. The state of being an object of the senses or mind; the state of being perceptible. a. Perception; the power of perceiving. Not proper.-The illumination is not fo bright and fulgent, asto obscure or extinguish all perceptibility of the rea-

fon. More.

\* PERCEPTIBLE. adj. [perceptible, Fr. perceptus, Lat.] Such as may be known or observed.-No found is produced but with a perceptible blaft of the air, and with some resistance of the air ftrucken. Bacon.-When I think, remember or abstract; these intrinsick operations of my mind are not perceptible by my fight, hearing, tafte, finell, or feeling. Hale.-It perceives them immediately, as being immediately objected to and perceptible to the fense; as I perceive the sun by my light. Hale. - In the anatomy of the mind, as of the body, more good will accrue to mankind by attending to the large, open and perceptible parts, than by studying too much finer nerves.

Pope.

\* PERCEPTIBLY. adv. [from perceptible.] In

fuch a manner as may be perceived.-The woman decays perceptibly every week.

Pope-(1.) \* PERCEPTION. n. f. [perception, Fr. berceptio, Latin.] 1. The power of perceiving; knowledge; consciousness .- Matter hath no life nor perception, and is not conscious of its own existence. Bentley .- Perception is that act of the mind, or rather a passion or impression, whereby the mind becomes conscious of any thing; as when I feel hunger, thirst, cold, or heat. Watts. 2. The act of perceiving; observation. 3. Notion; idea. -By the inventors, and their followers, that would feem not to come too flort of the perceptions of the leaders, they are magnified. Hale. 4. The flate of being affected by fomething. - Great mour. tains have a perception of the disposition of the air to tempests sooner than the vallies below. Bacon. -This experiment discovereth perception in plants to move towards that which should comfort them, though at a distance. Bacon.

(2.) Perception is a word which is fo well understood, that it is difficult for the lexicographer to give any explanation of it. It has been called the first and most simple act of the mind by which it is conscious of its own ideas. This definition, however, is improper, as it confounds perception with confcioumefs; although the objects of the former faculty are things without us, those of the latter the energies of our own minds. Perception is that power or faculty by which, through the medium of the fenses, we have the cognizance of objects diftinct and apart from ourfelves, and learn that we are but a small part in the fystem of nature. By what process the senses give us this information, we have endeavoured to show elsewhere. See METAPHYSICS, Sed. VI.

PERCEPTIVE. adj. [perceptus, I.at.] Having the power of perceiving.—The foul is awake and folicited by external motions, for fome of them reach the perceptive region in the most filent repose and obscurity of night. Glanville.—Whatever the least real point of the essence of the perceptive part of the foul does perceive, every real point of the perceptive must perceive at once. More.

\* PERCEPTIVITY. n. f. [from perceptive.]

The power of perception or thinking. Locke.
(1.) \* PERCH. n. f. [perca, Lat. perce, Fr]—
The perch is one of the fifthes of prey, that, like
the pike and trout, carries his teeth in his mouth;
he dare venture to kill and deftroy feveral other
kinds of fifth: he has a hooked or hog back, which
is armed with ftiff briftles, and all his skin armed
with thick hard scales, and hath two fins on his
back: he spawns but once a year, and is held
very nutritive. Walton.

(2.) PERCH, in ichthyology. See PERCA.

(3.) \* PERCH. n. f. [pertica, Lat. perebe, Fr.]

1. A measure of five yards and an half; a pole.

2. [perebe, Fr.] Something on which birds rooft or sit.—

For the narrow perch I cannot ride. Dryden.

(4.) Perch, in land-measuring, a rod or pole of 16½ feet in length, of which 40 in length and 4 in breadth make an acre of ground. But, by the customs of several counties, there is a difference in this measure. In Statfordshire it is 24 feet; and in the forest of Sherwood 25 feet; the foot being there 18 inches long; and in Herefordshire a perch of ditching is 21 feet, the perch of walling 16½ feet, and a pole of denshiered ground is 12 feet, &c.

(1.) \* To Perch. v. n. [percher, Fr. from the noun.] To fit or rooft as a bird.—

He perchet's on some branch thereby,

To weather him. Spenser.
Wrens make prey, where eagles dare not

The morning muses perch like birds. Crashaw.

-Let owls keep close within the tree, and not perch upon the upper boughs. South.—

They wing'd their flight aloft, then stooping

Perch'd on the double tree. Dryden.

Glory like the trembling eagle flood

Perch'd on my beaver.

Lee.

Hofts of birds that wing the liquid air,

Perch'd in the boughs.

(2.) To PERCH. v. a. To place on a perch.

—it would be notoriously perceptible, if you could perch yourseis as a bird on the top of some high steeple. More.—

As evening dragon came,

Affailant on the perched roofts. Milton.

\* PERCHANCE. adv. [per and chance.] Perbaps; peradventure.—

How long within this wood intend you flay?

—Perchance till after Thefeus' wedding day.

-Not without aim then perchance at a courtier's life. Wotton.—Only Smithfield ballad perchance to embalm the memory of the other. L'Estrange.

PERCHE, a ci-devant territory of France, in in the late prov. of Orleannois 35 miles long, and 56 broad; bounded on the N. by Normandy; S.

by Maine and Dunois; E. by Beauce; and I by Maine. It was named from a forest, and pretty fertile. It now forms the department ORNE, with a part of Normandy. The inhal tants carry on a pretty good trade; and the pricipal town is Bellesine.

\* PERCHERS. n. f. Paris candles used England in ancient times; also the larger fort wax candles, which were usually set upon the

tar. Bailey.

(1.) \* PERCIPIENT. adj. [percipiens, I Perceiving; having the power of perception.—article of religion hath credibility enough for the yet these causious and quickfighted gentlemen wink and sivallow this sottish opinion about cipient atoms. Bentley.—Sensation and percepare not inherent in matter as such; for if it so, every stock or stone would be a percipient rational creature. Bentley.

(2.) \* PERCIPIENT. n. f. One that has power of perceiving.—The foul is the fole per ent, which hath animadversion and sense proly so called. Glanville's Scepsis.—Nothing in extended percipient perceives the whole, but

part. More's Divine Dialogues.

\* PERCLOSE. n. f. [per and close.] Coffion; last part. Obsolete.—By the perclose of same verse, vagabond is understood for sucone as travelleth in fear of revengement. Rail

\* To PERCOLATE. v. a. [percolo, Lat.] ftrain through.—The evidences of fact are peted through a wast period of ages. Ha e.

(1.) \* PERCOLATION, n. f. [from percolation or feparatic fraining.—Experiments touching the fraining passing of bodies one through another, the percolation. Bacon.—Water passing through veins of the earth is rendered fresh and powhich it cannot be by any percolations we make, but the saline particles will pass through the percolation of the care of the

(2.) PERCOLATION is the fame with FI TION. See FILTER, § 2, and FILTRATION \* To PERCUSS. v. a. [percuss., Lat.

firike.—Flame percussed by air giveth a noise blowing of the fire by bellows; and so list flame percussing the air strongly. Bacon.

flame percussion, the air strongly. Bacon.
(1.) \* PERCUSSION. n. s. [percussion, percussion, Fr.] 1. The act of striking; stronger

The thunder-like percussion of thy sounds—The percussion of the greater quantity of produced by the greatness of the body perce Bacon.—The times when the stroke or per of an envious eye doth most hurt are, who party envied is beheld in glory. Bacon's E. The vibrations or tremors excited in the percussion, continue a little time to move for place of percussion in concentric spheres to distances. Newton's Opticks.—Marables taus percussion and the laws of motion. As but besides of found in the ear.—

In double rhymes the percuffice is strot

(2.) PERCUSSION, in mechanics, the im a body makes in falling or firiking upon a or the shock of two bodies in motion.

\* PERCUTIENT. n. f. [percutiens, Striking; having the power to itrike—Inc

or obliquity of the passage, or from the doubling of the percutient. Bacon.

PERCY, or Persy, a town of France, in the dep. of the Channel; 12 miles W. of St Loo, rd it N. of Avranches.

(L) PERDIAL, adj. [from per, Lat. by, and

be day. Daily, or by the day.

12) PERDIAL TYTHES. Sec PARSON, \$ 2. ERDICCAS, I, II, and III, kings of Mace-

deil See Macedon, 9 3, 5, 6.

PERDICIUM, in botany, a genus of the polygana superflua order, belonging to the syngenesia das of plants; and in the natural method ranking make the 49th order, Compositive. The receptable is saked; the pappus is fimple; the florets bila-

PERDIGO, a river of W. Plorida, which runs into the Gulf of Mexico, and forms a large bay # 15 mouth; in Lon. 87. 26. W. Lat. 30. 20.

PERDITION. n. f. [ perditio, Lat. perdition. 🎎 1. Destruction; ruin; death.—Upon tidings marked, importing the meer perdition of the This feet, every man puts himself in triumph. Mi-We took ourfelves for free men, feeing there was no danger of our utter perdition, and and feeing what was to be feen. Bacon.

Quick let us part! Perdition's in thy prefence, had horror dwells about thee! Addison's Cato. 1 los-

There's no foul loft,

My not fo much perdition as an hair had to any creature in the veilel. Sbak. s amal death. -All men's falvation and fome redels perdition are things to opposite, that doth affirm the one, must necessarily deny other. Hooke -. - Men, once fallen away from inited truth, daily travel towards their eterprodition. Raleigh's History.

PERDITOLS. See PERENNIAL, \$ 2.

PERDIX, in ornithology, a genus of birds, beto the order of Gallinæ, ranked by Linnæwith the genus Tetrao, or Grous; ww very proper y disjoined by Dr Latham, stalled as a diffinct genus; of which he defthe following characters: The bill is controng, and fhort; the nostrils are covered ore with a callous prominent rim; the orbits papillose; the feet naked; and most of the genus rumified with spurs. There are 48 species; shich the two principal are the Partridge and

La Pradix COMMUNIS, the common partridge, is known, that a description of it is unnecesmad we have not room to describe the fospecies. We refer those who wish complete mation to Dr Latham's valuable System of Cathology. Partridges are found in every counnd in every climate; as well in the frozen reabout the pole, as the torrid tracks under requator. In Greenland, the partridge, which brown in fummer, as foon as the icy winter fets is clothed with a warm down beneath; and its with and plumage affumes the colour of the fnow mong which it feeks its food. Those of Barakinda, on the other hand, are longer legged, VOL XVII. PART I.

of founds is accidental, either from the roughness much swifter of foot, and choose the highest rocks and precipices to refide in. They all, however, agree in one character, of being immoderately addicted to venery; and, as some writers affirm, often to an unnatural degree. See PARTRIDGE, and SHOOTING.

E

R

2. PERDIX COTURNIX, or common QUAIL, is not above half the fize of the partridge. The feathere of the head are black, edged with rufty brown; the breast is of a pale yellowish red, spotted with black; the feathers on the back are marked with lines of pale yellow, and the legs are of a pale hue. Except in the colours thus deferibed, and the fize, it every way refembles a partridge in shape, and, except that it is a bird of passage, it is like all others of the poultry kind in its habits and nature. The quail seems to be an inhabitant of every climate. It is observed to shift quarters according to the feafon, coming N. in fpring, and departing in autumn, and in vast flocks. On the West coast of Naples, within 4 or 5 miles, 100,000 have been taken in a day. In England they are not numerous at any time. They feed like the partridge, and make no neft, except a few dry leaves or stalks scraped together, and sometimes an hollow on the bare ground fuffices. In this the female lays 6 or 7 eggs, of a whitish colour, marked with irregular ruft coloured spots: the young follow the mother as foon as hatched, like young partridges. They have but one brood in a year. Quail-fighting was a favourite amusement among the Athenians. They abstained from the fleth of this bird, deeming it unwholesome, as supposing that it fed upon the white hellebore: but they reared great numbers of them for the pleasure of seeing them fight; and staked sums of money, as we do with regard to cocks, upon With us its fleth is the fuccess of the combat. confidered as a very great delicacy.—Quails are eafily caught by a call.

PERDOLI, a town of Imperial Istria; 4 miles

NNW. of Pola.

(1.) \* PERDUE. adv. [This word, which among us is adverbially taken, comes from the French perdue, or forlorn hope: as perdue or advanced centinel.] Close; in ambush.-

Few minutes he had lain perdue,

To guard his desp'rate avenue. Hudibras. (2.) PERDUE BAY, a bay on the SW. coast of St Vincent; a mile NW. of Kingston Bay

\* PERDULOUS. adj. [from perdo, Latin.] Loft; thrown away. - There may be some wandering perdulous withes of known impossibilities; as a man who hath committed an offence, may with he had not committed it. Bramball.

\* PERDURABLE. adj. [perdurable, Fr. perduro, Lat.] Lafting; long continued. A word not in use, nor accented according to analogy.-Confess me knit to thy deserving with cables of perdurable toughness. Shakesp. Othello.—
O perdurable shame; let's stab ourselves. Shak.

The vig'rous fweat

Doth lend the lively fprings their perdurable heat.

\* PERDURABLY. adv. [from perdurable.] Lastingly.

Why would he for the momentary trick, Sbak. Meaf. for Meaf. Be perdurably fin'd

E

\* PERDURATION. n. f. [perduration, Lat.]

Long continuance. Ainsworth.

PEREASLAW, a strong populous town of Po-land, in the palatmate of Kiovia, situated on the river Trebecz. Lon. 32. 44. E. Lat. 49. 46. N. \* PEREGAL. adj. [Fr.] Equal. Ootolete.—

Whilom thou wast peregal to the best. Spenser.

\* To PEREGRINATE. v. n. [peregrinus, Lat.] To travel; to live in foreign countries. Die.

PEREGRINATION. n. s. [from peregrinus, Travel: abode in foreign countries. —it was agreed between them, what account he should give of his peregrination abroad. Bacon's Henry VII. -It is not amis to observe the heads of doctrine, which the apostles agreed to publish in all their peregrinations. Hummond.—We reckon it only as the land of our peregrination, and afpire after a better country. Bentley.

\* PEREGRINE. adj. [peregrin, old Fr. peregrinus, Latin.] Foreign; not native; not domestick.—The received opinion, that putrefaction is caused by cold or peregrine and preternatural heat,

is but nugation. Bacon's Nat. Hift.

\* To PEREMPT. y. a. [peremptus, Lat.] To kill; to crush. A law term.-Nor is it any objection, that the cause of appeal is perempted by the defertion of an appeal; because the office of the judge continues after fuch inflance is perempsed. Ayliffe.

\* PEKEMPTION. n. s. [ peremptio, Lat. peremption, Fr. Cruth; extinction. Law term.—This peremption of instance was introduced in favour of

the publick. Ayliffe.

PEREMPTORILY. adv. [from peremptory.] Absolutely; positively; so as to cut off all farther debate.-Norfolk denies them peremptorily. Daniel.—Not to speak peremptorily or conclusively, touching the point of possibility, till they have heard me deduce the means of the execution. Bacon's Holy War .- Some organs are to peremptorily necessary, that the extinguishment of the spirits doth speedily follow. Bacon's Nat. Hig. - In all conferences it was infifted peremptorily, that the king must yield to what power was required. Clarendon .- God's laws peremptorily injoin us, to partake of the holy facrament. Kettlewell.—Some talk of letters before the deluge; but that is a matter of more conjecture, and nothing can be peremptorily determined either the one way or the other. Woodward -- Never judge peremptorily on first appearances. Clariffa.

\* PEREMPTORINESS. n. s. [from perempto-

7.] Positiveness; absolute decision; dogmatism. -Peremptoriness is of two forts; the one a magisterialness in matters of opinion; the other a positivenels in relating matters of fact. Government of the Tongue. - Self-conceit and peremptor inefs in a man's own opinion are not commonly reputed

vices. Tillotfon.

\* PEREMPTORY. adj. [peremptorius, low Latin; peremptoire, Fr. from peremptus, killed.) Dogmatical; absolute; such as destroys all further expostulation.-

If I entertain

As peremptorie a defire, to levell with the plaine A citie, where they loved to live; stand not betwixt my ire

And what it aimes at

Ghapman:

-As touching the apostle, wherein he was so per folute and peremptory, our Lord Jefus Christ made manifest unto him, even by intuitive revelation wherein there was no pollibility of errour. Hooket -He may have fifty-lix exceptions per emptorily a gainst the jurors, of which he thall thew no cause Spenser .-

Excuse it not for I am peremptory. Not death himself

In mortal fury is haif to peremptory,

As we to keep this city. Though the text and the doctrine run peren ry and abtolute, whotoever denies Christ shall furedly be denied by him; yet fill there is a t condition, unless repentance intervene. Sa Learning was to give us a fuller discovery of ignorance, and to keep us from being percent and dogmatical. Collier.—He would never tal tuch a peremptory and discouraging manner, he not affured, that he was able to fubdue the powerful opposition against the doctrine want taught. Addison on the Christian Religion.
(1.) \* PERENNIAL. adj. perconis, Lating Lasting through the year.—It the quantity

precifely the same in these pereunial fountain difficulty would be greater. Cherne. 2. Per al; unceafing.-The matter wherewith the rennial clouds are raised, is the sea that sure them. Harvey.

(2.) PERENNIALS, OF PERENNIAL FLOW in botany, a term applied to those plants roots will abide many years, whether they their leaves in winter or not. Those which their leaves are calked evergreens; but su cast their leaves are named deciduous, or DITOLS

\* PERENNITY. n. f. [from perennitas, Equality of lafting through all feafons; per ty.—That fprings have their origin from the and not from rains and vapour-, I conclude the perennity of divers springs. Derbam.

PEREUIL, a town of France, in the d ment of Charente; 12 miles from Angoules PEREVOZ, a town of Russia, in Nizod

vogorod; 48 miles SSE. of Niznei Novogo (1.) \* PERFECT. adj. [perfectus, Lat. ]

To PERFECT. v. a. [perfectus, from terficio, laim; susfaire, French.] 1. To finish; complete; becommante; to bring to its due state.—If we have sea on ther, Good dweiteth in us, and his love is serfected in us. 1 John, iv. 12.—

Beauty now must rerfett my renown; With that I governed him that rules this iffe.

Walter.—hishlances, rest not in the ordinary complex ita commonly received, but enquire into the natural properties of the things themselves, and the profession ideas of their distinct species. Inter-Endeavour not to settle too many habits it was, kit by variety you consound them, and sapple none. Locke.—

What toil did honest Curio take
Toget one medal wanting yet,
And perfed all his Roman set?
Prior.

5 To make skilful; to instruct fully.—

Ber cause and yours,

Named him withal.

\*\*PRECTER. n. s. [from perfed.] One that

\*\*Interfed.—This practice was altered; they

standad to Mercury, but to Jupiter the perfed.

(t) PERFECTION. n. f. (perfedio, Lat. perperfedio, Fr.) 1. The state of being perfect.—Man the a triple perfedion; first a sensual; then an dedual; lastly, a spiritual and divine. Hooker.

It is a judgment maim'd and most imperfect, that will confess perfedion so could err

Against all rules of nature.

Shak.

The virtue, being united to the heavenly grace

the nakes up the highest perfession. Milton.—

ham understanding being absolutely securities mistake by the perfession of its own nature of the perfession of its own nature.

It follows that no man can be infallible.

Many things impossible to thought, the been by need to full perfection brought.

Dryden.
Too few, or of an improper figure and dimento do their duty in perfellion. Blackmore.—
The care is not, whether gofpel perfellion can
they attained; but whether you come as near
that ancere intention, and careful diligence can
my you. Law. 2. Something that concurs to
the concurs to the concurs

What tongue can her perfedions tell, On whose each part all pens may dwell? Sidney. An heroick poem requires, as its last perfedion, he accomplishment of some extraordinary understring, which requires more of the active virtue than the softeness. Dryden. 3. Attribute of God.—If God be infinitely holy, just and good, he must take delight in those creatures that resemble

him moft in these perfections. Atterbury. 4. Exact

(II.) Perfection is divided, according to Chauvinus, into physical, moral, and metaphysical.

r. Perfection, Metaphysical, transcendental, or essential, is the possession of all the essential attributes, or of all the parts necessary to the integrity of a substance; or it is that whereby a thing has or is provided of every thing belonging to its nature. This is either absolute, where all impersection is excluded, such as the perfection of God; or secondum quid, and in its kind.

2. Perfection, Moral, is an eminent degree of virtue or moral goodness, to which men arrive by repeated acts of piety, beneficence, &c. This is usually subdivided into absolute or inherent, which is actually in him to whom we attribute it; and imputative, which exists in some other, and not in him it is attributed to.

3. PERFECTION, PHYSICAL, or NATURAL, is that whereby a thing has all its powerstand faculties, and those too in fuil vigour; and all its parts both principal and secondary, and those in their due proportion, constitution, &c. in which sense man is said to be perfect, when he has a sound mind in a sound body. This perfection is by the schools frequently termed triggaries, because a thing is enabled thereby to perform all its operations.

\* To PERFECTIONATE. v. a. [perfedience, Fr. from perfedien.] To make perfect; to advance to perfection. This is a word proposed by Dryden, but not received, nor worthy of reception.—Painters and sculptors, chusing the most elegant natural beauties, perfedience the idea, and advance their art above nature itself. Dryden.—He has founded an academy for the progress and perfediencing of painting. Dryden.

perfectionating of painting. Dryden.

PERFECTIVE. adj. [from perfect.] Conducing to bring to perfection: with of.—Praise and adoration are actions perfective of our fouls. More.—Eternal life shall not consist in endless love; the other faculties shall be employed in actions suitable to, and perfective of their natures. Ray.

able to, and perfective of their natures. Ray.

\* PERFECTIVELY. adv. [from perfective.] In fuch a manner as brings to perfection.—As virtue is feated fundamentally in the intellect, so per-

felively in the fancy, Grew.

\* PERFECTLY, adv. [from perfell.] 1. In the highest degree of excellence. 2. Totally; completely.—Chewing little sponges dipt in oil, when perfelly under water, he could longer support the want of respiration. Bayle.—Words recall to our thoughts those ideas only which they have been wont to be signs of, but cannot introduce any perfelly new and unknown simple ideas. Locke.
3. Exactly; accurately.—We know bodies and

their properties most per fell. I. lacke.

\* PERFECTNESS. n. f. [from perfell.] 1.
Completeness; consummate excellence; perfection. 2. Goodness; virtue. A scriptural word.

— Put on charity, which is the bond of perfellness.
Col. iii. 14. 3. Skill.—

Is this your perfedings? Shak.

\* PERFIDIOUS. adj. \perfidus, Lat. perfide, Fr.]

Treacherous; faife to truft; guilty of violated forth...

Te!l

Tell me, perfidious, was it fit To make my cream a perquifite? Widow. 2. Expressing treachery; proceeding from treach-

I fee thy fall

Determin'd, and thy hapless crew involv'd In this perfidious fraud.

\* PERFIDIOUSLY. adv. [from perfictions.] Treacheroufly; by breach of faith.

Perfidioufly

He has betray'd your bufiness. Shak. They eat perfidiously their words. Hudibras. -Can he not deliver us possession of such places as would put him in a worfe condition, whenever

he should perfidiously renew the war? Saust.

\* PERFIDIOUSNESS. n. s. [from perfidious.] The quality of being perfidious. - Some things have a natural deformity in them; as perjury, perfidiousness, and ingratitude. Tillotson.

\* PERFIDY. n. f. [perfidia, Lat. perfidie, Fr.] Treachery; want of faith; breach of faith.

\* PERFLABLE. adj. [from perflo, Lat.] Ha-

ving the wind driven through.

To PERFLATE. v. a. [perflo, Lat.] To blow through.-It Eastern winds did perflate our climates more frequently, they would clarify and refrest our air. Harpey. The first consideration in busing of cities, is to make them open, airy, and well fee flated. Arbuthnot.

\* PERFLATION. p. J. [from perflate.] The act of blowing through.-Miners, by perflations with large bellows, give motion to the air, which ventilates and cools the mines. Woodquard.

PERFORANS MANUS. See ANATOMY, &

213, 18.

To PERFORATE. w. a. [perforo, Lat.] To pierce with a tool; to bore.-Draw the bough of a low fruit tree newly budded without twifting, into an earthen pot perforate at the bottom, and then cover the pot with earth, it will yield a very large fruit. Bacon's Nat. Hift .- A perforated bladder does not fweil. Boyle .-

The labour'd chylt pervades the pores,

In all the arterial perforated thores. Blackmore. -The aperture was limited by an opaque circle placed between the eye-glass and the eye, and perforated in the middle with a little round hole for the rays to pass through to the eye. Neguton's Opticks .- Worms perforate the guts. Arbutbnot on

\* PERFORATION. n. f. [from perforate.] 1. The act of piercing or bornig. The likelieft way is the perforation of the body of the tree in feveral places one above another, and the filling of the lioles. Bacon. The industrious perforation of the tendons of the fecond joints of fingers and toes, and the drawing the tendons of the third joints through them. More. 2. Hole; place bored .-That the nipples should be made spongy, and with such rerforations as to admit passing to the milk, are arguments of providence. Ray on the Greation.

\* PERFORATOR. p. f. [from perforate.] The instrument of boring. Convenient chair, dip

juddenly thron ing the perfe the canua

PERFORATUS MANUS.

\* PERFORCE. adv. [per and force.] By vi lence; violently,-

Guyon to him leaping, staid His hand, that trembled as one terrify'd: And though himself were at the fight dismay Yet him perforce restrain'd.

The distilled water of wild poppy, mingled at lf with rule water, take with fome mixture of a cloves in a perfuming pan. Bacon's Nat. Hift. "5 nells adhere to hard bodies; as in perfuning

thek. 2. It is generally applied to one that makes of gloves, which sheweth them corporeal. Bacon's Nat. Hift.—
'Tis like perfuming an ill fcent, frong for art.

Granville. Carmel's flow'ry top perfumes the skies! Pope. \* PERFUMER. n. f. [from perfume.] One whose trade is to sell things made to gratify the fcent.—A moss the perfumers have out of apple trees, that bath an excellent scent. Bacon's Nat. Hift.-

First issued from perfumers shops

A crowd of fashionable fops. Swift. \* PERFUNCTORILY. adv. | perfunctorie, Lat.] Carelefsly; negligently; in such a manner as to fatisfy external form.-His majesty cast his eye perfunctorily upon it. Clarendon.—Lay seriously to heart the clearness and evidence of these proofs, and not perf nellorily pass over all the passages of the gospel. Lucas.—The two first of these have been handled by Aristotle very perfunctorily; of the fourth he has faid nothing at all. Baker on Learning

\* PERFUNCTORY. adj. [perfunctorius, Lat.] Slight; careles; negligent,—A transfert and perfunctory examination of things leads men into con-

liderable miftakes. Woodward.

\* To PERFUSE. v. a. [perfu/us, Lat.] To tincture; to overspread.—These dregs immediately perfuse the blood with melancholy, and cause ob-Reuctions. Harvey on Confump.

PERG, two cowns of Austria: 1. fix miles S. of Aigen: 2. twelve miles E. of Steyregg.

PERGA, a town of European Turkey in Albania, opposite Corfu. Lon. 20. 19. E. Lat. 39. 40. N.

PERGAMA, the citadel of Troy; which, because of its extraordinary height, gave name to all high buildings (Servius. Virg.) Others fay the walls of Troy were called Pergama.

PERGAMAR, a town of Turkey, in Romania; 60 miles SW. of Adrianople, and 65 NW. of

Gallipoli.

PERGAMEA, names given by Virgil and PERGAMIA Plutarch to PERGAMUM.

PERGAMO, or the modern name of PER-PERGAMOS, SGAMUM, and PFRGAMUS.

(1.) PERGAMUM, PERGAMEA, OF PERGAMIA, a town of Crete, built by Agamemnon in memory of his victory. (Plut. Virg. Velleius.) Here was the burying-place of Lycur-gus, (Ariftoxenus.) It was fituated near Cydonia (Servius); but Scylax helps him out, who places the Dactynnean temple of Diana, which stood near Cydonia (Strabo), to the north of the territory of Pergamia.

(2.) Pergamum, a town of Mysia, situated on the Caicus, which runs by it. (Plin. Strabo.) was the royal relidence of Eumenes, and of the kings of the race of the Attali. (Livy.) It had an ancient temple of Æsculapius. (Tacitus.) The ornament of Pergamum was the royal library, vying with that of Alexandria in Egypt; the kings of Pergamum and Egypt rivalling each other in this respect. (Pliny.) Strabo ascribes this rivalry to Eumenes. Plutarch mentions 200,000 volumes in the library at Pergamum. Here the :nembranæ pergamena, whence the name PARCHMENT, were invented for the use of books. (Varro, Pliny) It was the country of Galen, and of Oribalius, phyEclan to Julian. (Eunapius.) Here P. Scipio died. (Cicero.) Attalus son of Eumenes dying without issue, bequeathed his kingdom to the Roman people, who reduced it to a province. (Strabo). Here was one of the nine conventus juridici, or assemblies of the Afia Romana, called pergamenus, and the 9th in order, which Pliny also calls jurifdisio Pergamena.

PERGAMUS, an ancient kingdom of Afia, formed out of the ruins of the empire of Alexander the Great. It commenced about the year 283. The first fovereign was one Philetærus an eunuch, by birth a Paphlagonian, of a mean defcent, and in his youth a menial fervant to Antigonus, one of Alexander's captains. Philetærus left the city of Pergamus to his brother, or, according to some, to his brother's son Eumenes I. who obtained possession of the greater part of the province of Alia. Eumenes was succeeded by Attalus I. nephew of Philetærus, who during a reign of 43 years was engaged in many fuccesful wars with the Gauls, Philip of Macedon, and others. He was a man of great generofity, and fuch an enthusiast in favour of genius, that he caufed a grammarian named Daphidas to be thrown into the fea from the top of a high rock, because he spoke disrespectfully of Homer. Attalus was succeeded by his eldest son Eumenes IL He was exceedingly attached to the Romans, and affifted them in conquering Anticehus the Great, for which they rewarded him, by adding to his dominions all the countries on this fide of Mount Taurus, which belonged to that monarch. He continued long a faithful ally of that powerful people, but having entered into a fecret treaty with Perfeus K. of Macedon, he excited their re-Sentment, and although he fought to deprecate their vengeance, it would have fallen on him but for his death, which happened in the 39th year of his reign. He left one fon, but as he was an infant, he nominated his brother, to fucceed him. Attalus, II. in the beginning of his reign, was routed in a pitched battle by Prufias king of Bithynia, but the intervention of the Romans procured him complete redress. The latter part of his life he devoted to ease and luxury. He died in his 82d wear about 138 B. C. He was succeeded by Attalus III. the fon of Eumenes; whose reign was one continued horrid scene of madne's and ty-On his death a will was found, by which he left the Roman people heirs of all his goods; upon which they feized on the kingdom, and reduced it to a province of their empire by the name of Afia Proper. Aristonicus, a son of Eumenes by an Ephelian courtefan, endeavoured to wrest it from them, but although he gained several battles he could not attain his object, but died in prison. The country remained subject to the Romans while their empire lasted, but is now in the hands of the Turks. The city is half ruined, and is still known by the name of Pergamo. It is inhabited by about 3000 Turks, and a few families of poor Christians. Lon. 27. 27. E. Lat. 30. 3. N.

PERGUNNAH, in the language of Hidooftan, means the largest subdivision of a province, whereof the revenues are brought to one particular bead Gutchery, from whence the accounts and cash are transmitted to the general Gutchery of the province.

\* PERHAPS. adv. [per and bap.] Peradventur

Perhaps the good old man that kis'd his for Hopes yet to see him ere his glass be run.

—Somewhat may be invented, perhaps more cellent than the first design, though Virgil must still excepted, when that perhaps takes place. Dr

Perhaps new graces darted from her eyes, Perhaps foft pity charm'd his yielding soul, Perhaps her love, perhaps her kingdom cham him.

-God may perbaps pardon. Law. PERI. See MYTHOLOGY, § 21.

PERIAGOGUE, in rhetoric, is used wh many things are accumulated into one per which might have been divided into several.

PERIAGUA, a fort of large canoe made us in the Leeward islands, S. America, and the of Mexico. It is composed of the trunks of trees hollowed and united together; and thus fers from the canoe, which is formed of one.

PERIANDER, tyrant of Corinth and Comwas reckoned among the feven wife men of Gre though he might rather have been reckoned and the most wicked men, fince he changed the vernment of his country, deprived his commen of their liberty, usurped the sovereignty, committed the most shocking crimes. He emitted incest with his mother, and kicked to this wife Melisla. Yet he passed for one of greatest politicians of his time; and Herast tells us, that he forbad voluptuousness; that imposed no taxes; caused all pimps to be deed; and established a senate. He died A.

PERIANTHIUM, (from wee, round, and the flowers) the flower cup properly so calle most common species of calyx, placed immely under the flower, which is contained in

Now help, ye charming spells and series

(1.) \* PERICARDIUM. n. f. [we and a pericarde, Fr.] The pericardium is a thin a brane of a conick figure that refembles a and contains the heart in its cavity: its bapierced in five places, for the passage of the less which enter and come out of the heart use of the pericardium is to contain a smaller tity of clear water, which is separated by glands in it, that the surface of the heart magrow dry by its continual motion. Quincy.

(2.) PERICARDIUM. See ANATOMY, Ind (1.) \* PERICARPIUM. n. f. [pericarpe, Indicated to the pericarpe, Indicated to the pericarpe, Indicated the pericarpium of a plant, or that part fruit that envelopes the feed.—Besides that the pulp or pericarpium for the guard of the it serves also for the sustenance of animals. In

(2.) PERICARPIUM. See BOTANY, Indeed PERICHORUS, in antiquity, a name give the Greeks to those games or combats, that not consecrated to any of the gods.

PERICLES was one of the greatest men

per flourished in Greece. He was very brave; ad to doquent, that he gained almost as great an amority under the republican government of Atxis, as if he had been a monarch. His fondness to women was one of his chief vices. He marred the celebrated Aspassa, and died the 3d year site Peloponnefian war. See ATTICA, § 12, 13. MERICLITATION. n. s. [from perielitor, Lat.

poder, Fr.] 1. The state of being in danger.

1 Int; experiment.

(L) PERICRANIUM. n. J. [from wigi and cram; perienne, Fr.] The perieranium is the memher that covers the skull: it is a very thin and procemembrane of an exquisite sense, such as more minediately not only the cranium, but all boses of the body, except the teeth; for which in it is also called the periosteum. Quincy. one divided the pericranium, I saw a fissure ming the whole length of the wound. Wifeman. (L) PERICRANIUM. See ANATOMY, Index.

\*PERICULOUS. adj. [periculofus, Lat.] Dan-; jeepardous; hazardous. A word not in the moon every feventh day arriveth un-Henry fign, fo Saturn, which remaineth asummy years in one fign, and holdeth the resideration in years as the moon in days,

michele periculous periods. Brownin in operation; unnecessary diligence.

FERIGEE. \ n. f. [some and yn; perigée, Fr.]
FERIGEUM. \ Is a point in the heavens, aplanet is faid to be in its nearest distance from the earth. Harris.—By the propor-Is motion, it was at the creation, at the of Aries, and the perigeum or nearest Libra. Brown's Valgar Errours.

ALGEUX, or Perigueux, an ancient town ex, capital of the department of Dordogne, famely was of the ci-devant province of Pekited on the Ille; remarkable for the of the temple of Venus, and an amphitheatre; facus for partridge pies. It contains about contrens; and is 60 miles SW. of Limoges.

2.48. E. Lat. 45. 11. N.

PERIGORD, a province of France, which put of Guienne. It was bounded N. by by Agemois and Bazodois; and W. by thu, Angoumois and Saintonge. It was amiles long, and 60 broad. It abounds in times, and the air is pure and healthy. PE-

art was the capital.

PERIGORD STONE, an ore of manganese, durk grey colour, like the basaltes or trapp. be kraped with a knife, but is extremely to be broken. It is found of no regular rery compact, heavy, and as black as Its appearance is glittering and striated, there of antimony; its particles being difthe form of needles, croffing one another any agglutination, infomuch that fome box as iron-filings when fluck to a loadstone; bling the scoria from a black-smith's furnace. calcination it becomes harder and of a reddish m colour, but is not magnetic. It has a conmble specific gravity, does not melt per fe, but birax runs into an amethyst-coloured glass. a farcely affected by nitrous acid without the

addition of fugar. It feems also to contain forme argil and iron. It is met with in the ci-devant provinces of Gafcony and Dauphiny in France, and in some parts of England. It is employed by the French potters and enamellers in the glaffy varnish of their earthen wares. See MINERALOGY, Part II, Chap. VII, Order XVI, Gen. I, Sp. 2.

E

R

(1.) PERIGRAPHE, a word used to express a careless or inaccurate delineation of any thing.

(2.) PERIGRAPHE, in anatomy, is used by Vefalius to express the white lines or impressions that appear on the mufculus rectus of the abdomen.

PERIGUEUX. See Perigeux.

(1.) \* PERIHELIUM. n. f. [wies and nhat; peribelie, Fr,] Is that point of a planet's orbit, wherein it is nearest the sun. Harris .- Sir Isaac Newton has made it probable, that the comet which appeared in 1680, by approaching to the fun in its peribelium, acquired fuch a degree of heat, as to be 50000 years a cooling. Cheyne's Phil. Prin.

(2.) Perihelium. See Astronomy, Index. \* PERIL. n. f. (peril, Fr: perikel, Dutch ; pericuhon, Lat.] 1. Danger; hazard; jeopardy.—Doubt not to tell of your perils. Sidney.

How many perils do infold

The righteous man to make him daily fall? Spenser.

In the act what perils shall we find? The love and pious duty which you pay,

Have pass'd the perils of so hard a way. Dryd. Strong, healthy and young people are more in peril by pestilential fevers, than the weak and old-Arbathnos. 2. Denunciation; danger denounced. I told her,

On your displeasure's peril,

She should not visit you. \* PERILOUS. adj. [perileux, Fr. from peril.]

1. Dangerous; hazardous; full of danger-Alterations in the service of God, are perilous in common-weals. Hooker .-

Infamous hills and fandy perilous wilds. Milt. Perilow the affay, unheard the toil

T' elude the prescience of a God by guile. Pope. 2. It is used by way of emphasis, or ludicrous ex-

aggeration of any thing bad.—
Thus was th' accomplish'd squire endu'd With gifts and knowledge per loss shrewd.

Hadibras. 3. Smart; witty. In this fense it is, I think, only applied to children, and probably obtained its fignification from the notion, that children eminent for wit, do not live; a witty boy was therefore a perilous boy, or a boy in danger. It is vulgarly

"Tis a per'lous boy,

Bold, quick, ingenious, forward, capable. Shak. \* PERILOUSLY. adv. [from perilous.] Dangeroully.

\* PERILOUSNESS. n. f. [from perilous.] Dangerousness.

PERIM, an island in the Red Sea, situated between the two points which include the Straits of Babelmandel. It is about 5 miles long and 2 broad. The channels on each fide are dangerous and shal-The harbour is good.

\* PERIMETER. n. f. [ wige and pirgio ; perimetre, Fr.] The compass or sum of all the fides which bound any figure of what kind focver, whether rcci-

R

rectilinear or mixed.—By compressing the glasses still more, the diameter of this sing would interease, and the breadth of its orbit or perimeter decrease, until another new colour emerged in the centre of the last. Newton's Opticks.

PERIN, a province of Russia.

PERINZEUM, or PERINEUM, in anatomy, the space between the anus and the parts of generation, divided into two equal lateral divisions by a very distinct line, which is longer in males than females.

PERINSKIOLD, John, a learned Swedish writer, born at Stregnesia in Sudermania, in 1654. He was made professor at Upsal, secretary antiquary of the king of Sweden, and counsellor of the chancery of antiquities. He died in 1720. His principal works are, 1. A History of the Kings of Norway. 2. A History of the Kings of the North.

3. An edition of John Messenius on the Kings of Sweden, Norway, and Denmark, in 14 vols fol. &c.

(1.) \* PERIOD. n. f. [periode, Fr. wender.] 1. A circuit. 2. Time in which any thing is performed, so as to begin again in the same manner.—Tell these, that the sun is fixed in the centre, that the earth with all the planets roll round the sun in their several periods. Watts. 3. A stated number of years; a round of time, at the end of which the things comprised within the calculation shall return to the state in which they were at the beginning.—A cycle or period is an account of years that has a beginning and end, and begins again as often as it ends. Holder.—We stile a lesser space a cycle, and a greater by the name of period. Holder on Time. 4. The end or conclusion.—

If my death might make this island happy,
And prove the period of their tyranny. Shak.

Whatsoever concerns this sublunary world in
the whole extent of its duration, from the chaos
to the last period, shall be brought to light. Burnet.

What anxious moments pass between The birth of plots and their last fatal periods.

Addison.

5. The flate at which any thing terminates.—
Beauty's empires, like to greater flates,

Have certain periods fet, and hidden fates. Suckl.—Light-conserving stones must be set in the sun before they retain light, and the light will appear greater or lesser, until they come to their utmost period. Digby. 6. Length of duration.—Some experiment would be made how by art to make plants more lasting than their ordinary period. Bacon. 7. A complete sentence from one sull stop to another.—Periods are beautiful, when they are not too long. Ben Jonson.—

Not a period

Shall be unfaid for me. Milton.

—A fallacy cunningly wrapt up in a smooth period.

Locke.—The first words of every period in every page may be written in distinct colours. Watts.

8. A course of events, or series of things memorably terminated; as, the periods of an empire.—

From the tongue

Th' unfinish'd period falls.

(2.) Period, in astronomy, the time taken up by a star or planet in making a revolution round the sun; or the duration of its course till it return to the same part of its orbit. See Planet. The different periods and mean distances of the several planets are as follow:

Days h. Mean Dif Saturn 10579 6 36 26 953800 Jupiter 12 4332 20 35 520110 Mars 686 23 27 30 152309 Earth 365 6 30 9 100000 Venus 16 224 49 24 72333 Mercury ' 87 15 23 36710 53

The squares of the periodical tames of the primplanet, are to each other as the cubes of their tances from the sun: and likewise, the square the periodical times of the secondaries of any net are to each other as the cubes of their tances from that primary. This harmony am the planets is one of the greatest confirmation the Copernican hypothesis. See ASTRONOM.

270, 559.
(3.) Period, in chronology, denotes a retion of a certain number of years, or a kei years, whereby, in different nations, and or rent occasions, time is measured; such are the

lowing:
i. Period, Calippic, a fystem of hivest

years. See ASTRONOMY, § 31; and CALM ii. PERIOD, DIONYSIAN, or VICTORIAS RIOD, a fystem of 532 lunæ-solar and Julian me which being elapted, the characters of the fall again upon the same day and feria, and me in the same order, according to the opinion of ancients. This period is otherwise called great paschal cycle, because the Christian the first used it to find the true time of the pasc

easter. The sum of these years arise by multing together the cycles of the sun and moon.

iii. Period, Hipparchus's, is a feries of folar years, returning in a constant round, as froring the new and full moons to the same of the solar year, according to the senting Hipparchus. This period arises by much the Calippic period by sour. Hipparchus at the quantity of the solar year to be 365 de 55' 12"; and hence concluded, that in 10 Calippus's period would err a whole day therefore multiplied the period by sour, and the product cast away an entire day. But this does not restore the new and full most the same day throughout the whole period they are sometimes anticipated x day 8 hours 29" 20".

iv. Period, Julian. See Julian, § 3.

(4.) Period, in grammar, denotes a final pais of discourse, containing a perfect ten and distinguished at the end by a point, a stop, thus (.); and in members or divisions mby commas, colons (:), &c.. Rhetoricians der period, which treats of the structure tences, as one of the 4 parts of composite periods allowed in oratory are 3: A of two members, called by the Greeks dical by the Latins timembris; a period of 3 ma tricolos, trimembris; and a period of 4, quad bris, tetracolos. See Punctuation.

(5.) Period, in numbers, is a diffinction by a point or comma, after every fixth platigure; and is used in numeration, for the additinguishing and naming the several figuration. See Numeration, under Arithander.

(6.) Period, in medicine, is applied to

dicales which have intervals, and returns, to deart an entire course or circle of such disease; or progress from any state through all the rest till return to the same again. Galen describes peals a time composed of an intension and remisin; whence it is usually divided into two parts, a proxysm or exacerbation, and remission. In matting severs, the periods are usually stated small; in other diseases, as the epilepsy, i.e. they are vague or irregular.

To put

Your letter he defires

Tothese have shut him up, which failing to him, fried his comfort. Shak. Timon. PERIODICAL. Ladj. [periodique, Fr. from PERIODICK. | period.] 1. Circular; maa circuit; making a revolution.—Was the de periodick motion always in the same plane that of the diurnal, we should miss of those increases of day and night. Derham .- Four perpetually roll round the planet Jupiter, corried along with him in his periodical cirmend the fun. Watts on the Mind. 2. Haprevolution at some stated time.—Rehe and periodical conjunctions. Bentley. 3. ; performing forme action at flated times. combines of mountains and hollows furnished probable reason for those periodical foun-Soitzerland, which flow only at fuch partour of the day. Addison. 4. Relating to e revolutions .- Plato measured the mutalettes by a periodical fatality of number.

MIODICALLY. adv. [from periodical.] At prods.—The three tides ought to be under the space of the night and day, then all be a regular flux and reflux thrice in that the sight hours periodically. Broome.

MOECI, regents, in geography, such inham of the earth as have the fame latitudes, opposite longitudes, or live under the fame id and the fame meridian, but in different inles of that meridian, or in opposite points is parallel. These have the same common altroughout the year, and the same phenoment the one, it is midnight with the other, him twelve hours in an east and west dimer, or by turning the globe half round, it so degrees either way.

PPRIOSTEUM. n. f. [will and sein; perint, All the bones are covered with a very membrane, called the periofeum. Cheyne's

Hical Principles.

PERIOSTEUM. See ANATOMY, Index.

PATETICS, philosophers, sollowers of the peripatetic philosopher; called also Arifotelians. They were an Peripatetics, from regarding. I walk; bethey disputed walking in the Lyceum. (See Stotla § 3; METAPHYSICS, PLASTIC NAL, &c.) A reformed system of the Peripaphilosophy was first introduced into the mois in the university of Paris, from whence it spread throughout Europe: and has subsisting some universities even to this day, under the Yol. XVII. Part I.

name of febool philo ophy. The foundation thereof is Aristotle's doctrine, often misunderstood, but oftener misapplied: whence the retainers thereto may be denominated Reformed Peripatetics. Out of these have sprung, at various times, several branches; the chief are, the Thomists, Scotists, and Nominalists. See these articles. The Peripatetic system, after having prevailed with great and extensive dominion for many centuries, began rapidly to decline towards the close of the 17th, when the disciples of Ramha attacked it on the one hand, and it had still more formidable adversaries to encounter in Descartes, Galfendi, and Newton. See Philosophy.

PERIPATON, in antiquity, the name of that walk in the Lyceum where Aristotle taught, and whence the name of Peripatetics given to his fol-

lowers.

PERIPETIA, in the drama, that part of a tragedy wherein the action is turned, the plot unravelled, and the whole concludes. See CATASTRO-PHE, § 2.

(1.) \* PERIPHERY. n. f. [me and one; peripherie, Fr.] Circumference.—Neither is this fole vital faculty fufficient to exterminate noxious humours to the periphery or outward parts. Harvey.

(2.) PERIPHENY. See GEOMETRY.

\* To PERIPHRASE. v. a. | periphraser, Fr.]
To express one word by many; to express by

circumlocution.

(1.) \* PERIPHRASIS. n. f. [weepens; periphrase, Fr., Circumlocution; use of many words
to express the sense of one: as, for death, we may
say, the loss of life.—

She contains all blifs,

And makes the world but her periphrafis.

Cleaveland.

They make the gates of Thebes and the mouths of this river a conflant periphrafis for this number feven. Brown.—They flew their learning uselefly, and make a long periphrafis on every word of the book they explain. Watts.—The periphrafes and circumfocutions, by which Homer expresses the single act of dying, have supplied succeeding poets with all their manners of phrasing it. Pope.

(2.) PERIPHRASIS. See ORATORY.

PERIPHRASTICAL. adj. [from periphrafis.] Circumlocutory; expressing the sense of one word

in many.

PERIPLOCA, Virginian filk, in botany: A genus of the digynia order, belonging to the petandria class of plants; and in the natural method. ranking under the 30th order, Contorte. The nectarium furrounds the genitais, and fends out five filaments. There are five species, four of which are natives of warm climates, and can only be raifed there. The fifth, however, is sufficiently hardy for this climate. The periploca is a fine climbing plant, that will wind itself with its ligneous branches about whatever tree, hedge, pale, or pole is near it; and will arise, by the affistance of such support, to the height of above 30 feet; and where no tree or support is at hand to wind about, it will knit or entangle itself together in a most complicated manner. The stalks of the older branches, which are most woody, are covered with a dark brown lark, whilf the younger shoots are more mortied with the different co(1.) \* PERIPNEUMONIA. (1.) \* PERIPNEUMONY. I The proposed of the lungs.— (2.) \* PERIPNEUMONY. The proposed of the lungs.— (2.) \* Peripneumonia or inflammation of the lungs.— (2.) \* Peripneumony is the laft fatal fymptom of every difease; \* Arbuthnot.

shoot; and two of the joints should be planted deep in the soil. Another, and a never-failing

method, is by layers; for if they are laid down in

the ground, or a little foil only loofely thrown over the young preceding fummer's shoots, they

will firike root at the joints, and be good plants

for removing the winter following.

(2.) PERIPHEUMONT is attended with an acute fever, and a difficulty of breathing. See MEDI-

CINE, Index:

PERIRRHANTERIUM, a veffel of stone or brafs, which was filled with holy water, and with which all those were sprinkled who were admitted by the ancients to their facrifices. Beyond this veffel no profane person was allowed to pass. It was used both by Greeks and Romans, and has been evidently borrowed by the Church of Rome. The Hebrews also had a vessel for purification.

PERISCII, in geography, the inhabitants of either frigid zone, between the polar circles and the poles, where the fun, when in the fummer figns, moves only round about them, without fetting; and confequently their shadows in the same day turn to all the points of the horizon.

(1.)\* To PERISH. v. n. [perir, Fr. pereo, Lat.]

1. To die; to be destroyed; to be lost; to come
to nothing. It seems to have for or with before
a cause, and by before an instrument. Locke has
by before the cause.—

I burn, I pine, I perish,

If I atchieve not this young modest girl. Shak.

—If I have seen any perish for want of clothing.

Job. xxxi. 29.—He keepeth his life from perishing by the sword. Job xxxii. 18.—They perish from

off the good land. Dent. xi. 18.—I perificult hunger, Luke xv. 17.—The fick are laid on the earth to perific. Locke.—Thoughts of a foul the perificult in thinking. Locke.—Exposing their dien, and leaving them in the fields to perificult. Locke.—

Some Athens perishes. or Tully bleeds. Re—The subjects perished through their own to Pope. 2. To be in a perpetual state of decay Duration, and time which is a part of it, is taken we have of perishing distance, of which two parts exist together, but follow in succeed Locke. 3. To be lost eternally.—These that terly perish. 2 Peter, ii. 12.—O suffer me and perish in my fins. Moreton.

(2.) \* To Perish. v. a. To destroy; to de

Not in use.-

Because thy flinty heart more hard rocks,

Might in thy palace perish Margaret.

Rife, prepar'd in black, to mourn

rish'd lord.

This closeness did a little perish his under ings. Collier.

\* You weep not for a perish'd lord alone.

\* PERISHABLE. adj. [from perish.] Little perish; subject to decay; of short durant Bodily substances and perishable natures. Ra—Authority not perishable by time. Addising princes greatest present felicity to reign in subjects hearts; but the seare too perishable ferve their memories. Swift.—This trail arishable composition of sless had blood. Ray

Thrice has he feen the perishable kind

Of men decay.

\* PERISHABLENESS. n. f. [from periods]
Liableness to be destroyed; liableness to de
Suppose an island having nothing because
commonness and perishableness sit to superplace of money. Locke.

PERISPA, a town of Perfia, in the pro

Irak, 18 miles S. of Amadan.

\* PERISTALTICK. adj. [ experishae; perj Fr.] Perifialtick motion is that vermicular, of the guts, which is made by the contrad the fpiral fibres, whereby the excrements at fed downwards and voided. Quincy.

fed downwards and voided. Quincy.

Praiwig. v. a. [from the noun.] To dress

when the winter's keener breath be-

moig with snow the bald-pate woods.

Sylvester. ford periovig'd with Inakes, dreadful strides she takes. Swift. WINKLE. n. f. 1. A small shell sish;

a kind of fish snail.-Upon her head a coronet of periwinkle and escalop shells. Peacham. 2. [Clematis.] A plant.—There are in use, for the prevention of the cramp, bands of green periawinkle tied about the calf of the leg. Bacon. - A common simple with us is perswinkle. Wiseman.

PERIZONIUS, James, a learned and laborious writer, born at Dam in 1651. He became professor of history and eloquence at the university of Francker, when, by his merit and learning. he made that university flourish. However, in 1693, he went to Leyden, where he was made profesfor of history, eloquence, and Greek; in which employment he continued till his death, in He wrote many learned and curious works, particularly Origines Babylonica et Egyptiace, 2 vols 8vo, &c. But his work, most generally known, is the notes upon Santii Minerva.

PERIZZITES, ancient inhabitants of Paleftine, mingled with the Canaanites. They did not inhabit any certain portion of the land of Camaan; there were some of them on both sides the river Jordan, in the mountains, and the plains.

PERK. adj. Pert; brifk; airy. Obsolete.

They wag their wriggle tails,

Perk as a peacock, but nought avails. Spens. (1.) \* To PERK. v. n. [from perch, Skinner.] 'To hold up the head with an affected brifknefs.-

If, after all, you think it a difgrace, That Edward's miss thus perks it in your face.

(2.) \* To PERK. v. a. To dress; to prank.-'Tis better to be lowly born,

Than to be perk'd up in a glift'ring grief. Sbak.

PERKIN. See Cyderkin. (1.) PERKINEAN, adj. of or belonging to Per-

KINISM. (2.) PERKINEAN SOCIETY, a fociety lately inftituted at No3. Frith Street, Soho, London; for the relief of the afflicted poor, by the use of the metallic tractors. The lift of subscribers is numerous and respectable. If Perkinism be an imposition, or deception, as some allege, an incredible num-

ber of persons of all ranks are deceived. PERKINISM, in medicine, is a method of curing head-achs, megrams, rheumatisms, quinsies, gouts, lumbagos, cramps, contufions, fprains, tumors, burns, scalds, eryfipelas, palsies, and various other diseases and pains in all parts of the body, by drawing METALLIC TRACTORS over the parts affected; invented by Dr Perkins of N. America. These tractors are made of silver, brais, copper, iron, lead, or zinc; and even of ivory and ebony; and are supposed to act as mechanical stimuli, or as galvanic conductors of electricity. ments have been made with fuccels by other phyficians and furgeons, particularly Dr J. C. Tode, physician to the king of Denmark, and professors Herholdt and Rafu, of Copenhagen, who published a treatise on Perkinism, and sirst made use of the term. Many other tracts have fince been published in London, exhibiting a great number of cases, and about 2000 cures, seemingly all well attefted, performed upon perfons of all ages, from infancy to upwards of 70. But whether their success is to be attributed to inherent virtue. or to the imagination of the patient, is not for us D d 2

to determine. It would appear, however, that in · many well authenticated cases of cures performed on brutes, the latter could have no influence.

PERLEBERG, a town of Upper Saxony, capital of Prignitz. It was pillaged by the Swedes in 2638. It lies 62 miles NW. of Berlin.

PERLETHORP, a village in Edengstow pa-

rith, Nottinghamshire.

\* PERLOUS: adj. [from perilous.] Dangerous; full of hazard.

> A perious paffage. Spenser. Late he far'd

In Phædra's fleet bark o'er the perlotis fhard.

Spenser. (1.) PERM, a government of Russia, formerly a province of Kafan. It is divided into two pro- fus, Lat. Allowance; grant of liberty. vinces, viz. PERM (N° 2.) and CATHARINEN-

(2.) PERM, a province in the above govern-

ment, feated on the banks of the Kama.

(3.) PERM, the capital of the above government and province, scated at the conflux of the Kama and the Zegoehekha, 808 miles E. of Petersburg, and 620 E. of Moscow. Lon. 74. o. E. of Ferro. Lat. 57. 40. N.

PERMACOIL, a town of Hindooftan, in the Carnatic, 17 miles NNW. of Pondicherry, and 45 SSE, of Arcot. It was taken by the British under Col. Coote, in 1760. See India, § 18.

\* PERMAGY. n. l. A little Turkish boot. Dia.

PERMANENCE. \ n. f. [from fermanent.]
PERMANENCY. 1. Duration; confidency; continuance in the fame state; lastingness.-Salt, they fay, is the basis of folidity and permasency in compound bodies. Boyle. - Shall I dispute whether there be any fuch material being, that hath fuch a permanence or fixedness in being. Hale .- From the permanency and immutability of nature. Burnet. 2. Continuance in rest .- Such a punctum to our conceptions is almost equivalent to permanency and rest. Bentley.
\* PERMANENT. adj. [permanent, Fr. perma-

nens, Lat. ] 1. Durable; not decaying; unchanged .- All laws which God hath made, are necesfarily forever fermanent. Hooker .- That eternal duration should be at once, is utterly unconceivable, and that one permanent instant should be commensurate or rather equal to all successions of

ages. More.-

Eternity stands permanent and fixt. Dryden. s. Of long continuance.—These, or such other light injuries, which leave no permanent effect. Kettlewell.

\* PERMANENTLY. adv. [from permanent.] Durably; lattingly.—It does, like a compact or confistent body, deny to mingle permanently with

the contiguous liquor. Boyle.

\* PERMANSION. n. f. [from parmaneo, Lat.] Continuance.-Although we allow that hares may exchange their fex fometimes, yet not in that vicitlitude it is prefumed; from temale unto male, and from male to female again, and fo in a circle without a permanfion in either. Brogun.

\* PERMEABLE. adj. [from permeo, Lat.] Such as may be pailed through.—The pores of a bladder are not easily termeable by air. Boyle.

PERMEANT. adj. [permeans, Latin.] Paffing through. - It entereth not the veins, but ta-

keth leave of the permeant parts at the mouth ( the meleraicks. Brown.

\* To PERMEATE. v. a. [permeo, Lat.] T pass through.-This heat evaporates and elevati the water of the abyss, pervading not only the fishers, but the very bodies of the strata, permen ing the interstices of the sand, or other matt whereof they confift. Woodward's Natural Hiflor

\* PERMEATION. n. f. [from permeate.] T

act of palling through.

\* PERMISCIBLE. adj. [from permisceo, La Such as may be mingled.

\* PERMISSIBLE. adj. [permissus, Lat.] Wh may be permitted.

\* PERMISSION. n. s. [permission, Fr. perm

With thy permission then, and thus foreward The willinger I go.

You have given me your permission for this

dress. Dryden.

PERMISSIVE. adj. [from permitto, Lat. 1. Granting liberty, not favour; not hinden though not approving.

We bid this be done, When evil deeds have their permiffire pass, And not the punishment.

Hypocrify, the only evil that walks Invisible, except to God alone

By his permissive will, through heav'n and car

2. Granted; fuffered without hinderance; not a thorised or favoured.—If this doth authorise and

which before was but permissive. Bacon's Essays Thus I embolden'd spake, and freedom to Permissive, and acceptance found.

Çlad With what permissive glory since his fall Was left him, or false glitter. Milt. Par.

\* PERMISSIVELY. adv. [from permissive.] bare allowance; without hinderance.—As to for the propagation of the christian faith, I 🔻 be glad to hear spoken concerning the lawfuld not only permissively, but whether it be not d gatory to christian princes to design it. Bacon-

\* PERMISTION. n. s. [permistus, Lat.] 1

act of mixing.

\* PERMIT. n. s. A written permission is an officer for transporting of goods from place place, showing the duty on them to have b paid.

\* To PERMIT. v. a. [permitto, Lat. permet 1. To allow without command.-W things God doth neither command nor forbid, fame he permitteth, &c. Hooker. 2. To fell without authorifing or approving. 3. To all to fuffer.—It is not permitted unto women to in 1. Gorinthians, xiv. 34.-

Ye gliding ghosts, permit me to relate. L -Age fermits not that our mortal members should retain the vigour of our youth. Dry -We should not permit an allowed, possible, gr and weighty good to flip out of our thoughts: Locke.—After men have acquired as much as laws permit them, &c. Swift. 4. To give ! to relign. -

Nor love thy life, nor hate; but what the

PERKE, a town of France in the dep. of Araits of Calais.

RENEAU, a town of Russia, in Livonia, with ande, near the mouth of a river, so named, 35 N. of Riga. Lon. 23. 37. E. Lat. 58.

PERNEK, a fort of Hungary, 12 miles N. of

(11) PERNES, a town of France, in the dep. the Strants of Calais, and ci-devant prov. of Arras, on the Clarence; 17 miles NW. of Arras. lm. 1. 31. E. Lat. 50. 29. N.

1) Pernes. See Perne.

PERNIA, a town of Croatia; 16 miles SB. of The conclution of an oration. Cattatta

\* PERNICIOUS. adj. [perniciosus, Lat. pernickux, Fr.] 1. Mischievous in the highest degree; destructive.-It would be hurtful, if not pernicious. Hooker .-

I call you fervile ministers,

That have with two pernicious daughters join'd Your high engender'd battles, 'gainst a head So old and white as this. Shakefp. King Lear. Let this pernicious hour

Stand ay accurfed in the kalendar! Shake peare. 2. [ Pernix, Latin.] Quick. An use which I have found only in Milton, and which, as it produces an ambiguity, ought not to be imitated.

Part incentive reed

Provide, pernicious with one touch to fire. Milt. \* PERNICIOUSLY. adv. [from pernicious.] Destructively; mischievously; ruinously.—Some pernicioufly, against their own conscience, have taught. *Ascham.*-

All the commons

Hate him perniciously. Shakesp. Henry VIII. \* PERNICIOUSNESS. n. f. [from pernicious.] The quality of being pernicious.

\* PERNICITY. n. /. [from pernix.] Swiftness; celerity.—Others are endued with great pernicity.

PERNIO, a kibe or chilblain, is a little ulcer, occasioned by cold in the hands, feet, heels, nose, and lips. It will come on when warm parts are too fuddenly exposed to cold, or when parts from being too cold are fuddenly exposed to a confiderable warmth; and has always a tendency to gangrene, in which it frequently terminates. It most commonly attacks children of a fanguine habit and delicate constitution; and may be prevented or removed by fuch remedies as invigorate the fystem, and are capable of removing any tendency to gangrene in the conflitution.

PERNO a town of Nyland, in Sweden.

PERNOV, a town in the government of Riga, on a river near the Baltic.

PERNSTAIN, a town of Germany, in Aus-

tria: 12 miles NNW. of Wolfgang.

PERONÆUS, in anatomy. 3 muscles of the perone or fibula. See Anatomy, 9 217, No 8,

PERONES, a fort of high shoes which in early times were worn even by fenators; but at last were confined to ploughmen and labourers. They were very rudely formed, confifting only of hides undressed, and reaching to the middle of the leg. Virgil mentions the perones as worn by a compa-

ny of ruftic foldiers on one foot only.

PERONNE, a strong town of France, in the dep. of the Somme and late prov. of Picardy. It is called La Pucelle, i. e. the Virgin, because it has never been taken, though often belieged. It is very ancient. The Merovingian kings had a palace in it, and Charles the Simple was imprisoned and died in its caftle. Lewis XI. was also detained in it, by the D. of Burgundy, till he was forced to fign a difadvantageous treaty. It has 17,000 citizens; and is feated on the Somme, 27 miles SW. of Cambray, and 80 E. by N. of Paris.

Lon. 3. 2. E. Lat. 49. 55. N. (1.) \* PERORATION. n. f. [peroratio, Lat.]

What

What means this passionate discourse?
This peroration with such circumstances? Shak.
True woman to the last—my peroration

I come to speak in spite of suffocation. Smart. (2.) PERORATION consists of two parts. 1. Recapitulation; wherein the substance of what was diffused throughout the whole speech is collected briefly and curforily, and summed up with new force and weight. 2. The moving the passions; which is so peculiar to the peroration, that the masters of the art call this part sedes affectium. See Oratory.

PEROSE, a village of England, in Cornwall.

PEROTIS, in botany, a genus of the digynia order, belonging to the triandria class of plants; and in the natural method ranking under 4th order, Gramma. There is no calyx: the corolla confifts of a bivalvular glume; the valves are oblong, acute, somewhat unequal, and terminating in a sharp beard: it has three capillary stamina; the anthere incumbent; the style capillary, and shorter than the corolla; the stigma feathery and shorter than the corolla ferves as a perianthium, including a single seed of an oblong linear shape.—Of this there is only one species; viz.

PEROTIS PLUMOSUS, a native of America.

PEROUGE, a town of France, in the dep. of Ain, a mile W. of Meximieux, and 2 NE. of Montluel.

PEROUSA, a town of the French republic, in the dep. of the Po, and Piedmontefe, 16 m. SW.

of Turin.

PEROUSE, John Francis Galaup, a celebrated, but unfortunate French navigator born at Albi, in 1741. He entered early into the marine school, and served 5 years during the war. In Oct. 1764, he was made enfign, and acted in the E. Indies from 1765 to 1777. He served under D'Estaing in the following war, and in 1782, was appointed on the difficult talk of destroying the British settlements at Hudson's Bay, which he accomplished, and returned in 1783. In 1785, he was fent by Lewis XVI. with two ships on a voyage of discovery, but perished with his whole crews, having never been heard of, fince he left Botany Bay, in Jan. 1788. His voyage was published at Lond. 1798, in 3 vols. \$vo. and contains numerous important discoveries in various sciences.

\* To PERPEND. v. a. [perpendo, Lat.] To weigh in the mind; to coulider attentively.

Thus it remains and the remainder thus;
Perpend.

Perpend, my princess and give ear. Shak.

Duly perpend the discoveries of men. Brown.

\* PERPENDER. n. f. [perpigne, Fr.] A cop-

ing stone.

\* PERPENDICLE. n. f. [perpendicule, Fr. perpendiculum, Lat.] Any thing hanging down by a

ftrait line. Dia.

(1.)\* PERPENDICULAR. adj. [perpendiculaire, Fr. perpendicularis, Latin.] 1. Crosling any other line at right angles. Of two lines, if one be perpendicular, the other is perpendicular too.—

If in a line oblique their atoms rove,

Or in a perpendicular they move; Blackmore.—The angle of incidence is that angle, which the line, described by the incident ray, contains with the perpendicular to the restecting or refrac-

ting furface at the point of incidence. Nauton 2. Cutting the horizon at right angles.—Some define the perpendicular altitude of the highest mountains to be four miles. Brown.

(2.) PERPENDICULAR. n. f. A line crofting the horizon at right angles.—Though the quantity of water thus rifing and falling be nearly conftant as to the whole, yet it varies in the feveral parts of the globe; by reason that the vapour float in the atmosphere, and are not restored down again in a perpendicular upon the same precise tract of land. Woodward.

(3.) PERPENDICULAR. See GEOMETRY, Index.

\* PERPENDICULARITY. n. f. [from perpendicular.]

The flate of being perpendicular.—
The meeting of two lines is the primary effential mode or difference of an angle; the perpendicular of these lines is the difference of a right angle.

Watt.

\* PERPENDICULARLY. adv. [from perpendicular.] 1. In such a manner as to cut another line at right angles. 2. In the direction of a strait

line up and down.—

Thou hast perpendicularly fall'n. Shet — Irons cooled perpendicularly, acquire a directive faculty. Brown.—Shoot up an arrow perpendicularly it will return to your foot again. More—All weights move perpendicularly downward. Rep

\* PERPENSION. n. f. [from perpend.] Coals deration. Not in use.—Unto reasonable perpenfions it hath no place in some sciences. Brown.

To PERPETRATE. v. a. [perpetro, Lat. per petrer, Fr.] 1. To commit; to act. Always is an ill sense.—

I'ts true and perpetrated in our days. The These they returning will to death require, Will perpetrate on them the first design, And take the forseit of their heads for mine.

Fierce Romulus, for perpetrated crimes,
A facred refuge made.

2. It is used by Butler in a natural sense, in con-

pliance with his verse, but not properly.—

For whatsoe'er we perpetrate,

We do but row, we're steer'd by fate. Huding PERPETRATION. n. f. [from perpetrate, r. The act of committing a crime.—A desperation, have honested a mere private revenge. Hot independent of the most violent acts. Clarifa. 2. A bad action.—The strokes of divine vengeance, always attentions perpetrations. K. Charles.

(1.) \* PERPETUAL. adj. [perpetuel, Fr. perpetues, Latin.] 1. Never ceating; eternal with 18 spect to futurity.—Under the same moral, 28 therefore under the same perpetual law. Holyday.

Mine is a love, which must perpetual be.

Dryde

2. Continual; uninterrupted; perennial.—
Within those banks rivers now

Stream, and perpetual draw their humid train.

—By the muscular motion and perpetual flux of the liquids, a great part of them is thrown on of the body. Arbutbnot. 3. Perpetual ferew. A ferew which acts against the teeth of a wheel

and continues its action without end.—A perpetual force whath the motion of a wheel and the force of a force, being both infinite. Wilkins.

(2.) Perpetual motion. See Motion, § 9. (3.) Perpetual movement. See Movement,

No a.

PERPETUALLY. adv. [from perpetual.] Contaily; continually; incessantly.—The numbers in protually varied. Dryden.—Doth it not grow that and denser perpetually? Newton.—The bible her perpetually read in churches. Swift.

\*To PERPETUATE. v. a. [perpetuer, Fr. perpero, Lat.] 1. To make perpetual; to preferve
from extinction; to eternize.—Medals, perpetuate
the riores of her majefty's reign. Addison.—Man
control devide any other method of likely to preferve and perpetuate the knowledge and belief of a
reclation. Forbes. 2. To continue without cesfation or intermission.—A continued perpetuated
voice from heaven. Hammond.

\* PERPETUATION. n. s. [from perpetuate.] The act of making perpetual; incessant continuac.—Perpetuation of an ancient custom. Brown.

\*FRPETUITY. n.f. [perpetuite, Fr. perpetuin, Lit.] \*\*. Duration to all futurity.—God for precity hath established laws. Hooker.—

Groan to in perpetuity. Shak. Cymbeline.

We should, for perpetuity,

Go bence in debt. Shak. Winter's Tale. -Nothing wanted to his noble and heroical intenbut only to give perpetuits to that which was butime so happily established. Bacon.—There takeno other assurance of the perpetuity of this but what we have from him that built it. Less 1. Exemption from ; intermission; or cef-▲ A cycle or period begins again as often as soul, and so obtains a perpetuity. Holder .- The prolongins a constant disposition of mind to patile all christian virtues, not a perpetuity of exsole and action. Nel/by. 3. Something of which tere is no end.—A present repast for a perpetuity. man.—The ennobling property of the pleafure, that acrues to a man from religion, is, that he has the property, may be also fure of the per-Ex. Soutb.

The laws of God as well as of the land

Althor a perpetuity should stand.

PERPIGNAN, a confiderable town of France, but dep. of the Eastern Pyrennees, with a strong mid and an university. It is seated on the river strong which there is a handsome bridge, parthus plain, and partly on a hill. Lon. o. 43. E. Le. 46. 18. N.

PERPLEX. adj. [berplex, Fr. perplexus, Lat.]
breate; difficult. Perplexed is the word in use.

By the soul directs the spirits is perplex in the

Glanville's Scepfis.

To Perflex. v. a. [perplexus, Lat.] 1. To with with doubtful notions; to entangle; to make anxioux; to teafe with fuspense or ambiguisk; to distract; to embarrass; to puzzle.—Being Fraity perplexed in his mind, he determined to m mto Persia. 1 Mac. iii. 31.—Themselves with boths the day and night perplex. Denh.—He perfers the minds of the fair sex. Dryden.—We shall be up to perplex the mind. Locke.—You perplex and consound the reader. Waterland. 2. To make intracte; to involve; to complicate.—

Their way
Lies through the perplex'd paths of this drear

We both are involv'd

In the same intricate perplext distress. Addison.

What was thought obscure, perplexed, will lie open. Locke.

3. To plague; to torment; to vex. A sense not proper, nor used.—

How might fuch killing eyes perplex. Granv. \*PERPLEXEDLY. adv. [from perplexed.] In-

tricately; with involution.

\* PÉRPLEXEDNESS. n. f. [from perplexed.]

1. Embarrassment; anxiety. a. Intricacy; involution; difficulty.—Obscurity and perplexedness have been cast upon St Paul's Epistles from without. Locke.

\* PERPLEXITY. n. f. [perplexité, Fr.] 1. Anxiety; distraction of mind.—The fear of him ever since hath put me into such perplexity, as now you found me. Sidney.—Perplexity not suffering them to be idle, they think and do, as it were, in

a phrenfy. Hooker .-

In penfive plight and fad perplexity. Spenfer. 2. Entanglement; intricacy.—In the perplexity of his own thoughts. Stilling fleet.

\* PERPOTATION. n. f. [per and poto, Lat.]

The act of drinking largely.

(1.) PERQUIMANS, or PERQUIMINS, a county of N. Carolina in Edenton district, bounded on the W. by Chowan county, and E. by the Pasquotank and Pasquotank county. In 1795, it contained 3,562 citizens, and 1878 slaves.

(2.) PERQUIMANS, or a river in the above

(2.) PERQUIMINS, S county, to which it gives name.

(1.) \* PERQUISITE. n. f. [perquifitus, Latin.]
Something gained by a place or office over and a-

bove the settled wages.—
Tell me, perfidious, was it fit,

To make my cream a perquifite. Widow and Cat.

The best perquifites of a place are the advantages it gives a man of doing good. Addijon.

To what your lawful perquifites amount.

Savifa.

(2.) PERQUISITE, in law, is any thing gotten by a man's own industry, or purchased with his money; in contradistinction to what descends to him from his father or other ancestor.

\* PERQUISITED. adj. [from perquifite.] Sup-

plied with perquifites.-

Pone.

If permissived variets frequent stand. Savage.

PERQUISITION. n. s. [perquisitus, Latin.]

An acquate enquirus a thorough fresch.

An accurate enquiry; a thorough search. Ainfw. (1.) PERRAULT, Charles, son of an advocate in parliament, was born at Paris, in 1626. Colbert chose him first clerk of the buildings, of which he was superintendant, and afterward made him comptroller-general of the finances under him. He was one of the first members of the academy of the belles lettres and inscriptions, and was received into the French academy in 1671. His poems La Peinture, and La ficele de Louis le Grand, are well known. He drew up elogies of great men of the 17th century, with portraits, and produced oother esteemed works.

(2.) PERRAULT, Claude, brother of Charles, was born at Paris in 1613; and was bred a phyncian, though he never practifed but among his relations,

lations, friends, and the poor. He excelled in architecture, painting, sculpture, mathematics, physics, and all those arts that relate to designing and mechanics. When the academy of sciences was established, he was one of its first members, and was chiefly depended on for mechanics and naturel philosophy. His works are, A French translation of Vitruvius: Memoires pour fervir à l' Hiftoire naturelle des Animaux, folio, 1676, with figunes; Esfais de Phisiq e, 4 vols 12mo, 1688; Recueil des plusieurs machines de novelle invention, ato, 1700, &c. He died in 1688.

(3, 4.) PERRAULT, Nicholas, and Peter, brothere of the two last, made themselves also known

in the literary world.

PERRECY, a town of France, in the dep. of Saone and Loire, 101 miles NW. of Charolles. PERREUX, a town of France, in the dep. of

Rhone and Loire; 3 miles E. of Roanne.

PERRIERS, a town of France, in the dep. of the Channel; 8 miles N. of Coutances.

PERRITIO, a river of Naples, which runs into

the Crate, in Calabria Citra.

PERRON, James Davy Du, a cardinal, distinguithed by his abilities and learning, boro in Bern, in 1556; and educated by Julian Davy, his father, a very learned Calvinift. Philip Desportes, abbot of Tyron, made him known to Henry III. king of Prance, who conceived a great effect for him. Some time after Du Perron abjured Calvinism, and embraced the eccletiastical function. After the murder of Henry III. he retired to the house of Cardinal de Bourbon, and thok great pains in bringing back the Protestants to the church of Rome. He chiefly contributed to engage Henry IV. to change his religion; and that prince sent him to negociate his reconciliation to the holy fee, in which he succeeded. Du Perron was consecrated billiop of Evreux while be relided at Rome. He was made cardinal in 1604 by pope Clement VIII. at the folicitation of Henry IV. who afterwards nominated him to the archbishopric of Seus. He also fent him to Rome with Card. Joyeuse. in order to terminate the disputes between Paul V. and the Venetians. He died at Paris in 1618. His works were collected after his death, and published at Paris in 3 vols. folio.

PERROS GUERIC, a town of France, inthedep. of the North Coasts; 41 miles N. of Lannion.

PERROT, Nicholas, lord of Ablancourt, a man of uncommon genius, born at Chalons in 1606. After studying philosophy about 3 years, he was fent to Paris to follow the law. At 18 years of age he was admitted advocate of parliament, but soon discontinued his practise. In 1637 he was admitted a member of the French academy; he died in 1664. His works are mostly translations.

PERRUKE, PERUKE, or Periwig, was anciently a name for a long head of natural bair; fuch, particularly, as there was care taken in the adjusting and trimming of. The Latins cailed it coma: whence part of Gaul took the denomination of Gallia Comata, from the long bair which the inhabitants were as a fign of freedom. The word is now used for a set of false hair, curled, buckled, and fewed together on a frame or cawl; anciently called capillamentum or "false perruke." The ancients used false hair, but the use of perukes, it their present mode, has not existed a centuries.

(1.) PERRY, Capt. John, an engineer, who re fided long in Ruffia, having been recommended to the czar Peter while in England, as a perfor capable of ferving him on a variety of occasion relating to his new design of establishing a flee making his rivers navigable, &c. He was author of The State of Rullia, 1716, 8vo, and An Account of the Ropping of Dagenham Breach, 171 8vo. He died Feb. 11, 1733.

(2.) Perky, a fmall town of Huntingdonshire,

the parish of Great Stoughton,

(3.) \* PERRY. n. f. [poire, Fr. from poire.] Cyd made of pears.—Perry is the next liquor in effect

after cyder. Mortimer

(4.) PERRY, the best pears for perry are the which are most tart and harsh. Of these Bothury pear, the Bareland pear, and the h pear, are the most esteemed for perry in Wor ershire, and the squash pear, in Gloucestershi

(1.) PERSAIN, a river of Alia, in Pegue, whi runs from the Ava, into the bay of Bengal.

(2.) PERSAIN, a town of Pegue on the abo river, 132 miles SW. of Pegue, and 252 SSE. Arracan.

PERSANTE, a river of Potnerania, which n

into the Baitic, below Colberg.

PERSCHLING, a town and river of Auth The river runs into the Danube, 3 miles about

\* To PERSECUTE. v. a. [perfecuter, Fr. ] fecutus, Lat.] 1. To harais with penalties; pursue with malignity. It is generally used of nalties inflicted for opinions. - 1 perfecuted this unto the death. Adi, xxii. 4. 2. To purius repeated acts of vengeance or enmity .-Relate,

For what offence the queen of heaven begut To persecute so brave, so just a man! 3. To importune much: as, he persecutes me

daily folicitations.

(1.) \*PERSECUTION. n. f. [ perfecution, Fr. fecutio, Lat. from perfecute.] 1. The act or p tice of perfecuting.-The Jews railed terfeq against Paul and Barnabas, and expelled the Alls xiii. 50 .- He endeavoured to prepare charge for the reception of the impending A cution. Fell.-

Heavy persecution shall arise. -Those who lived in the ages of perfecution. difon. 2. The state of being persecuted. necks are under persecution. Lam. v. 5 .- Chris fortitude and patience had their opportunit times of affliction and perfecution. Spratt.

(2.) Persecution, in a more restrained sen the fufferings of Christians on account of the ligion. Hiftorians usually reckon ten general fecutions, the first of which was under the ror Nero, 31 years after our Lord's afcen when that emperor having let fire to the oil Rome, threw the odium of that execrable at on the Christians, who under that pretence t wrapped up in the skins of wild beasts, and t ried and devoured by dogs; others were called, and others burnt alive. The second was der Domitian, in the year 95. In this perf tion, St John the apostle was sent to the ill

Patmos, in order to be employed in digging in the mines. The third began in the third year of Trajus, in the year 100, and was carried on with pest violence for feveral years. The fourth was under Antoninus the philosopher, when the Chrishas were banished from their houses, forbidden hallow their heads, reproached, beaten, hurried implace to place, plundered, imprisoned, and inch. The fifth began in the year 197, under mperor Severus. The fixth began with the of the emperor Maximinus in 235. The moth, which was the most dreadful persecuin that had ever been known in the church, bemin the year 250, in the reign of the emperor tous, when the Christians were in all places from their habitations, stripped of their ten, tormented with racks, &c. The eighth m in the year 257, in the fourth year of the nof the emperor Valerian. The ninth was the emperor Aurelian, A. D. 274; but this may inconsiderable: and the tenth began in tight year of Dioclesian, A. D. 303. In this perfecution, which lasted ten years, houwith Christians were set on fire, and droves were tied together with ropes, and

2. Continuance in a flate of grace.—We place the grace of God in the throne, to rule and reign in the whole work of conversion, perjeverance, and falvation. Hammond.

(2.) Perseverance, in theology, a continuance in a state of grace to a state of giory. About this subject there has been much controversy in the Christian church. Ail divines, except Unitariang, admit, that no man can ever be in a state of grace without the co-operation of the spirit of God; but the Calvinitts and Arminians differ widely as to the nature of this co-operation. The former, at least such as call themselves the true disciples of Calvin, believe, that those who are once under the influence of divine grace can never fall totally from it, or die in mortal fin. The Arminians, on the other hand, contend, that the whole of this life is a flate of probation; that without the grace of God we can do nothing that is good; that the Holy Spirit affifts, but does not overpower our natural faculties; and that a man, at any period of his life, may refift, grieve, and even quench the spirit. See THEOLOGY.

\* PERSEVERANT. adj. [perfeverant, Fr. perfeverant, Lat.] Perfifting; constant. Ainsworth.

\* To PERSEVERE. v. n. [perfevere, Lat. perfeverer, Fr. This word was anciently accented less properly on the second syllable.] To persist in an attempt; not to give over; not to quit the design.—

But in her pride she doth persevere still.

\* PERSEVERINGLY. adv. [from perfevere.]

With perfeverance.

(1.) PERSEUS, in fabulous history, the fon of Jupiter by Danae, the daughter of K. Acrifius. See Acristus and Danae. Many miracles are related of this hero, by the poets. Having engaged to bring the head of Medula to Polydectes. K. of Scriphos, who had educated him, Minerva gave him her shield, Mercury lent him his wings and caduceus, with his dagger made of diamonds, called herpe; and Piuto lent him his helmet, which rendered him invifible. Thus equipped, Perseus flew through the air, visited the Graie, and their fifters the Gorgons; killed Medusa, and brought away her head; gave birth to PE-GASUS and Chryfuer from her blood; turned the giant Atlas into a mountain by a fight of her head a killed the fea monfter that was going to devour Andromeda; married that princess; changed her uncle Phineus and his troops, who were going to carry her off from him, into stones;

and made the fame metamorpholis upon Poly dectes when he was going to ravish Danae. Having afterwards killed his grandfather Acrifius accidentally, by throwing a quoit, he refused to fucceed him in the throne of Argos, and exchanged it for that of Tirynthus: after which, he founded the city of Mycenæ, of which he became king, and where he and his posterity reigned for 100 years. He flourished, according to most chronologists, in 1348 B. C. but, according to Sir Isaac Newton, only in 1028.

(2.) Perseus, in altronomy. See Astrono-

my, § 548.
(3.) Perseus. See Macfdon, § 18, 19. This unfortunate monarch left a daughter and 2 fons, Philip and Alexander. The latter was bred a carpenter, but having acquired fome learning, became fecretary to the Senate of Rome.

PERSHORE, a town of Worcetterthire, on the Avon, 9 miles ESE. of Worcester, and 102 WNW. of London. It has 300 houses, and markets on Tues, and Sat. Lon. 1. 44. W. Lat. 52. 4. N.

(1.) PERSIA, a most ancient and celebrated empire of Alia, extending in length from the mouth of the Araxes to that of the Indus, about 1840 miles, and in breadth from the Oxus, to the Perfian gulph, about 1080. It is bounded on the N. by the Caspian Sea, the Oxus, and mount Caucasus; on the E. by the Indus and the dominions of the Great Mogul; on the S. by the Perfian gulph and the Indian ocean; and on the W. by the dominions of the Grand Signior. learn from Sir William Jones, that Persia is the name of only one province of this extensive empire, which by the prefent natives, and all the learned Muffulmans who relide in the British territories in India, is called Iran. It has been a practice common in all ages to denominate the whole of a country from that part of it with which we are best acquainted; and hence have the Europeans agreed to call Iran by the name of that province of which Shirauz is the capital: See Sur-RAUZ. The same learned writer is consident that Iran, or Persia in its largest extent, comprehended within its outline the lower Afia, which, fays he, was unquestionably a part of the Persian, if not of the old Affyrian empire.

(2.) PERSIA, ANCIENT NAMES AND FIRST SET-TLEMENT OF. The most ancient name, however, of this country, was that of Elam, or, as some write it, Alam, from Elam the son of Shem, from whom its first inhabitants are descended. Herodotus calls its inhabitants Cephenes; and in very ancient times the people are faid to have called themselves Artai, and the country where they dwelt Artea. In the books of Daniel, Efdras, &c. it is called by the names of Pars, Pharai, or Fars, whence the modern name of Perfia: but whence those names have been derived, is now uncertain. That Persia was originally peopled by Elam the fon of Shem, has been very generally admitted; but the ancient history of this distinguished empire is very little known. The first Perfian emperor of whom any thing is known with tolerable accuracy, was the great Cyrus, although it is evident that a powerful monarchy had sublisted in Iran for ages before the accession of that hero; that this monarchy was called the

Mabébédian dynasty; and that it was in fact the oldest monarchy in the world.

(3.) PERSIA, CLIMATE AND SEASONS OF. The air and climate of this country, confidering the great extent thereof, cannot but be very different, according to the fituation of its feveral parts; fome being frozen with cold, whilst others are burnt with heat at the same time of the year. The air, wherever it is cold, is dry; but where it is extremely hot, it is fometimes moilt. All along the coast of the Persian Gulph, from W. to E. to the mouth of the Indos, the heat for four months is fo excessive, that even the natives, unable to bear it, are forced to quit their houses and retire to the mountains; fo that fuch as travel in these parts, at that season, find none in the villages but wretched poor creatures, left there to watch the effects of the rich, at the expence their own health. The extreme heat of the as it is insupportable, so it makes it prodigion unwholesome; strangers frequently failing in there, and feldom escaping. The eastern prom ces of Persia, from the Indus to the borders Tartary, are subject to great heats, though no quite so unwholesome as on the coasts of the dian Ocean and the Persian Guiph; but in the northern provinces, on the coast of the Caspin Sea, the heat is full as great, and, being attended with moisture, as unwholesome as on the con before mentioned. From October to May, the is no country in the world more pleasant the this; but the people carry indelible marks of the malign influence of their fummers, looking att a faint yellow, and having neither ftrength fpirite; though, about the end of April, they bandon their houses, and retire to the mountain which are 25 or 30 leagues from the fea. I this moistness in the air is only in these parts; rest of Persia enjoys a dry air, the sky being feetly ferene, and hardly fo much as a cloud to fly therein. Though it seklom rains, the admits of mitigation; for in the night, when is not a cloud to be feen, and the sky is so d and the stars afford a strong light, a brisk of fprings up, which lasts until within an hope the morning, and gives a refreshing cooling the air. The feafons in general, and particula in the middle of this kingdom, happen thus: winter, beginning in November, and lasting un Murch, is very sharp and rude, attended w frost and snow; which last descends in great state on the mountains, but never in the plains. climate of Shirauz, the capital of Perfia Prop is represented by a traveller who lately visited. as one of the most agreeable in the world, the tremes of heat and cold being feldom felt. SHIRAUZ. The great dryness of the air excent Persia from thusder and earthquakes. spring, indeed, there sometimes talls hail; as the harvest is then pretty far advanced, it day a great deal of mischief. The rainbow is seld feen in this country, becanfe there rife not pours enough to form it; but in the night the are seen rays of light shooting through the fun ment, and followed as it were by a train of smo The winds, however brisk, seldom swell in ftor:na or tempefts; but they are sometimes P fonous and infectious on the shores of the Gulp Mr Tavernier fays, that at Gombroon people often find themselves struck by a fouth wind, in such a manner that they cry, I burn! and immediately sill down dead. M. Le Brun tells us, that he was fund while he was there, that the weather was scattines so excessively hot as to melt the seals of inters. At this time the people go in their bits, and are continually sprinkled with cold was; and some even he several hours naked in the water. Among the inconveniences consequent from this malign disposition of the air, one of the most terrible is the engendering, in the amaind legs a kind of long small worms, which cause be extracted without great danger of braking them; upon which a mortification en-

(4) Persia, Government of. Persia is an Moute monarchy, the lives and estates of the prople being entirely at the disposal of their more. The king has no council established, but addied by such ministers as are most in favour; the resolutions taken among the women of klum frequently defeat the best laid designs, Theorem is hereditary, excluding only the fe-The fore of a daughter are allowed to The laws of Persia exclude the blind the throne; which is the reason that the prince usually orders the eyes of all the in of the royal family, of whom he has any to be put out. mumber of wives, which it would be death mone, befides the eunuchs, who have the tendance of them, to look at, or even migradent; wherefore, when he travels, noleaguen to all men to quit the road, nay their Theres, and to retire to a great distance. The minister is called the amaet doulet, which figthe director of the empire, and also viser ar the great supporter of the empire: as he almost sustains the whole weight of the adkration. This minister's chief study is to his maker, to secure to himself an ascendover his mind, and to avoid whatever may him any uneafiness or umbrage. With this he never fails to flatter him, to extol him tail the princes upon earth, and to throw a evil over every thing that might help to oby eyes, or discover him the weakness of the He takes particular care to keep the king The ignorance, to hide from him all unwelmews; and to exalt immoderately every adhe obtains over his enemies. In like manthe inferior officers and governors of provinemploy all the means in their power to secure pine minister's favour. There is a gradation potism and savery, down from the prime artu the lowest retainer to the court, or deent on the government. Children are somein Perfia required by the king to cut off the and note, and even to cut the throats of their aruts; and these orders cannot be objected to, Phontendangering their own lives. Indeed their tench and mercenariness are such, that they in perpetrate such atrocious deeds without the the cruple, when they have a promise of posthing their poles. The prime ministers, notwithanding the precarious footing on which they and, fonctimes continue in their employments

during life. Next to the prime minister are the nadir, or grand mafter of the household; the mehter, or groom of the chambers, who is always a wnite eunuch; the mirakbor bashe, or master of the horse; the mir-fbakarbeggi, or great huntsman and tatconer; the divanbeggi, or chief justice, to whom there lies an appeal from the deroga, or the lieutenant of police, in every town; the wacka-nuwiez, or recorder of events, or first foretary of state; the mustau sh-elemenaleck, or master of the accounts and finances of the kingdom; the numes bumbashes, or the king's chief physicians; the shickada fibashe, or inspector of the palace, and regulator of rank at court; and the KHANS, or governors of provinces, under whom are other governors, called foltans, appointed also by the king. Civil matters are all determined by the cazi, and ecclefiaftical ones (particularly divorces) by the speickel-selleum, or head of the faith ; an officer answering to the musti among the Turks; under him are the Spieck-el, selom, and cadi, who decide in all matters of religion, and make all contracts, testaments, and other public deeds, being appointed by the king in all the principal towns; and next to these are the pichnamas, or directors of the prayers; and the moullabs, or doctors of the law. Justice is carried on in Persia in a very summary manner; the sentence being always put into execution on the the fpot. Their is generally punished with the lofs of nofe and ears; and high-way robbery, by ripping up the belly of the criminal, in which fituation he is expoted upon a gibbet in one of the most public parts of the city, and there left until he expires in torment. There is no nobility in Perfia, nor is any respect shown to a man on account of his family, except those who are of their great prophet or patriarchs; but every man is effectived according to the post he possesses; and when he is difmiffed, he loses his honour, and he is no longer diftinguished from the vulgar.

(5.) Persia, History of, from Cyrus's BIRTH TO HIS DEATH. Cyrus is celebrated both by facred and profane hittorians; but the latter are at no fmall variance concerning his birth and acceffion to the throne. The stories told by Herodotus, of Astyages, the last king of the Medes, being alarmed by his dreams; of his endeavouring to prevent their fulfilment by marrying his daughter, Mandane, to a mean Pertian; of his afterwards ordering his grandson Cyrus to be murdered; of his preservation by Harpagus, and of Astyages's barbarous revenge by murdering Harpagus's fon, and ferving up his mangled limbs to Harpagus at a dinner; and of Harpagus conspiring with Cyrus to dethrone his grand-father; with Astyages's deposition and imprisonment, have all very much the air of a fable. According to Kenophon, Cyrus was the fon of Cambyses king of Persia, and Mandane the daughter of As-tyages king of Media. He was born a year after his uncle Cyaxares, the brother of Mandane. He lived till the age of 12 with his parents in Perlia, being educated after the manner of the country, and inured to fatigues and military exercises. At this age he was taken to the court of Astyages, where he refided four years; when the revolt of the Medes and Perlians from the Babylonians hap.

pened. See BABYLONIA, § 2. While Cyrus was employed in the Babylonish war, before he attacked the metropolis itself, he reduced all the nations of Alia Minor. The most formidable of these were the Lydians, whose king Croesus affembled a very numerous army, composed of all the other nations in that part of Asia, as well as of Egyptians, Greeks, and Thracians. This vast army, confisting of 420,000 men, Cyrus routed at the battle of Thymbra, and next day took Sardis, the capital of Lydia. (See Croesus, and Lydia.) After the conquest of Sardis, Cyrus turned his arms against Babylon which he reduced as related under BABYLONIA, § 2. Having fettled the civil government of the conquered kingdoms, and restored the Jews to their own land, (See Jews, § 3.) Cyrus took a review of all his forces, which he found to confift of 600,000 foot, 120,000 horse, and 2000 chariots armed with feythes. these he extended his dominion all over the nations to the confines of Ethiopia, and to the Red Sea; after which he continued to reign peaceably over his vast empire till his death, which happened about A. A. C. 529. In the time of Cyrus, the Persian empire extended from the Indus to the Ægean Sea. On the N. it was bounded by the Euxine and Caspian Seas, and on the S. by Ethiopia and Arabia. That monarch kept his refidence for the seven cold months at Babylon, by reason of the warmth of that climate; three months in the spring he spent at Susa, and two at Ecbatan during the heat of fummer.

(6.) PERSIA, HISTORY OF, FROM CYRUS'S DEATH TO THAT OF CAMBYSES. Cyrus on his death-bed appointed his fon Cambyfes to fucceed him in the empire; and to his other fon, Smerdia, he gave several confiderable governments. The new monarch immediately fet about the conquest of Egypt; which he accomplished in the manner related in the history of that country. (See Egypt, § 10.) Having reduced Egypt, Cambyfes next resolved to turn his arms against the Carthaginians, Hammonians, and Ethiopians. But he was obliged to drop the first of these enterprizes, for want of thips. And in attempting to cross the defert against the latter, he lost the greater part of an immense army, and was obliged to return to Thebes. Through jealoufy of his brother Smerdis, he had caused him to be murdered, but during his absence on this expedition, a magian, who greatly refembled Smerdis in looks, affumed the name of the deceased prince, and raised a rebellion against Cambyses, who was generally hated for his cruelty. Haftening home to suppress this revolt, his fword accidentally wounded him in the

thigh, which occasioned his death, (7.) PERSIA, HISTORY OF, FROM CAMBYSES'S DEATH TO THAT OF SMERDIS MAGUS. Tho' Cambyfes had on his death-bed informed the nobles of the murder of his brother, and that the person who had usurped the government was an imposter, yet they gave no credit to his affurances. Smerdis the magian was allowed to take possession of the throne in peace, and commenced his reign very popularly. The imposition was however foon detected, the false Smerdis having formerly lost his ears; the person who had killed the true Smerdis publicly confessed his crime; a confederacy

of feven principal lords was formed against the usurper, and he and his brother Patizithe were flain, after a reign of only 8 months. No were they the only fufferers. The mob fell upo the magi, and made a general massacre of them the memory of which was kept up long after, b an anniversary festival, called MAGOPHONIA.

(8.) PERSIA, HISTORY OF, FROM DARIUS I ACCESSION TO THAT OF XERXES. Six of the noble conspirators having determined to choose king from among themselves, by repairing o horse-back to a particular spot, and bestowing the crown on him whose horse first neighed, Dark the fon of Hystaspee governor of Sula was put possession of this dignity, by the fagacity of h groom. He was elected king of Persia in the ye 522 B. C. Immediately after his accession, promoted the other fix conspirators to the employments in the kingdom, married the daughters of Cyrus, Atolia and Artystona, mys the daughter of the true Smerdis, and R dyma the daughter of Otanes, who had detent the imposture of the magian. He then divi the whole empire into 20 latrapies or government and appointed a governor over each divition, ord ing them to pay him an annual tribute. Un Darius, the building of the temple of Jerusak which had been obstructed by Cambyses and Sm dis, went on successfully, and the Jewish was entirely restored. The most remarkable Darius's other transactions were his expedition gainst Babylon; against Scythia, India, and Gre The expedition against Babylon took place A.A. 517. The inhabitants of that city having laid a stock of provision for several years, and street all the old people and children, and those w they confidered unnecessary, shut themselved and withstood the siege of Darius and all his for a year and 8 months, and would mod hably have succeeded in tiring them out Zopyrus, one of Darius's generals, having on his own note and ears, perfuaded them been thus barbaroully treated by the mou and was defirous of revenge; fo they intrude him the guard of the city, which he delivere to the Perfians. Darius beat down the wall that metropolis to the height of 50 cubits: of the most active in the rebellion were imple the rest pardoned. After the reduction of B lon, Darius undertook a Scythian expedition, d ted against those nations which lie between Danube and the Tanais. In this however he not so fortunate. He led 700,000 men into thia, but the inhabitants, too wife to oppor vast an army in the field, retreated before wasting the country as they fled. Seeing the minent danger his army were in of penthis want, he began his retreat which he effected the loss of the old and fick, whom he left by him. India however felt and submitted prowers of his army. (See India, § 3.) H duced that large country, and made it a proof the Perlian empire, drawing from them annual tribute of 360 talents of gold. For account of his expedition to Greece, fee TICA, § 11. The ill success which attended here, however, was so far from making him the enterprife, that it only made him the

stent on reducing the Grecians; and he refolved to head his army in perion, having attributed his tomer had faccefs to the inexperience of his general. But while he was making the necessary reparations for this purpose, he received intelligate that the Egyptians had revolted, so that he was obliged to make preparations for reducing the allo; and before this could be done, the highed, after having reigned 36 years, leaving attende to his son Xerxes.

(4) Persia, History of, from Xerxes's This prince afcend-ATTESSION TO HIS DEATH. with throne of Perfia in the year 485 B. C.; and in the enterprise was to reduce the Egyptians; be chechually did, bringing them into a mk fate of flavery than they ever had experiand before. After this he resolved on an exid is related under ATTICA, § 11. By his decimes in the Grecian expedition, he became b dispirited, that he thenceforth abandonshoughts of war and conquests; but growmanical, and oppressing his subjects, he was and in his bed, A. A. C. 464, and 21st of in; and was succeeded by his third son Arma, iurnamed Longimanus on account of the t logth of his arms.

to Persia, History of, Till Artaxer-Is BEATH. This prince is named Aha/uerus freque, and is the fame who married Esther, the whole of his reign showed the kindness to the Jewish nation. In the of his reign he was opposed by Hystaf-ad son of Xerxes, whom, however, he though not without confiderable diffi-After this he fettled the affairs of governlal reformed many abuses which had crept then, being fully established on the throne, sported featts and rejoicings to be made the days in the city of Susa; at one of which to divorce his queen for disobedience; therwards married Esther, as recorded Est. 11. In the 5th year of his reign, the Egyptrolted anew, and, being affifted by the A, held out for fix years; but were again to submit, and continued in subjection the whole of his reign. Nothing elfe rehappened during the life of Artaxerxes minus, who died in the 41st year of his Pi and was succeeded by Xerxes II. the only he had by his queen, though by his concuwe tad 17.

m. Persia, HISTORY OF, TILL DARIUS II's re. Xerxes II. having drunk immoderately mertainment immediately after his accession, to a chamber to refresh himself with sleep; to he was murdered by Sogdianus, the son markes by one of his concubines, after he goed 43 days. Sogdianus was scarce seather throne when he put to death Bagorazus, act saithful of all his father's ennuchs; by and the murder of his sovereign, he between the murder of his sovereign, he between the murder him; but Ochus, collected a great army under pretence of mg the death of Xerxes, and being joined my of the nobles and governors of provinces, came proposed an accommodation with C-

chus; who no fooner had him in his power thanhe caused him to be suffocated among ashes; a punishment invented on purpose for him. being fettled on the throne, changed his name to Darius; and is by historians commonly called Darius Nothus, or The Bastard. But Arlites, another of the brothers, feeing how Sogdianus had got the better of Xerxes, and Ochus of him, attempted to treat Ochus in the same manner. He was not, however, so successful; for, being defeated in an engagement, he furrendered, but was immediately put to death by suffocation in ashes. Several other persons were executed: but these severities did not procure him repose, for his whole reign was disturbed with violent commotions in various parts of the empire. One of the most dangerous was raised by Pisuthnes governor of Lydia; but he, being deferted by his Greek mercenaries, was overcome, and put to death. His fon Amorgas continued to infeft the maritime provinces of Ana Minor for two years; till he al-fo was taken and put to death by Tiffaphernes, governor of Lydia. Other infurrections quickly followed; particularly that of the Egyptians, who could not be reduced. Before his death Darius invested Cyrus his youngest son with the supreme government of all Alia Minor. done through the perfuation of his mother PARY-SATIS, who had an absolute sway over her husband; and she procured this command for him, that he might thereby be enabled to contend for the kingdom after his father's death. He died A. A. C. 405. and was succeeded by his son Artaxerxes, by the Greeks furnamed Mnemon, on account of his extraordinary memory.

(12.) Persia, history of, till the death OF ARTAXERXES II. The most remarkable transaction during the reign of this prince was the revolt of his brother Cyrus. He began with gaining over the cities under Tiffaphernes; which quickly produced a war with that governor. Cyrus then began to affemble troops, which he pretended were defigned only against Tiffaphernes. As he had given great affiftance to the Spartans in their wars against the Athenians, he now demanded affiftance from them; which they very readily granted. Cyrus, having thus collected an army of 13,000 Greek mercenaries and 100,000 regular troops of other nations, fet out from Sardis, towards Upper Afia. Having arrived at Cunaxa in Babylon, Cyrus found his brother with 900,000 men ready to engage him. Cicarchus, the commander of the Peloponnesian troops, advifed Cyrus not to charge in perfon, but to remain in the rear of the Greek battalions; but he replied, that he should thus render himself unworthy of the crown for which he was fighting. As the king's army drew near, the Greeks fell upon them with fuch fury, that they routed the wing opposite to them almost at the first onset; upon which Cyrus was with loud fhouts proclaimed king by those next to him. But he, perceiving that Artaxerxes was wheeling about to attack him in flank, advanced against him with 600 chofen horse, killed Artageses captain of the king's guards with his own hand, and put the whole body to flight. In this encounter, discovering his brother, he spurred on his horse, and, coming

up to him, engaged him with great fury. Cyrus killed his brother's horse, and wounded him on the ground; but he immediately mounted another horse, when Cyrus attacked him again, and gave him a fecond wound, when the guards, perceiving the king's danger, discharged their arrows against Cyrus, who at the same time was pierced through by his brother's javelin. He feel dead upon the spot; and all the chief lords of his court were flain with bim. In the mean time, the Greeks having defeated the enemy's left wing commanded by Tiffaphernes, and the king's right wing having put to flight Cyrus's left, both parties imagined that they had gained the victory. But Tissaphernes acquainting the king that his men had been put to flight by the Greeks, he immediately rallied his troops to attack them. The Greeks under Clearchus, easily repulsed them, and purfued them to the foot of the neighbouring hills. As night was drawing near, they returned to their camp, but found that the greatest part of their baggage had been plundered, and all their provisions taken. The next morning they received the news of Cyrus's death, and the defeat of the army under him. Whereupon they fent deputies to Arizus, commander in chief of all the other forces of Cyrus, offering him the crown of Perfia. Arizus rejected the offer, and acquainting them that he intended to fet out on his return to Ionia, advised them to join him in the night. They followed his directions, and, under Clearchus, arrived at his camp about midnight, whence they fet out on their return to Greece. were at a vast distance from their own country, in the very heart of the Persian empire, surrounded by a victorious and numerous army, and had no way to return again, but hy forcing their way through an immense track of the enemy's country. But their valour and refolution mastered all these difficulties; and, in spite of a powerful army, which purfued and haraffed them all the way, they made good their retreat for 2325 miles through the provinces belonging to the enemy, and got fafe to the Greek cities on the Euxine fea. This retreat (the longest that was ever made through an enemy's country) was conducted at first by Clearchus; but he being cut off through the treachery of Tissaphernes, Xenophon was chosen in his room, who at last brought his men safe into Greece. (See XENOTHON.) The war with Cyrus was scarce ended, when another broke out with the Spartans, on the following account. Tiffaphernes being appointed to fucceed Cyrus in all his power, to which was added all which he himself possessed formerly, began to oppress the Greek cities in Asia in a most cruel manner. On this they fent ambaffadors to Sparta, defiring The Spartans having ended their long war with the Athenians, willingly laid hold of this opportunity of breaking with the Persians, and therefore lent against them an army under the command of Thimbro, who, being strengthened by the forces which returned under Kenophon, took the field against Tissaphernes. But Thimbro being recalled, Dercyllidas, a brave officer, was appointed to fucceed him; and he carried on the war to much more advantage. Finding that Tiflaphernes was at variance with another governor

named Pharnabazus, he concluded a truce wit the former, and marching against Pharnabaru drove him quite out of Æolis, and took kver cities in other parts. The latter repaired to the Persian court, complained against Tissaphern and adviled the king to equip a powerful fler and give the command of it to Conon the Atl nian, by which he would obstruct the passage further recruits from Greece; and thus foon an end to the power of the Spartans in Alia. T king accordingly ordered 500 talents for the equ ment of a fleet, and appointed Conon comma er of it. The Spartans hearing of this, fent of Agefilaus one of their kings, and a most expended commander, into Atia. This was dewith such secrecy, that Agesilaus arrived at En fus before the Perfians had the leaft notice of defigns. He took the field with 10,000 foot 4000 horse, and falling upon the enemy, totally unprepared, carried every thing him. Tiffaphernes deceived him into a true he got his troops affembled, but gained little his treachery; for Agelilaus deceived him turn, and while Tillaphernes marched his to into Caria, the Greeks invaded and plund After various other deceptive Phrygia. nœuvres on each fide, Agefilaus led his trou gainst Sardis; and Tissaphernes having diff ed a body of horse to its relief, Agessaus pon them before the foot could come to the fiftance. The Perfians were routed at the onset; after which Agefilaus over-ran the country, enriching his army with the spoils this continued ill fortune Artaxerxes was for provoked against Tissaphernes, that he him to be put to death. Tithrauftus, what appointed to fucceed him, feut large prefet Agefilaus, to bribe him to abandon his conq but finding him determined not to relinqui war, he fent Timocrates of Rhodes into G with money to bribe the leading mee in the and rekindle a war against the Spartans cordingly the cities of Thebes, Argos, Ca &c. entering into a confederacy, obliged the recal Agefilaus to defend Sparta. After parture, which happened A. A. C. 354, the tan power received a severe blow at Cnidos, their fleet was entirely defeated by that of xerxes under Conon, 50 of their thips being to in the engagement; after which, Conon Pharnabazus being masters of the sea, failed to the islands and coasts of Asia, taking the there which had been reduced by the Spart Seltos and Abydos only held out, and relified utmost efforts of the enemy, though they been belieged both by sea and land. Next Conon having affembled a powerful fleet, took Pharnabazus on board, and reduced illand of Melos, from whence he made a de on the coasts of Lycaonia, pillaging all the time provinces, and loading his fleet with a mense booty. After this, Conon obtained h to return to Athens with 80 ships and 50 tall to rebuild the walls of that city. Having a number of hands, the work was foon comple and the city not only restored to its former sp dor, but rendered more formidable than c The Spartans were food reduced to the neces

of making peace. The terms were, that all the feet cities in Afia should be subject to the king Perfia, also the illands of Cyprus and Clazomen; that Seyros, Lemnos, and Imbros, should withored to the Athenians, and all the cities of Mese declared fire. Artaxerxes engaged to make who accepted thefe terms, and to affift sainst such as should reject them. Artamenbeing now disengaged from the Grecian med his arms against Evagoras king of who was descended from the ancient Salamine, the capital of Cyprus. His as had reigned there for many ages, but at last driven out by the Persians, who rethe illand to a Persian province. Evagoras, being a man of an enterprifing genius, out the Persian governor and recovered Sa-Artaxerxes attempted to drive him out int Conon, by means of Ctefias chief phy-Artaxerxes, got all differences accommo-But Evagoras gradually reduced under significant the whole of the illand. however, held out against him, and Artaxerxes for affiftance; who, as foon was at an end, bent all his force against The Athenians, notwithstanding the conferred upon them by Artaxerxes, their old ally in this eand fent him ten men of war under but the fleet, commanded by Talento Agefilaus, falling in with them furrounded them fo that not one The Athenians fent Chabrias with et and body of land forces; with which reduced the whole island. But the bring foon after obliged, by a treaty ed with the Perfians, to recal Chabrias, attack d the island with 300,000 men, hips. Evagoras applied to the Egypbyans, Arabians, Tyrians, and other nafrom whom he received supplies both of money; and fitted out a fleet, with le rentured an engagement with that of But being defeated, and obliged to up in Salamine, he was closely bead at last was obliged to capitulate, and whole island except Salamine, which sa king tributary to Artaxerxes. The ar being ended, Artaxerxes turned his the Cadufians, whose country lay be-Luxine and Cafpian feas; but was oto abandon the project; after having loft a member of troops and all his horses. In his expedition, which happened immediatethe Cadufian war, he was attended with let faccefs; owing to the bad conduct of This commander fent an ambassa-Athens, demanding Iphicrates, the best of his time, to command the Greek merthe Persian service. This the Athenisphed with; and Iphicrates having muftroops, to exercised them in all the arts m, that they became famous among the under the name of Iphicratefian foldiers. Perfians were fo flow in their preparations, whole years elapsed before they were

to take the field. Artaxerxes, that he

might draw the more mercenaries out of Greeces fent ambaifadors to the different states in it, enjoining them to live at peace with each other, one the terms of the treaty lately concluded. All things being ready for the expedition, the troops were mustered at the city then called Ace, and fince called Prolemais; where they amounted to 200,000 Perfians under Pharnabazus, and 20,000 Greeks led by Iphicrates. The fleet confifted of 300 gallers, belides a valt number of other veffels which followed with provisions. The fleet and army began to move at the fame time; and feparated as little as possible. Having made a descent at one of the mouths of the Nile, they took a fortress, and put ail the Egyptians in it to the fword. Iphicrates then proposed embarking the troops without loss of time, and attacking Memphis, the capital, which would have rendered it eafy to reduce the whole country; but Pharnaba. zus would undertake nothing before the rest of the forces were come up: neither would he permit Iphicrates to attack the place with the Greek mercenaries only, from a mean jealoufy of the honour which he might acquire; and thus the Egyptians recovered courage to put themselves in fuch a posture of defence, that they could not be attacked with any probability of fuccess; and the Nile overflowing its banks, obliged them to return to Phoenice. The expedition was again undertaken 12 years after, but without fuccess. The last years of Artaxerxes were greatly disturbed by diffentions in his family; and he died in the 94th year of his age and 46th of his reign.

(13-) PERSIA, HISTORY OF, TILL THE DEATH OF ARTAXERXES III. He was succeeded by one of his fons named ARTAXERXES OCHUS, who behaved with such cruelty, that almost one half of his dominions revolted as soon as he came to the throne. But, by the dissensions of the rebels among themselves, all of them were reduced one after another; and the Sidonians, finding themselves betrayed, burnt themselves to the number of 40,000, together with their wives and children. Artaxerxes Ochus, having quelled all the infurgents, immediately fet himself about reducing Egypt, and for this purpole procured a reinforcement of other 10,000 mercenaries from Greece. On this march, he loft a great number of his men in the lake SERBONIS. When the S. wind blows, this lake is covered with fand, in such a manner that no one can diftinguish it from the firm land. Several parties of Ochus's army were loft in it for want of proper guides; and whole armies have fometimes perished in it. When he arrived in Egypt, he detached three bodies to invade the country; each commanded by a Persian and a Greek. The first was led by Lachares the Theban, and Rofaces governor of Lydia and Ionia: the 2d by Nicostratus the Theban and Aristazanes; the 3d by Mentor the Rhodian and Bagoas an eunuch. The main body of the army he kept with himseif, and encamped near Pelusium, to watch the events of the war. The event was fuccessful, and Ochus having reduced the whole country, dismantled their strong holds, plundered the temples, and returned to Babylon loaded with booty; where he conferred high rewards on those

who had diftinguished themselves. To Mentor the Rhodian he gave 100 talents, and other prefents; appointed him governor of all the coalts of Afia, and committed to his care the whole management of the war which he was still carrying on, and either by stratagem, or by force, he at last reduced all the provinces that had revolted. Ochus then gave his attention to nothing but his pleatures, leaving the administration of affairs entirely to Bagoas the Eunuch, and to Mentor. These two agreeing to share the power between them, the former had Upper Asia, and the latter all the rest. Bagons, being an Egyptian, had a great zeal for the religion of his country, and endeavoured, on the conquest of Egypt, to influence the king in favour of the Egyptian ceremonies; but, Ochus not only refused to comply, but killed the facred bull, the emblem of Apis, plundered the temples, and carried away their facred records. Bagoas in revenge poisoned his master and benefactor in the and year of his reign; kept the king's body, causing another to be buried in its flead; and because the king had caused his attendants eat the flesh of Apis, Bagoas cut his body in pieces, and gave it so mangied to be devoured by cats, making handles for fwords of his bones. He then placed Arfes the youngest of the deceased king's sons on the throne, that he might the more easily preserve the whole power to

himself. (14.) PERSIA, HISTORY OF, TILL THE DEATH OF DARIUS III, AND OVERTHROW OF THE EM-PIRE. Arfes did not long enjoy even the shadow, of power which Bagoas allowed him, being murdered in the 2d year of his reign by that treacherous eunuch, who now conferred the crown on Darius Codomanus, a relation of the royal family. But finding that he would not fuffer himfelf to be guided by him in all things, the treacherous Bagoas brought him a poisonous potion; but Darius got rid of him by his own artifice, caufing him to drink the poison which he brought. This established Darius in the throne as far as security from internal enemies could do fo; but in a very little time his dominions were invaded, and foon after conquered by Alexander the Great. The particulars of that heroe's conquests are related under MACEDON, § 12, 13; we shall therefore here only take notice of the fate of Darius himseif, with which the Persian empire concluded for many ages. After the battle of Arbela, Alexander took and plundered Persepolis, whence he marched into Media, in pursuit of Darius, who had fled to Ecbatan the capital. This prince had still an army of 30,000 foot, among whom were 4000 Greeks, who continued faithful to the laft. Besides these, he had 4000 slingers and 3000 horse, most of them Bictrians, commanded by Beilus. When Darius heard that Alexander was marched to Ecbatan, he retired into Bactria, with a defign to raife another army; but foon after he determined to venture a battle with the forces he still had left. On this Bessus governor of Bactria, and Nabarzanes a Persian lord, formed a confpiracy to seize his person, and, if Alexander purfued them, to gain his friendship by betraying their master into his hands; but if they escaped, their delign was to murder him, and usurp the

crown. The troops were easily gained over; but Darius himself, when informed of their proceed ings, and folicited to trust his person among the Greeks, could not give credit to the report. The consequence was, that he was in a few days sei ed by the traitors; who bound him with golde chains, and flutting him up in a covered car fled with him towards Bactria. The cart was to vered with fkins, and strangers appointed to dri it without knowing who the prisoner was. Be fus was proclaimed commander in chief by the Bactrian horse; but Artabazus and his for with the forces they commanded, and the Gree under one Patron, retired from the army my Beffus, and marched over the mountains town Parthiene. Alexander arriving at Echatan, told that Darius had left the place five days fore. He then dispatched orders to Clitus, had fallen fick at Sufa, to repair, as foon as covered, to Echatan, and thence to follow into Parthia with the cavalry and 6000 Mag nians, who were left in Echatan. Alexander felf with the rest of the army pursued Da and the 11th day arrived at Rhages, having my ed in that time 3300 furlongs. Most of those accompanied him died through fatigue; much that, on his arrival at Rhages, be scarce muster 60 horsemen. Finding that he not come up with Darius, who had passed Caspian straits, he staid five days at Rhage refresh his army and settle the affairs of I Thence he marched into Parthia, and ence near the Caspian straits, which he passed no without opposition. He had scarce entered thia, when he was informed that Beffus an barzanes had conspired against Darius, a figned to seize him. Hereupon, leaving the body of the army with Craterus, he add with a fmail troop of horfe, and having day and night, he came on the 3d day to lage where Bessus with his Bactrians I camped the day before. Here he learned Darius had beeen seized by the traitors Bessus had caused him to be shut up in cart, and that the whole army, except Arts and the Greeks, obeyed Bessus. Alexan last came in fight of the barbarians, who marching in great confution. His unexpect pearance struck them, though far superior ber, with fuch terror, that they immediately and because Darius refused to follow them, fus, and those who were about him, disch their darts at the unfortunate prince, leaving wallowing in his blood. After this they different ways, and were purfued with flaughter by the Macedonians. In the med the horses that drew the cart in which was, stopped, for the drivers had been kl Beffus, near a village about four furlongs if highway. Thither Polystratus, a Macedon ing pressed with thirst, was directed by the bitants to a fountain to refresh. himseif, place where they stopped. As he was fill helmet with water, he heard the groans of ing man; and looking round him, discou eart with a team of horses, unable to me the many wounds they had received. Wh drew near, he perceived Darius lying in the

living leveral darts flicking in his body. He had beneth enough left to call for fome water, which Mystratus brought him. Darius, after drinking, tened to the Macedonian, and with a faint voice his bim, that, in the deplorable state to which kwa reduced, it was no finall comfort to him his Lift words would not be loft: he then and him to return his hearty thanks to Amud family, and to acquaint him, that, with hi breath, he befought the gods to prosper in all his undertakings, and make him fole much of the universe. He added, that it did b much concern him as Alexander to pursue I bing to condign punishment those traitors had treated their lawful fovereign with fuch tity, that being the common cause of all med heads. Then, taking Polystratus by the you mine, and carry him, in my name, the pledge I am able to give, in this condition, words, he expired in the arms of Polystra-Mexander coming up a few minutes afbrailed his death, and caused his body to kind with the highest honours. The trailess being at last reduced to extreme diffi-" was delivered up by his own men naked hound, into the hands of the Macedonians; Alexander gave him to Oxyathres the of Darius, to fuffer what punishment think proper. Plutarch tells us that he in the following manner: Several big by main force bent down to the and one of the traitor's limbs tied to them, the trees, as they were fuffered to to their natural polition, flew back with mice, that each carried with it the limb tied to it. Thus ended the empire of 109 years after it had been founded by

He therefore gave notice to can governors of the provinces bordering Lecominions, that he had a just right as the of Cyrus, to all the Lesser Alia; which manded them immediately to quit, as well profinces on the frontiers of the ancient tingdom, which were already his. The cace of this was a war with Alexander the Roman emperor. Concerning the of this war there are very different accounts. ortain, however, that, on account of his ex-PL XVII. PART I.

ploits against Artaxares, Alexander took the titles of Parthicus and Perficus; though it would feem, with no great reason, as the Persian monarch loft tione of his dominions, and his fuccefford were equally ready with himself to invade the Ro-

man territories.

(16.) Persia, History of, Till the SE-COND OVERTHROW OF ITS EMPIRE, BY THE SARACENS. Artaxares dying after a reign of twelve or lifteen years, was fucceeded by his fon Sapor; a prince of great abilities both of body and mind, but fierce, haughty, untractable, and cruel. He was no fooner feated on the throne, than he began a new war with the Romans. In the beginning he was unfuccef ful, being obliged, by Gordian, to withdraw from the Roman dominions, and was even invaded in his turn; but, in a short time, Gordian being murdered by Philip, the new emperor made peace with him uport terms very advantageous to the Perfians. He was no fooner gone than Sapor renewed his incurfions, and made fuch aiarming progress, that the emperor Valerian, at the age of 70, marched against him in person with a numerous army. An engagement enfued, in which the Romans were defeated, and Valerian taken prisoner. purfued his advantages with fuch cruelty, that the people of the provinces took arms, first under Cailiftus a Roman general, and then under Odenatus prince of Palmyrene. Thus they not only protected theinfelves from the infults of the Perfians, but even gained many great victories over them, and drove Sapor with difgrace into his own dominions. In his march he is faid to have made ule of the bodies of his unfortunate pritoners to fill up the hollow roads, and to facilitate the paffage of his carriages over such rivers as lay in his way. On his return to Persia, he was solicited by the kings of the Cadufians, Armenians, Bactrians, and other nations, to fet Valerian at liberty; but to no purpole. On the contrary, he used him the worse; treated him daily with indignities, fet his foot upon his neck when he mounted his horse; flayed him asive after some years confinement; and caused his skin to be tanned, which he kept as a monument of his victory over the Romans. This extreme infolence and crucity was followed by an uninterrupted courfe of misfortune. Odenatus defeated him in every engagement, and even feemed ready to overthrow his empire; and after him Aurelian took ample vengeance for the captivity of Valerian. Sapor died A. D. 273, after having reigned 31 years; and was fucceeded by his fon Hormifdas, and he by Varanes I. The former reigned a year and ten days, and the latter 3 years; after which he left the crown to Varanes II. who feems to have been fo much awed by the power of the Romans, that he durft undertake nothing. The rest of the Perfian hiftory to the overthrow of the empire by the Saracens, affords nothing but an account of their continued invations of the Roman empire, which more properly belongs to the history of ROME and Constantinople, and to which we therefore refer. The last of the Persian monarchs, of the line of Artaxares, was Isdigertes, or Jezdegerd, who was cotemporary with Omar, the fecond caliph after Mahomet. He was fearce feated on the throne, when he found himself attacked by a powerful army of Saracens under the command of one Sad, who invaded the country through Chaldea. The Persian general took all imaginable pains to harafs the Arabs on their march; and having an army superior to them in numbers, employed them continually in skirmishes. But Sad, perceiving that this lingering war would destroy his army, determined to force the enemy to a general engagement; and which he at last accomplished with complete success, aster a battle that lasted 3 days and 3 nights. And thus the capital, and the greatest part of the dominions of Persia, fell into the hands of the Arabs; along with the king's treasures, which were immense; A. D. 643.

(17.) Persia, history of, to its conquest BY JENGHIZ KHAN. After this battle, Jezdegerd retired into Chorassan, where he reigned as king, over it and two other provinces, viz. Kerman and Segestan. But after he had reigned in this limited manner for 19 years, the governor of Merou betrayed it to the Turks. Jezdegerd immediately marched against the rebels and their allies, but was defeated; and having with much difficulty reached the river, while the ferryman was higgling about his fare of 5 farthings, a party of the rebel horse came up, and knowing Jezdegerd, killed him in 652. Jezdegerd left behind him a fon named Firouz, and a daughter named Dara. The latter espoused Bostenay, whom the rabbinical writers entitle the bead of the captivity; and who, in fact, was the prince of the Jews fettled in Chaldea. As for Firouz, he still preserved a little principality; and when he died, left a daughter named Mah Afrid, who married Walid the fon of the caliph Abdalmalek; by whom the had a fon named Yezid, who became caliph, and fovereign of Persia; and who claiming the title derived from his mother, constantly styled himself the son of Knofrou king of Persia, the descendant of caliph Maroan, and among whose ancestors on the fide of the mother were the Roman emperor and the kbacan. Persia continued to be subject to the Arabs till the decline of the Saracen empire; being governed by deputies, entitled Sultans, under the Grand Khalifs. In process of time, the fultans of Tertia, Babylon, &c. quarrelled among themselves, and occasioned several revolutions, and sluctuations of power, the consequence of which was the coming in of the Turks. TANGROLOPIX, their hader, conquered the fultan of Perfia, in 1030, and assumed the government. He was succeeded by a race of Turkish princes for about 100 years; v hen the Tartars invaded Persia, drove out the Furks, and a new dynasty of Tartarian princes f ecceded: after which it was feized by various visurpers, till the time of Jenghiz Khan, who conquered it, with almost all the rest of Asia.

(18.) Persia, history of, to its conquest BY TAMERLANE. After the death of Jenghiz than, which happened in 1227, Persia, and the r. ighbouring countries, were governed by officers appointed by his focceffors, who reigned at Kerakorom, in the eaftern parts of Tartary, till 1253, when it became once more the feat of a mighty empire under Haalen, or Hulaku the Mogul, who, ii, 1256, abolished the khalifat, by taking Bag-

dad. (See BAGDAD, § 5.) After the death of He-laku, his fon Abaka fucceeded to his extensive dominions; who, in the very beginning of his reign was invaded by Barkan Khan, of the race of Jaga tay the fon of Jenghiz Khan, from Great Bukha ria, with an army of 300,000 men; but, happily for Abaka, Barkan died before the armies came to an engagement, upon which the invaders returne to Tartary. In 1264, Armenia and Anatolia we ravaged by the Mamelukes from Egypt, but the were obliged to fly from Abaka; who thus feet ed to be established in an empire almost as exte five as that of the ancient Perfian kings. But 2268 his dominions were invaded by Borak Kha another descendant of Jagatay, with an army 100,000 men. He quickly reduced the provin of Choraffan, and in 1269 advanced as far 14 derbijan, where Abaka had the bulk of his for A bloody battle enfued; in which Abaka was torious, and Borak obliged to fly into Tan with the loss of all his baggage and great pa his army. Abaka died in 1282, after 2 reg 17 years, and was fucceeded by his brother med Khan. He was the first of the family of ghiz Khan who embraced Mahometanim; neither he nor his successors appear to have much versed in the arts of government; for Perfian history, from this period, becomes only account of infurrections, murders, rebellions, poisonings, till the year 1337, when, upon death of Abusaid, it split to pieces, and was fessed by a great number of petty princes; whom were at perpetual war with each other the time of Timur Beg, or Tamerlane, who more reduced them all under one jurisdiction bout A. D. 1400.

(19.) PERSIA, HISTORY OF, TO ITS CONCE BY THE SHEYK, ISMAEL SOPHI. After the det Tamerlane, Perfia continued to be governed fon Shah Rukh, or Mirza, a wise and prince: but it did not remain in Tamerland mily above 6 fhort reigns; for after continu fentions among themselves, the last of the defeated and flain in 1472, by Usum Cassal Armenian prince, who founded the Armenia nafty. There were five princes of this line; which it fell into confusion, being held by a number of petty tyrants, till the beginning 16th century, when it was conquered by Shi mael Safi, Sofi or Sophi; whose father was So Hayder, who was the 19th in a direct line Ali the fon-in-law of Mahomet. When Te lane returned from the defeat of Bajazet the ish sultan, he carried with him a great num captives out of Karamania and Anatolia, into to put them to death; and with this intent tered Ardebil, a city of Arderbijan, 25 miles Taurus, where he continued for some days this time lived in that city the Sheykh Sefi, ted by the inhabitants to be a faint; and, as much reverenced by them. From the fame fanctity, Tamerlane paid him frequent visits when he was about to depart, promised to whatever favour he should ask. Ses requ that he would spare the lives of his captives merlane granted his request, upon which Sheykh furnished them with clothes and oth cessaries, and sent them home to their resp COM countries. The people were so much affected with this extraordinary instance of virtue, that they repaired in great numbers to Seli, bringing with them considerable presents. Thus the descendants of the Sheykh made a conspicuous figure till 1486, when they were all destroyed by the Turkmans expt linael, who fled to Ghilan, where he lived whome time under the protection of the king of tountry. There was at that time, among Mahometans, a vast number of people disper-Morer Afia; and among these a party who fol-bed Hayder the father of Ismael. Ismael, findthat Persia was all in confusion, and hearing t there was a great number of the Hayderian din Karamania, removed thither, and collected no of his party, all devoted to the interest of his by; by whose aid he conquered Shirwan. Afthis he pursued his conquests; and as his antato oppose him, had conquerthe greatest part of Persia, and reduced the of Bagdad in 1510. But in 1511, he received defeat from Selim I, who took Tauris; would probably have crushed the empire of sophi in its infancy, had he not thought mquest of Egypt more important.

PERSIA, HISTORY OF, TO THE DEATH OF AN ABBAS THE GREAT. Ismael died in 1523, by the crown to his eldeft fon Thamasp I, was a man of very limited abilities, and was More invaded by the Turks on his accession to throne. However, they were obliged to rey an inundation, which overflowed their Thamasp, however, reduced Georgia to ce of the Persian empire, which had preten divided among a number of petty The reigns of the fucceeding princes afathing remarkable till the time of Shah Ab-4 furnamed the Great. He ascended the m 1584; and began with declaring war athe Tartars, who had seized the finest part horatan. Having raifed a powerful army, he and that province, where he was met by Abh Khan, the chief of the Usbeck Tartars, be attacked and defeated, and forced to am Choraffan. Here he continued 3 years; kaving Choraffan, fixed the feat of govern-BE ISPAHAN, where it has continued ever His next expedition was against the Turks, whom he took the city of TAURIS, after dethe garrison; on which most of the other test places submitted. One city only, called being very strongly situated, resisted all the the of Abbas; but was at last taken by the afte of the Curds, whom he gained over by ing to share the plunder with them. But ad of this he invited their chiefs to dine with is and having brought them to a tent, the ento which had feveral turnings, he stationed the infide two executioners, who cut off the of the guests as soon as they entered. After burbarous piece of treachery, Abbas confidermlarged his dominions, and repelled two grous invasions of the Turks. He attempted to promote commerce, and civilize his fubbut flained all his great actions by his abocruelties. He took the lile of Ormus the Portuguese, who had kept it fince 1507,

by the affiftance of some English ships in 1622; and died six years after, aged 70.

(21.) Persia, history of, to the death of SHAH NADIR. The princes, who succeeded Abbas, were remarkable only for their cruelties and debaucheries, which occasioned a revolution in 1716, when Shah Hussein was dethroned by the AFGHANS, or Pattans; (fee PATTANS;) who being oppressed by the ministers, revolted under the conduct of one Mereweis. The princes of the Afghan race enjoyed the fovereignty only 16 years, when Ashraff the reigning shah was dethroned by one of his officers. On this Thamasp, otherwise called THAMAS, the only furvivor of the family of Abbas, affembling an army, invited into his fervice Nadir Khan, who had obtained great reputation for his valour and conduct. No fooner had Nadir Khan got the command of the Perfian army, than he attacked and defeated the usurper Esriff. put him to death, and recovered all the places the Turks and Russians had taken during the rebellion: and then prince Thamas seemed to be established on the throne: but Nadir, to whom Thamas had given the name of Thamas Kouli, that is, the Slave of Thamas, (See Kouli;) thinking his fervices not fufficiently rewarded, and pretending that the king had a defign against his life, conspired against his fovereign, put him to death, and usurped the throne, flyling himfelf Sbab Nadir. He afterwards laid fiege to Candahar, of which a fon of Mereweis had pollefied himself. While he lay at this fiege, the court of the Great Mogul being distracted with factions, one of the parties invited Shah Nadir to come to their affiftance, and betrayed the Mogul into his hands. He thereupon marched to Delhi, the capital of India, and fummoned all the viceroys and governors of provinces to attend him, and bring with them all the treasures they could raise; and those that did not bring as much as he expected, he tortured and put to death. (See Delhi, § 2; and India, § 12, 13.) Having thus amassed the greatest treasure that ever prince was master of, he returned to Persia, giving the Mogul his liberty, on condition of his refigning the provinces on the W. fide of the Indus to Perfia. afterwards made a conquest of Usbeck Tartary, Then he and plundered Bochara the capital. marched against the Dagistan Tartars: but lost great part of his army in their mountains, without fighting. He defeated the Turks in several engagements; but laying fiege to Bagdad, was twice compelled to raise it. He proceeded to change the religion of Persia to that of Omar, hanged up the chief priests, put his own son to death, and was guilty of fuch cruelty, that he was at length

assissinated by his own relations, in 1747.

(22.) PERSIA, HISTORY OF, TO THE DEATH OF VAKEEL KERIM KHAN. Upon the death of Shah Nadir, a contest ensued among his relations for the crown, which rendered Persia a scene of the most horrible consusion for upwards of 40 years. The reader will form some notion of the troubles of this unhappy country, from the following series of pretenders to the throne, between the death of Nadir and the accession of Kerim Khan: (from Francklin's Observations:) Their reigns, or more properly the length of time they respectively governed.

Verned with their party, were as follows: 1. Adil Shah, 9 months. 2. Ibrahim Shai, 6 months. a. Shah Rokh Shah, after a variety of revolutions, at length regained the city of Mefchid; he was alive in 1787, and above 80 years of age, reigning in Khorafan, under the direction of his fon Nuffir Illah Meerza. 4. Suleeman Shah, and 5. Ifinael Shah in about 40 days were both cut oif, almost as foon as they were elevated. 6. Azad Khan Aighan, one of Kerim Khan's most formidable rirals and competitors, was fubdued by him, brought prisoner to Shirauz, and died there a natural death. 7, Huffun Khan Kejar, another of Kerim Khan's competitors, was belieging Shirauz, when his army fuddenly mutinied and deferted him. The mutiny was attributed to their want of pay, A party fent by Kerim Khan took him prisoner. His head was instantly cut off, and presented to Kerim Khan. His family were brought captives to Shirauz, They were well treated, and had their liberty given them foon after, under an obligation not to quit the city. 8. Ali Merdan Khan was killed by a musket-shot as he was walking on the ramparts of Maschid encouraging his men. 9. Kerim Khan Zund, by birth a Curdiftan, was a favourite officer of Nadir Shah, and at the time of his death was in the fouthern provinces. Shirauz and other places had declared for him. ter various encounters, he completely subdued all his rivals, and finally established himself as ruler of all Persia. He was in power about 30 years; the latter part of which he governed Perlia under the appellation of vakeel or regent, for he never would take the title of Shab. He made Shirauz the chief city of his residence, in gratitude for the affiftance he had received from its inhabitants and those of the southern provinces. He died in 1779, regretted by all his fubjects, who esteemed and

honoured him as the glory of Perfia. (23.) PERSIA, HISTORY OF, TO THE DEATH OF ZILEA KHAN. When the death of Ker.m Khan was announced in the city, much confusion arose; 22 principal officers of the army, men of high rank, took possession of the citadel, with a resolution to acknowledge Abul Puttah Khan (the eldest son of the late Vakeel) as their sovereign, and to defend him against all other pretenders; where-upon Zikea Khan, a relation of the late Vakeel by the mother's fide, who was possessed of immense wealth, enlifted a great part of the army into his pay, by giving them very confiderable bounties. Zikea Khan was of the tribe of Zund, (or the Lackeries,) a man remarkably proud, cruel, and unrelenting. Having affembled a large body of troops, he marched to the citadel, and laid close flege to it for 3 days; at the expiration of which, finding he could not take it by force, he had recourse to treachery. To each of the principal khans he fent a written paper, by which he fwore upon the Koran, that if they would come out and fubmit to him, not a hair of their heads should be touched, and that they should have their effects fecured to them. Upon this a confultation was lield by them; and as they could not fublish many days longer, they agreed to furrender relying on Zikea's promites. Zikea, in the mean time, gave private orders for the khans to be feized, and brought separately before him as they came out of

the citadel. His orders were strictly obeyed, and these deluded men were all massacred in his presence. Zikea Khan's tyranny became soon into lerable, and he was cut off by his own body-guard when Abul Futtah Khan, who was then in the tamp, was proclaimed king by the unanimous voice of the troops, whom he immediately leback to Shirauz. On his arrival he was acknowledged as sovereign by all ranks of people, an took quiet possession of the government.

(24.) PERSIA, PISTORY OF, UNTIL 1788. M homed Sadick Khan, only brother of the late K rim Khan, who had during that prince's life fille the high office of beglerbeg of Fars, and had be appointed guardian of his fon Abul Futtah Kha was at this period governor of Buffora, which a been taken by the Perlians, previous to the vake death. Upon hearing of his brother's decealed began to form schemes for the destruction of nephew; but as it was necessary for him to be the spot, he withdrew the Persian garrison sit Buffora, who were all devoted to his interest; cuated the place, and marched immediately Shirauz. The news of Sadick Khan's approthrew the inhabitants of Shirauz into the great consternation: their minds were variously agital on the occasion; some, from his public chand expected he would fulfil the commands of his ceased brother; others expected he would set for himself, which proved to be the case; for ving entered Shirauz a very few days after, caused Abul Puttah Khan to be deprived of fig and put into close confinement. After this, dick Khan openly affumed the government foon as the intelligence reached Ali Murad Kh who was at Ispahan, that lord inflantly rebell deeming himself to have an equal right to the vernment with Sadick Khan, as in fact he Pertia was thus again involved in all the hor of a civil war. Ali Murad Khan indeed took feffion of Shirauz, affumed the government, gave to the empire the flattering prospect of fettled under the government of one man; but prospect was soon obscured by the power and dit acquired by Akau Mahomed Khan." On night following Kerim Khan's death, this found means to make his escape from Shirauz, fled to the northward, where collecting for troops, he foon made himfelf mafter of Mazan ran and Chilan, and was proclaimed nearly about the time that Ali Murad Khan had taken Shina "It is remarkable (fays our author), that from first entering into competition for the government he has been fuccefsful in every battle which he fought. He is an eunuch, having been made whilst an infant, by the command of Nadir Sa but possesses great personal bravery." Ali Mu Khan, hearing of the fuccess of Akau Mahon Khan, determined to go against him; but as was previously proceeding to Ispahan to suppare a rebellion, he fell suddenly from his horse and pired. At this period Jaafar Khan, the eldelt only furviving fon of Sadick Khan, was govern of Khums: he deemed this a favourable opport nity to affert his pretentions to the governme and immediately marched with what few troo he had to Ispahan: foon after his arrival he joined by the greater part of the malcontents w

were then in arms. In this fituation he remained 6.mc time; but Akau Mahomed Khan coming form upon him with his army, he was obliged to rk his fate in a battle, and, being defeated, fled sed the remains of his troops, to Shirauz. Soon and he ventured a 2d engagement with his opparent Akau Mahomed Khan; and for this purpa marched with his army towards Ispahan: the m mies met near Yezdekhast, when a battle etch, and Akau Mahomed Khan's fuperior forme sgain prevailing, Jaafar Khan was defeated, ad retired to Shirauz, which he quitted on the sith of June 1787, and thortly after marched his may to the northward, but returned in October pithout having effected any thing." Such was Late of Persia in 1788. Mr Francklin, from stick excellent Observations on a Tour made in peri 1786-7 these particulars are mostly exand, fays that Jaafar Khan is the most "likely, ale of fuccess against his opponent, to restore rountry to a happy and reputable state; but require a long time to recover it from the into which the different revolutions have he allowed, once blooming as the garden of is fair and flourishing to the eye; - Now, fad rafe! despoiled and leasters by the cruel ravages vu, and defolating contention."

(by.) Persia, Islands of. In his voyage from woo up the Persian Gulph, Mr Ives makes of several islands, named Kisme, Polloar, Maderabie, Shittewar, and Busheel. Some were quite barren; on others there were tees and bushes, with little fishing towns, Is kw small vessels lying along shore. the were thinly scattered among the hills; ach was the barrenness of these islands that matter of surprise how sheep and goats foblist upon them, till it was found, that foil produced a kind of fmall-leaved juicy lows, on which these animals feed. The Pertoan affords a most romantic prospect. Narpoint terminates in a long and low piece of which runs off into the gulph from the foot Persian hills. Between this point and the land is a channel, in which a ship of 900 burden might easily ride. Through all the in Gulph Mr Ives remarks, that the spring on the illands is much better than that on continent. At the island called Baharen, dino down to the bottom of the sea, at certain be depths, and come up again with their vef-fied with fresh water. This fresh water is in boles or little natural wells, fome fathoms the furface of the sea. The Arabs have Im marks on the island to teach them where for the fresh water.

Its.) Persia, Manners of the People of. cancient Persians are known to have been exceeding voluptuous and effeminate. After the concept of the empire by Alexander, the Greek displine and martial spirit being in part communicated to them, they became much more forminated and hence the Parthians were a match not may for the Syro-Macedonian princes, but even kinthe Romans. Of their manners we know little a nothing, but that to their valour and military all they joined in a surprising degree all the luxu-

ry and diffipation of the ancient Persians. The modern Perfians, like the Turks, plundering all the adjacent nations for beauties to breed by, are men of a good flature, flape, and complexion; but the Gaures, or ancient Persians, are homely, iil-shaped and clumfy, with a rough skin, and olive complexions. In some provinces not only the complexions, but the conflitutions of the inhabitants, fuffer greatly by the extreme heat of the climate. The Perfian women are generally handsome and well shaped, but much inferior to those of Georgia and Circassia. The men wear large turbans on their heads, fome of them very rich, interwoven with gold and filver; a veft, girt with a fash; and over it a loofe garment, something shorter; with fandals, or slippers, on their feet. When they ride, which they do every day, they wear pliant boots of yellow leather; the furniture of their horses is extremely rich, and the ftirrups generally of filver: whether on horseback or on foot, they wear a broad fword and a dag-ger in their fash. The dress of the women does not differ much from that of the men; only their vefts are longer, and they wear stiffened caps on their heads, and their hair down. With respect to outward behaviour, fays an intelligent traveller. "The Persians are certainly the Parisians of the Whilst a rude and insolent demeanor peculiarly marks the character of the Turkish nation towards foreigners and Christians, the behaviour of the Pertians would, on the contrary, do honour to the most civilized nations: they are kind, courteous, civil and obliging. Their usual drink is water and sherbet, as in other Mahometan countries, wine being prohibited; but of all Mahometan nations, they pay the least regard to this pro-Many of them drink wine publicly, hibition. and almost all of them in private (excepting those who have performed the pilgrimage to Mecca, and men of religion): they are also very liable to be quarrelfome when incbriated, which is often attended with fatal consequences. They eat opium, but in much less quantities than the Turks; and indeed in every thing they fay or do, eat or drink, they make a point to be as different from this nation as possible, whom they detest beyond measure; esteeming Jews and Christians superior to them. and much nearer to falvation. They are of the fect of Ali; whom they venerate to a high degree of blasphemy, and exalt even above the Almighty himfelf.

(27.) PERSIA, MARRIAGE LAWS IN. The most remarkable law among the Persiaus respects marriage. A man may divorce his wise when he chooses, without assigning any other reason for the divorce than that it is his pleasure. If he should change his mind, he may again marry her, divorce her a second time, and a third time marry her; but here this privilege stops. No man is allowed to marry the woman whom he has thrice divorced. A widow is obliged to mourn four months for her deceased husband before she can be married to another; but a concubine may form a new connection the instant that her keeper expires.

(23.) Persia, Metals and other Minerals in. Metals of all forts have been found in Perlia. Since the reign of Abbas the Great, iron, copper, and lead have been very common; but there are

mo gold or filver mines open. There are filver mines in Kerman and Mezanderan, and one near Spauhawn; but they cannot be worked for want of wood. Sulphur, faltpetre, falt, and alum are found in plenty. Plains, fometimes 20 leagues in length, are covered entirely with falt, and others with fulphur or alum. In fome places falt is dug out of mines. Marble, freeftone, and flate, are found in great plenty about Hammadan. The marble is of 4 colours, viz. white, black, red and black, and white and black. Perfia yields both black and white petroleum. Near Tauris they find azure. And there are feveral rocks or mines of turquoifes.

(29.) Persia, Mountains of. There is perhaps no country in the world which, generally speaking, is more mountainous than Persia; but many of them have neither springs nor metals, and but sew are shaded with trees. Some of the chief of them are situated on the frontiers, and serve as a kind of natural ramparts, to this vast empire. Among the latter are the mountains of Caucasus and Ararat, sometimes called the meuntains of Dagbestan which sill all the space between the Euxine and Caspian seas; those called Taurus, and the several branches thereof, run through Persia from Natolia to India, and sill all the middle of the country.

(30.) PERSIA, PROVINCES OF. Perfia is divided into 11 provinces; viz. 1. Shirvan; 2. Adirbeitzan; 3. Ghilau; 4. Mezanderan and Taberiftan; 5. Perfian Irak. or ancient Parthia; 6. Chufitan: 7. Farfitan; 8. Kerman, or Keriftan; 9. Mecran, or Makran; 10. Segeftan; and 11. Sableftan, or Zableftan, and Chorasan, including Afterabat and Dageftan. (See these articles.) Candahar was anciently a province of Persa, but is now independent.

(31.) Persia, Quadrupeds, insects and BIRDS OF. The horses of Persia are the most beautiful of the East, though they are not so much esteemed as those of Arabia; so great, however, is the demand, that the finest ones will fetch from 90l. to 450l. fterling. They are higher than the English saddle horses; straight before, with a small head, legs wonderfully slender, and finely proportioned; they are gentle tra-vellers, very light and fprightly, and are of fervice till they are 18 or 20 years old. The great numbers of them fold into Turkey and the Indies, though none can be carried out of the kingdom without license from the king, makes them dear. Asses are of two forts; the first bred in Persia, heavy and doltish; the other originally of an Arabian breed, the most docile and useful creatures in the world. They are used wholly for the faddle, being very fure-footed, carrying their heads lofty, and moving gracefully. Some of them are valued at 201. ftr. The mules here are also very fine; they pace well, never fall, and are seldom tired. The highest price for a mule is about 45l. Camels are also numerous in Perma, and very serviceable: they call them kechty krouch konion, i. e. the flips of the land; because the in-land trade is carried on by them as the foreign is by ships. Of these camels there are two sorts, the northern and fouthern: the latter, which is much the finaller but swifter, will carry a load of about 700 weight, and trot as fast as a horse will

gallop; the other will travel with a load of 120 or 1300 weight; both are profitable, cofting little or nothing to keep. They travel without halte or reins; grazing on the road, notwithstandin their load. They are managed entirely by the voice; those who direct them finging, and the ci mel moving brifker, or flower, as they keep quicker or flower time. The camels shed the hair clean in fpring. Camels hair is the most pr fitable fleece of all the tame beafts: fine fluffia made of it; and in Europe, hats, with a mi ture of a little beaver. As beef is little eaten Perfia, their oxen are generally employed ploughing, and other labour. Hogs are nowhe bred in Perfia, if we except a province or two the borders of the Caspian Sea. Sheep and de are very common. Of wild beafts, the numb is not great because there are few forests; h where there are any, as in Hyrcania, now call TABRISTAN, great numbers of lions, bears, tight leopards, porcupines, wild boars, and wolves, found. There are but few infects, owing to ! dryness of the climate. But in some proving there is a wast number of locusts, which sly abo in fuch clouds as to darken the air. In cent places they have large black fcorpions, fo ve mous, that fuch as are stung by them die in all hours. In others they have lizards frightfully ly, which are an ell long, and as thick as a la toad, their skins being as hard and tough as the of the sea-dog. The southern provinces are sessed with gnats; some with long legs, sa white, and as fmall as fleas, which make no zing, but fling suddenly, and smartly, like need Among the reptiles is a long square worm, cal by the inhabitants bazar-pey, i. c. thousand because its whole body is covered with seet runs prodigiously fast; and its bite is danger and even mortal if it gets into the ear. There in Perfia all the forts of fowls we have in Em Wild and tame pigeons are kept in vaft nu all over the kingdom, chiefly on account of dung. They have pigeons so taught, that, in one flock, they furround wild ones, and the them with them to their mafters. The partial are the largest and finest in the world, being nerally of the fize of our fowls. Geefe, du cranes, herons, and many other forts of fowls, are common; nightingales are heard the year, but chiefly in spring; martlets le whatever words are taught them; and a bird, led noura, chatters incessantly, and repeats wi ever if hears. Of birds of a larger fize, the remarkable is the pelican, by the Perfians ca tacab, i. e. water-carrier; and misc, i. e. sheep; cause it is as large as one of those animals.

Pelicanus.) There are in Persia various of prey. Some of their falcons are the largett finest in the world: the Persian lords are lovers of falconry, and the king has generally of them, each of which has a person to atter (32.) Persia, Rivers of. Except the Ar which rifes in the mountains of Armenia, and into the Kur or Cyrus before it reaches the pian Sea, there is not one navigable ftream in The Oxus divides Perfia on the country. from Usbeck Tartary. The Indus also may

reckoned among the rivers of Persa, as the

waters W. of that river are now in possession of that crown: It runs a course of more than 2000 siles, and overslows all the low grounds in April,

May, and June.

(13.) PERSIA, SEAS AND FISH OF. The feas u the S. of Perfia are, the Gulph of Perfia or Mora, the Gulph of Ormus, and the Indian Oon. The only sea on the N. is the Caspian, or human sea; which is more properly a lake, ing so communication with any other fea. The less together with the lakes and rivers, suph Renta with plenty of fish. The Persian Gulph sidered to have more fish than any other sea in he world. On the coafts of this gulph is taken a stat of fifth, whose sless is of a red colour, very thiose, and some of them weigh 200 or 300 lb. The over fish are chiefly barbels. Those of the in are carps and shads. In the river Spauhas are a great number of crabs, which crawl be trees and live under the leaves, whence my me taken; and are esteemed very delicious. Persia, soil and produce of. The supplere so dry, that, if it be not watered, it ices nothing, not even grass; but, where and turn the water into their plains and valis not unfruitful. There is a great diffema of fertility in the various provinces; those Media, Iberia, Hyrcania, and Bactria, are now peat measure what they were formerly, and most of the others in their productions. All the Persian Gulph, the soil is barren, cattle thing in a worse condi-any where else. Though there is scarce a in Perfia which does not produce wine, wine of some provinces is much more med than that of others; but that of Shiuniverfally allowed to be the best in The grain most common there is wheat, is very fine. As for borley, rice, and milthey only make bread of them in some places, Courdiftan, when their wheat bread is exled; but rice is the universal aliment; and three after they have fown it as other grain, in 3 months transplant it, root by root, into which are well watered, otherwise it would tattain that perfection which it acquires. inpens exceedingly, so that in some parts The Perbread is white, and good; and commonly

(15.) Persia, STATE OF SCIENCE IN. The has excel more in poetry than any other fort Merature; and astrologers are now in as great Their tation as the magi were formerly. the are all MSS, the art of printing having not been introduced among them: they excel indin writing, and have eight different hands. write from the right hand to the left, as the do. In their short hand, they use the letof the alphabet; and the same letters, differpointed, will have 20 different fignifications. lort, the Persians are born with as good natu-Perts as any people in the East, but make a bad "them; being great diffemblers, cheats, liars, flatterers, and having a strong propensity to ptnoulnels, luxury, idlenels, and indolence; vices indeed to which the Affatics in general are much addicted.

(36.) PERSIA, TRADE, MANUPACTURES AND ONEY OF. The English, and other nations, MONEY OF. trade with the Persians by the gulph of Ormus at Gombroon, and by the way of Turkey. A trade also was not many years fince opened by the English with Persia through Russia, and the Caspian Sea; but that is now discontinued, having been prohibited by the court of Russia, who were apprehensive that the English would teach the Perfians to build ships, and dispute the navigation of the Caspian Sea with them. The principal commodities and manufactures of Persia, are, raw and wrought filks, mohair camblets, carpets, leather; for which, and some others, the European merchants exchange chiefly woollen manufac-tures; but the trade is carried on altogether in European shipping, the Persians having scarce any ships of their own, and the Russians having the fole navigation of the Caspian Sea. There is not a more profitable trade in the world, than that which is carried on between Gombroon and Surat: and the English East India company frequently let out their ships to transport the merchandise of the Banians and Armenians from Perfia to India. The shah of Persia is the chief merchant; and he usually employs his Armenian subjects to traffic for him in every part of the world. His agents must have the offer of all merchandise, before his subjects are permitted to trade. It is computed that Perfia produces yearly upwards of 22,000 bales of filk, chiefly in the provinces of Ghilan and Mezanderan, each bale weighing 263 pounds. Vast quantities of Persian filk used to be imported into Europe, especially by the Dutch, English, and Russians, before the civil wars began. goods exported from Perfia to India are, tobacco. all forts of fruits, pickled and preferved, especially dates, marmalade, wines, distilled waters, hories, Perfian feathers, and Turkey leather of all forts and colours, a great quantity whereof is also exported to Muscovy and other European countries. The exports to Turkey are, tobacco, galls, thread, goats hair, stuffs, mats, box-work, and many other things. As there are no posts in the east, and trading by commission, with the use of bills of exchange, is little known, traffic must proceed in a very aukward heavy manner, in comparison of that of Europe. The most current money of Persia is the abasses, worth about 1 s. 4 d. sterling; they are of the finest filver. An abassee is worth two mahmoudes; a mahmoude, two shahees; and a shahee, ten fingle or five double casbeghes: these last pieces are of brase, the others of silver; for gold is not current in trade. The shahees are not very common; but mahmoudes and casbeghes are current everywhere. Horses, camels, houses, &c. are generally fold by the toman, which is an imaginary coin, worth 200 shahees, or 50 abaffees; and they usually reckon their estates that way. Such a one, they fay, is worth fo many tomans, as we say pounds in England.

(37.) PERSIA, TROOPS OF, ROYAL TITLES, &c. With respect to the forces of Persia, their two bodies, called the Kort/bies and Goulans, that serve on horseback, are well kept and paid, and

шау

may amount, the former to about 22,000, and the latter to about 18,000. The Kortshies are descended from an ancient but foreign race; and the Goulans are either Georgian renegadoes or flaves, or the children of flaves of all nations. The infantry, called Tangtchies, are picked out from among the most robust and vigorous of the peafants, and compose a body of 40,000 or 50,000. The Persians have sew fortified towns, and had no ships of war, till Kouli Khan built a royal nawy, and among them had a man of war of 80 guns; but fince the death of that usurper, we hear no more of their fleet. The arms of the king of Perfia are a lion couchant, looking at the fun as he rifes over his back. His usual title is Show or Pat/haw, the disposer of kingdoms. They add also to the king's titles those of fultan, and chan or cham, which is the title of the Tartar lovereigns. To acts of state the Persian monarch does not fubscribe his name; but the grant runs in this manner, viz. This all, or edil, is given by him subom the universe obeys.

(1.) PERSIAN, adj. Of or belonging to Persia.
(2.) PERSIAN GULF, or the GULF OF PERSIA, a large gulf of Asia, between Persia and Arabia Felix. The entrance near Ormus is not above 30 miles over; but within, it is 180 in breadth; and the length, from Ormus to the mouth of the Euphrates, is 420 miles.

(3.) PERSIAN WHEEL. See HYDROSTATICS. PERSIANS, n. f. The people of Perlia. See

PERSIA, 9 26.

PERSICA, the PEACH, is by Linnaus referred to the fame class and genus with AMYGDALUS; however, as they are reckoned different genera, by Tournefort and others, we shall here mention the 3 principal species of the Persica, most remarkable for the beauty of their flowers.

1. PERSICA AFRICANA, the double-flowering Dwarf Almond.

2. PERSICA: HUMILIS, the Dwarf Almond. These two reach not above the height of 3 or 4 feet, though their flowers are of equal beauty

3. Persica vulgaris, the common peach tree, with double flowers. It is a very great ornament in gardens, producing very large double flowers of a beautiful red or purple colour, and growing to a confiderable fize. Numerous other species of peach trees, with their culture, uses, &c. are described under Assygdalus, § 1—9.

PERSICARIA, in botany. See Polygonum,

PERSICUM MARE, or in ancient geography, PERSICUS SINUS, a part of the sea which the Romans called Mare Rubrum, and the Greeks, Mare Erythraum; wailing Arabia Felix on the E. between which and Carmania, entering into the land, it washes Pertis on the S. Its large mouth consists of straight sides, like a neck, and then the land retiring equally a vast way, and the sea surrounding it in a large compass of shore, there is exhibited the sigure of a human head. (Mela.) Thophrastus calls this bay Sinus Arabicus.

PERSIMON. See Drospyros, N° 2. From the perfimon is made a very palatable liquor in the following manner: As foon as the fruit is rice, a fufficient quantity is gathered, which is

very easy, as each tree is well stocked with then These persimon apples are put into a dough wheat or other flour, formed into cakes; at put into an oven, in which they continue till the are quite baked and fufficiently dry, when the are taken out again; then, in order to brew t liquor, a pot fuli of water is put on the fire, a fome of the cakes are put in: these become s by degrees as the water grows warm, and cru ble in pieces at last; the pot is then taken in the fire, and the water in it weil stirred abo that the cakes may mix with it: this is then po ed into another vessel, and they continue to se aild break as many cakes as are necessary for brewing: the malt is then infused, and they p ceed as usual with the brewing. Beer thus p pared is reckoned much preferable to other b They likewife make brandy of this fruit in following manner: having collected a fuffici quantity of perfimons in autumn, they are gether put into a veffel, where they lie for aw till they are quite foft: then they pour water them, and in that state they are left to fermen themseives, without any addition. The bra is then made in the common way, and is faid be very good, especially if grapes (in particular the fweet fort), which are wild in the woods, mixed with the perfimon fruit. Some perfim are ripe at the end of September, but most them later, and some not before November December, when the cold first overcomes t The wood of this tree is very g acrimony. for joirers instruments, such as planes, bandle chilels, &c. but if after being cut down it lies posed to funthine and rain, it is the first w which rots, and in a year's time there is not left but what is ufeless. When the persinon a get once into a field, they are not cally got of it again, as they forcad greatly.

(1.) PERSIS, a Roman lady, whom St Paulutes in his epiffle to the Romans, (xvi. 12.) calls his beloved fifter. She is not honoured any church; which is fomething fingular.

(2.) Persis, in ancient geography, a prof of Perlia, bounded by Media, Carmania, Sufi and the Perlian Gulf. It is used by some aud for Perlia itself.

\* To PERSIST. v. n. [perfifo, Lat. perfif.]

Fr.] To perfevere; to continue firm; not to over.—An immortal foul shall perfif in be when time itself shall cease. South.—If they fif in pointing their batteries against participants, no laws of war forbid the making to fals. Addison.

The flate of perfifting; fleadines; c flancy; perfeverance in good or bad.—The of God better can confift with the indelibe commissions of many lins, than with an allot perfisance in any one. Government of the Town 2. Obstinacy; obduracy; contumacy.—T think's me as far in the devil's book, as thou

think'st me as far in the devil's book, as thou Falstass, for obduracy and perfishers. Shakesper PERSISTIVE. adj. [from perfish.] Steam not receding from a purpose; persevering.—

The protractive tryals of great Jove, To find perfishive constancy in men.

E 'R 233

PERSIUS FLACCUS, Aulus, a Latin poet in the reign of Nero, celebrated for his fatires. He was bun, according to fome, at Volterra in Tufcany; nd according to others, at Tigulia, in the gulf at Specia, in the year 34. He was educated till in years old at Volterra; and afterwards at Rome pale Palamon the grammarian, Virginius the Admician, and Cornutus the Stoic, who contotal a friendship for him. Pertius consulted illustrious friend in the composition of his tes. Lucian also studied with him under Corms; and was so charmed with his verses, that kwa meessantly breaking out into acclamations #the beautiful patlages in his fatires. He was a lady friend, a good fon, an affectionate brother prent. He was chafte, meek, and modest: hich hows how wrong it is to judge of a man's man by his writings; for the fatires of Persius est only licentious, but sharp and acrimonious. in was of a weak constitution, and troubled a weak stomach, which was the cause of his in the 30th year of his age. Six of his famain; in their judgments of which the pare been much divided, excepting as to decurity. Yet his style is grand, figurative, and fultable to the dignity of the Stoic hopey: and hence he shines most in recoming virtue.

For her own person, k beggar'd all description. VOL XVIL PART L

g. Man or woman represented in a fictitions dislogue.-All things are lawful unto me, faith the apostle, speaking in the person of the christian gentile. Hooker .- Thefe tables, Cicero pronounced under the person of Crassus. Baker on Learning: 10. Character.—From his first appearance apost the stage, in his new person of a sycophant or juggler, inflead of his former person of a prince, he was exposed to the derision of the courtiers and the common people. Bacon.—He hath put on the p-r/on not of a robber and murtherer, but of a traitor to the state. Hayward. 11. Character of office.

I then did use the person of your father. Shak. -How different is the same man from himself, as he sustains the person of a magistrate and that of a friend. South. 12. [In grammar.] The quality of the noun that modifies the verb .- He had, with the remembrance of that plight he was in, forgot in speaking of himself the third person. Sidney.—If speaking of himself in the first person singular has fo various meanings, his use of the first person plus ral is with greater latitude. Locke.

(2.) A Person is an individual substance of a rational intelligent nature. The word person, person fona, is thought to be borrowed a perfonundo, from personating or counterseiting; and is supposed to have first fignified a mask: because, as Boethius informs us, in larva concava fonds volvatur: and hence the actors who appeared masked on the stage were sometimes called larvati and sometimes perlonati. He likewise says, that as the several actors represented each a fingle individual person. for this reason, other people, who were at the fame time distinguished by something in their form, character, &c. whereby they might be known, came likewife to be called by the Latins persone, and by the Greeks werene. Again as actors rarely represented any but great and illustrious characters, the word came at length to import the mind, as being that whose disposition: constitute the character. And thus men, angels and even God himself, were called perfons. Things merely corporeal, as a stone, a plant, or a horse were called by oftales or supposite, but never per-

(3.) Person, in grammar, (§ 1, def. 14.) is applied to fuch nouns or pronouns as, being either perfixed or understood, are the nominatives in all inflections of a verb; or it is the agent or patient in all finite or personal verbs. See English

LANGUAGE.

(4.) Person, in geography, a new county of N. Carolina, in Hillfborough diffrict. The courthouse and post office are 26 miles N. of Hills borough and 34 E. of Caswell.

\* PERSONABLE. adj. [from perfon.] 2. Handsome; graceful; of good appearance. Were it true that her son Ninias had such a star ture, as that Semiramis, who was very perfonable, could be taken for him; yet it is unlikely that she could have held the empire 42 years after by any fuch fubility. Raleigh. 2. [In law.] One that may maintain any plea in a judicial court. Ains.

She hath urg'd his height,

And with her personage, her tall personage, She hath prevail'd with him. Shakes Shake/peare. "-Lord Sudley was herce in courage, courtly in fashion, in personage stately. Hayward. racter assumed .- The Venetians, naturally grave, love to give into the follies of fuch feafons, when difguifed in a falle personage. Addison on Italy. 4. Character represented.—Some persons must be found out, already known by history, whom we may make the actors and personages of this fable. Broome on Epic Poems.

(1.) \*PERSONAL. adj. [personel, Fr. personalis, Latin.] r. Belonging to men or women, not to things; not real.—Every man fo termed by way of personal difference only. Hooker. 2. Affecting individuais or particular people; peculiar; proper to him or her; relating to one's private ac-

-tions or character.-

I know no personal cause to spurn at him.

-The words are conditional; if thou doest well, and so personal to Cain. Locke. - In private conversations the application may be more personal. Rogers.—If he imagines there may be no personal pride in those that are dressed out with so much glitter of ornament, let him only make the experiment. Law. 3. Present; not acting by repre-- Lentative.-

He was personal in the Irish war. Shak. -This immediate and personal speaking of God Almighty to Abraham, Job, and Mofes, made not rall his precepts and dictates, delivered in this manner, fimply and eternally moral; for fome of them were perional, and many of them ceremonial and judicial. 4. Exteriour; corporal.-A -princels, whose perfonal charms were now become the least part of her character. Addison. 5. [In law.] Something moveable; fomething appendant to the person, as money; not real, as

This fin of kind not personal But real and hereditary was. Davies. 6. [In grammar.] A personal verb is that which has all the regular modification of the three perfons; opposed to impersonal that has only the third.

(2.) PERSONAL implies also any thing that con-

cerns, or is reftrained to, the person.

(3.) PERSONAL ACTION, in law, is an action levied directly and folely against the person; in opposition to a real or mixed action. See Ac-TION.

(4.) PERSONAL GOODS, OF CHATTELS, in law, agnifies any moveable thing belonging to a perfon, whether alive or dead. See CHATTELS.

(5.) PERSONAL IDENTITY. See METAPHY-

nics. Sed. XXIII. § pt4.

(6.) Personal Verb, See § 1, def. 6.

\* PERSONALITY. n. f. (from perfonal.) The existence or individuality of any one. This perfenally extends itself beyond prefent existence to what is past, only by consciousness, whereby it imputes to itself past actions. Locke.

To PERSONALIZE, v. a. To change from thing to a person.

PERSONALIZING, n. f. See Personifi

PERSONALLY. adv. [from per'mal.] 1. person; in presence; not by representative.--A probation they give, who personally declare the affent by voice, fign or act. Hooker .-

I could not personally deliver to her

What you commanded me. -There are many reasons, why matters of in a wonderful nature should not be taken notice by those Pagan writers, who lived before our viour's disciples had personally appeared and them. Addi on. 2. With respect to an individu particularly.-She bore a mortal hatred to house of Lancaster, and personally to the Bacon. 3. With regard to numerical existen The converted man is personally the same before, and is neither born nor created a-new proper literal fense. Rogers.

PERSONATÆ, the 40th order in Linus's Fragments of Natural Method, confi of plants whose flowers are furnished with regular gaping or grinning petal, which in iomewhat refembles the mout of an animal BOTANY, Index.) Most of the genera of the der are arranged under the class and order namia angiospermia. The rest, although they not enter into that artificial class and order want of the classic character, the inequality stamina; yet, in a natural method, which of greater latitude, may be arranged with plants which they ref-mble in their habit at neral appearance, and particularly in the stances expressed in that title.

\* To PERSONATE. v.a. |from per/ora, 1 1. To represent by fictitious or assumed character fo as to pass for the person represented.-The was not to perfonate one, that had been long fore taken out of his cradle, but a youth the been brought up in a court. Bacon. 2. Tol Lent by action or appearance; to act .-

Herfelf a while the lays afide, and make Ready to personate a mortal part. 3. To pretend hypocritically, with the requ pronoun.—It has been the constant practi the Jesuits to fend over emissaries, with in tions to personate themselves members of the ral fects amongst us. Swift. 4. To counted to feign. Little in use.—Plety is opposed to personated devotion under which any kind d piety is difguifed. Hammond .- Thus have I ed with the dogmatist in a personated key Glonville. 5. To resemble .-

The lofty cedar personates thee. 6. To make a representative of, as in picture.

of nie.

One do I personate of Timon's frame. 7. To describe. Out of use.—It must be 24 ating of himself; a satyr against the soft prosperity. Shak.—By the colour of his the shape of his leg, the manner of his gail, expressure of his eye, forehead and complete he shall find himself most feelingly perfect Shakespeare. \*\* PERSONATION. n. f. [from prifer Countries

Counterfeiting of another person.—This being one of the strangest examples of a personation that ever was, it describes to be discovered and related at the full. Bacon.

1) \* PERSONIFICATION. n. f. [from perjust] Prolopopæia; the change of things to per-

Det: 35, Cerfasion heard his voice. Milton. (1) PERSONIFICATION, OF PERSONALIZING, MRSONIFYING, Sthe giving an inanisee being the figure, fentiments, and language #aperson. (See Oratory, § 243.) Dr Biair, in the Lectures on Rhetoric, gives this account of possuication. "It is a figure, the use of which nerry extensive, and its foundation laid deep in home eature. At first view, and when consideed abstractive, it would appear to be a figure of beumoft boldness, and to border on the extrameant and ridiculous. For what can feem more mmote from the track of reaf-nable thought, than book of flones and trees, and fields and rivers, by they were living creatures, and to attribute r baen thought and fenfation, affections and acone might imagine this to be no more budidish conceit, which no person of taste Ment. No fuch ridiculous effect is produced perfonification when properly employed; on contary, it is found to be natural and agreeto not is any very uncommon degree of palrequired in order to make us relish it. Ail

fay, the ground thirsts for rain, or the earth Imile with plenty; when we fpeak of ambition's being riflicfs, or a difease being deceitful; tuch expresflogs show the facility with which the mind can accommodate the properties of living creature's to things that are innimate, or to abstract con-ceptions of its own forming." The Dr goes on to inveftigate the nature of personification at confiderable length. And he adds a very proper. caution respecting the use of it in prose compositions, in which this figure requires to be used with great moderation and delicacy. "The fame liberty is not allowed to the imagination there as in poetry. The same affistances cannot be obtained for raising passion to its proper height by the force of numbers and the glow of ftyle. However, addresses to inanimate objects are not exchided from profe; but have their place only in the higher species of orstory. A public speaker may on fome occasions very properly address refigion or virtue; or his native country, or fome city or province, which has fuffered perhaps great calamities, or has been the scene of some: memorable action. But we must remember, that as fuch addresses are among the highest efforts of eloquence, they should never be attempted unless by persons of more than ordinary geniue; for, if the orator fails in his delign of moving our palfions by them, he is fore of being laughed at. Of all frigid things, the most frigid are the aukward and unfeafonable attempts fometimes made towards fuch kinds of personification, especially if they be long continued."

\* To PERSONIFY. v. a. [from person.] To

change from a thing to a person.

## PERSPECTIVE

## PERSPECTIVE.

## DEFINITIONS.

PERSPECTIVE is thus defined by Dr Johnson, both as a substantive and adjective.

per, even in its most gentle and humble forms,

mæluded; nay, in common conversation, very

mæluded; nay, in common conversation, very

with it. From profe it is far from be-

Prespective. n. f. [perspedif, Fr. perspicio, 1. A glass through which things are viewlif it tend to danger, they turn about the persecution it. Denbarn.—It may import us in this in the hear to the forms raising abroad; all by the best perspediives, to discover from what suff they break.—

You hold the glas, but turn the perfective, And farther off the lessen'd object drive. Dryd. Faith for reason's glimmering light shall give

Fir immortal perspective. Prior.

The science by which things are ranged in a paire, according to their appearance in their mi situation.—Medals have represented their balangs according to the rules of perspective.

Lofty trees, with facred shades,

And perspectives of pleasant glades.

Perspectives. ads. Relating to the scence of vision; optick; optical.—We have perspective louics, where we make demonstrations of all lights and radiations.

PERSPECTIVE is also used for a kind of picture or painting, frequently seen in the gardens, and at the ends of galleries; designed expressly to decive the sight by representing the continuation of an alley, a building, landscape, or the sike.

But Perspective, as an art, or branch of fcience, is the art of drawing on a plane furface pictures or true refemblances of objects, as the objects themselves appear to the eye from any distance and lituation, real or imaginary. See Drawing, See. XIV. and Painting, Part I, See. II.

## SECT. I. HISTORICAL SKETCE of the ART of DRAWING in PERSPECTIVE.

The progress made by the ancients in this branch of drawing and painting is very little known. We only learn from Vitruvius, that Agatharchus, infructed by Æschylus, was the first who wrote upon this subject; and that afterwards the principles of this art were more distinctly taught by Democritus and Anaxagoras, the disciples of Agatharchus.

Of the theory of this art, as described by them, we know nothing; none of their writings have escaped the general wreck of ancient literature, that took place, in the dark ages. But the revival of painting in Italy was accompanied with a

Digitized by Google

revival of this useful and elegant branch of this

It was fo late as the 16th century, before Perspecified was revived, for rather re-invented. It owes its revivingence particularly to that branch of plinting, which was employed in the decorations of the theatre, where landscapes were introduced, which would have looked unnatural and horrid, if the fixe of the objects had not Leen pretty nearly proportioned to their distance from the

The first who attempted to lay down the rules of peripective was Peter del Borgo, an Italian. He supposed objects to be placed beyond a transparent tablet, and endeavoured to trace the in:ages which rays of light, emitted from them, would make upon it. What fuccess he had in this attempt we know not, as the book which he wrote upon this fubject is not extant. It is, however, very much commended by the famous Ignatius Dante; and, upon the principles of Borgo, Albert Durer constructed a machine, by which he could trace the perspective appearance of objetis.

Balthazar Peruffi studied the writings of Borgo, and gudeavoured to make them more intelligible. To him we owe the discovery of points of distance, to which all lines that make an angle of 45 degrees with the ground line are drawn.

Not long after, Guido Ulbaldi, another Italian, found that all the lines that are parallel to one another, if they be inclined to the ground line, converge to fome point in the horizontal ling, and that through this point also a line drawn from the eye, public to them, will pass. These principles put together enabled him to make out a pretty complete theory of perspective.

Great improvements were made in the rules of perspective by subjequent geometricians; particularly by proteffer Gravefande, and still more by Dr Brook Taylor, whose principles are in a great measure new, and far more general than any before him:

## SECT. II. OUTLINES of the PRINCIPLES and PRACTICE of PERSPECTIVE.

To understand the principles of perspective, it will be proper to confider the plane on which the representation is to be made as transparent, and interpoled between the eye of the spectator and the object to be represented. Thus, suppose a person at a window looks through an upright pane of glass at any object beyond it, and, keeping his head fleady, draws the figure of the object upon the glass with a black lead pencil, as if the point of the pencil tauched the object itself; he would then have a title representation of the object in peripertive as it appears to his eye.

To do this, two things are necessary;

ift, That the glass be laid over with firong gum water, which, when dry, will be nt for drawing upon, and will retain the traces of the pencil; and,

adly, That the fludent look through a small

hole in a thin plate of metal, fixed about a foot from the glass, between it and his eye, and that he keep his eye close to the hole; otherwise te might thirt the position of his head, and confequently make a falle delineation of the object.

After tracing out the figure of the object, he may go over it again with pen and ink; and when that is dry, put a flieet of paper upon it, and trace it thereon with a pencil; then taking away the paper and laying it on a table, he may finish the picture by giving it the colours, lights, and fliades, as he ices them in the object itiel; and then he will have a true refemblance of the ob

To fuch as have a general knowledge of the principles of optics, this must be self-evident; For as vision is occasioned by pencils o rays com ing in fliaight lines to the eye from every post of the visible object, it is plain that, by joing the points in the transparent plane, through which all those pencils respectively pass, an exact representation must be formed or the object, as it appears to the eye in that particular polition and at that determined diffance : and were picture of things to be always first drawn on transparent planes, this simple operation, with the principle on which it is founded, would comprife the whole theory and practice of peripective. As this, how ever, is far from being the case, roles must be deduced from the feiences of optics and geometry for drawing representations of visible objects of opaque planes; and the application of their rule constitutes what is properly called the ART OF PERSPECTIVE.

Before we lay down the fundamental principle of this art, it is proper to observe, that when perion thands directly oppolite to the middle one end of a long avenue, which is ftraight an equally broad throughout, the fides thereof for to approach nearer to each other in proportions they are further from his eye; or the angles, the der which their different parts are feen, become gradually leis, according as the distance from bi eye increases; and if the avenue be very long, the fides of it at the faithest end feem to meet: and there an object that would cover the whok breadth of the avenue, and be of a height equal to that breadth, would appear only to be a men point.

Having made these preliminary observations we now proceed to the practice of the art, after brick ly defining the terms used in it.

#### SLCT. III. DEFINITIONS of the TERMS USED in PERSPECTIVE.

I. THE borizontal line is that line supposed to be drawn parallel to the horizon through the of of the spectator; or rather, it is a line which ke parates the heaven from the earth, and which be mits the fight. Thus A, and B, Plate XIY, + fo r, are two pillars below the horizontal line Ch because the eye is elevated above them; in fig. 4 they are faid to be equal with it; and in 18-36 raised above it. Thus according to the different

† This Plate hould have been numbered Plate CCLXXIV, according to its proper order; but he a mit take of the engravers, was marked XIV; and the whole impression being thrown of, before the error was elicroids it was too late to ulter it.

or lower than the horizontal line.

2. The point of fight A, fig. 4, is that which makes the centrical ray on the horizontal line ab; or is the point where all the other vifual rays D, D, unite.

. The points of diffance C, C, fig. 4, are points. ked in the horizontal line at equal diffances on: enister of the point of fight A.

And in the same figure B B represents the

being, or fundamental line.
3. EE is the abridgement of the square, of which D, D, are the fides,

& P. F. the diagonal lines which go to the,

parts of diffance C, C.

a decidental points are those where the objects It there may be cast negligently, because neithe drawn to the point of fight, nor to these of than, but meeting each other in the horizontwo pieces of fquare timle G and H, fig. 5, make the points I, I, I, I, on himoutal line; but go neither to the point K, nor to the points of distance C, C: exidental points ferve likewife for cafements, bes, windows, tables, chairs, &c.

I The point of direct view, or of the front, is the lave the object directly before us; in the case it shows only the fore side; and, if between a little of the top; but nothing the blue, unless the object be polygonous.

The point of oblique view is when we see an mande of us, and as it were affant, or with the refour eye: the eye, however, being all the polite to the point of light; in which case, the object laterally, and it prefents to us bles or faces. The practice is the same in the points, as in the front points; a point of 4 points of distance, &c. being laid down in one as well as the other.

in lebnography is the figure of the platform in spective, or the plan any thing is to be raifed on. II. Orthography in perspective is the figure of ing or fore tide of an object, as a house, &c.; is the figure of fuch an object directly opto the eye. As the ichnography represents the orthography represents the side opto the eye.

The Samography is what exhibits the object quite part, with all its diminutions and shadows, but, fides, height, and all raifed on the geomeplan plan.

### MIT. IV. GENERAL RULES RESPECTING PER-SPECTIVE.

LET every line, which in the object or geoto its base, he so also in its scenographic deexcons, or in the description thereof in all its mentions fuch as it appears to the eye; and let bines, which in the object return at right anto from the fore right tide, be drawn in like miner scenographically from the point of fight. Il. Let all itraight lines, which in the object

furn from the fore right fide, run, in a sceno-Faplic figure, into the horizontal line.

III. Let the object you intend to delineate, hading on your right hand, be placed also on the if the point of fight; that on the left

somes of riew, the objects will be either higher hand, on that hand of the fame point; and that which is just before, in the middle of it.

IV. Let those lines which, in the object, are equi-diftant from the returning line, be drawn, in the fcenographic figure from that point found in the horizon.

V. In fetting off the altitude of columns, pedeftals, and the like, measure the height from the base line upward in the front or fore right side ; and a vifual ray down that point in the front shall. limit the altitude of the column, or pillar, all the way behind the front fide, or orthographic ap-pearance, even to the point of fight. This rule must be observed in all figures, as well where there is a front, or fore right side, as where there

VI. In delineating ovals, circles, arches, croffes, spirals, and cross arches, or any other figure in the roof of any room, first draw ichnographically, and fo, with perpendiculars from the most eminent points thereof, carry it up to the ceiling, from which feveral points carry on the figure.

VII. The centre in any fcenographic regular figure is found by drawing crofs lines from the opposite angles; for the point where the diago-

nals cross is the centre.

VIII. A ground plane of squares is alike, both above and below the horizontal line; only the more it is diftant either above or below the horizon, the squares will be so much the larger or wider.

IX. In drawing a perspective figure where many lines come together, to direct your eye, draw the diagonals in red, the vifual lines in black, the perpendiculars in green or any other different colour, from that which you intend the figure shall

X. Having considered the height, distance, and polition of the figure, and drawn it accordingly, with its fide or angle against the base, raise perpendiculars, from the feveral angles or defigned points, from the figure to the base, and transfer the length of each perpendicular, from the place where it touches the base, to the base on the side opposite to the point of distance. Thus the diametrals to the perpendiculars in the base, by interfection with the diagonals, drawn to the feveral transferred distances, will give the angles the figures; and fo lines drawn from one point to another will circumfcribe the scenographic

XI. If in a landscape there be any standing waters, as rivers, ponds, and the like, place the horizontal line level with the farthest fight or ap-

pearance of it.

XII. If there be any houses, churches, castles, towers, mountains, ruins, or the lile, in the landscape, consider their position, that you may find from what point in the horizontal lines to draw the front and sides of them in the picture.

XIII, In drawing objects at a great diftance, observe the proportions, both in magnitude and distance, in the draught, which appear from the

object to the eye.

XIV. In colouring and shadowing of every object, you must make the same colours and shades. in your picture which you observe with your eye, in the landscape, especially in drawing and co-

louring objects that lie near; but according as the diffrance becomes greater, the colours must be fainter, till at last they are gradually lost in a darkish iky colour.

SECT.: V. MECHANICAL METHODS of DRAWING. in Perspective.

To fuch as are unacquainted with mathematics, we would recommend the following methods, whereby they may lay any plan in perspective, and raise pillars or buildings to due heights, ac-

cording to their proper diffances.

1. Suppose L L D B A, fig. 6. Plate XIV, a square piece of pavement, confisting of twentyfive pieces of marble, each a foot square: It must be measured exactly, and laid regularly down upon paper; and for the take of a more diftinct notion how every particular square will appear when you have a true perspective view of them, mark every other stone or marble black; or else number each of them as in the figure, which is divided into squares, every other one of which may be made to appear black, like the three at the bottom marked BCD: or z 2 3 4, answering to those which are marked in perspective with the fame numbers.

Now to lay your plan in perspective, fix your point of fight as you observe in the figure; or more or less to the right or lest, as you think proper: then draw the line KK parallel to, and at what distance you will from LL; and raise a line on each fide from L to K, to form the figure you see, as a frame to your figure; then draw a line from the corner K, which is the point of distance, to the opposite corner L; and this line will regulate your work. Thus far done, draw fines: from the squares of your plan to the point of fight, as exact as possible; and wherever your line of distance cuts those lines, draw lines parallel to the line L. L., which will give you the squares in perspective, or the true figure of every square. Thus' D, in the perspective plan, answers to B in the measured plan, and x, 2, 3, and 4, answer to their corresponding squares in the same plan.

To raise either pillars, trees, houses, or any other bodies, according to their respective heights, at different distances and proportions, on the plan laid down, measure them out in perspective into fuares of a foot, or any other measure. Let one of these squares, 1, 4 in fig. 7, serve for the base of a pillur a foot thick. Mark the sine L K, by the scale of the ground plan, into equal proportions or feet; a, b, c, d; which being fo many feet high, and standing on the base, are uprights, not in perspective. Then draw a line, 4 5 parallel to z c. Join c and 5, and then you have the front of a body three feet high and one foot wide, which is the object you were to raise. From 4 draw a line, with a black lead pencil, to the point of fight; and from 3 raise a line parallel to 4 5, till it touches the pencilled line passing from 5 to the point of fight, which will give you the fide appearance of the column or body, as you will he it from the place where you fland.

Then, with a pencil, from a draw a line to the point of fight, which will determine the line 6 7 that bounds the perspective view of the column stop. Afterwards from 2 raise a pencilled line paraldel to a c or re, till it touches the line draws from c to the point of fight; then draw 6 7 para hel to e 5, and you will have the square of the tu of the column, as observed from A, which is su posed to be the place where you stand.

It is to be observed, that the line drawn fro a to 6 is only an imaginary line, and in conf quence is to be rubbed out, because not bei feen from the place where you stand, it must n appear in the drawing. The fame may be under frood of the line drawn from z to 25 but it is a ceffary that they appear in the draught, on a count that they direct you how to regulate the t of your column, and to place it with certain upon its base.

Laftly, finish your column with lines only, the is, from z to c, from 4 to 3, from 3 to 7, from to 5, from 6 to 7, and from r to 4, whereby will have the true representation of the colu

as in fig. 8.

When this is done, you may creet another lumn on any one of the fquares in the fame m ner, observing to fling your shades all on one fil and being able to mafter thefe few example which may cost you very little trouble, you be capable of doing any thing in this way.

II. The following is the method of the co brated Sir Christopher Wren, and may be put practice with great case. A, fig. 9, Plate XIV a small fight with a short arm, B, which may turned about and moved up and down the fi cylinder CD, which is screwed into the p ED, at D: this piece ED moving round about the center E, by which means the fight may removed either towards E or F. P is a ruler! tened on the two rulers G, G, which serve to keep the square frame SSSS perpendicul and by their fliding through the square holes T, they ferve to flay the light either farther in or nearer to, the faid frame; on which frame stuck with a little wax the paper OO whereon the picture is to be drawn by the pe The pen I is by a small brass handle V so si to the ruler HH, that the point I may be very firm, fo as always to touch the paper. is a ruler that is, by means of the small fin a a a a a, b b b b b, confrantly moved horized tally or parallel to itself; at the end of which is fluck a fmall pin, whole head P is the fi which is to be moved up and down on the lines of any object.

The construction of the firings is this: Thet strings a a a a a, b b b b, are exactly of an eq length: two ends of them are fastened into a im leaden weight, which is employed in a focket the back fide of the frame, and ferves exactly counterpoise the ruler HH, being of an eq The other two ends of them weight with it. fastened to two small pins H H, after they he rolled about the small pullies M M, L L, K by means of which pullies if the pen I be tall hold of, and moved up and down the paper, ftring moving very cafily, the ruler will always:

main in a horizontal polition.

The manner of using it is this: Set the interment upon a table, and fix the fight A at wh height above the table, and at what distance from the frame, SSSS, you please. Then looking through the fight A, holding the pen I in your hand, move the head of the pin P up and down the out-lines of the cb. ct, and the point of the pen, I, will describe on the paper, O O O, the

hape of the object to traced.

III. Another mechanical method of defigning such practifed is by means of the Camera Objetim: a machine that reprefents an artificial eye, when the images of external objects are exhibitel diffinelly in their native colours, either inveredr or credt. The camera obfcura, or dark chamber, is made after two different methods. The one is the camera obscura, properly so called; the is, my large room made as dark as possible. has to exclude all light but that which is to pass though the hole and lens in a ball fixed in a radow in the room. The other is made in vamin forms, as that of a box, the fides of which hillout, &c. for the conveniency of carrying it but place to place.

for the construction of a camera obscura, 1. Dain the room E F, fig. 10, Plate XIV, leaving me little aperture open in the window at V, # fide I K, facing the prospect A B C D. 2. be perture fit a lens, either plano-convex, or ers on both sides. 3. At a due distance, to Atomined by experience, foread a paper or the doth, unless there be a white wall for the proxe: then on this G H, the defired objects BCD will be delineated invertedly. 4. If you have their appear erect, place a concave whitween the centre and the focus of the first receive the image on a plane speculum into the horizon under an angle of 45°, or Ptwo lenses included in a draw-tube instead of Lef the aperture do not exceed the bigness of nathe objects will be represented without any nath. And thus the objects may be drawn replied to the greatest degree of accuracy.

The fludent will adopt any of these methods with he finds will be most suitable to his purfect but the Camera Obscura is that which is exercally used by painters. This method also the additional advantage of giving the left a correct idea of colouring from nature, these who may not find it convenient to get a cunera obscura made, such as is here detect, may purchase one of the common small made and sold at London for 15 shillings.

## Lit. VI. Rules and examples in Scenographic Perfective, Go.

I Suppose the pentagon ABDEF, fg. 11, with the represented by the rules of perspective the transparent plane VP, placed perpendicular the horizontal plane HR, dotted lines are pred to pass from the eye C to each point of Rotagon CA, CB, CD, &c. which are supposed in their passage through the plane PV, to the their traces or vestiges in the points a, b, d, c. on the plane, and thereby to delineate the origin a b d e f; which, as it strikes the eye of the same rays that the original pentagon ABDEF does, will be a true perspective respective of the same rays that the original pentagon as the same rays that the original pentagon are same rays that the original pentagon as the same rays that the original pentagon are rays that the original pentagon are

H. To find the perspective appearance of a triit, HBC, fg. 12, between the eye and the mage, draw the line DE, which is called the fundamental line; from 2 draw 2 V, reprefenting the perpendicular distance of the eye above the fundamental line, be it what it will; and through V draw, at right angles to 2 V, H K parallel to DE: then will the plane DHKE represent the transparent plane, on which the perspective representation is to be made. Next to find the perspective points of the angles of the triangle, let fail perpendiculars A 1, C 2, B 3, from the angies to the fundamental DE; fet off these perpendiculars upon the fundamental, opposite to the point of distance K, to B, A, C. From 1, 2, 3, draw lines to the principal point V; and from the points A, B, and C, in the fundamental line, draw the right lines AK, BK: CK to the point of distance K; which is so called beeause the spectator ought to be so far removed from the figure or painting, as it is distant from the principal point V. The points a, b, and e, where the visual lines V 1, V 2, V 3, interfect the lines of distance A K, B K, C K, will be angular points of the triangle a bx, the true representation of ABC

By proceeding in this manner with the angular points of any right-lined figure, whether regular or irregular, it will be very easy to represent it in

perspective.

III. If the scenographic appearance of any solid were to be represented; suppose of a triangular prism, the base of which is the triangle mno, fig. 13, you need only find the upper surface of it, in the same manner as you found the lower, or base; and then joining the corresponding points by right lines, you will have the true representation of the solid in perspective. So that the work is the same as before: only you take a new fundamental line, as much higher than the former, as the altitude of that solid the scenographic representation of which you would delineate.

IV. There is still a more commodious way, which is this: Having found, as above, the bale or ichnographic plate mno, let perpendiculars be erected to the fundamental line from the three angular points, which will express the altitudes of those points. But because these altitudes, though equal in the body or folid itself, will appear unequal in the scenographic view, the faithest off appearing less than those nearer the eye, their true proportional heights may be thus determined. Any where in the fundamental line, let A B be erected perpendicularly, and equal to the true altitude; or, if the figure have different altitudes, let them be transferred into the perpendicular AB; and from the points A and B, and from all the points of intermediate altitudes, if there be any fuch, draw right lines to the point of light, V: those lines AV, BV, will constitute a triangle with AB, within which all the points of altitude will be contained. Through the points on m, draw parallels to the fundamental line; and from the points a a, &c. erect perpendiculars to those parallels; and the points where they interfed the lines A V, B V; as in a a, b b, &c will determine the apparent height of the folid in the frenographic polition to the eye in V.

In practice, these parallels and perpendiculars are easily drawn, by means of a good drawing board, or table, fitted for the purpose.

V. To

V. To exhibit the perspective of a pavement, confifting of fquare ftones viewed directly: Divide the fide A B, fig. 14, transferred to the fundamental line DE, into as many equal parts as there are square stones in one row. From the several points of division draw right lines to the principal point V, and from A to the point of distance K, draw a right line A K, and from B to the other point of distance L, draw another L B. Through the points of the interfections of the corresponding lines draw right lines on each fide, to be produced to the right lines A V and B V. Then will a fg b be the appearance of the pavement AFGB.

VI. To show the perspective appearance of a square ABDC, fig. 15, seen obliquely, and having one of its sides AB in the sundamental line. The square being viewed obliquely assume the principal point V, in the horizontal line H R, in fuch a manner, as that a perpendicular to the fundamental line may fall without the fide of the fquare AB, or at least may not bisect it; and make VK the distance of the eye. Transfer the erpendiculars A C and B D to the fundamental line DE; and draw the right lines KB, KD; as also A V and V C: then will A and B be their own appearances; and e and d the appearances of the points C and D consequently, AcdB is the appearance of the square A B D C.

VII. If the fquare ACBD be at a distance from the fundamental line D E, which rarely happens in practice, the diffances of the angles A and B must likewise be transferred to the fundamental line; and even the oblique view itself is not very common. The reason why objects appear smaller as they are at a greater distance is, that they appear according to the angle of the eye, wherein they are feen; and this angle is taken at the eye, where the lines terminating the objects

VIII. For example, the eye A, fig. 16, viewing the object BC, will draw the rays AB and AC, which give the angle BAC; so that an object viewed under a greater angle will appear larger, and another under a less angle smaller. That among equal objects, those at the greatest distance appear smallest, and consequently, that in all perspective the remotest objects must be made the smallest, will be manifest from the figure: the objects BC, DE, FG, HI and KL, being all equal, but at different diltances from the eye, it is evident that the angle DAE is less than the angle BAC, that FAG is less than DAE, that HAI is less than FAG, and that KAL is less than HAI. Hence the 2d, 3d, 4th, and 5th objects, will appear smaller, though really all equal, inafmuch as the angles diminish in proportion as the objects recede. If the eye, on the other hand, were removed to M, KL would appear the largest, and BC no bigger than NO.

IX. It follows, that, as objects appear such as is the angle they are seen under, if several lines be drawn between the fides of the same triangle, they will all appear equal: thus all the lines comprized between the fides O N and O P, fig. 17, of the triangle NOP, will appear equal to each other: and as objects comprehended under the same angle feem equal, so all comprehended under a greater angle must seem greater, and all under fmaller angle, less.

X. This being premised, if there be a number of columns or pilafters to be ranged in perspective on each fide of a hall, church, or the like, the must of necessity be all made under the same a gle, and all tend to one common point in the be rizon O, fig. 18. For instance, if from the poin DE, the eye being placed at A, and viewing first object DE, you draw the visual rays D and EO, they will make the triangle DO which will include the columns DE, FG, H K L, M N, so as they will all appear equal.

XI. What has been faid of the fides is like to be understood of the ceilings and parement the diminutions of the angles of remote object placed either above or below, following the fi rule as those placed laterally. Trees being m ed by the same law, have the same effect columns, &c. for being all comprehended in fame angle, and the two rays having each its angle, and all the angles meeting in a point, form a third, which is the earth, and a for which may be supposed the air, and thus a an elegant prospect.

XII. To exhibit the perspective of a circle the circle be fmall, circumfcribe a square about draw diagonals and diameters b a and de, fg interfecting each other at right angles; and d the right lines fg and bc parallel to the diam dc through b and fc as also through f and gright lines meeting the fundamental line points 3 and 4. To the principal point V right lines V 1, V 3, V 4, V 2, and to the of diftance L and K draw the right lines L Kr. Laftly, connect the points of interfed a, b, d, f, b, g, e, c, with the arches a b, b 4. Sc. Thus will a b d f b g e c be the appear of the circle.

XIII. If the circle be large, on the mide the fundamental A B, fig. 20, describe a Temit and from the feveral points of the peripher G, H, I, &c. to the fundamental line, le perpendiculars C 1, F 2, G 3, H 4, I 5, From the points A, 1, 2, 3, 4, 5, &c. draw I lines to the principal point V; as also a right from B, to the point of distance L, and an from A to the point of diffance K. Through common interfection draw right lines, as is preceding case: thus we shall have the points g, b, c, which are the representations of these C, F, G, H, I, which being connected as bef give the projection of the circle. Hence it. pears not only how any curvilinear figure may projected on a plane, but also how any pared confifting of any kind of stones may be delked in perspective.

XIV. If any complicated figure be proposed may not be easy to apply the practical rules to description of every minute part; but by fing that figure in a regular one properly full ded, and reduced into perspective, a person led in drawing may with ease describe the proposed.

Upon the whole, where the boundaries of proposed objects consist of straight lines and s furfaces, they may be described directly by rules of perspective: but when they are cur ter, either in their fides or furfaces, the practical raise can only ferve for the description of such right-lined cases as may conveniently enclose the third; and which will enable the student to draw then within those known bounds with a sufficient three of exactness.

I would indeed be a fruitless task, to seek by sacked rules of perspective to describe all the boilows and prominences of objects; which the boilows and shades of their parts, or in maller windings and turnings; the infinite only of the folds in drapery; of the boughs and as of tree; or the features and limbs of men animals; much less to give them that roundand foftness; that force and spirit, that easied freedom of posture; that expression and w, which are requisite to a good picture.

#### SECT. VII. CONCLUSION.

way appear a bold affertion to fay, that the hot fletch now given of the art of perspectivific in toundation for the whole practive problems which most generally occur. Stretise foundation being so simple, the meet need not be complex, nor swell into sources which, by their fize, deter from the land give the simple art all the appearance they; and by their prices, defeat the design authors, the dissemination of knowledge the practitioners.

on perspective have acquired their long and tedious discourses, minute exof common things, or by great numcamples: which indeed make some of hoks valuable by the variety of curious cuts, not at all instruct the reader by any imments in the art itself. For most of those are treated this subject have been more con-In the practice of defigning, than in the ples of geometry; and therefore when, in practice, the cates which offered have put trying particular expedients, they have them worth communicating to the pubprovements of the ait; and each author, an own little expedient, (which a scientiwould bave known for an easy corollathe general theorem,) have made it the pe of a practical system; thus narrowing of mlarging the knowledge of the art; and the findent, tired of the bulk of the volume, cha fingle maxim is tedioufly spread out, principle on which it is founded kept out th, contents himself with a remembrance maxim (not understood), and keeps it slightege, to avoid gross errors.

the truth of this affertion, we may appeal whole body of painters and draughtimen; and not be confidered as an imputation on of remifines or negligence, but as a necession of the interpretation of the less just anthematicians of eminence have written pedice, treating it as the subject of pure in it is not the less just anthematicians of eminence have written pedice, treating it as the subject of pure in it really is; and the performances in broat, Taylor, Gravesande; Wolf, De la to. IVII. PART I

Gaille, Emerjon, and Malton, are truly valuable, by prefenting the art in all its perforculty and universality.

The works of Taylor and Emerlon are peculiarly valuable, on account of the very ingenious and expeditious constructions which they have given fuited to every poslible case. The merit of the first author has been universally acknowledged by all the British writers on the subject, who candidly declare that their own works are composed on the principles of Dr Taylor: but any man of science may perceive that these authors have either not understood them, or aimed at pleasing the public by fine cuts and uncommon cases: for, without exception, they have omitted his favourite constructions, which had gained his preducetion by their univerfality, and attached themfelves to inferior methods, more usually expedient p.rhaps, or inventions (as they supposed) of their own.

What has been laid down in this treatife is not professed to be according to the principles of Dr Taylor, because the principles are not peculiar to him, but the necessary results of the theory itself, and inculcated by every mathematician who had confidered the subject. They are sufficient not only for directing the ordinary bractice, but also for fuggesting modes of construction for every case out of the common track. And any person of ingenuity may have a laudable enjoyment in thus, without much stretch of thought; inventing rules for himself; and will be better pleased with such finits of his own ingenuity, than in reading the tedious explanations of examples devised by others. We would therefore, with Dr Taylor, "advise all our readers not to be contented with the scheme they find here; but, on every occasion, to draw new ones of their own, in all the variety of circumftances they can think of. This will take up more time at first, but they will find the vast benefit and pleafure of it by the extensive notions is will give them of the nature of the principles."

The art of perspective is necessary in all arts where there is any occasion of designing; but it is more particularly necessary for landscape drawing which can do nothing without it. A figure in a picture, which is not drawn according to the rules of perspective, does not represent what is intended. Indeed we hesitate not to say that a picture which is desicient in this particular, is as blameable as any composition in writing which is deficient in point of grammar.

It would certainly be thought ridiculous were any person to pretend to write an heroic poem. or a fine discourse, upon any subject, without understanding the grainmatical propriety of the language in which he wrote; and it feems no less ridiculous for one to attempt to make a good picture without understanding perspective. Yet how many pictures are there to be feen, that are highly valuable in other respects, and yet are extremely faulty in this point?-Indeed this fault is fo general, that we hardly remember to have feen a picture entirely free of it; and what is the more to be lamented, the greatest masters have been the most guilty of it. Such examples make it the less regarded, but the fault is only the more to be lamented, and requires the more care to avoid it.

A principal cause of this fault is doubtless the

wrong method that is generally used in educating persons in this art: for young people are generally put early to drawing, and when they have acquired a facility in that, they are immediately put to colouring. These things they learn by practice, and as it were by rote; but are not inftructed in any rules of art; by which means, when they come to make defigns of their own, though they are very expert at drawing and colouring every thing that offers itself to their fancy; yet for want of instruction in the strict rules of the art they do not know how to govern their inventions with judgment. Thus they become guilty of fo many gross mistakes, that they prevent themseives, as well as others, from finding that fatisfaction they otherwise would do in their performances. To correct this, we would recommend it to the masters of the art, to begin their instructions with the technical parts of painting, before they let the students loose to follow the inventions of their own imaginations.

In a word, it should be remembered, that the art of drawing taken in its full extent, consists of two parts; the inventive, and executive. The inventive part, like poetry, belongs more properly and immediately to the original design, (which it invents and disposes in the most proper and agreeable manner,) than to the sinished drawing, which is only a copy of that design already formed in the imagination of the artist. The perfection of this art depends upon the thorough knowledge the artist has of all the parts of his subject; the beauty of it consists in the happy choice and disposition that he makes of it: and it is in this, that the genius of the artist discovers itself, while he in-

dulges and humours his fancy, which here is qui unconfined. But the other, the executive part painting, is wholly confined to the rules of a which cannot be dispensed with in this, and the fore the student ought to govern himself, entin by these rules.

Nothing ought to be more familiar to the dent than perspective; for it is the only thing can make the judgment correct, and will help fancy to invent with ten times the ease that

could do without it.

To conclude, although a knowledge of spective is necessary in drawing, yet the flud must not think of restricting himself to mathe tical exactness in finishing a perspective vi However paradoxical it may appear, the exness of mathematics in perspective must be rected by the eye; otherwise the most acust finished perspective, done upon the strict thematical principles, will have a very stiff, ward and unnatural appearance. In a work fludent must combine a knowledge of mathe tics with an accurate eye and correct taffe, at the same time that he never loses light of one, take the utmost care not to trespass agi the other. In drawing perspective views, h ever, of celebrated buildings, fuch as the Re Office of Edinburgh, or Somerset-bouse at Los where there is no view of the street given a with them, they must always be done with strictest mathematical exactness. But where public buildings are introduced as forming of a street, measurement is not strictly attended as it would give the whole too stiff an app

## PER

(1.) PERSPECTIVE, AERIAL, is sometimes used as a general denomination for that which is more restrictedly, called, 1. Aerial perspessive, or the art of giving a due diminution or degradation to the strength of light, shade, and colours of objects, according to their different distances, the quantity of light which falls upon them, and the medium through which they are seen: 2. The Chiaro obscure, or clair obscure, which consists in expressing the different degrees of light, shade, and colour of bodies, arising from their own shape, and the position of their parts, with respect to the eye and neighbouring objects, whereby their light or colours are affected; and 3. Keeping, which is the observance of a due proportion in the general light and colouring of the whole picture, so that on light or colour in one part may be too bright or strong for another. See Keeping.

(2.) PERSPECTIVE, BIRD'S EYE VIEW IN, is that which supposes the eye to be placed above any building, &c. as in the air at a considerable distance from it. This is a plied in drawing the representations of fortifications, when it is necessary not only to exhibit one view as seen from the ground, but so much of the several buildings as the eye can possibly take in at one time from any situation. In order to this, we must suppose the eye to be removed a considerable height above the ground, and to be placed as it were in the air, so

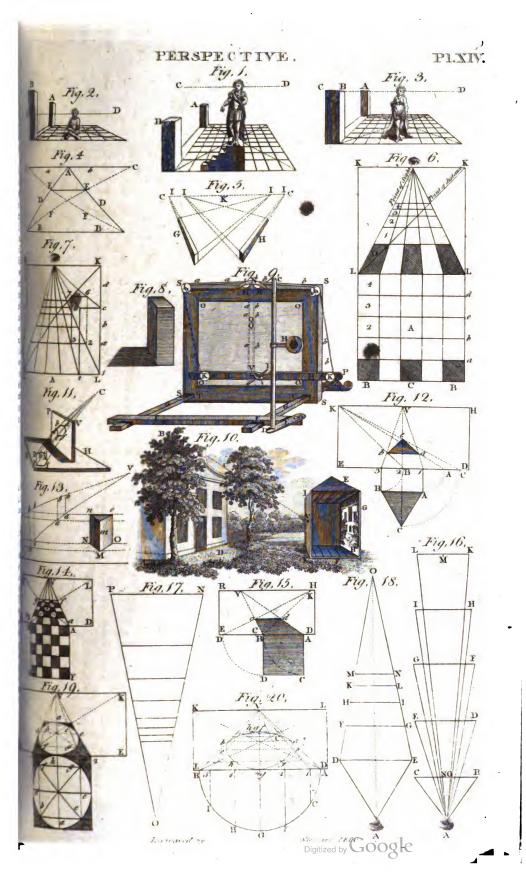

# PER

as to look down into the building like a bin is flying. In representations of this kind, the er the horizontal line is placed, the more fortification will be seen, and vice versa.

ortification will be seen, and vice versa.

(3.) PERSPECTIVE GLASS, OF GRAPHICAL

spective. See Dioptrics, § 49, and Or (4.) Perspective Machine, an instrume which any person, without the help of the ru art, may delineate the true perspective figures jects. Mr Ferguson has described a machine of fort of which he ascribes the invention to Dr B fig. 4. of Pl. CCLXXIII. is a plane of this mad and fig. 5. is a representation of it when ma of in drawing distant objects in perspection fig. 4. a bef is an oblong square board, represent by ABEF in fig. 5. x and y (X and Y) hinges on which the part eld (CLD) is more This part confifts of two arches or portions gles cm l (CML) and dn l (DNL) joined togs at the top / (L), and at bottom to the cross by (DC), to which one part of each hinge is and the other part to a flat board, half the of the board a bef (ABEF), and glued to uppermost side. The centre of the arch is at d, and the centre of the arch dn/is 社会 the outer fide of the arch dn l is a fliding pid much like the nut of the quadrant of altitude longing to a common globe), which may be ved to any part of the arch between d and /:

ere is such another slider o on the arch eml, ich may be let to any part between e and 1.—A red con (CPN) is firetched tight from the cenc(C) to the slider n(N), and such another end is stretched from the centre d (D) to the sli-: (0); the ends of the threads being fastened these centres and sliders. By moving these slinon their respective arches, the intersection p of the threads may be brought to any point of open space within the arches. - In the groove () is a firaight fliding bar i (I), which may be m further out, or pushed further in at plea-To the outer end of this bar I (fig. 5.) is d the upright piece HZ, in which is a groove receiving the fliding piece Q. In this flider is all hole r for the eye to look through, in using machine: and there is a long flit in HZ, to let loke be seen through, when the eye is plabehind it, at any height of the hole above the d of the bar I. APERSPECTIVE MACHINE, METHOD OF U-

om. Suppose you want to delineate a permempresentation of the house q r s p, Pig. 5. in we must imagine to be a great way off, the machine on a fleady table, with the end of the horizontal board ABEF toward the k 6 that, when the Gothic-like arch DLC is with, the middle part of the open space (a-P) within it may be even with the house you place your eye at Z and look at the though the small hole r. Then fix the eorda square piece of paper with four wafers historize of that half of the horizontal board is nearest the house; and all is ready for Set the arch upright, as in the figure; is will be when it comes to the perpendiide t of the upright piece st fixed to the ortal board behind D. Then place your eye and look through the hole rat any point of rule, as q, and move the fliders N and O till ring the intersection of the threads at P dibetween your eye and the point q: then put the arch flat upon the paper on the board, T, and the interfection of the threads will W. Mark the point W on the paper with x of a black lead pencil, and fet the arch it again as before: then look through the and move the fliders N and O till the inion of the threads comes between your eye ly other point of the house, as p: then put the arch again to the paper, and make a mark thereon at the intersection of the 4, and draw a line from that mark to the one at W; which line will be a true per-

which will be the perspective outlines of the In like manner find points for the corners door and windows, top of the house, chim-&c. and draw the finishing lines from point at: then shade the whole, making the lights hades as you see them on the house itself, ou will have a true perspective figure of it.

representation of the corner pg of the Proceed in the same manner, by bringing

efection of the threads successively between

Te and other points of the outlines of the 4 1, 4, &c. and put down the arch to mark \* points on the paper, at the interfection of

ends: then connect these points by straight

Great care must be taken, during the whole time, that the position of the machine be not shifted on the table; and to prevent such an inconvenience, the table should be very strong and steady, and the machine fixed to it either by screws or clamps. (See Perspective.) Mr Peacock likewife invented three simple instruments for drawing architecture and machinery in perspective, of which the reader will find sketches and descrip-

tions in the 75th vol. of the Philof. Trans.

\* PERSPICACIOUS. adj. [perspicax, Latin.]
Quicklighted; sharp of light.—It is as nice and tender in feeling, as it can be perspicacious and

quick in seeing. South.

\* PERSPICACIOUSNESS. n. s. seefpi-

cacious. | Quickness of fight.

\* PERSPICACITY. n. f. [perspicacité, French.] Quickness of fight.—He that laid the foundations of the earth cannot be excluded the secrecy of the mountains; nor can there any thing escape the perspicacity of those eyes, which were before light, and in whose opticks there is no opacity. Brown,

PERSPICIENCE. n. f. [perspiciens, Latin.]

The act of looking sharply. Dia.

PERSPICIL. n. f. [perspicillum, Lat.] A glass through which things are viewed; an optick glass. Little used,-

Let truth be

Ne'er so far distant, yet chronology

Will have a perspicil to find her out. Crashaw, The perspicil, as well as the needle, hath enlarged the habitable world. Glanville.

(1.) \* PERSPICUITY, n. f. | perspicuité, Fr. from perspicuous.] 1. Transparency; translucency; diaphaneity.—As for diaphaneity and perspicuity, it enjoyeth that most eminently. Brown. 2. Clearness to the mind; easiness to be understood; freedom from obscurity or ambiguity.-The verses containing precepts, have not so much need of ornament as of perspicuity. Dryden.—Respicuity consists in the using of proper terms for the thoughts, which a man would have pass from his own mind into another's. Locke.

(2.) Perspicuity. See Oratory, § 124-131. \* PERSPICUOUS. adj. [perspicuus, Latin.] 1, Fransparent; clear; such as may be seen through, diaphanous; translucent; not opake.-The clear and perspicuous body effecteth white, and that white a black. Peacham. 2, Clear to the underflanding; not obscure; not ambiguous.-

The purpole is perspicuous. -All this is so perspicuous, so undeniable, that I need not be over industrious in the proof of it.

Spratt.

\* PERSPICUOUSLY. adv. [from perspicuous.]

-The case is no sooner Clearly; not obscurely.—The case is no sooner made than refolved; if it be made not enwrapped, but plainly and perspicuously. Bacon.
\*PERSPICUOUSNESS. n. s. [from perspicuous.]

Clearnels; freedom from obscurity; transparence;

diaphaneity

PERSPIRABLE. adj. [from perspire.] Such as may be emitted by the cuticular pores. In an animal under a course of hard labour, aliment too vaporous or perspirable will subject it to too firong a perspiration, debility, and sudden death. Arbuthnot. 2. Perspiring; emitting perfpiration.

spiration. Not proper.—Hair cometh not upon the paims of the hands or foles of the feet, which are parts more perspirable: and children are not hairy, for that their fkins are most perspirable. Bacon.-Electricks will not commonly attract, unless they become perfoirable. Brown.

(1.) \* PERSPIRATION. n. f. [from perspire.] Exerction by the cuticular pores.—Infentible perspiration is the last and most perfect action of animal digestion. Arbuthnot.

(2.) Perspiration, in medicine, is the evacuation of the juices of the body through the pores of the skin. Perspiration is distinguished into senfible and insensible; and here sensible perspiration is the same with sweating, and insensible perspiration that which escapes the notice of the senses. This last is the idea affixed to the word perspiration when ufed alone.

\* PERSPIRATIVE. adj. [from perspire.] Per-

forming the act of perspiration.

\* Fo PERSPIRE. v. n. [perspire, Latin.]
z. To perform excretion by the cuticular pores. s. To be excreted by the skin .- Water, milk, whey, taken without much exercise, so as to make them perspire, relax the belly. Arbutbnas.

PERSTAIN, a town of Bohemia, in the circle of Boieflau; 14 miles NW. of Jung Buntzel.

\* To PERSTRINGE. v. a. [perstringo, Latin.] To gaze upon; to glance upon. Dia.

\* PERSUADABLE, adj. [from persuade.] Such

\*To PERSUADE. v. a. [per/uadeo, Lat. perfuader, Fr.] 1. To bring to any particular opinion .- Let every man be fully perfuaded in his own mind. Rom.—We are perfuaded better things of you. Heb. vi. 9 .- Joy over them that are perfuaded to salvation. 2 Esdrat, vii.—Let a man be ever so well perfuaded of the advantages of virtue, yet, till he hungers and thirfts after righteousness, his will will not be determined to any action in purfuit of this confessed great good. Locke.-Men should seriously persuade themselves, that they have here no abiding place. Wake. 2. To influence by argument or expostulation. Persuasion seems rather applicable to the passions, and argument to the reason; but this is not always obserwed .- Philoclea's beauty not only persuaded, but so persuaded as all hearts must yield. Sidney .-They that were with Simon, being led with covetoulnels, were persuaded for money. 2 Mac.—To fit cross-leg'd, or with our fingers pectinated, is accounted bad, and friends will persuade us from it. Brown.—How incongruous would it be for a mathematician to perfuade with eloquence, that he might prevail with his hearers to believe that three and three make fix! Wilkins .- I should be glad, if I could persuade him to write such another critick on any thing of mine. Dryden. 3. To inculcate by argument or expoltulation.—To children, afraid of vain images, we perfuade confidence by making them handle and look nearer fuch things. Taylor. 4. To treat by persuasion. A mode of speech not in use .-

Twenty merchants have all persuaded with

\* PERSUADER. n. f. [from perfuade.] One. who influences by perfusion; an importunate ad-

vifer.—Himfelf was the author or principal & fuader of that counsel. Bacon .-

He foon is mov'd

By fuch persuaders as are held upright. Dan Hunger and thirst at once,

Pow'rful persuaders! Mile \* PERSUAŠIBLE. adj. [persuasibilis, Lat. p fuafible, Pr. from fersuadeo, Latin.] To be inf enced by persuation.—It makes us apprehend own interest in that obedience, and makes us to table and persuafible. Gov. of the Tongue. PERSUASIBLENESS. n. f. [from per uafile

The quality of being flexible by perfuation.

(1.) PERSUASION. n. s. | persuasion, Fr. in persuasus, Lat.] 1. The act of persuading; act of influencing by expollulation; the gaining or attempting the passions.—
Thou hast all the arts of fine persuase

a. The flate of being perfuaded; opinion. general perfuation of all men does to accoun -You are abus'd in too bold a perf Shak. - When we have no other certainty of a in the right, but our own perfuntions that we m this may often be but making one error the for another. Gov. of the Tongue. - The obed and the men of practice fliall triumph over present imperfections, till persuafion pals knowledge, and knowledge advance into rance. South.

(2.) Persuasion, Art of. See Orato \* PERSUASIVB. adj. [persuasis, French; perfuade.] Having the power of perfuading ving influence on the paffions.—In prayer, not so much respect what precepts art define touching the method of perfuafive uttern the presence of great men, as what doth t vail to our own edification. Hooker.-Let M refume his farther discourse, as well for the funfive as for the confult. Bacon .- Notwith ing the weight and fitness of the argund persuade, and the light of man's intellect to this persua five evidence with a suitable affect affent followed. South.

\* PERSUASIVELY. adv. [from perjusted

fuch a manner as to perfuade.

The ferpent with me Persuasively hath so prevail'd, that I Have also tasted.

-Many who live upon their effates cann much as tell a story, much lefs speak clearly,

persuasively in any business. Locke.

PERSUASIVENESS. n. f. [from pare] Influence on the passions.—An opinion of the celsfuinels of the work being as necessary to a purpose of undertaking it, as either the rity of commands, or the persuafreness of ses. Hammond.

\* PERSUASORY. adj. [persuasorius,] from persuade.] Having the power to persua

Neither is this persuafory. Brown.

(1.) \* PERT. adj. [ pert, Welth; pert, Du appert, French.] 1. Lively; brifk; fmart. Awake the pert and nimble spirit of min

Md

On the tawny fands and thelves, Trip the pert fairies.

From pert to stupid links supinely down, In youth a coxcomb, and in age a clown.

Speciator.

Savey; petulant; with bold and garrulous logacity.—Ali fervants might challenge the fame berty, and grow pert upon their masters. Collier—Alady bids me in a very pert manner mind my masters. Addison.—

Sometimes by a frown,
When they grew pert, to pull them down.

Swift.

(1) PERT, in geography, a parish of Scotland, in Angus-thire, united to that of Logie. See Logis, N° 3. Its church is seated on the North Mt. near the Old North Water Bridge, 3 miles into Logie.

To PERTAIN. v. n. [pertineo, Lat.] To being: to relate.—Men hate those that affect that more by ambition, which pertaineth not to the hervise.—A cheveron or rafter of an analysis every honourable bearing, is never seen the coat of a king, because it pertaineth to a manical profession. Peacham.

MATELS, a town of Germany, in Austria;

\*PERTEREBRATION. n. f. [per and tere-Lat.] The act of boring through. Ainf. (L) PERTH, or PERTHSHIRE, one of the largest uies in Scotland. It extends 77 miles in a aght line, from Blairgowrie on the E. to the of Ben-Loi on the W. and measures 68 miles men the Prith of Forth at Culross, on the S. the boundary of the forest of Atholi on the the Tilt rifes. It is bounded on the N. part of Inverness and Aberdeen shires; on L by Forfarshire; on the SE. by the Frith of In and the counties of Kinross and Fife; on the by the Forth, and the counties of Clackmannan Stirling; on the SW. by Dumbartonshire; on k W. by Argyllshire; and on the NW. by Inmel-hire. It comprehends the districts of Aol, Braidalbin, Monteith, Stratherne, Stormont, hquhidder, Gowrie, Rannoch, and Pertu Prom. Its total contents are estimated at 5000 peare miles; which amount to 3,200,000 Scots or 4,068,640 English acres. It is generally frided into the Highlands and Lowlands; the GIAMPIAN mountains form the line of division dween these. Some of the Ochil and Sidlaw although of great elevation, are ranked in the Lowland division, because the language and funners of the inhabitants differ from those of the people in the Highland district, on the other side the Grampians. The Highland divilion con-18 parishes; the Lowland 58; in all 76. he surface of this extensive county is highly and tentiully diverlified: and perhaps no diffrict of and extent in the world exhibits scenes of more finding and romantic magnificence, intermingled with nature in its most rugged form, as well as clothed in its most beautiful garb. The foil likewife confine of all the varieties known in the kingdom; the carle or rich loamy foil being most pre-Valent on the banks of rivers, and low grounds; and the fandy and tilly foil being chiefly prevalent on the fides of the hills. The climate is as vanous as the foil and furface. The hilly country abounds with pasture, on which are fed black

cattle, horses, sheep, goats, and deer. The heaths, woods, and forests, are well stored with variety of game; the rivers teem with falmon, perches, and trouts. The valleys are in general warm, and the crops early, and all the usual grain and roots are raised; but in rainy seasons they are often much injured by the rivers overflowing their The two principal rivers are the FORTH and the TAY: but there are many inferior rivers . in the county; particularly the Almond, Allan, ERNE, Bran, Garry, Brrick, Blane, Isla, Dovan, Teith, &c. (See these articles.) The principal lakes are Loch Tay, Loch Erne, Loch Dochart, Loch Ericht, Loch Catherine, Loch Rannoch, &c. Several of the highest mountains of Scotland are in this county; particularly Ben-Lawers, Ben-LEDI, BENMORE, SCHECHALLION, MORDUN, Ben-voirlich, &c. The prospects from the tops of these mountains are in general grand, extensive, and delightful; but the view from the top of MORDUN, in particular, is so exceedingly rich and various, that Mr Pennant styled it, "The GLORY of SCOTLAND." Orchards and gardens are numerous, and abound with every kind of fruits, roots, and herbs found in S. Britain. There are several extensive mosles, particularly that of Kincardine. (See Kincardine, No 6; and Moss, § 7.) There are also numerous extensive forests, abounding with oak, fir, elm, ash, larix, and various other kinds of trees. Lime-stone, iron-stone, slates, and free-stone abound, as well as some lapis calaminaris; and coals are found in the S. parts of the county. Copper and lead mines have been discovered in some places; and STEATITES, or rock foap, is found in Monteith, 3 feet thick, and extending above 4 miles in length. Besides PERTH, the capital, this county contains the royal borough of Culross, and the towns of Abernethy, Auchterderran, Dumblane, Crieff, Scone, Dunkeld, Coupar, Alyth and Longforgan; and above 60 confiderable villages; as Callander, Blairgowrie, Kincardine, Muthil, Inchture, &c. Among the numerous feats of the nobility and gentry, which ornament this county, are Blair Caftle, and Dunkeld House, seats of the D. of Atholi; Tay-mouth, the E. of Braidalbin's feat; Duplin Castle, the seat of the E. of Kinnoul; Drummond Castle, the seat of the Perth family; the palace of Scone, the feat of Lord Mansfield; Ouchtertyre, the feat of Sir Patrick Murray; Duneira, the feat of Lord Vifc. Melville; Blair-Drummond, the feat of Mr Home-Drummond; Lawers, the feat of Col. Robertson; Methyen Castle, the seat of Lord Methyen; Castle Huntly, the feat of George Paterson, Esq.; Lundie, the feat of Lord Visc. Duncan; Castle-Gray and Kinfauns, feats of Lord Gray; Drimmie, the feat of Lord Kinnaird; Culrofa Abbey, a feat of the E. of Dundonald; Valleyfield, the feat of Sir Charles Preston; Balgowan, the seat of Col. Graham; besides Cardross, Gartmore, Kier, Lenrick, Castle Menzies, Delvin, Invercauld, Monzie, Gleneagles, Aberuchil, Rossie, Freeland, Gask, Kilgrafton, St Martins, Blair-Gowrie, Errol House, Pitfour, Seggieden, Murthly, and many others. The valued rent of this extensive county is estimated at 339,8181. 58. 8d. Scots; the real rent at 230,900 l. fterling. The total population, by the reports to Sir John Sinclair, between 1791 and 1798,

and the increase, fince 1755, to 14,371. The houses and attire, even of the commonalty, are neat and decent; and every pealant can produce a good quantity of linen, and great store of blankets, made in his own family. Flax is reared by every hufbandman; and being dreffed at home, is spun by the females of his family into thread for linen; this is woven by country weavers, of whom there is a great numher through all the Low Country, and afterwards bleached or whitened by the good-wife and her servants; so that the whole is made fit for use at a very finall expence. They likewife wash, card, spin, and weave their wool into tartan for plaids, kerfies, and coarse russet cloth, for common wearing, belides great part of it which is knit into caps, stockings, and mitts. Plaids, made of the finest worsted, are worn either plain or variegated, 23 veils, by women of the lower, and even of the middle rank; nay, some years ago, ladies of faflion wore filken plaids with an undress: this is a loose piece of drapery, gathered about the head, shoulders, and wait, on which it is crossed, so as to leave the hands at liberty, and produces a very good effect to the eye of the spectator. The Low-landers of Perthshire are civilized, hospitable, and industrious: the commerce of the country consists chiefly in corn, linen, and black cattle. (See TRADE.) This county fends one representative to the imperial British parliament.

(2.) PERTH, a parish in the above county, of a semicircular form, the Tay, on the E. forming the diameter. It is about 4 miles long from N. to S. and 3 broad, from E. to W. It is separated by the Tay from the parishes of Scone, Kinnoul, and Kinfauns, on the E. on the SE. it is bounded by that of Rhynd; on the S. by those of Forteviot and Dumbarny; and on the W. by those of Tibbermuir and Aberdalgie. The soil is partly loam and partly clay; and being very fertile, yields zich crops. The chief villages are Balhousie, Pittheveless, Feu-house, Craigie, Tulloch, and Muirtown of Balhouse. There are two established ministers besides two helpers. The total population, in 1793, was estimated by the rev. J. Scott, at 10.871; the increase, since 1755, at 10.862.

19,871: the increase, fince 1755, at 10,852.
(3.) PERTH, an ancient city of Scotland, capital of the above county and parish, as it formerly was of the whole kingdom. The name is derived by some from the Celtic, in which language Peart or Peirt is said to fignify a finished labour, or com-Nete everk; but by others from its ancient name BERTHA, by the easy and natural change of B into P; which name in the German language fignifies illustrious or celebrated. About the time of the Roman invalion it was pollefled by that tribe of the Picts called HORESTI, along with Fifeshire, and that portion of Perthshire, which lies S. of the Tay; though the rev. Dr Playfair places their territory E. of that river. (See HORESTI.) What kind of town Bertha was, previous to the arrival of the Romans, whether it was compactly built, or only a collection of straggling huts, for the occasional assembling of the people, cannot now be accertained. But it is generally admitted, that it was regularly built and fortified at the command of Julius Agricola, about A. D. 79, while he was profecuting his conquests on the N. side of the

Forth; and by him, as a memorial of his success, named VICTORIA. And ample privileges are faid to have been bestowed on it by the Romans. It is recorded by Tacitus, and quoted from him, by Mr Henry Adamson, a native of Perth, and the son of Provost James Adamson, in his poem entitled The Mufes Threnodie, that, " When Agricola and his army first saw the Tay, and the adjacent plain on which Perth is now fituated, they cried out, Ecce Tiber! Ecce Campus Martius! " Behold the Tiber! Behold the Field of Mars!" compa ring what they faw to their own river, and to the extensive plain in the neighbourhood of Rome. Our poetical historian adds, that " Agricola pite ed his camp in the middle of that field, on fpot where Perth stands. He proposed to make a winter camp; and afterwards built what he tended should be a colonial town. He fortified with walls, and with a strong castle, and suppl the ditches with water, by an aqueduct from Almond. Also, with much labour to his soldied and probably to the poor natives, a large wood bridge was constructed over the river at Pertia "He was nearly 5 years establishing the Ros power on the N. of the Forth, till he was recall by Domitian."—Holinshed says, that there was ancient British temple built at Perth, in the fig near the Tay, dedicated to Mars. Geoffrey Monmouth fays, in his legendary history, that was built long before the birth of our Saviour, a British king, who was the son of Regan the cond daughter of K. Lear; that he governed whole island; and built other two temples, one Mercury at Bangor, and the other to Apollo Cornwall. Subterraneous relics of this ancient difice were discovered 3 feet below the firet, bout 1786, when Col. Mercer of Aldie erected elegant modern house on the fite of the ance temple. Two flat arches were discovered, un each of which was an apartment 26 feet long, 24 broad; with walls 31 feet thick. of Perth, as well as its ancient church and bridge built by the Picts, were dedicated by that prop to St John, the tutelary faint of the town; where fome perfons gave it the name of ST John TOWN; but the rev. Mr Scott fays, " it never wi fo called in any of the public writs, nor by the habitants in general." Fordun, Major, and other of our ancient historians, have recorded that in 1210, in the reign of K. William, a great inundant tion happened, which overflowed the town, car ried off the large bridge of St John, overthrew 14 ancient chapel, a rampart, and many houses; and that the king with his two fons were obliged to make their escape in a boat. Upon this fact, Hell tor Boece built a fabulous story, which is adopted by Buchanan himfelf, that the ancient town of Bertha having been thus fwept away, king Wil liam built a new city, in a different fituation where Perth now stands: but this fable has been sufficiently refuted by Lord Hailes, Walter Good all, and other eminent antiquaries; and there are many hundreds of charters still extant, which prove, that the city of Perth existed, and was known by its present name, long before the date fabulously assigned for its erection by Boece. Be tween 1201 and 1459, no fewer than 14 national councils were held at Perth. In 1298, its walls

were rebuilt by Edward I. of England, who made a the refidence of his deputies; till they were expelled, after an obstinate relistance, by K. Robert bruce. He attacked it in 1306, but was repulsed by the Earl of Pembroke, who fallied out and dekated Bruce at Methven. In 1311, however, Robut, after a fiege of fix weeks, scaled the walls, mi and burnt the town, and levelled the works. the the battle of Duplin, (see Duplin, No 1.) Mand Baliol took and fortified it: but it was in after surprised, by the Scots, and its fortifiations razed. K. Edward III, took possession of k = 1335, made it his head quarters, and refided ne for some time. The English historians have worded, that John E. of Cornwall, brother to LEdward III, died at Perth, in Oct. 1336; but ry omit a fingular circumstance mentioned by and and quoted by the rev. Mr Scott, in his I herally wounded by the fmall fword or dagger who had " remonstrated to him wanton cruelties he had committed upon s, in the western counties, which he had with fire and fword, though the people article; burning the churches, and many in them, who had fled thither, as to holy as of refuge;" &c. In 1339, Perth stood a fere against the regent, Robert, but was taby draining the ditch. In 1437, K. James I. numbered, at the Black Friars monastery by at Graham, who gave him 28 wounds, and then two defending him. The walls of the the repaired by his fon James IL. In 1644, vas leized by the Marq. of Montrose, after title of Tibbermoor. In 1651, Cromwell i; and the Commissioners built a citadel on Linch, capable of containing 500 men. In 14, the Earl of Mar with the rebels, lay a conbir time in it, after the battle of Dumblane; EDUNBLANE, No 2.) but they were dislodged the D. of Argyll, and obliged to retreat northds. In 1745, the rebels again obtained posof it; proclaimed James III; appointed magistrates, and attempted to fortify it, but foon compelled to retreat.—The first public nd of the reformed religion, in Scotland, was at Perth; where the celebrated John Knox, acted a sermon against idolatry, before several the principal nobility, on Thursday, 11th May, Immediately after fermon, a popish priest mag given some provocation, the people rose, M broke down the images and altars. A weekly has been preached upon Thurs ever since. Be city is populous and handsome; the streets reil paved, and tolerably clean; and the houses, the fireets and houses are, for the greater My disposed on a regular plan. Several streets min a direction parallel with the river, as far as nght line can bear this relation to a curve line, tarly between E. and W. These are again intersted by others extending between N. and S. Liny of the houses in the street called the Waterate feem to be very old. Towards the S. end that fireet flands the famous palace of the Gowfamily. The house, and the very room, where he attempt of the Gowries to seize or assassinate

converted into barracks for a train of artillery; but the back stair, down which the Ruthvens were thrown, is pulled down. This strange event, however magnified or attefted by contemporary writers, is made up of so many improbabilities, or circumstances for which no reason can be assigned, that Lord Hailes, in republishing the account printed by authority, 1600, preparatory to his further observations on it, seems justified in absolutely discrediting a fact which passed for problematical with so many persons at the very time. Dr Robertson supposes it a plot of Elizabeth to get James into her power. Mr Cant having discussed the whole story of the conspiracy in his notes on Adamson's Muse's Threnodie, p. 185-261, concludes, "that as this would have been a very impolitic measure, the best way of accounting for it is by James's known hatred to the Puritans, and wish to get rid of two popular characters." The king had been seized and forced from his favourites by the father of the Ruthvens 12 years before (1582), and though he affected to forgive him, took the first opportunity to condemn and execute him as a traitor, in 1584. Mr Camden was too good a courtier to speak with impartiality of any part of this weak monarch's conduct. The castle of Perth stood near the red bridge, which terminated the narrow street called Skinner-gate. At the end of the Castle-Rreet another narrow street leads W. to the Black-friars called Couvre few row, where the curfeu bell was. The kings of Scotland before James II. were crowned at Scone, and refided at Perth as the metropolis of the nation. cient kings of the Picts also often resided in it. James II. refided and was educated in the caftle of Edinburgh, and was crowned there in 1437. The parliaments and courts of justice were removed from Perth to Edinburgh, but Perth kept its priority till 22 James III. 1482. The church in which the celebrated John Knox preached is still standing. and is now divided into three; named the east, the middle, and the avest kirks. The east kirk is very handsomely modernised within. There is an old hospital, a considerable building, the founding of which is ascribed to James VI. The town-house shuts up the E. end of the High-street, on the W. bank of the Tay. A monastery of Carthusians was established by King James I. of Scotland, who loft his life on the spot, by the treachery of Athol and his accomplices. The king was buried in a very stately monument in this place, which was called monasterium vallis virtutis, one of the most magnificent buildings in the kingdom, which with others was deftroyed by the populace. The only remains of the magnificent Carthufian priory are the carved stones with which the SE. porch of St John's church is built, now greatly decayed. The king's garment full of stabs is still preserved The town was anciently provided with a stone bridge over the river, which an inundation fwept away; but a new and very fine one was built between 1766 and 1771, reckoned the most beautiful structure of the kind in North Britain, (See Bridge, & 9, No iff; and Kinnoul, No 3.) The flourishing state of Perth is owing to two accidents: 1. that many of Cromwell's wounded officers and soldiers chose to reside here, after he left he king was supposed to have been made, are now .. the kingdom, who introduced a spirit of industry

among the people; 2. the long continuance of the earl of Marr's army here in 1715, which occasioned vak fums of money to be spent in the place. But this town, as well as all Scotland, dates its prosperity from the year 1748; the government of this part of Great Britain having never been fettled till that time. Perth is a royal borough, and 2d in dignity to the metropolis. It had a royal charter from king David I. who died in 1153, and which was renewed and confirmed by another from K. William I. in 1210, which is still extant. Its delegates join with those from Dundee, Forfar, Cupar of Fife and St Andrews, in electing a reprefentative in the British imperial parliament. It is governed by a provoft, 4 bailies, (viz. 3 merchants and one tradefman,) a dean of guild, trea-furer, and 19 counfellors. Besides the old church above mentioned, which ferves for three, it has an elegant chapel of ease, at the W. end of the High-Street, which is just finishing: also an elegant new episcopal chapel, elegant and capacious churches occupied by the Burgher and Antiburgher Seceders, and the Congregationalists; besides a neat meeting-house possessed by the Independents, Glasites or Sandemanians; and other smaller ones occupied by other fects of Independents, Scots Epifcopals, Cameronians, Baptifts, Relief-Church Prefbyterians, Bereans, &c. There is also an Academy for Mathematics and other sciences, which has long had a high reputation; a public Library, and an Infirmary or Hospital, which was built in 1750, on the fite of the old Carthufian Monastery, and is very well managed. A new fet of schools are planned out and begun to be erected on the fite of the old Blackfriars, a little N. of the Printing Office. Perth is greatly improved within these few years, by a number of new streets and elegant new buildings: particularly George Street, which leads to the Bridge; Charlotte Street which leads from George Street to the North Inch; the Crefcent, an elegant row of new buildings in the form of a lunar erescent, W. from Charlotte Street; Rose Terrace, a new street running N. from the W. end of the Crescent; Methven Street, leading N. from the New Chapel of Ease towards the Barracks, which are also to be numbered among the numerous modern improvements of Perth; which from the additional plans at prefent in contemplation, seem to be but in their infancy. An entire New Town is intended to be built on the ground named, from being anciently occupied by, the Black Friars. They were a branch of Dominicans; their monastery was founded in 1231 by Alexander II: that of the Carmelites or White Friars, in the reign of Alexander III: the Charter House or Carthusian Monastery, in 1429, by James 1; and that of the Franciscans or Gray Friars, by lord Oliphant in 1460; but all of them were abolished at the Reformation. The population of Perth is estimated at about \$1,000 and is said to have increased one 3d fince 1745. It has two weekly markets on Wed. and Friday, and o annual fairs in March, April, June, July, Aug. Sept. Oct. and two in Dec. Perth was famous for its trade so early as the beginning of the 13th century. Alexander Neckham an ancient English author, who died in 1227, mentions it in the following diflich, quoted in Camden's Britannia:

14 Transis ample TAI, per rura, per oppida per

" Regnum sustentant illius urbis opes."

Which is thus translated by Bp. Gibson, in his translation of Camden:

" Great TAY thro' PERTH, thro' towns, thro' country flies;

"PERTH the whole kingdom with her wealth fupplies."

But as we wish to give a more particular account of its present trade, manufactures, fisheries, &c. than has yet been laid before the public, we post pone it to the article TRADE. Perth is lituated on the SW. bank of the Tay, 28 miles above its mouth; 40 W. of Edinburgh; 420 N. of London 64 NE. of Glafgow; 238 NE. of Dublin; 538W, of Montrose; 82 SSW. of Aberdeen; and 23 W of Dundee. Lon. 3. 27. W. Lat. 36. 12. N.

(4.) PERTH PROPER, a diffrict in the about county, firetching 20 miles in length, and at fair places 15 in breadth, is bounded on the NE. the Carle of Gowrie; on the E. by Angus; the W. by Stratherne; on the N. by Athol; a This is a fruit on the S. by the Frith of Tay. country, populous and well cultivated, abound with gentlemen who poffels opulent eftates; will farmers who understand agriculture; and with nufacturers who turn their industry to great count.

PERTH AMBOY, a city of New Jersey, accom ing to Dr Brookes, but, of New York, according Mr Cruttwell, in the county of Middlesex; sex on a neck of land between the Rariton and Arth Kill Sound. Both agree that it lies open to San Hook, and has one of the best harbours in the nited States; but Mr Cruttwell makes it i miles from New York, and 168 from Philad phia; whereas Dr Brookes and J. Walker mi it only 25 miles from New York. Lon. 74.50 75. 0. W. Lat. 40. 35. N.

PLRTINAX, an illustrious Roman emperor, the domillied about A. D 170. He was dehaded of a mean family; and like his father, who was either a flave or the fon of a flave, he In time time followed the employment of makmannal. His poverty did not, however, prein him from receiving a liberal education. For metime he was employed in teaching the Greek 🗪 🗫 Roman Pauguages in Etruria. He next have a foldier, and by his valour rofe to defices in the army, and was made conful Marchus. He was afterwards made gover-Maria, and at length of Rome itself. When was murdered, Pertinax was-univerdolor to fucceed to the imperial dignity. He speed with reluctance; but his mildness, his mony and popularity, convinced the fenate people of the propriety of the choice. He has name to be inscribed on any part of the inferior that they belonged but to the public. He melted the filver menuch had been raifed to Commodus, and his concubines, horses, arms, and other that of his pleasure. With the money mied, he abolithed all the taxes which Comby tad imposed. These patriotic actions him the affection of the worthest of his ands; but when he attempted to introduce athe preterian guards proper discipline, the was apprized of their mutinying, but inof flying, he boldly addressed them, and had begun to retire, when one of the most lous advanced and darted a javelin at his d. exclaiming, The foldiers fend you this. The knowed the bloody example; and Pertinax, thing up his head, and calling upon Jupiter to his death, was immediately dispatched. bominable murder happened A.D. 103. It looner known, than the enraged populace cted from all quarters, and uttering dreadful has against the authors of his death, ran up had not the courage to avenge it. Such Determented end of Pertinax, after he had 66 years 7 months and 26 days; and reign-Lacording to Dio Cathus, only 87 days. His were interred with great pomp by Di-Julianus, his fuccessor. Septimius Severus, saned the name of Pertinan, and punished with en ferenty all who had been accellary to his en ed his panegyric, and cauted him to be maked among the gods, appointing his fon chief Med. The day of his accession and his birthby were celebrated for many years after. VOL. XVII. PART I.

\* PERTINENCE. ] n. f. Ifrom pertinax, Lat.]
\* PERTINENCY. | Justiness of relation to the matter in hand; propriety to the purpole; appofiteness.-I have shown the fitness and pertinency of the apostle's discourse. Bentley.

(1.) \* PERTINENT. adj. [pertinens, Lat. pertinent. Fr.] Related to the matter, in hand; just to . the purpole; not ufelefs to the end propoled; apa polite; not foreign from the thing intended .-

My caution was more pertinent Than the rebuke you give it.

-I fet down what I thought perfinent to this bua finels. Bacon .- Here I thall frem a little to di recla, but you will by and by find it pertinent. Bacon .-He could find pertinent treatiles of it in books. Locke. 2. Relating; regarding; concerning. In this fense the word now used is pertaining.—Men shall have just cause, when any thing pertinent unto faith and religion is doubted of. Hooker.

(2.) PERTINENT OF LANDS, in Scots law. Sec LAW, Part III, Chap. II, Sect. III.

\* PERTINENTLY. adv. [from pertinent.] Apa politely; to the purpole.—Be modelt in the prefence of thy betters, speaking little, answering pertinently. Taylor .-

\* PERTINENTNESS. n. f. [from pertinent.]

Appolitenels. Dist.

\* PERTINGENT. ada. [pertingens, Latin.]

Reaching to; touching. Dist.

PERTLY. adv. [from pert.] 1. Brifkly; fmartly.—The first are pertly in the wrong. 2. Saucity; petulantly.-

Youder walis, that pertly front your town.

Shake

When you *pertly* raife your fnout, This, among Hibernian affes, Por theer wit, and humour patfes. Swift \* PERTNESS. r. f. [from pert.] 1. Brifk folly 1 faueinels; petulance.-

Dullness delighted ey'd the lively dunce,

Rememb'ring the herfelf was pertuejs once. Popes 2. Petty liveliness; spritcliness without force, dignity or folidity.—There is in Shaftesbury's works a lively pertnefs, and a parade of literature. Watts.

\* PERTRANSIENT. adj. [pertransiens, Lat.]

Pathog over. Dia.

(1.) PERTUIS, a town of France, in the department of the Mouths of the Rhone, and late province of Provence, near the Durance, 9 miles N. of Aix, 12 SSE. of Apt, and 27 N. of Marfeilles. Lon. 5. 36. E. Lat. 43. 44. N.

(2.) PERTUIS BRETON, a narrow firsit of the fea, between the coast of France and the isle of Ré.

(3.) PERTUIS D'ANTIOCH; a strait between the ifles of Oteron and Ré.

(4.) PERTUIS DE MAUMUSSON, a strait between the coast of France and the iffe of Oleron, about 4 of a league.

\* To PERTURB. v. a. sperturbo, Lat. \* To PERTURBATE. ) 1. To disquiet; to

deprive of tranquillity.-

Reft, reft, perturbed spirit. Sbak.

His perturbed tool within him mourns. Sandys. 2. To diforder; to confuse; to put out of regularity.-They are content to fuffer, rather than perturb the public peace. King Charles. - Sevinalie ty perturbing the real mable commands of virtue Brown-The accession or secession of bodies from 104 the earth's face perturb not the equilibration of either hemisphere. Brown.

\* PERTURBATION. n. f. [perurbatio, Lat. pepurbation, Fr.] 1. Disquiet of mind; deprivation of tranquillity.

Shame, and perturbation, and despair. Milton. -The foul doth manifelt all its passions and perturbations. Ray. 2. Reftleffness of pattions.-Natures, that have much heat, and great and violent defines and perturbations, are not ripe for action, till they have pulled the meridian. Bacon. 3. Dif-

turbance; diforder; confusion; commotion .-They did ever hang over the kingdom, ready to break forth into new perturbations and calamities. Bacon. 4. Cause of difquiet .-

O posith'd perturbation! golden care! Shak. 5. Commotion of paffions. -

Without perturbation, hear me speak. B. Jonson. \* PERTURBATOUR. n. f. perturbator, Lat. perturbateur, Fr.] Raner of commotions.

PERTUSED. adj. [pertujus, Lat.] Bored;

punched; pierced with holes.

\* PERTUSION. n. f. [from pertufus, Latin.] 1. The act of piercing or punching.—The manner of opening a vein, in Hippocrates's time, was by stabbing or pertufion, as it is performed on horses. Arbuthnot. 2. Hole made by punching or piercing .- An empty pot without earth in it, may be put over a fruit the better, if some few pertufions be made in the pot. Bacon.

PERTUSSIS, n. f. [Latin.] Chincough. See

MEDICINE, Index

(1.) PERU, a country of South America, bounded on the N. by Popayan, E. by Amazonia, S. by Chili, and W. by the Pacific ocean; extending from 1° 40' N-to 26° 10' S. Lat. and between 56° and 81° Lon. W. being about 1800 miles long; but its greatest breadth not exceeding 390.

(2.) PERU, BALSAM OF. See MYROXYLON.

(3.) PERU, DISCOVERY OF. This country was discovered by the Spaniards, and the first intelligence they had of it was from Nunez de Baiboa, ho had been raised to the government of Santa Maria in Darien, and who accidentally learned from a young eacique, that there was a country abounding with gold about 6 days journey to the S. Balboa fet out on the 1st day of September 2313, about the time that the periodical rains began to abate. He had only 190 Spaniards along with him; but all of them were hardy veterans, inured to the climate of America, and very much attached to their leader: 1000 Indians attended to carry their provisions and other necesfaries; and they had along with them fome ficice dogs. After a most painful journey of 25 days, he arrived at the South Sea; when he went into it up to the middle, and took possession of the ocean in name of the king of Spain. That part of the South Sea, he called the Gulf of St Miobacl; which name it still retains, and is fituated R. of Panama. From some of the caciques he extorted provisions and gold; others fent him prefents voluntarily. He led back his followers to Santa Maria, to refresh them after their fatigues; and fent an account to the court of Spain of the important discovery he had made, demanding 1000 men, to conquer the country he had newly discovered. But here his hopes were blast-

ed, the bing appointing Pedrarias Davila to fu perfede him, with the command of re flout ref fels, and 1200 foldiers. Baiboa submitted to the king's pleature, yet the new governor tried his for fome pretended irregularities committed by fore his arrival, and fined him of almost all be w worth. In the mean time, the Spaniards, paying no regard to the treaties concluded by Balba with the Indians, plundered and deftroyed a indiferiminately, from the gulph of Daries t lake Nicaragua. The new comers had also am ed about the middle of the wet feafon, when the excellive rains produced the most fatal disease To this was joined an extreme feare ty of pres fions; so that in a month above 600 Spania perified. Balboa fent remonstrances to Spain gainst the new governor; on which the kings pointed Balbya neutenant-governor of the tries on the South Sea, with very extensive thority; enjoining Pedrarias to support him his enterprises, and to consult with him in d thing which he hindeif undertook. But the a reconciliation took place in appearance, for that Pedrarian agreed to give his daught marriage to Balboa, yet he foon after had condemned and executed on pretence of dil ty. On the death of Balboa, farther discom were laid aside for some time; but there three persons at Panama who determined to in quest of this country. These were Erancia zarro, Diego de Almagro, and Hernand Lugies zarro and Almagro were foldiers of fortune, Luque was an ecclefiaftic; who afted bot priest and schoolmaster at Panama. There tederacy was authorifed by Pedrarias; and engaged to employ his whole fortune in the venture. Pizarro, being the least wealthy gaged to take upon himself the greatest sha the fatigue and danger, and to command the mament which was to go first upon the dilet Almagro offered to conduct the supplies of vitions and reinforcements of troops; and I was to remain at Panama, to superintend ever was carrying on for the general interest. 1524, Pizarro set saii from Panama with a veiled of small burthen, and 112 men; in the improper feafon of the whole year, the period winds, which were then fet in, being directif posite. The consequence was, that after bet about for 70 days, with much danger and fait he had advanced scarce as far to the SE. 282 ful navigator will now make in three days. touched at several places of Terra Firma, and the Pearl Mands, where he was found by gro, who had fet out in quest of him with al turcement of 70 men, and had fuffered fimila treffes, belides loting an eye in a combat will Indians. But the country of Popayan, fhor a better aspect, and the inhabitants more frie they determined not to abandon their sch Almagro returned to Panama, but the bad counts of the service gave his countryment an unfavourable idea of it, that Almagro levy only 80 men. The disasters and disappear ments they met with, in this new attempt, " fearce inferior to those they had already exp enced, when part of the armament at last real ed the bay of St Matthew on the coast of Qui and landed at Tacamez, where they met with a mere fertile and champaign country than any es had yet feen; the natives also being more wilzed, and clothed in cotton or woollen fuffs, formed with gold and fliver. But some of the motaries had informed their friends of their my dangers and loffes, which weighed fo much Peter de los Rios, the successor of Pedrarias, the prohibited the raifing of new recruits, and midipatched a veiller to bring home Pizarro this companions from the illand of Gallo. Alup and Luque advited Pizarro not to relin-th an enterprife on which they had built all er hopes. He therefore refused to obey the sonor's orders, and intreated his men not to andon him. But the calamities to which they d been exposed had such an effect, that when dew a one upon the fand with his fword, tellfuch as wished to return, that they might pass a a, only 13 remained with him. Pizarro is lattle troop now fixed their residence on thad of Gorgona, where they continued 5 in the most unwholesome climate imagiwhen a weifel arrived from Panama, in spence of the folicitations of Almagro and who had prevailed on the governor to t filled to the SE, and in 20 days discovered cult of Peru. They arrived at Tumbez, restable for its stately temple, and a palace of that or lovereigns of the country. Here they the reports concerning the riches of the ry were true; not only ornaments and fa-Talkis being made of gold and filver, but elich as were for common use. Yet to attempt conquest of this opulent empire with their torce, would have been madness; they stented themselves with viewing it, procuring of the beatts called Llamas, some vest-ls of and filver, and two young men, whom they rufled in the Castilian language. With these arrived at Panama in \$527.

4) Peru, history of, till the murder ATABALIPA. The empire of Peru is faid to t been originally possessed by independent is reckoned among the most savage in Ame-; siving more like wild beafts than men. For ralages they lived in this manner, when there cared on the banks of a lake called Titiaca, a and woman of majestic form, and clothed in mt garments. They declared themselves to the children of the sun, sent by their benefi-I parent to instruct and reclaim mankind. The ts of these extraordinary personages were to Capac and Mana Ocla. At their perfusleveral of the dispersed savages united, and, ring their commands as heavenly injunctions. and them to Cuzco, where they fettled, and to build a city. Manco Capac instructed men in all the useful arts; while Mama Ocla th the women to spin and weave; after which oco framed a code of laws for his new state. according to the Indian tradition, was nded the empire of the Incas, or lords of Pe-At first its extent was small, reaching not at 8 leagues from Cuzco. Within these limits, tyer, Manco exercised the most perfect desoulm, and the same was maintained by his succeffors, all of whom were not only obeyed as monarchs, but reverenced as deities. Their blood was held to be facred, and, by prohibiting intermarriages with the people, was never contaminated. The family, thus leparated from the rest of the nation, was diffinguished by peculiarities in dreis and ornaments, which it was uniawful for others to assume. When the Spaniards first vifited this country, they found it agitated by a civil war. Huma Capac, the rath monarch from the founder, was on the throne; a prince no lefs confpicuous for his abilities in war than for his pacific virtues. By him the kingdom of Quito was subdued, which almost doubled the extent of the Pernvian empire. Huana married the daughter of the conquered monarch, by whom he had a fon pared Atahualea, or Atahalipa, to whom, at his death in 1529, he left the king fora of Quito, bestowing the rest of his dominions upon Huascar, his eldest son, by a mother of the royal race. This produced a civil war, in which Atabilipa proved victorious, and afterwards, to fecure himself on the throne, put to death all the descendants of Manco; but he spared the use of his rival Hunfcar, who was taken prifener, that, by iffuing orders in his name, he might establish This contest had so much his own authority. engaged the attention of the Peruvians, that they never attempted to check the progress of the Spaniaros. The first intelligence Pizarro received of it was a mellage from Huascar, asking his affithance against Atabalipa. Pizarro therefore determined to push forward, while intesting discord put it out of the power of the Peruvians to attack him with their whole force. Leaving a garrison in St Michael, he began his march with only 62 horsemen, and 102 fout. He proceeded to Caxamalca, where Atabalipa was encamped, and was met by an officer with a valuable prefent from the Inca, accompanied with a proffer of his alliance. Pizarro pretended to come as the ambaffador of a very powerful monarch, who wished to aid him against his enemies. As the object of the Spaniards in entering their country was altogether incomprehensible to the Peruvians, they had formed various conjectures concerning it. whether their new guelts were beings of a fuperior nature, who had visited them from some beneficent motive, or formidable avengers of their crimes, and enemies to their repose and liberty. Pizarro's declaration of his pacific intentions, removed all the Inca's fears. The Spaniards were thus allowed to march across the fandy defert hetween St Michael and Motupe, and through a defile in the mountains to narrow and inaccessible, that a few men might have defended it. As they approached to Caxamalca, Atabalipa fent them presents of fill greater value. On entering Caxamalca, Pizarro took pollession of a large court, on one fide of which was a palace of the Incaand on the other a temple of the fun, furrounded with a strong rampart. When he had posted his troops in this advantageous station, he dispatched Hernando Soto, and his brother Ferdinand, to the camp of Atabalipa, to defire an interview with the Inca. They were treated with all the respectful hospitality usual among the Peruvians. and Atabalipa promifed to vifit the Spanith coin-

mander next day in his quarters. The decent deportment of the Peruvian monarch, the order of his court, and the reverence with which his Inbjects obeyed his commands, aftonified the Spaniards. But their eyes were more powerfully attracted by the yast profusion of wealth which they observed in his camp. On their return to Caxamaica, they gave fuch a def ription of it to their countrymen, as confirmed Pizarro in a re-fo trion which he had already taken, as daring as it was perfidious. He determined to avail himself of Atabaiipa's unsuspicious simplicity, and to feize his perfou during the interview. He divided his cavalry into 3 fquadrons, under his brothers Ferdinand, Soto, and Benalcazar; his infactiv was formed into one body, except 20 of most tried courage, whom he kept near his own person; the artillery, consisting of two field-pieces, and the crofs-bow men, were placed opposite to the avenue by which Atabalioa was to approach. Early in the morning the Peruvian camp was all in motion. But as Atabaiipa was folicitous to appear with the greatest spiendour and magnificence in his first interview with the strangers, the preparations were fo tedious, that the day was far advanced before he began his march. At length the Inca approached. First of all appeared 400 men in an uniform drefs,, as harbingers. He himself, sitting on a throne, almost covered with gold, filver, and precious stones, was carried on the shoulders of his principal attendants. Behind him came his chief officers. Several bands of fingers and dancers accompanied this cavalcade; and the whole plain was covered with troops, amounting to above 30,000 men. As the Inca drew near the Spanish quarters, father Vincent Valverede, chaplain to the expedition, advanced with a crucifix in one hand, and a breviary in the other, and in a long discourse explained to him the doctrine of the creation, the fall of Adam, the incarnation, the fufferings and refurrection of Jesus Christ, the appointment of St Peter as God's vicegerent on earth, the transmission of his apostolical power by succession to the popes, the donation made to the king of Caftile by pope Alexander of all the regions in the New World; and required Atabalipa to embrace the Christian faith, to acknowledge the jurisdiction of the pope, and to submit to the king of Castile as his lawful fovereign; promising, if he complied, that the Castilian monarch would protect his dominions, and permit him to continue in his royal authority; but if he should impiously refuse to obey this fummons, he denounced war against him in his master's name, and threatened him with the most dreadful effects of his vengeance. This strange harangue, unfolding deep mysteries, and alluding to unknown tacts, of which no power of eloquence could have conveyed a diffinct idea to an American, was fo lamely translated by an unikilful interpreter, that it was incomprehensible to Atabalipa. But some parts in it, of obvious meaning, filled him with aftonishment and indignation. His reply, however, was temperate. He faid that he was lord of his own dominions by hereditary right; that he could not conceive how a foreign priest should pretend to dispose of territories which did not belong to

him: that he, being the rightful poffessor, reful ed to confirm it; that he would not forfake th fervice of the Sun, the immortal divinity what he revered, to worship the God of the Spaniard who was subject to death; that with respect other matters, as he had never heard of them b fore, he defired to know where he had lame things fo extraordinary. " In this book," a Twered Valverede, reaching out to him his bres ary. The Inca opened it, and turning over the leaves, lifted it to his ear: "This," fays he, " filent; it tells me nothing;" and threw it wit difdain to the ground. The enraged monk, re ning to his countrymen, cried out, "To are Christians, to arms! the word of God is infused avenge this profauation on thefe improus dogs Pizarro immediately gave the fignal of affat At once the martial music struck up, the can and muskets began to fire, the house salide ficrcely, the infantry rushed on sword in b The Peruvians, aftonished at the unexpedict tack, fled with universal confernation, with attempting to defend themfelves. Pizarro, at head of his chosen band, advanced directly wards the Inca; and though his nobles crowd around him with zeal, and feil in numbers at feet, the Spaniards foon penetrated to the re feat; and Pizarro feizing the Inca by the a dragged him to the ground, and carried him prisoner to his quarters. The fate of the monaid increased the precipitate flight of his follows The Spaniards purfued them towards every qui ter, and, with delib-rate and unrelenting bard rity, continued to flaughter the wretched and fifting fugitives. Above 4000 Peruvians we killed. Not a fingle Spaniard feil, nor was wounded but Pizarro himfelf flightly. Thepl der taken was immense, but the Spaniards with the spaniards which being observed by the ca, he endeavoured to apply himfelf to their ing passion, avarice, to obtain his liberty: therefore offered such a rautom as quite allow ed them. The apartment in which he was co fined was 22 feet in length, and 16 in bread! and all this space he engaged to fill with vell of gold as high as he could reach. This propor was eagerly caught by Pizarro, and a line w drawn upon the walls to mark the slipulate Atabalipa, anxious for his liberty, it mediately dispatched messengers into all parts the empire, to collect the immense quantity gold which he had promifed; and though the u fortunate monarch was now in the hands of l enemies, fuch was the veneration which his fi jects had for him, that his orders were ober with as great alacrity as if he had been at full berty. In a short time Pizarro received i tel gence that Almagro was arrived at St Mich with a reinforcement. This was a matter of finall vexation to Atabalipa, who now confiden his kingdom as in danger of being totally on run by their strangers. For this reason he order ed to put his brother Hustear to death, left frould join against him. In the mean time, the Indians daily arrived at Caxamalca with va quantifies of treasure; the light of which so muc Inflamed the Spaniards, that they infifted upon a immediate divition: and this being complied with ( 253

there kill to the share of each horseman 8000 pekn, worth as many pounds flerling, and half as much to each foot foldier, Pizarro and his offites receiving shares proportionable to their dig-Eg. A 5th part was referred for the emperor, bather with some vetters of curious workman-After this, Atabalipa was very importunate wt Pizamo to recover his liberty; but the Spawith unparalleled treachery and cruelty, binow determined to put him to death. But, best some show of justice to this detestable actype him. He appointed himself and Almagro, makiwo affiliants, as judges; an attorney-general deam on the profecution in the king's name; components to affift the prisoner in his defence; d derks to record the proceedings. Before frange tribunal, a charge was exhibited full manurng. That Atabalipa, though a bafhad usurped the regal power; that he had sbrother and lawful fovereign to death; twas an idolater, and had offered up hufusifices; that he had a great number of these, &c. On these heads they proceedby the fovereign of a great empire, over they had no jurisdiction. To all these the linea pleaded not guilty. He called mand earth to witness the integrity of his and how faithfully he had performed and the perfidy of his accusers. and to be fent over to Spain to take his leare the emperor; but no regard was paid reaties. He was condemned to be burnt abich cruel fentence was mitigated to me; and the unhappy monarch was exewithout mercy. Hideous cries were fet his women as the funeral procession passed apartment; many offered to bury themalte with him; and on being hindered, themselves out of grief. The whole of Caxamalca was filled with lamentations, grickly extended over the whole king-

PERU, HISTORY OF, TO ITS FINAL SUB-ON BY THE SPANIARDS. The murder of pa did no service to the Spaniards. Friends raics accused them of inhumanity and trea-Lords of gold that were coming to Caxby order of the deceased Inca were now which was the first unfortunate confeof their late iniquitous conduct. The two of Indians united against Pizarro; and of the Spaniards not only exclaimed against cty of the judges, but would even have had not a ferife of the impending danthem quiet. At Cuzco the friends of proclaimed Manco Capac the legitimate of the late Inca. Pizarro fet up Taparpa, of Atabatepa, as emperor. Immediately nt for Cusco. An army of Indians opbi progress, but the Spanish cavalry bore pay thing before them. The conquerors great booty; and Pizarro dispatchedAlbiteduce Cuzeo, while he himself foundcolony in Xauna. Ferdinand Soto was with 65 horse to Cuzco, to clear the the remainder of the army. Mean time mediand as the Spaniards fet up no per-

fon in his room, the title of Manco Capac was univerfally acknowledged. A new fupply of foldiers arriving from Spain, Benalcazar, governor of St Michael, undertook an expedition against Quito, where Atabalipa had left the greatest part of his treasure. He accomplished his purpose with difficulty, but found that the inhabitants had carried off ail their gold and filver. About the faine time Alvarado governor of Guatimala, invaded Chili. In this expedition his troops endured fuch hardfhips, and fuffered fo much from the cold among the Andes, that a fifth part of the men and all the horfes died, and the rest were so much dispirited and emaciated, that they became quite unfit for fervice. Alvarado then returned to his government, but most of his followers enlisted under Pizarro. In the mean time Ferdinand Pizarro had landed in Spain, where he produced fuch immerfe quantities of gold and filver as quite aftonished the court. The general's authority was confirmed with new powers, Almagro had the title of governor conferred upon him, with jurifiiction over 200 leagues of a country lying S. of the province allotted to Pizarro. Pizarro then fettied the internal policy of his province, and removed the feat of government from Cuzco to Lima. Mean time Almagro had fet out on his expedition to Chili; (See Chili, § 2.) Pizarro encouraged his most distinguished officers to invade those provinces which had not yet been visited by the Spaniards. No sooner did Manco Capac perceive the Spaniards thus dividing their forces, then he feized the opportunity of making one vigorous effort to redrefs the wrongs of his countrymen, and expel the cruel invaders. Though strictly guarded by the Spaniards, he found means to communicate his intentions to the effet men of his nation, whom he joined in 1536, under pretence of celebrating a feftival which he had obtained liberty from Pizarro to attend. Upon this an army of 200,000 men collected. Many Spaniards were maffacred, and feveral detachments cut off; and while this vaft army laid flege to Cuzco, another formidable body invested Lima, and kept the governor shut up. The greatest effort, however, was made against Cuzco, which was defended by Pizarro and his two brothers, with only 170 men. The flege lasted 9 months; many Spaniards were killed; among whom was John Pizarro, the general's brother, and the best of them all. The rest were reduced to the most desperate situation, when Almagro appeared near Cuzco. He had now received the royal patent, creating him povernor of Chili. On his arrival his affittance was folicited by both parties. The Inca made many advantageous propofals; but at length attacked him in the night by furprife with a great body of chofen troops. But the Spanish valour and discipline prevailed, and the Peruvians were repulsed with such slaughter, that the remainder dispersed, and Almagro advanced to Cuz-Pizarro's brother took measures to oppose his entrance; but while prudence restrained both parties from entering into a civil war; each leader endeavoured to corrupt the followers of his antagonift. In this Almagro had the advantage; and fo many of Pizarro's troops deferted in the night, that Almagro was encouraged to advance towards

the tity, where he surprised the centinels; and this transaction, with the illiberal spirit of a party investing the house where the two brothers were lodged, he compelled them, after an obstinate defence, to furrender; and Almagro's authority. over Cuzco was immediately recognized. But Francis Pizarro, having dispersed the Peruvians who invested Lima, and received considerable reinforcements from other provinces, ordered 500 men under Alonfo de Alvarado to march to Cuzco to relieve his brothers. Almagro attacked him by furprife, defeated and dispersed his army, taking himself and some of his principal officers pri-Soners. This victory seemed decisive; and Almagro was advised to make it so by putting to death Gonzalo and Ferdinand Pizarro, and Alvarado. This advice, however, he declined from humamity; and inflead of marching directly against Pizarro, he retired to Cuzco; which gave his adversary time to recollect himself, and Aimagro again suffered himself to be deceived by pretended offers of pacification. The negociations were protracted for several months; Gonzalo Pizarro and Alvarado bribed the foldiers who guarded them, and escaped with 60 of Almagro's men. neral next proposed that all disputes should be Submitted to their fovereign; and on this principle, Almagro released those whom Pizarro wanted; which he had no fooner done, than the latter fet out for Cuzco with an army of 700 men, to which Almagro had only 500 to oppole; advanced without obstruction, and an engagement soon followed in which Almagro was defeated and taken prifoner. The conquerors behaved with great cruelty, massacring a great number of officers. Indians had affembled in great numbers to see the battle, with an intenton to join the vanquished; but were so much overawed by the Spaniards, that they retired after the battle was over, and thus loft the only opportunity they ever had of expelling their tyrants.—Almagro was at length gried, and condemned by Pigarro; and he was first strangled in prison, and then beheaded. He left one fon by an Indian woman whom he appointed his fuccessor. As during these diffensions all intercourse with Spain ceased, it was some zime before the accounts of the civil war were received at court. The first intelligence was given by some of Almagro's soldiers, who had left America on the ruin of their cause; and they did not fail to represent the injustice and violence of Pizarro in their proper colours, which strongly prejudiced the emperor against him. In a short time, however, Ferdinand Pizarro arrived, and endeavoured to give matters a new turn. emperor was uncertain which of them to believe, but resolved to send over one he could trust to investigate the matter. Mean time, Ferdinand was arrested at Madrid, and confined to prison, where he remained 20 years. The person nominated to this important trust was Christopher Vaca Di While Di Castro was preparing for his woyage, Pizarro, confidering himfelf as the unrivalled master of Peru, proceeded to parcel out its territories among the conquerors; and had this division been made with any degree of impartiality, the extent of country which he had to bellow was sufficient to have gratified his friends, and to have gained his enemies. But Pizarro conducted

leader. Large districts, in parts of the country most cultivated and populous, were set apart a his own property, or granted to his brothers, h adherents, and favourites. To others, lots k valuable and inviting were affigned. The follow ers of Almagro, amongst whom were many the original adventurers to whose valour Pizar was indebted for his success, were totally exclu They therefore murmured in fecret, a meditated revenge. Rapid as the progress of t Spaniards in South America had been since I zarro landed in Peru, their avidity of domini was not yet satiated. The officers to whom F dinand Pizarro gave the command of differ detachments, penetrated into several new prov ces; and though exposed to great hardshipsul cold regions of the Andes, and amidit the wo and marshes, they made considerable discus and conquefts. Peter de Valdivia re-assume magro's scheme of invading Chili; and madel progress in the conquest of the country, that founded the city of St Jago. But the enterp of Gonzales Pizarro was the most remarks He fet out from Quito at the head of 340 fold near one half of whom were horfemen, with Indians. Excess of cold and fatigue proved to the greater part of these last. The Span tho' more robuit, fuffered confiderably, but they descended into the low country, their tress increased. During two months, it rains cellantly, without any interval of fair weath dry their clothes. The vast plains upon they were now entering, either without in tants, or occupied by the rudest and least to trious tribes in the New World, yielded fubfishence. They could not advance a fig through woods, or marches. Such inceffand and fearcity of food, would have dispirited troops. But the fortitude and perfeverance They perfil Spaniards were insuperable. struggling on, until they reached the barks Napo, one of the large rivers which run in Maragnon. There, with infinite labour, the a bark, which was manned with 50 foldiers, Francis Orellana. The ftream carried them with fuch rapidity, that they were foon farof their countrymen, who followed flowly by At this distance from his commander OREL formed the scheme of distinguishing himse following the course of the Maragnon until i ed the ocean, and by furveying the vaft a through which it flows. This scheme was a as it was treacherous. For, if he violated hi to his commander, and abandoned his fells diers in a pathless desert, his crime is som balanced by the glory of having ventured navigation of near 2000 leagues, through un nations, in a vessel hastily constructed with timber, and by very unskilful hands, withou visions, without a compass, or a pilot. courage and alacrity supplied every defect. mitting himself fearlessly to the guidance stream, the Napo bore him along to the S he reached the great channel of the Mar He sometimes seized by force the provisions fierce favages feated on its banks, and fom procured a supply of food by a friendly

wurfe. After a long feerles of dangers and difweiles, which he encountered with amazing magmainity, he reached the ocean where new pertiswated him. These he likewise furmounted, and py late to the Spanith fettlement in the island Cuwhence he failed to Spain. The vanity wal to travellers who vifit regions unknown to sent of mankind, prompted him to mingle an musdinary proportion of the marvellous in the and se of his voyage. He pretended to have derived nations to rich, that the roofs of their series were covered with plates of gold; and membed a republic of AMAZONS fo warlike and powerful, as to have extended their dominionaconfiderable tract of the fertile plains which bld silited; fabies hardly yet exploded. The mat, however, deserves to be recorded, not onto one of the most memorable occurrences in adresturous age, but as the first event that led ertain knowledge of those immense refretch E. from the Andes to the ocean. less can describe the consternation of Piwhen he did not find the back at the conthe Napo and Maragnon, where he had Oreliana to wait for him. But imputing school from the place of rendezvous to fome accident, he advanced above 50 leagues the banks of the Maragnon, expecting every to he the bark appear with a supply of At length he came up with an offi-Oreilana had left to perith in the deservice he had remonstrated against his perhim he learned the extent of Orellana's and his followers perceived at once their therate fituation. The spirit of the stoutest steran funk within him; and all demanled back inftantly. Pizarro was now from Quito; and in that long march s encountered hardfhips greater than by had endured in their progress outward. compelled them to feed on roots and berlucat all their dogs and horses, to devour loathfome reptiles, and even to gnaw the of their faddles and fword belts: 4000 Inato Spaniards, perished in this wild and expedition, which continued near two as 50 men were aboard the bark with only 80 got back to Quito. These were with famine out with fatigue, that they had more the ece of spectres than of men. But Pizzarentering Quito, received accounts of a fathat threatened calamities more dreadthose through which he had passed. time that his brother made the partial I his conquetts above-mentioned, the adof Aimagro no longer entertained any bettering their condition. Great numdefnair resorted to Lima, where the house Amagro was always open to them: and portion of his father's fortune, which was fpent in affording them fublist-The warm attachment with which every who ferved under the elder Almagro delesself to his interests, was transferred to who was now grown up to manhood, and all the qualities which captivate the af-

fections of foldiers. Of a graceful appearance, dexterous at all martial exercises, bold, open, generous, he feemed to be formed for command ? and the accomplishments he had acquired heighsened the respect of his followers. The Almagrians, looking up to him as their head, were ready to undertake any thing for his advancement. Nor was affection for Almagro their only incitement; they were urged on by their own diffretles. Many of them, destitute of common necesfaries, and weary of loitering away life, a burden to their chief, began to deliberate how they might be avenged on the author of all their milery. Their frequent cabals did not pass unobserved; and the governor was warned to be on his guard against men who meditated some desperate deed, and had resolution to execute it. But, either from his native intrepidity, or from contempt of persons whose poverty rendered their machinations of little consequence, he disregarded the ad-This gave the Almamonitions of his friends. grians full leifure to digeft and ripen their scheme; and John de Herrada, an officer of great abilities, who had the charge of Almagro's education, took the lead in their confultations. On Sunday, the 26th of June, at mid-day, Herrada, at the head of 18 of the most determined conspirators, fallied out of Almagro's house in armour; and drawing their fwords, as they advanced hastily towards the governor's palace, cried out, "Long live the king, but let the tyrant die." Tho' Pizarro, was usually surrounded by a numerous trainof attendants, yet as he was just rifen from table, and most of his domestics had retired to their own apartments, the conspirators were at the bottom of the staircase, before a page in waiting could give the alarm. The governor, whom no form of danger could appal, starting up, called for arms, and commanded Francis de Chaves to make fall the door. But that officer running to the top of the staircase, wildly asked the conspirators what they meant? Inflead of answering, they flabbed him to the heart, and burst into the hall. A sew drawing their fwords, followed Pizarro into are inner apartment. The conspirators rushed for-ward after them. Pizarro, with no other armsthan his fword and buckler, defended the entryse and, supported by his half-brother Alcantara and his friends, maintained the unequal contest with the vigour of a youthful combatant. But the armour of the conspirators protected them, while every thrust they made took effect. Alcantara fell dead at his brother's feet; his other defendants were mortally wounded; and the governorno longer able to parry the many weapons furioufly aimed at him, received a deadly thrust fuil in his throat, funk, and expired. As foon as her was flain, the affassins ran out into the streets, and waving their bloody fwords, proclaimed the death of the tyrant. Above 200 of their affociates having joined them, they conducted young Almagroin folemn procession through the city; and assembling the magistrates and principal citizens, compelled them to acknowledge him as lawful fucceifor to his father in his government. The palace of Pizarro, with the houses of his adherents, were pilliged by the foldiers. The new governor marchcuk

ed into the heart of the empire, to reduce such he could be conveyed to Spain. Gonzales Pierre places as refused to acknowledge his authority. A multitude of russians joined him on his march. His army breathed nothing but vengeance and plunder: every thing gave way before it. If the military talents of the general had equalled the ardour of his troops, the war had ended here. Unhappily for Almagro, he had loft his conductor John de Herrada. His inexperience made him fall into the fnares that were laid for him by PeterAlvares, who had put himfelf at the head of the opposite party. In the mean time, Vaca Di Castro, who had been fent from Europe to try the murderers of old Almagro, arrived at Peru. As he was appointed to affume the government in cafe Pizarro was no more, all who had not fold themselves to the tyrant, hastened to acknowledge him. Castro instantly led them against the enemy. The armies engaged at Chapas on the 16th Sept. 1542, and fought with inexpressible obstinacy. Victory decided in favour of Castro. Those among the rebels who were most guilty, dreading tortures, provoked the conquerors to murder them, crying out It was I wbo killed Pizarro. Their chief was taken prisoner and died on the scaffold. While these scenes of horror were transacting in America, the Spaniards in Europe were employed in finding out expedients to terminate them; though no measures had been taken to prevent them. Peru had only been made subject to the audience of Panama, which was too remote. A supreme tribunal was established at Lima for the dispensation of justice, with authority to enforce and reward a due obedience to the laws. Blasco Nunez Vela, who prefided in it as viceroy, arrived in 1544, attended by his subordinates in office, and found every thing in the most dreadful disorder. To put an end to these tumults which now subfifted, would have required a profound genius, and many other qualities which are feldom united. Nunez had none of these advantages. He indeed possessed probity, firmness, and ardour; but he had taken no pains to improve these gifts. . With these virtues, which were almost defects in his lituation, he began to fulfil his commission, without regard to places, persons, or circumstances. Contrary to the opinion of all intelligent persons, who wished that he should wait for fresh instructions from Europe, he published ordinances, which declared that the lands the conquerors had leized should not pass to their descendants, and which dispossessed those who had taken part in the civil commotions. All the Peruvians who had been enflaved by monks, bishops, and persons belonging to the government, were declared free. Other tyrannical eftablishments also would soon have been proferibed; and the conquered people were on the eve of being theltered under the protection of laws, which would at least have tempered the rigours of the right of conquent, if even they had not entirely repaired the injuffice of them; but the Spanish government was to be unfortunate even in the good it attempted to effect. A change so unexpected filled those with consternation, who faw their fortunes thus wrested from them. From aftonishment they proceeded to indignation, murmuring, and fedition. The viceroy was degraded, put in irons, and banished to a defert island, till

ro was then returned from his hazardous expedition, which had employed him long enough to prevent him from taking a part in those revolutions which had fo rapidly succeeded each other The anarchy he found prevailing at his return, in spired him with the idea of seizing the suprem authority. His fame and his forces made it in possible that this should be refused him, but hi ulurpation was marked with fo many enormitie that Nunez was regretted. He was recalled from exile, and foon collected a fufficient number of forces to enable him to take the field. Civil con motions were then renewed with extreme fury l both parties. No quarter was asked or given either fide. The Indians took part in this as the had done in the preceding wars; some range themselves under the standard of the vice others under the banners of Gonzales. 15,000 to 20,000 of these unhappy wretches were scattered about in each army, dragged the artillery, levelled the roads, carried the gage, and deftroyed one another. Their querors had taught them to be fanguinary. ter a variety of advantages for a long time nately obtained, fortune at length favoured rebellion under the walls of Quito, in Jan 1545; and Nunez with the greatest part of men were mailacred. Pizarro took the roa Lima, where they were deliberating on the monies with which they should receive him. zaies contented himfelf with making his entit on horseback, preceded by his lieutenant, marched on toot. Four bishops and the trates accompanied him. The streets were with flowers, and the air refounded with This homage totally turned the head of a ma turally haughty, and of confined ideas. Gonzales potteffed both judgment and t ration, he might have rendered himself pendent. The principal persons of his wished it. Instead of this, he acted with cruetty, infatiable avarice, and unbounded Even those, whose interests were comm with those of the tyrant, withed for a dele Such a deliverer arrived from Europe in the fon of Peter Di la Gafca. Over this is a is their general drefs, bey never lay afide, even while they fleep. dians, who have acquired some fortune, the barbers and phlebotomifts, difthemselves from their countrymen by the of their drawers, and a finit, with lace five fingers broad fastened round like a band. They wear filver or gold buckles thoes though they wear no flockings; ta cloak of fine cloth, often adorned with m firer lace. Rum and brandy are drank tions of all ranks; but the excellive use of XXVII. PART L

fpirituous liquors chiefly prevails among the Meß tizos. Another liquor much ufed in this country is mate, which is made of an herb Paraguay. (See Paraguay, N° 4.) Gaming is carried to an extravagant height. The common people and the Indians, are greatly additted to stealing; but robberies are feldom heard of.

(7.) PERU, MINES OF. There are great nums bers of very rich mines which the waters have in-The disposition of the ground, which from the fummit of the Cordilleras goes continually shelving to the South Sea, renders such events more common at Peru than in other places. has been in tome infrances remedied. Joseph Salcedo, about 1660, discovered near Puna, the mine of Laycacoto. It was fo rich, that they often cut the filver with a chilel. It was at last overflowed with water, but in 1740, Diego de Bacna affociated with others to avert the springs. The labours, which this difficult undertaking required, were not finished till 1754. The mine yields as much now as it did at first. But mines still richer The mine yields as have been discovered. Such is that of Porost, which was found in the fame country where the Incas worked that of Porco. An Indian, named Healpa, in 1545, purfuing some deer; in order to climb certain steep rocks laid hold of a bush, the roots of which loofened from the earth; and brought to view an ingot of filver. The Indian had recourse to it for his own use. The change in his fortune was remarked by one of his countrymen, and he discovered to him the secret. two friends could not keep their counfel and cn-joy their good fortune. They quarrelled; on which the indifferent confident discovered the whole to his master, Villaroel, a Spaniard. this the mine was worked; and a great number of others were found in its vicinity; the principal of which are in the northern part of the mountain, and their direction is from N. to S. The fame of Potofi foon foread abroad; and there was quickly built at the foot of the mountain a town, contifting of 60,000 Indians and 10,000 Spaniards. The sterility of the foil did not prevent its being immediately peopled. Corn, fruit, flocks, American stuffs, European luxuries, arrived from every quarter. In 17.8 these mines produced annually near 973,000 l. without reckoning the filver which was not registered, and what had been carried off by fraud. From that time the produce has been fo much diminimed, that not above ith part of the coin which was formerly firuck is now made. At all the mines of Peru, the Spaniords, in purifring their gold and filver, use mercury, with which they are supplied from Guança Velica. The common opinion is, that this mine was difcovered in 1564. The trade of mercury was then ftill free: it became an exclusive trade in 157% At this period all the mines of merenry were thut? and that of Guança Velica alone was worked, the property of which the hing referred to himself. It is not found to diminish. This mine is dug in the very large mountain, of Potosi, 60 leagues from Lima. In its profound abys are seen streets, fquares, and a chapel, where the mysteries of religion on all festivals are celebrated. Millions of flambeaux are continually kept to enlighten it. The mine of Guança Velica generally affects those

who work in it with convulsions: and the other mines, which are not less unhealthy, are all worked by the Peruvians. These unfortunate victims of an infatiable avarice are crowded all together and plunged naked into these abysses, the greatest part of which are deep, and all excessively cold. Tyranny has invented this refinement in cruelty, to render it impossible for any thing to escape its restless vigilance. If there are any wretches who long survive such barbarity, it is the use of cocoa that preserves them.

(3.) PERU, MOUNTAINS, RIVERS, AND TOWNS OF. The principal moun ains of Peru are the Andes, or Cordilleras. See Andes, § 1—6. The chief rivers are the Sangay, Upano, Papra, Lafacunga, Titicaca, &c. The principal cities are Quito, Paita, Lima, Cufco, Potofi, Porco.

(9.) PERU, POPULATION OF. The population of Peru has not been afcertained with any precision. The city of Lima contains 54,000; Guayaquil, 20,000; Potofi, 25,000; Paz, 20,000, and Cusco, 26,000; in all 145,000; but these places are but a small part of the Peruvian empire.

(10.) PERU, PROVINCES, EXTENT, CLIMATE, &c. of. This extensive empire is governed by a viceroy, and is divided into three large provinces or audiences, called QUITO, LIMA or Los Reges, and CHARCAS. (See these articles.) This empire, when it was subdued, extended along the S. Sea, from the river of Emeralds to Chili, and on the land fide to Popayan, according to fome geographers. It contained within it that famous chain of mountains which rifes in the Terra Magellanica, and is gradually lost in Mexico, where it unites the fouthern parts of America with the northern. The climate differs extremely in different parts of the country, though it lies all within the torrid gone. Some places are exceeding hot; others mild and temperate: others, particularly the tops of the CORDILLERAS, and other high mountains, are covered with eternal inow; while other mountains, covered also with snow, constantly throw out torrents of fire and finoke. In fome places it never rains; in others the rains are excessive. Thunder florms are also exceedingly frequent in some places, while in others they are totally un-known. But no part of the globe is so often conwulfed by the most dreadful of all natural phenomena, earthquakes. Nor is any part of the empire so frequently visited by them as Lima. (See In Feb. 1797, a dreadful earthquake LIMA.) happened, by which great numbers of people perithed. In the provinces of Taninga, Ambato, Rio Bamba, Alaofi, and part of Quito and Chimbo, the houses were all levelled with the ground. The mountains shook with such violence, that they were dashed against each other, and the volcanos threw up burning lava, duft, stones, and avaler; and totally defiroyed Capalpi, San-Andrea, Duano, Guanando, Emlyies, and many other places. At Simbagna and Timba, new rivers burft forthe and several takes threw up flames. Yet in the whole of this empire, the climate is healthy; agg, rethere any malady peculiar to it; and most of the difference of Europe are little known in it. 3. (AL, PRU, QUADRUPEDS, BIRDS, INSECTS, &C. or. hagge cattle, which were early introduced from Europe, now run wild and are hunted.

Goats have also thriven well; but European he have degenerated. There are three species quadrupeds peculiar to Peru, viz. the Lana, vicuna and guanaco. They are all three species camels, though covered with wool, and h called camel-sheep. The lama is described in CAMELUS, N° 3, and the two latter are van of Pacos. See Camelus, N° 4. The m make cloth of their wool, and they are of service as beafts of burden, being very doci eafily kept. Their flesh is reckoned as no mutton. The guanaco is ufeful in the mines, ing metals one rugged roads, where no other could go. There are also a few tigers, as larg fierce as those of Africa, and a species of w roneoully called a lion. Alligators also fre the banks of the rivers. The most singular are the gallinazo, and the CONDOR, two d species of vultures. (See VULTUE.) The gr is of great use in preventing the country in ing over-run with alligators. They watch male alligators, concealed among the brane trees near the banks of rivers, and as foon have laid their eggs and retired, these bin down and devour them, tearing up such The condor is the buried in the fand. bird in this country, is very carnivorous, The ZUNBAD ten flies off with lambs. bummer, is a night bird peculiar to the mo and deferts. They are seldom seen, bu heard, by their finging and humming noise The humming birds likewise about are remarkable for their finallness of fize, beautiful vivid colours of their feathers. 8 CHILUS. The Toucan is also peculiar country. See RHAMPHASTOS. The bats monstrous size, and often suck the blood of Serpents are numerous, particularly rattle Spiders and most other infects are larger th of Europe. Earth worms are as long 24 arm, and as thick as one's thumb.

E

(12.) PERU, RELIGION OF THE ANCI TIVES OF. The Peruvians were taught by to adore the Creator, whom they dend Paca Camac, that intelligence which arim world. They feldom built temples or of crifices to him. One temple, however, 4 to The unknow God, the Spaniards found arrival, crected in a valley, thence named her of Paca Camac. The facrifices institute nour of the fun confifted chiefly of lambs; which they offered all forts of cattle, for corn, and even burnt their finest cloths of tar by way of incense. They had drink of made of maize, fleeped in water. They fome kind of veneration to the images of animals and vegetables that had a place Befides the folemnities at es temples. moon, 4 grand festivals were celebrated The first, cailed Raymi, was held in June, in honour of the fun, but of their first Inca Capac, and Coya Mama Ocla, his wife an whom the Incas confidered as their firk. descended immediately from the sun. At tival, all the viceroys, generals, govern nobility, affembled at Cuzco; and the In ciated in person as high-priest; though occasions the regular pontist, who was PER (259) PER

the uncle or brother of the Inca, officiated. On the morning of the festival, the Inca, accompanied his near relations, in order of their feniority, ment barefoot in procession, at day-break, to the earlet-place, where they remained looking atten-bely towards the east. The luminary no sooner secared, than they fell proftrate on their faces in the their god and father. The vassal princes, adsobility, that were not of the blood royal, At the fame in another square. The priests then a black lamb, in facrifice, first turning its and towards the east. From the entrails of the they drew prognostics of peace and war, The Peruvians believed in the immortality the foul. The Incas taught them that, on leathis world, they should enter into a state of expinels, provided for them by their god and fa-

othe fun. (13) PERU, SCIENCES AND ARTS IN. Before external of the Spaniards in America, the Perusame acquainted with some points of astro-They had observed the various motions supplinet Venus, and the different phases of The people divided the year by the but the Incas, who had discovered the marked out the fummer and a folitices by high towers, which they erected the E. and W. of Cuzco. When the fun rose opposite to 4 of those towers, on the E. the city, and fet against those of the W. then the fummer folftice; when it rose and the towers, it was the winter folftice. limbed also erected marble pillars in the great before the temple of the fun, by which they the equinoxes, under the equator, when he being vertical, the pillars cast no shade. while times they crowned the pillars with garof flowers and odoriferous herbs, and celea festival to the fun. They distinguished months by the moon, and their weeks were and quarters of the moon; the days of the week a diffinguished, as first, second, &c. When the eclipsed, they concluded it was on acof their fins, imagining that this phenomeportended famine, war, and pestilence, or ther terrible calamity. In a fimilar state of abon, they apprehended that the was fick, dying. They had philosophers, who taught sultivated poetry, and composed plays, and were acted before the king by the great of the court, officers, &c. They were acwith painting and statuary, but in all the ents of mechanic arts they were extremely Though many goldsmiths were conemployed, they had never invented an anany metal, but used a hard stone, and beat her plate with round pieces of copper instead of nor had they any files or graving tools. ar carpenters had no other tools than hatchets copper or flint; nor had they learned the use fron; though the country affords mines of it. Beir knives were also made of flint or copper. 14.) PERU, SOIL AND PRODUCE OF. The ferof the foil is incredible, for the fruits and owers of all the feafons are visible at the same e; and while some herbs of the field are fading, of the same kind are springing up; while

some flowers lose their beauty, others blow; when the fruits of the trees have attained their maturity, and the leaves begin to change their colour, frefa leaves bloffom, and fruits are feen in their proper gradations in fize and ripeness on the same tree. The same incessant fertility is conspicuous in the corn, both reaping and fowing being carried on at the fame time: fo that the declivities of the neighbouring hills exhibit all the beauties of the four feafons in one affemblage. Though all this is generally feen, yet there is a fettled time for the grand harvett: yet fometimes the most favourable feafon for fowing in one place is a month or two after that of another, though their distance does not exceed 3 or 4 leagues. Thus in different spots, sowing and reaping are performed throughout the year, the forwardness or retardment arising from the different fituations, and temperatures. The chirimoya is confidered as one of the most delicious fruits in the world. Its dimensions are various, being from z to 5 inches in diameter. It is imperfectly round, flatted towards the stalk, but all the other parts are nearly circular. It is covered with a thin foft fhell, which adheres fo closely to the pulp as not to be separated from it without a knile. The outward coat is green, variegated with prominent veins, forming all over it a kind of net-work. The pulp is white, and con-tains a large quantity of juice refembling honey, of a sweet taste, mixed with a gentle acid of a most exquisite flavour. The seeds are formed in several parts of the pulp, and are somewhat slat. The tree is high and tufted, the frem large and round, but with some inequalities, full of elliptic leaves, terminating in a point. The blossom and leaves are a darkish green. It is remarkable for its incomparable fragrance. The granadilla resembles a hen's egg, but is larger. The outfide of the shell is smooth, glossy, and of a faint carnation colour, and the infide white and foft. The shell contains a viscous liquid substance full of very fmall and delicate grains, less hard than those of the pomegranate. This medullary fubstance is separated from the shell by a fine and transparent membrane. Its fruit has a delightful sweetness blended with acidity, very cordial and refreshing, and so wholesome, that there is no danger of eating to excess. The frutilla, or Peruvian strawberry, is generally not above an inch in length, but much larger in some parts of Peru; but their taste, though juicy, and not unpalatable, is not equal to Wheat, barley, maize, potathose in Europe. toes, cassava, pimento, cotton, vines, olives, &c. are cultivated, and afford abundant produce.

(15.) PERU, TRADE AND MANUFACTURES OF. Commerce is chiefly carried on by Europeans, who are fettled in Peru. The manufactures are chiefly cottons, white and striped baize and cloths. On the arrival of the galleons at Carthagena, these traders refort thither to purchase European goods, which on their return they disperse through the provinces. Iron and steel are imported from Europe, and large quantities of indigo from Mexico; blue being the colour chiefly preferred, in apparel. With the wool of the vicuna, they make, at Cusco, stockings, handkerchiefs, and scar's. The same wool, mixed with that of the European sheep, serves for carpets and sine cloth. Inferior wool is

Digitized by Google

manufactured into ferges, oruggets, &c. Gold and filver toys, laces and embroideries are also made by the natives; the last chiefly by Peruvian girls, and Mestizos.

(16.) Peru, volcanoes of. The principal volcanoes are Sangay, Cotopaxi, Pichincha, and

TONGOURGUA. See these articles.

\* To PERVADE. v. a. [pervado, Lat.] 1. To pass through an aperture; to permeate.-

The labour'd chyle pervades the pores. Blackm. -Paper dipped in water or oil, and many other fubflances foaked in fuch liquors as will intimately pervade their little pores, become more transparent. Negut. 2. To pass through the whole extenfion.—An immaterial felf-active substance, that can penetrate and pervade it. Bentley .--

What but God, Pervades, adjusts and agitates the whole? Thomf. \* PERVASION. n. f. [from pervade.] The act of pervading or patting through.—Both those kinds of fluidity, afcribed to faltpetre, will appear to be caused by the pervasion of a foreign body. Boyle.

\* PERVERSE. adj. | pervers, Fr. perver fus, Lat.]

z. Distorted from the right.-

And nature breeds

Perverse, all monstrous, all prodigious things.

2. Obstinate in the wrong; stubborn; untractable. This was all thy care

To ftand approved in fight of God, though worlds

Judg'd thee perverse. Milton's Par. Loft. To so perverse a sex all grace is vain. Dryd. 3. Petulant; vexatious; peevish; desirous to cross

and vex; crois.-

I'll frown and be perverse, and say thee nay, So thou wilt wooe. Shak.

\* PERVERSELY. adv. [from perverfe] intent to vex; previfuly; vexatiously; spitefully; crossly; with pett, malignity.-Men perverfely take up piques and displeasures at others. Decay of Piety.- Men, that do not perverfely use their words, feldom miliake the fignification of the names of simple ideas. Locke.-

A patriot is a dangerous post,

When wanted by his country most,

Perverfely comes in evil times. Swift. \* PERVERSENESS. n. f. [from perverfe.] Petulance; peevishness; spiteful crosiness.

Virtue hath some perverseness; for the will Neither believe her good, nor others ill. Donne.

Her whom he withes most, shall feldom gain Through her perverseness. Milt. Par. Loft. The perverseness of my fate is such,

That he's not mine, because he's mine too much. Dryden.

Conviction does but more incense;

Perverseness is your whole defence. Swift. Perversion; corruption. Not in use.-Neither can this be meant of evil governours or tyrants, but o' fome perverseness and defection in the na-

tion itself. Bacon. \* PERVERSION. v. f. [perverfion, Fr. from perverse.] The act of perverting; change to someing worfe.--Women to govern men, flaves freem.n, are much in the fame degree; all being total y clations and perverfions of the laws of nature and nations. Bucen .- The hopes of enjoying the abbey lands would be an effectual incitement ( their perversion. Swift.

\* PERVERSITY. n. f. [ perverfité, Fr. from pe

verse.] Perverseness; crotiness.—
What strage perversity is this of man! Nor \* To PERVERT. v. a. [ perwerto, Lat. perwert Fr. 1. To differ from the true end or purpo -Instead of good they may work ill, and reru justice to extreme injustice. Spenser's Ireland .thou feeft the oppression of the poor, and viole perverting of justice in a province, marvel not. chuf. v. 8.-

If then his providence

Out of our evil feek to bring forth good, Our labour must be to pervert that end,

And out of good still to find means of evil. M —He has perverted my meaning by his glot Dryden.—Porphyry has wrote a volume to exp this cave of the nymphs with more piety! judgment; and another person has perverted to obscenity; and both allegorically. Broomercannot charge any thing upon their nature. we take care that it is not perverted by their cation. Law. 2. To corrupt; to turn from right; opposed to convert, which is to turn the wrong to the right.-

He in the ferpent had perverted Eve, Her husband she, to taste the fatal fruit. The fubtle practices of Eudoxius, bithop of stantinople, in perverting and corrupting the

pious Emperor Valens. Waterhand.

\* PERVERTER. n. /. [from pervert.] that changes any thing from good to bad; at rupter. - Where a child finds his own parent perverters, he cannot be so properly born, ## ned into the world. South. 2. One who de any thing from the right purpose.—He that a prohibition in a divine law, had need be fatisfied about the fense he gives it, left he the wrath of God, and be found a person his law. Stilling fleet.

\* PERVERTIBLE. adj. [from pervert.]

may be easily perverted. Ain auto the (1.) PERUGIA, a handsome, large, ancient populous city of Italy, capital of PERUGINO ed on a hill. It has a ftrong citadel, an united 3 colleges, 3 academies, and a bishop's sec. churches, and many other buildings are very fome. It is 60 miles NF. of Florence, 75 1 Rome. Lon. 12. 30. E. Lat. 43. 6. N.

(2.) PERUGIA, a lake of Perugino, 8 miles the city, N° 1. It is almost round, being about

miles in diameter, and has 3 islands. (1.) PERUGIANO, or ) a province of I (1.) PERUGINO, one of the smalle the territory of the church, bounded on the by Etruria; on the S. by Orvictano, and on E. by the duchies of Spoleto and Urbino, and the N. by the county of Castellana. It is 25 4 long, and 24 broad. The air is very pure, the foil fertile in corn and good wine. tal is Perugia.

(2.) PERUGINO. See MONTANINI.

PERVICACIOUS. adj. [pervicax, 12 Spitefully obtinate; peevilhly contumecient May private devotions be efficacious upon mind of one of the most pervicacious young tures! Glaciffu.

I've perus'd her well. Sb.k. Stylelf I then perus'd, and limb by limb Servey d. Milt. Par. Loft. PERUSER. n. f. [from peruse.] A reader; ex-

Ex. - The difficulties and hefitations of every will be according to the capacity of each per-Produ.

PERUSIA, an ancient town of Etruria, on the be, built by Oenus; where L. Antonius was belieged by Augustus, till he surrendered. (Strabe.) It is now called PERUGIA.

PERUVELS, a town of the imperial French republic, in the d p. of gemappes, and ci-devant prov. of Austrian Hainault, 5 miles N. of Condé.

(1.) PERUVIAN, adj. of or belonging to Peru.

(2.) PERUVIAN BALSAM. See MYROXYLON.
(3.) PERUVIAN BARK, or JESUITS BARK, the Bark of the Cinchona officinalis, a well known medicine. See Cinchona, No 3. The pale and the red are chiefly used in Britain. The pale is brought to us in pieces of different fizes, either flat or quilled, and the powder is rather of a lighter colour than that of cinnamon. The red is get nerally in much larger, thicker, flattish pieces, but fometimes also in the form of quills, and its powder is reddish like that of Armenian bele. It is much more refinous, and possesses the sensible qualities of the cinchona in a much higher degree than the other forts; and the more nearly the other kinds refemble the red bark, the better they are now confidered. The red bark is heavy, firm, found, and dry; friable between the teeth; does not separate into fibres; and breaks, not thivery, but short, close, and smooth. It has three layers: the outer is thin, rugged, of a reddish brown colour, but frequently covered with mosfy matter: the middle is thicker, more compact, darker coloured, very refinous, brittle, and yields first to the peftle: the inmost is more woody, fibrous, and of a brighter red. The Peruvian bark yields its virtues both to cold and boiling water; but the decoction is thicker, gives out its tafte more readily, and forms an ink with a chalybeate more fuddenly than the fresh cold infusion. This infufion, however, contains at least as much extraotive matter, but more in a state of folution; and its colour, on standing some time with the chalybeate, becomes darker, while that of the decoction becomes more faint. When they are of a certain age, the addition of a chalybeate renders them green; and when this is the case, they are in a state of fermentation, and effete. Mild or caustic alkalies, or lime, precipitate the extractive matter, which in the case of the caustic alkali is re-dissolved by a farther addition of the alkali. Lime-water precipitates less from a fresh infusion than from a fresh decoction; and in the precipitate of this last some mild earth is perceptible. The infusion is by age reduced to the same state with the fresh decoction, and then they deposite nearly an equal quantity of mild earth and extractive matter; fo that lime-water, as well as a chalybeate, may be used as a test of the relative strength and perishable nature of the different preparations, and of different barks. Accordingly cold infusions are found by experiments to be less perishable than decoctions; infusions and decoctions of the red bark than those of the pale; those of the red bark, however, are found by length of time to f war e more mild earth with the lime-water, and more extracted matter. Lime-water, as precipitating the extracted matter, appears an equally improper and difagreeable menstruum. Water suspends ti e refin by means of much less gum than has been supposed. Rectified a rit of wine extracts a bitterness, but no astringency, from a residuum of

to affections of cold water; and water extracts aftringency, but no bitterness, from the residuum of as many affishous of rectified spirit. The residua in both are infipid. From many ingenious experiments made on the Peruvian bark by Dr Irvine, published in a differtation which gained the prizemedal given by the Harveian Society of Edinburgh for 1.783, the power of different mention, as acting upon Peruvian bark, is afcertained with greater accuracy than had before been done: and, with respect to comparative power, the fluids after mentioned act in the order in which they are placed: -1. Dulcified spirit of vitriol. 2. Caustic ley. 3. French brandy. 4. Rhenish wine. 5. Soft water. 6. Vinegar and water. 7. Dulcified spirit of nitre. 8. Mild volatile alkali. 9. Redified spirit of quine. 10. Mild vegetable alkali. 11. Lime-water. antifeptic powers of vinegar and bark united are double the fum of those taken separately. The afiringent power of the bark is increased by acid of vitriol; the bitter tafte is destroyed by it. The officinal preparations of the bark are, 1. powder: of this, the first parcel that passes the sieve being the most resinous and brittle layer, is the strongest. 2. The extract: the watery and spirituous extract conjoined form the most proper preparations of this kind. 3. The refin: this cannot perhaps be obtained separate from the gummy part, nor would it be defirable. 4. Spirituous tinosure: this is best made with proof-spirit. The decollion: this preparation, tho' frequently employed, is yet in many respects inferior even to a simple watery infusion. The best form is that of powder; in which the conflituent parts are in the smoft effectual proportion. The cold infusion, which can be made in a few minutes by agitation,

ployed; and it may be given in form of electuary with currant jelly, with brandy, or with rum.
(4.) PERUVEAN CAMEL. See CAMELUS, N° 3. (5.) PERUVIAN HARE. See LEPUS, No 15.

the spirituous tincture, and the extract, are like-

wife proper in this respect. For covering the taste,

PESCE, Nicolas, a famous Sicilian diverwhom F. Kircher gives the following account " In the time of Frederic king of Sicily (fays I cher), there lived a celebrated diver, whose m was Nicolas, and who, from his amazing 🛍 fwimming, and his perfeverance under water, furnamed the fift. This man had from his fancy been used to the sea; and earned his sca fublishence by diving for corals and oysters, whi he fold to villagers on thore. His long acqui tance with the lea, at last, brought it to be alm his natural element. He was frequently know to spend five days in the midst of the waves, will out any other provisions than the fish which caught there and ate raw. He often swam from Sicily into Calabria, a tempestuous and q gerous passage, carrying letters from the He was frequently known to swim among gulphs of the Lipari islands, no way apprehent of danger. Some mariners out at fea, one observed something at some distance from the which they regarded as a fea-monster; but up its approach it was known to be Nicholas, who they took into their ship. When they asked hi

whither he was going in so stormy and rough a ka, and at such a distance from land, he showed them a packet of letters, which he was carrying to one of the towns of Italy, exactly done up in a bather bag, in such a manner as that they could so be wetted by the fea. He kept them thus propany for forme time in their voyage, converg and asking questions; and after eating; an harr meal with them, he took his leave, and, prog into the fea, purfued his voyage alone. horder to aid these powers of enduring in the dep, nature feemed to have affifted him in a very structurary manner: for the spaces between his legers and toes were webbed, as in a goode; and became so very capacious, that he could the in, at one inspiration, as much breath as wild ferve him for a whole day. The account shestraordinary a person did not fail to reach, he king himself; who commanded Nicholas to brought before him. It was no easy matter to Micholas, who generally spent his time in the sof the deep; but, at last, after much he was found, and brought before his The curiofity of this monarch had been recited by the accounts he had heard of the of the gulph of Charybdis; he now therem conceived, that it would be a proper oppormy to have more certain information. lesson commanded our poor diver to examine bottom of this dreadful whirlpool; and as an enent to his obedience, he ordered a golden I lung into it. Nicholas was not infenfi-Mitte danger to which he was exposed; danmuch known only to himfelf; and therefore he montrate: but the hopes of the rethe defire of pleasing the king, and the er of thowing his skill, at last prevailed. He styjumped into the gulph, and was as inwallowed up in its bosom. He continued three quarters of an hour below; during which the king and his attendants remained on soxious for his fate; but he at last appearbolding the cup in triumph in one hand, and way good among the waves with the It may be supposed he was received with when he came on shore: the cup was the reward of his adventure; the king orlim to be taken proper care of; and, as was formewhat fatigued and debilitated by his after an hearty meal he was put to bed, and to refresh himself by sleeping. When prits were thus restored, he was again brought tisfy the king's curiofity with a narrative of wooders he had feen; and his account was to blowing effect. He would never, he said, beyed the king's commands, had he been and of half the dangers that were before him. Were four things, he faid, which rendered Except dreadful, not only to men, but to fifthes leves. r. The force of the water burfting from the bottom, which required great strength nefit. 2. The abruptness of the rocks that on pery fide threatened destruction. 3. The force the whirlpool dashing against those rocks. And, I The number and magnitude of the polypous by some of which appeared as large as a man; and which, every where flicking against the rocks, reversed their fibrous arms to entangle him. Ber

ing asked how he was able so readily to find the cup that had been thrown in, he replied, that happened to be flung by the waves into the cavity of a rock against which he himself was urged in his descent. This account, however, did not satiefy the king's curiofity. Being requested to venture once more into the gulph for further difcoyeries, he at first refused: but the king, desirous of having the most exact information possible of all things to be found in the gulph, repeated his folicitations; and, to give them still greater weight, produced a larger cup than the former, and added also a purse of gold. Upon these considerations the unfortunate diver once again plunged into the whirlpool, and was never heard of more."

PESCENNIUS NIGER. See NIGER, Nº 1. PESCHIERA, a fmall but strong town of the Italian republic, in the dep. of the Mincio, diffrict and late duchy of Verona; with a caftle and a ftrong fort; seated on the Mincio; at its origin from the lake of Garda. This town and fort were abandoned by Gen. Beaulieu, and taken by the French, on the 30th May 1796; and the Auftrians, under Gen. Wurmfer, were again defeated near it on the 6th Aug. 1796. Lon. 11. 4. PETECHIZE, in medicine, a name given to those spots, whether red or of any other colour, which appear in malignant severs.

\* PETECHIAL. adj. [from petechie, Latin.] Peftilentially spotted.—In London are many severs with buboes and carbuncles, and many petechial or spotted severs. Arbuthnot.

PETFLANGE, a town of France in the depof the Mosche, 9 miles SW. of Sarguemines, and

131 NE. of Morhange.

PETELIA, or PETILIA, an aucient town of Italy, in Magna Græcia, the capital of Lucania, Built, or at leaft repaired by PHILOCTETES, who, after his return from the Trojan war, lêt his country Melibrea, his !ubjects having revolted. (Mela, ii, 4. Liv. xxiii, 20.) It made a sonspicious figure during the 2d Punic war, by its obstinate relistance to Hannibal. Marcellus, Hannibal's rival, was stain in a battle near its walls. It is now called Strongoli. See Strongoli.

(1.) PETER, ST, the apostle, born at Bethfaida, was fon of Jonas, and brother of St Andrew. (John 1. 42, 43.) His first name was Simon, but when our Saviour called him to the aposticthip, he changed his name into Cephas, that is, in Syriac, a Sone, or a rock; in Latin, petra, whence Peter. He was a married man; and had his house, his mother-in-law, and his wife, at Capernaum, upon the lake of Gennesareth. (Mark is 29. Mat. viii. 14. Luke iv. 38.) St Andrew having been first called by Jesus Christ, met his brother Simon, and told him (John i. 41.) " we have found the Meffiah," and then brought him to Jefus. After having passed one day with our Saviour, they returned to their ordinary occupation, fishing. But it is thought they were present with him at the marriage of Cana in Galilee. This happened A. D. 30. St Peter's miraculous draught of fithes; the cure of his wife's mother; his walking upon the waters; his answers to our Saviour's important questions; his presence at the transfiguration; his payment of the tribute; his queltion respecting forgiveness, and the destruction of the temple; his vain self-confidence that he would ftand by his Lord; his triple denial of him foon

after, with his confequent repentance; his meeting with him after his refurrection; his 2d miraculous draught of fifthes; our faviour's trying questions to him; his meeting with the other a posities; the miraculous gift of tongues; his for mon or address to the people; the consequent convertion of 3000 persons; his miraculous cun of the lame beggar; and convertion of other 1000 his imprisonment by the priefts and Sadoncees, m his boldness on that occasion; his annunciation of death to Ananias and Sapphira; his ad impr forment and liberation by an angel; his bolded before the Jewish rulers; his sufferings and di mission; his preaching at Samaria; his reproof Simon the magician; his cure of Eneas at Ly da; his raising up Tabitha from death; his vi at Joppa, the message to him from Cornelius, his convertion; Peter's vifit to him, and the fequences; his return to Jerusalem; with his prisonment by Herod Agrippa, A. D. 44; 34 recorded, with many other interesting particular in the Gospels, and Acts of the Apostles. A his delivery from prison by the angel, he lest rusalem; but we are not told what became him till the council held at Jerusalem in the 51. It is thought that before this time he m his ad journey to Rome, whence he wrote first epittle. St Peter was obliged to leave ! in the year 51 by order of the emperor Claud who had banished all Jews from thence. particulars of St Peter's life are little known A. D. 51. in which the council of Jerus was held, till his last journey to Rome, was some time before his death. Then bei quainted by revelation that the time of his was not far off (2 Pet. i. 14.), he wrote to faithful his 2d epillie. St Peter and St Paul to Rome about the same time, A. D. 65, they performed many miracles, and made I converts. Simon Magus by his tricks conti here to deceive the people, pretending him be the Messiah, and even attempting to ask to heaven. His festival is celebrate with that of St Paul on the 29th of June. ter died A. D. 66, after having been billed Rome about 24 or 25 years. His age was ! 74 or 75. It is agreed, that St Linus was his ceffor. St Peter has been made the author veral books; fuch were, his Acts, his Gosp Revelation, his work about preaching, and ther about judgment. There is extant, a history of St Peter, cailed the Recognitions, bed to St Clement

(2.) Peter of Blois, a learned man of 12th century, born about 1220, at Blois in Fee He was the first person who employed the same

word TRANSUBSTANTIATION, which hath ever fince made so great a noise. He was appointed preceptor to William II. king of Sicily in 1167, set obtained the custody of the privy feal. In 1188, he left Sicily, and returned into France. It was foon after invited into England by Henry I who employed him as his private fecretary, michim archdeacon of Bath, and gave him some other benefices. When he had spent a few years secont, he retired into the family of Richard Abp. of Canterbury, who had made him his feeday and chancellor about 1176. In this stain he continued to the death of the archbishop 1183, enjoying the highest degree of favour that presate. Our author remained in the e fation with Abp. Budwin, who fucceeded thard. He was also sent by that prelate to ad his cause before Pope Urban III. After the patter of Baidwin for the Holy Land in 1192, author was involved in various troubles in his ar; and died about the end of the 12th cen-He appears from his works, which may preckoned among the most valuable moof the age in which he flourished, to then a man of great integrity and fincere as well as of a lively inventive genius and mon erudition. His printed works confift the letters, which he collected at the defire of III.; of 65 fermons; and of 17 tracts on dif-

nt subjects. PETER THE HERMIT. See CROISADE, § 3. PETER I. Ryled PETER THE GREAT, CZAT, therwards emperor, of Russia, founder of fan empire; for though the country was hown, and of great antiquity, yet it had no of power, of political influence, or of gecommerce, in Luxope, tili his time. thorn in 1672; and was proclaimed czar when m years of age, in exclusion of John his elwither, who was of a fickly conftitution and in his understanding. The princels Sophia, of fifter, made an infurrection in favour of and to put an end to the civil war, it was agreed that the two brothers should jointly the imperial dignity. Peter had been very ght up not only through the general defects Ruffin education, but likewife through the the princess Sophia, who surrounded him orry thing that might Rifle his natural deof knowledge, deprave his mind, and enervate Mh picalures. Notwithstanding this, his intion for military exercises discovered itself in tenderest years. He formed a company of 50 commanded by foreign officers, clothed and after the German manner. He entered into the lowest post, that of a drummer; ber role otherwise than as a foldier of fortune. he design was to teach his nobility, that not birth, was the only title to military byments. He reinforced his company with tral others, till at last he had got together a As he had then no on his hands, he exercised them in all forts of the engagements, and by this means secured to telf a body of well disciplined troops. The t of a Dutch ressel which he had met with on the belonging to one of his pleasure-houses,

made fuch an impression on his mind, that he conceived the almost impracticable design of forming a navy. His first care was to get some Hollanders to build fome small vessels at Moscow; and he passed two successive summers on board English or Dotch ships, which fet out from Archangel, that he might instruct himself in every branch of naval affairs. In 1656 czar John died, and Peter was now fole mafter of the empire. In 1698 he fent an embaffy to Holland; and went incognito in the retinue, and vitted England as well as Holland, to inform himself fully in the art of thipbuilding. At Amsterdam he worked in the yard as a private inip-carpenter, under the name of Peter Michaelof; but he has been often heard to fay, that if he had never gone to England, he had remained ignorant of that art. In 1700 he had got together a body of standing forces, confishing of 30,000 foot; and now the vast project he had formed displayed itself in all its parts. He opened his dominions, which till then had been thut up, having first sent the chief nobility of his empire into foreign countries to improve themselves in knowledge and learning. He invited into R. alia all the foreigners he could meet with, who were capable of instructing his subjects in any thing, and offered them great encouragement to fettle in his domini-This raised many discontents; and the defpotic authority he exerted on that occasion was fearcely powerful enough to suppress them. In 1700, being strengthened by the alliance of Augustus king of Poland, he made war on Charles XII. king of Sweden. His first ill success did not deter him; for he used to say, "my armies must be overcome, but this will at last teach them to conquer." He afterwards gained confiderable advantages; and founded Petersburg in 1703. In 1700 he gained a complete victory over the Swedes at Pultowa. In 1712 he was inclosed by the Turks on the banks of the Pruth; and feemed inevitably loft, had not the czarina Catharine bribed the grand vizir, and the czar's prudence completed his deliverance. In 1716, he made a tour through Germany and Holland, and vifited the royal academy of sciences at Paris. It would be endless to enumerate all the various establishments for which the Russians are obliged to him. He formed an army according to the manner of the politest and most experienced nations; he fitted out fleets in all the four feas which border upon Russia: he caused many strong fortresses to be raised after the best plans; and made convenient harbours: he introduced arts and sciences into his dominions, and freed religion from many superfittious abuses; he made laws, built cities, cut canals, &c.; was generous in rewarding, impartial in puniffung; faithful, laborious, and humble; yet was not free from roughness of temper. He had indeed cured himfelf of excess in drinking; but he has been branded with other vices, particularly cruelty. He published the unfortunate history of his son prince A-LEXIS, whom he caused to be executed, and towards whom fome blame his feverity, while others think it was necessary. He was equally severe to his fon's friends. He beheaded his own brotherin-law Count Lapuchin, brother to his wife Ottokessa Lapuchin whom he had divorced, and uncle to prince Alexis. The prince's confessor had also his head cut off. The remainder of the czar's life was nothing but a feries of grand projects, labours, and exploits, that seemed to efface the memory of his excessive severities. He made frequent speeches to his court and to his council. In one he told them that he had facrificed his fon to the welfare of his dominions. He died of the strangury in 1725, and left the world at least with the magnanimity of a hero, if not with the piety of a Christian. Peter was tall of stature, and of a bold and majestic aspect, though sometimes disfigured by convultions, which altered his features. He converted with perfons in all stations. He loved women; and valued himself on drinking large draughts, rather than fipping delicious wines, For a minuter account of his improvements, &c. fee Russia, Petersburg, and Catharine I.

(5.) PETER THE IId. emperor of Russia, the son of the unfortunate prince Alexis, was born in 1715; and in 1927, succeeded the empress Catharine I. who had declared him grand duke in 1726. The most remarkable event of his reign was the difgrace of Pr. Menzikoff. See MENZI-

He died in 1730, aged 15.

(6.) PETER THE IIId, emperor of Russia, was the fon of Charles Frederick, D. of Holftein Gottorp, by the princess Anne, daughter of Peter the Great, and was born in 1728. On the death of the empreis Elizabeth, in 1762, he succeeded to the throne, but did not long enjoy it; being dethroned the same year, by his wife, САТНА-RINE II. He died in confinement 7 days afterwards, and, as is generally believed, was murdered in a barbarous manner, fimilar to that by which Edward II. of England perished. See Eng-

LAND, § 28, and Russia.
(7.) Peter the IIId. K. of Arragon, succeeded his father James I. in 1276, and turned his arms against Navarre, to which kingdom he laid claim; but failed in the conquest of it. He mar-ried the daughter of Manfred K. of Sicily; and, to effect the conquest of that island, contrived the horrible mailagre of the French, called the Sicilian Vefpers. (See Sicily.) For this crime he and. the Sicilians were excommunicated by Pope Mar-

tin IV, He died at Villefranche in 1282.
(8.) PETER THE CRUEL, K. of Caffile, succeeded his father Alphonius XI. in 1350, in his 16th year, and proved a most barbarous and bloody tyiant; which provoked his subjects to rebel and expe him; but, little to the honour of the English, was restored by their assistance under the command of the brave Black Prince Edward. He was afterwards, however, abandoned by him, and met his just fate from his brother Henry, Count of Trastamara, who killed him with his own Land. See Spain.

(9-12.) PETER, was also the name of 4 kings of Portugal. See Portugal.

(13.) PETER, or Don PEDRO, of Portugal, D. of Coimbra, was the 3d Ion of John, K. of Portingal, and born 4th March, 1394. He was one of the most accomplished princes of his age; was himself very learned, and was a patron of all To increase his knowledge, he learned men. travelled through the principal countries in Europe,

Afia and Africa, with a train fuitable to his quality; of which travels an account was published, but according to the spirit of the times, loaded with romantic fables. On his return, he manied Ifabel, daughter of Count Urgel, and grand-daughter of K. Peter IV. In his travels he vilited Eigeland, and was made a Knight of the Garter, April 32, 1417, by Lis coulin K. Henry V. who was grand-fon of John of Gaunt by the father, as Don Pedro was by the mother. In 1440, he was appointed regent of Portuga!, during the minority of his coulin Alphonfus V. His regency was fo mild as well as just, that the people of Lifbon asked leave to erect a statue to him, which this great prince declined. He governed the king dom with fo much propriety, that Portugal wa never more respected by the other powers of a rope. He diminished the taxes, maintained laws in their vigour, and gave the young king excellent education; who when he came of a was so pleased with his conduct, that he man and raifed to the throne, the Duke's daught Donna Ifabella, in 1446. Yet all his ments not prevent the envy of forme courtiers, who last got so much the ear of the filly monarch, to perfuade him, that the Duke was a tra Their villainous machinations at last effected death; but upon an inspection of his pap Alphonsus became convinced of his innoces and as the only amends he could now make on ed his body to be interred with every mark honour in his own sepulchre.

(14.) PETER, THE WILD BOY, a favage, for in the woods near Hamelen, a town in the cle rate of Hanover, when King George I. wh party of friends, was hunting in the force Hertswold. He was supposed to be then a 12 years of age, and had fublifted in those wor upon leaves, berries, wild plants, bark of to &c. from his infancy. How long he had been that state is not known. In 1726, he was bro over to England, and put under the care of Arbuthnot, with proper teachers. But the there appeared no natural defect in his organ speech, he could never be brought to articula fingle fyllable diffinctly. He was afterwards mitted to the care of different persons, but m acquired any degree of improvement. He of 22d Feb. 1785, when he was supposed to be years old. He was well made; middle-fize had no appearance of an idiot, nor any thingpt ticular in his form, except two of his fingers, nited by a web up to the middle joint. He delighted with music, and learned to hum atte He had a fore knowledge of bad weather. Monboddo gives a particular description of b as an inflance of his favourite hypothesis, the " man in a state of nature is a mere animal

PETER AND PAUL, ST, in geography. See

TROPAULOWSKOI.

(1.) PETERBOROUGH, a city of Northan tonshire, about 82 miles from London. It is least city, except perhaps Ely, and unquestional the poorest bishopric, though one of the old towns in England. It had a monaftery dedicate to St Peter, and founded as early as the year 64 to which the abbot of Croyland and his mon flying for protection in 870, they were overtake

and murdered in a court of this monastery called the nonly churchyard, because they were all buried here; and to this day is to be feen the tombstone with their effigies, which had been erected over their common grave. Soon after this the Danes throved both the monastery and friars, so that th defitute for above 100 years. The monks with a mitred abbot at their head, till the mution, when Henry VIII. converted it into thop's fee. The cathedral, which is faid to be than 1000 years old, though apparently modern, is a noble Gotffie fabric, and was ch more so before it was defaced in the civil The west front, which is 156 feet broad, boy fately; and befides columns curioufly ais supported by three of the tallest arches The windows of the cleifters are omamented with feripture paintings, and facerthon of its abbots. There are also in ment, monuments of Q. Catharine, wife of Will and of Mary queen of Scots; and the ad lived to 95, after he had buried all the spers of the town twice over. There is parish church besides the cathedral. The soverned by a mayor, recorder, and by a charter of Henry VIII. Belides and chapter, who are an ecclefiaftical ation diffinct from the bishop, there are 5 cmons, 4 students in divinity, and about 30 officers; with a grammar school, and two schools. The air of Peterborough is faid be very wholefome, by reafon of the neighfeas; but the water of the river is fresh pod, the highest spring tide never coming ting miles of the town; and there is plenaccelent water in their wells. The fireets poor, and the houses but mean; there is, ro, a handsome market-house, over which the affizes and feilions. Its jurisdiction boter 32 towns and hamlets, wherein the againstes appointed by the royal commission and with the same power as judges of assize, their quarterly fessions in this city. It to S. of Botton, and 81 N. of London. 10. W. Lat. 52. 30. N. Pereaborough, Countess of. See Ro-N. N. 1. PETERBOROUGH, E. OF. See MORDAUNT.

PITERBOROUGH, a town of Ireland, in thin county, and province of Ulfter.

PETERBOROUGH, a town of New Hamp-Pulliborough county; containing 861 📇 🗸 1795. It is feated on the Contoocook; manufactures of iron, cloth, paper, paint It is 70 miles W. of Portsmouth, and 2 Philadelphia.

MERCULTER, a parish of Scotland in Aber-E to W. and from 5 to 6 broad; on the is the Dee. The climate is healthy; the ragged and uneven, with rocky eminenmarthy flats interspersed. The arable i mixture of light loam, clay and moss, in hi fertile. The population, in 1794, was i Eccale 247 fince 1755. The number of

horses was 132; sheep 2,380; and black cattle 1000. About 250 acres are planted with firs and other trees. The principal manufacture is paper, which is carried on with great success. There is also a distillery. On the top of the hill of Old-town there are relies of a rectangular camp. The rampart is called Norman's Dyke.

(1.) PETERHEAD, a town of Scotland, in the county of Aberdeen, about 30 miles NE. of that city. It stands on the most easterly point in Scotland, and from thence due west that kingdom is broadest. It is the nearest land to the northern continent of Europe, and lies within 300 miles of the care, which is called the Naze of Norway. Through this channel the grand body of the herrings pass in their annual migrations from Shetland and the north feas to the more fouthern latitudes, attended with the all-devouring cod and ling; on which account Peterhead, or, as it is fometimes called, Buchanness, hath always been the fecond station of the Dutch buffes after leaving the Shetland islands. Tradition fays, that fome hundred years ago the Dutch offered Lord Marefchal, then the proprietor of the coaft, to cover a fmall island called Inch-Keith with filver for the property of it to carry on their fisheries, which for obvious reasons could not be accepted. Be that as it may, the Dutch still frequent the coast in July and August, and sometimes 100 fail are feen within fight of land, bufily employed in the herring and white fisheries. The natives, to whom this treasure properly belongs, have lately made some attempts towards the white fishery, of which they cure and vend chiefly at the London market 4000 barrels of delicate small cod and ling annually. They also fit out some vessels for the Hebride fishery off Barrahead for Barcelona market; and they claim the merit of having taught the islanders how to take and cure the large fish which abound on their coasts. They have often gained the highest premiums allowed by government for curing white fithes. Few harbours in Great Britain are of more importance to navigation than this of Peterhead, as, in case of violent ftorms from the easterly points, large veffels embayed betwixt this and the mouth of the Forth have not a port that they can fafely take at every time of the tide, that of Aberdeen excepted. If therefore they cannot make their way to fea in the teeth of a strong easterly wind, or double this headland that they may gain the Murray frith, they must inevitably come on shore. This har. bour lies on a spacious bay, where vessels of any burden may ride in all other winds, and is therefore the general rendezvous of the shipping which frequent the northern feas, where they cast anchor on clean ground, and ride fafely till the ftorms have abated. The harbour is defended by a good battery. A confiderable trade is carried on directly to the Baltic for deals, iron, hemp, tar, and other articles. There is also a manufacture of fewing thread, which employs many young girls. A mineral well in fummer gives great gaicty to the place; its falutary virtues have long, and very juftly, been celebrated. An analysis of this water has been given by Dr Laing; who found that one lb. avoirdupoife of the water contains 30% gr. muriat of iron; 7 gr. muriat of lime; 32 gr. carbonat of iron; 2 gr. filiceous earth; 2 gr. fulphat of lime; 134 gr. fulphate of foda; 75 muriat of Joda; and 831 cubic inches of carbonic acid gas. This water has long been in great repute for diforders of the fromach and bowels, gravel, droply, nervous affections, female complaints, fcrophula, leucophlegmafia, and difeafes of general debility.—The population of this town in 1794 was 2550. The town is in the form of a crofs, and is divided into 4 diffricts. The Townhouse is an elegant building at the head of the principal fireet; 60 feet long, 40 broad, with a fine clock and a spire 100 feet high. It cost above I. 2000. The late improvements of the piers have cost L 5000. The Keith Inch divides the harbour into N. and S. It has many elegant houses on it. Near it is a fort and a guard-house, with a battery of 4 twelve-pounders, and 4 eighteen-pounders. In 1795, this port had 28 veffels, carrying 3000 tons. In 1793, its trade was estimated at above 200,000 l. a-year. Peterhead is a burgh of barony, governed by a bailie and & councellors. There are many elegant houses for the accommodation of firangers. There is also a ball-room, under which there are two salt-water baths. Owing to the open peninfulated fituation, the air of this place is effected peculiarly pure and healthful; even the fogs rifing from the fea are thought to be medicinal: the town is therefore snuch enlivened by the concourse of company who frequent it on these accounts. The town is meat and well built, the houses are handsome, and the streets tolerably spacious and very clean; and at has every appearance of a thriving, plentiful, and happy place. It is 24 miles N. of Aberdeen and 25 ESE. of Banff. Lon. 1. 39. W. Lat. 57° 30′ 33″ N.

(2.) PETERHEAD, a parish of Aberdeenshire, in the diffrict of Buchan; 5 miles long from N. to S. and from 3 to 4 broad; comprehending about 5000 arable acres, and 2000 of moss and moor. The name is derived from the promonto-ry, No 3. The furface is level with a few eminences, the highest of which, STIRLING hill is scarce 200 feet above the sea level. The coast on the S. is high and rocky. The foil is very various from a fandy loam and thin harly foil to a rich deep black earth and ftrong clay. It is watered by the Ugie, which affords falmon, trouts, &c. The climate is cold but healthy. The chief crops are oats, barley, peafe, beans, turnips and potatoes. The population, in 1794, was 4,700; increase 1613, fince 1755. The number of hories was about 400; of sheep, 590, and black cattle

900. The roads are good.

(3.) PETERNEAD, anciently PETER'S HEAD, a promontory between the above town and the fea; which gives name to the town and parish. It is supposed to be the TAIXALON, or Taikalon, or Taikalon, or Taikalon, or Taikalon, or

(4:) PETERHEAD BAY, a bay on the coaft of Aberdeen, formed by the above town and promontory. It affords a very fafe anchorage for thips of any burden, in all strong gales from the W. WNW. or WSW.

PETERHOFF, a town in Ruffia, about 20 miles from Petersburg, diftinguished for its palace

and gardens. The palace was begun by Peter and finished by Elizabeth. As it is placed upor an eminence, it commands a most superby view of Cronitadt, Petersburg, the intervening gulf, as the opposite coast of Carelia. The palace is more magnificently furnished, and the suite of apar ments are truly princely. The presence chambles richly ornamented with portraits of the for reigns of the house of Romanos, who have reigned in Russia fince 1613.

PETER LE PORT ST, a market town England, in the fouth-east part of Guernley, Hampshire, in the British channel, consisting only one long and narrow street. The mouth the harbour is well set with rocks, and is on a fide defended by a caftle, one called the old of and the other castle-cornet. The governor of island generally resides here, who has the mand of the garrifon in this and all the other tles. The harbour has a good road, whence may fail with any wind, and from the mad under the guns of the castle to the pier, clo to the town. The pier is a noble work, for of rast stones, joined together with great at regularity; it is not only a security to the but, being contiguous to the town, is handle paved at the top with large mooth flag-guarded with parapets, and, being of 2 length and breadth, forms a pleafant walk, ing a free prospect of the sea and the neigh ing illands. Cornet-caftle, which command the town and the harbour, stands on a rock rated from the land by an arm of the fea, a than 600 yards wide, and not fordable but water in great fpring-tides.

PETER-PENCE, was an annual tributed penny, paid at Rome out of every family feaft of St Peter. And this Ina the Saxon when he went in pilgrimage to Rome about year 140, gave to the pope partly as also partly in recompense of a house crecked in for English pilgrims. And this continued paid generally until the time of King Henry when it was enacted, that from hencefor person shall pay any pensions, Peter-pence, ther impositions, to the use of the bishop of Rome.

TETERS, Father, a Jefuit, was confessed counsellor to James II. king of England prince difmissed him in 1688, because he was sidered as the author of those troubles in the kingdom was then involved.

(1.) PETERSBURG, or ST PATERSEE city of Russia, in the province of Ingria, an pital of the whole empire. It was found 1703 by Czar Peter the Great, whose ambit was to have a sleet on the Baltic; for which some the centre of trade throughout all in minions. The spot he pitched upon was a fenny, uncultivated island, formed by the

the of the Neva, before they fall into the gulph of Fin's id. In the fummer this island was coverad with mud; and in winter became a frozen , rendered almost inaccessible by dreary toand deep moralles, the haunts of bears, s, and other favage animals. Having taken won of Nattebourg, and the town of Neifchin 1703, Peter affembled in Ingria above men, Rushans, Tartars, Costacks, Livobe and others, even from the most distant parts empire, and laid the foundation of the ciand fortifications, which were finished in 4 almost in despite of nature. He was oed to open ways through forests, drain bogs, lykes, and lay caufeways, before he could the new city. The workmen were ill prowith necessary tools and implements, such pules, pick-axes, fliovels, planks, and wheelthey were even obliged to fetch the from a great diftance in the skirts of their or in little bags made of old mats and I level together. They had neither huts nor 10 shelter them from the severity of the the country, which had been defolated could not accommodate such a multitude my movisions; and the supplies by the lake Laproce often retarded by contrary winds. In mence of these hardships, above 100,000 are faid to have perithed; nevertheless the proceeded with incredible vigour and expewhile Peter, for the fecurity of his workformed a great camp, in such a manner, infantry continued in Finland, and his cawere quartered in Ingria. The buildings of kept pace with the fortress, which is the the town, furrounded on all fides by the and in little more than a year, above bouses were erected. At present there may double that number in Petersburg, tho' of them are inconsiderable. To people this Peter invited merchants, artificers, mechaleamen, from all the different countries pe: he demolified the town of Nieuschants, bought hither not only the materials of the but the inhabitants themselves. A thou-Miles were drawn from Moscow; he obhis nobility to quit their palaces and their and about Moscow, and take up their reat Petersburg, in a much more cold and finally, refolving to remove trade of Archangel, he issued an ordonimporting, that all fuch merchandife as conveyed to Archangel, to be fold to should now be fent to Petersburg, they should pay no more than the usual These regulations have rendered this one petatest and most slourishing cities in Eu-The Ruffian boyars and nobility have built silvent palaces, and are now reconciled to attuation. At first many houses were built but these being subject to sudden conions the Czar, in 1714, issued an order, wered with tiles. The fort is an irregular with opposite bastions. This, together the reft of the fortifications, was in the formed of earth only; but in the fequel was faced with firong walls, and provided

with casemates, which are bomb-proof. In the curtain of the fort, on the right-hand fide, is at noble difpenfary, well fupplied with excellent medicines, and enriched with a great number of porcelain vases from China and Japan. The most remarkable building within the fort is the cathedral, built by the direction of an Italian architect. Petersburg is partly built on little islands, some of which are connected by draw-bridges; and partly on the continent. In the highest part, on the bank of the Neva, the Czar fixed his habitation, built of freeftone, and fituated fo as to command a prospect of the greater part of the city. Here likewife is a royal foundery; together with the fuperb houses of many noblemen. On the other tide of a branch of the Neva stands the Czar's furnmer palace, with a fine garden and orangery. Petersburg is very much subject to dangerous inundations. In 1715, all the baftions and drawbridges were either overwhelmed or carried away. The breadth, depth, and rapidity of the Neva. have rendered it extremely difficult, if not impracticable, to join the islands and the continent by bridges. The adjacent country is so barren, that the town must be supplied with provisions from a great distance; consequently they are extremely. dear. Here are woods in plenty, confifting of pine, fir, alder, birch, poplar, and elm; but the oak and the beech are generally brought from Cafan. In winter the weather is extremely cold, and hot in the fummer. Peter the Great established, in the neighbourhood of Petersburg, manufactures of linen, paper, faltpetre, fulphur, gunpowder, and bricks, together with water-mills for fawing timber. He inftituted a marine academy, and obliged every confiderable family in Ruffia to fend at least one fon or kinfman, between the ages of 10 and 18 to this feminary. To crown his other. plans of reformation, he granted letters patent for founding an academy, upon a very liberal endowment; and though he did not live to execute this scheme, his empress, who survived him. brought it to perfection. It was modelled on the plans of the royal fociety in London, and the academy of France. The present divisions of the town are called, r. The Admiralty quarter; 2. the Vashili Oftrof or Island; 3. The Fortress; 40 The Island of St Petersburg; and, 5. The various suburbs of Livonia, of Moscow, of Alexander Nevski, and Wiburgh. The late Empress did so much for this city, that the may not improperly be called its second foundress. It is, nevertheless, ftill an infant place, and, as Mr Wraxhall observes. " only an immense outline, which will require future empresses, and almost future ages, to com-plete." The streets in general, says Mr Coxe are broad and spacious; and three of the principal ones, which meet in a point at the Admiralty, and reach to the extremities of the fuburbs, are at least two miles in length. Most of them are paved; but a few are still suffered to remain floored with planks. In feveral parts of the metropolis, particularly in the Vailili Oftrof, wooden houfes and habitations, fearcely superior to common cottages, are blended with the public buildings; but this motley mixture is far lefs common than at Moscow, where alone can be formed any idea of an ancient Russian city. The brick houses are amamented

ornamented with a white flucco, which has led feveral travellers to fay that they are built with ftone; whereas, unless I am greatly mistaken, there are only two stone structures in all Petersburg. The one is a palace, building by the empress upon the banks of the Neva, called the marble palace; it is of hewn granite, with marble columns and ornaments; the other is the church of St Isaac, conftructed with the same materials, but not yet finished. The mansions of the nobility are many of them vast piles of building; they are furnished with great cost, and in the same elegant style as at Paris or London. They are situated chiefly on the S. fide of the Neva, either in the Admiralty quarter, or in the fuburbs of Livonia and Moscow, which are the finest parts of the city." See NEVA. Mr Coxe calculates the number of inhabitants in Petersburg, at 130,000. An equestrian statue of Peter I. in bronze, of a colosial fize, the work of Monfieur Falconet, the celebrated French statuary, was cast at the expence of Catharine II. in honour of her great predeceffor. Mr Coxe gives a particular description of it. The statue was erected on the 27th of August 1782, upon a pedestal of a most prodigious magnitude; the stone when landed, (a labour of 6 months) being 42 feet long at the base, 36 at the top, 21 thick and 17 high; a bulk greatly furpassing in weight the most boasted monuments of Roman grandeur. The weather is extremely changeable in this capital, and the cold is at times extreme. It fometimes happens that coachmen or fervants, while they are waiting for their mafters are frozen to death. To prevent these dreadful accidents, great fires of whole trees, piled, one upon another, are kindled in the court-yard of the palace and the most frequented parts of the town." Petersburg is 300 miles NE. of Stockholm, 355 NW. of Moscow, 540. NNE. of Warfaw, 525 NE. of Copenhagen, and 750. NE. of Vienna. Lon. 30. 25. E. Lat. 59. 26' 23" N.

(1.) \* PETITION. n. f. [petitio, Latin.] Request; intreaty; supplication; prayer.-We must propose unto all men certain petitions incident and very material in causes of this nature. Hooker.

My next poor petition

Is, that his noble grace would have some pity Upon my wretched women.

-Let my life be given at my petition, and my people at my request. Efther, vii. 3.—A house of prayer and petition for thy people. 1 Mac. vii.-We must send up petitions and thoughts now and then to heaven. Law. 2. Single branch or article of a prayer.-

This last petition heard of all her pray'r. Dryd. (2.) Petition, in law, is a supplication made by an inferior to a fuperior, and especially to one having jurifdiction. It is used for that remedy which the subject hath to help a wrong done by the king, who hath a prerogative not to be fued by writ: In which fense it is either general, That the king do him right; whereupon follows a general indorfement upon the fame, Let right be done the party: Or it is special, when the conclusion and indorfement are special for this or that to be done, &c. By statute, the foliciting, labouring, or procuring the putting the hands or confent of above 20 persons to any petition to the king or either house of parliament, for alterations in church or state, unless by assent of three or more justices of the peace of the county, or a majority of the grand jury at the affizes or fessions, &c. and repairing to the king or parliament to deliver fuch petition with above the number of ten persons, is fubject to a fine of 100 l. and three months impriforment, being proved by two witnesses within fix months, in the court of B. R. or at the affizes. &c. And if what is required by this statute be observed, care must be taken that petitions to the king contain nothing which may be interpreted to M m reflect!

Sbak.

reflect on the administration; for if they do, it may come under the denomination of a libel: and we is remarkable, that the petition of the city of London for the fitting of a parliament was ocemrd libellous, because it suggested that the king's dissolving a late parliament was an obstruction of justice; also the petition of the seven bishops, sent to the Tower by James II. was called a libel, &c. To subscribe a petition to the king, to frighten him into a change of his measures, intimating, that if it be denied many thousands of his subjects will be discontented, &c. is included among the contempts against the king's person and government, tending to weaken the fame, and is punishable by fine and imprisonment.

To PETITION. v. a. [from the noun.] To

folicit; to supplicate.

You have petition'd all the gods

For my prosperity. Sbak. The mother petitioned her goddels to bestow upon them the greatest gift that could be given. Addison.

\* PETITIONARILY. adv. [from petitionary,] By way of begging the question.—This doth but petitionarily infer a dextrality in the heavens. Brown.

\* PETITIONARY. adj. [from petition,] 1. Supplicatory; coming with petitions.-

Pardon thy petitionary countrymen. It is our base petitionary breath

That blows 'em to this greatness. Ben Jonsan. 2. Containing petitions or requests.—Petitionary prayer belongeth only to fuch as are in themseives impotent. Hooker.—I return only yes or no to

questionary and petitionary epistles. Swift.
\* PETITIONER. n.f. [trom petition.] One who offers a petition.-When you have received the petitions, and it will please the petitioners well to deliver them into your hand. Bacon. - V. hat pleafure can it be to be encumbered with dependences, thronged and surrounded with petitioners? South. -Their prayers are to the reproach of the petitioners. L'Estrange.

Tears, the dumb petitioners of grief. Dryden. The Roman matrons presented a petition to the fathers; this raised so much railiery upon the petitioners, that the ladies never again offered to

direct the lawgivers of their country. Addison.
PETITIO PRINCIPIL, in logic, the taking a thing for true, and drawing conclusions from it as such, when it is really false; or at least wants to be proved before any inferences can be drawn from it.

(1.) \* PETITORY. adj. [petitorious, Lat. petitaire, Fr.] Petitioning; claiming the property of any thing. Ainfavortb.

(2.) PETITORY ACTION, in Scots law. See

LAW, Part III. Chap. III. Sell. I.

PETITOT, John, a curious painter in enamel, born at Geneva in 1609. He arrived to a degree of perfection that may almost be accounted in mitable. He however, only painted the heads and h inds of the figures: the hair, grounds, and drapery, being executed by Bordier his brother-inlaw. There two artists had the credit of labouring together for 50 years, in the greatest harmony. ale painted the portraits of Charles I. and his fapully. He then went to Paris, where he was highly favoured by Lewis XIV. and acquired an ample fortune. Being a Protestant, the revocation of the edict of Nantes obliged him to tetire to Geneva; but fettling foon after at Veray in Bern, he passed the remainder of his life in affluence. He died in 1691; and had 17 children: of whom one took to painting, and fettled at London, where he gained reputation; but was much inferior to his father. Petitot may be called the inventor of painting portraits in enamel. He made use of gold and silver plates, and seldom enamelied copper. His price was 20 louises a head, which he foon raifed to 40.

PETITPIERRE, Ferdinand Oliver, an eminer Protestant French divine, who flourished the the beginning of the 18th century. He was I nifter of a church in Chaux De Fond, and public ed a work entitled, Thoughts on the airvine ness; divided into 3 chapters, containing the nition, Proofs, and Consequences, of the infigoodness of God. This work has gone thro many editions, and has been translated into lith and other languages. But one of the tenets included in it, being, that the State of ture punishment, (which, however, he place a most terrisic point of view,) is not eternal, that all men will be finally happy, he was prohibited from preaching, and afterwards fed. A translation of this work was publified

Edinburgh in 1799, 12mo.

PETIVER, James, P. R. S. an eminent E botanist, contemporary with Plukenet. He bred an apothecary with Mr Fentham, of & He settled in Alder tholomew's hospital. Street, and became apothecary to the Charter-He made a collection in natural history, lot able, that Sir Hans Sioane offered him L 400 it before his death, and purchased it aftered He was elected F. R. S. and affifted Ray in the vol. of his History of Plants. He engaged the tains and furgeons of ships to bring him specimens of foreign plants; and enabled the felect proper objects by printed directions. wrote 1. TRARCH, Francis, a celebrated Italian bom at Arezzo in 1304. He studied grammetoric, and philosophy, 4 years at Caris whence he went to Montpelier, where he ed the law. His father and mother dying of pague at Avignon, he returned to that city 12 12 years of age to fettle his domestic affairs, purchased a country house in a very solitary grecable fituation, called Vaucluse; where he as the beautiful Laura, with whom he fell re, and whom he has immortalifed in his He travelled into France, the Netherand Germany; and at his return to Avigentered into the service of Pope John XXII. employed him in several important affairs. arch expedied some confiderable posts; but disappointed, he applied himself entirely to 7; in which he met with fuch applause, in the same day he received letters from and Paris inviting him to receive the poetic He preferred Rome, and received that In from the fenate and people on the 8th A-

pril 1341. His love of solitude at length indiced him to return to Vaucluse; but, after the death of the beautiful Laura, Provence became infupportable to him, and he returned to Italy in 1352; when, being at Milàn Galeas Viceconti made him counsellor of state. Petrarch spent almost all the rest of his life in travelling to and from the different cities in Italy. He was archdeacon of Parma, and canon of Padua; but never received the order of prieshood. All the princes and great men of his time gave him public marks of their esteem; and while he lived at Arcqua, 3 miles from Padua, the Florentines fent Boccace to him with letters, inviting him to Florence, and informa ing him, that they restored to him all the estate of which his father and mother had been deprive ed during the diffensions between the Guelpha and Gibeiines. He died a few years after at Arc-qua, in 1374. He wrote many works that have rendered his memory immortal; printed in 4 volumes folio. His life has been written by feveral authors; particularly by Mrs Sufanna Dobfon, in z vols. Evo.

PETRASTRUMIA, a town of Naples in Prina

cipato Ultra; 9 miles S. of Benevento. PETRATSCHEN, a town of Prussian Lithua-

nia, 4 miles WSW. of Kagnitz.

(1.) \* PETRE. n f. [from petra, a stone.] Nitre; falt petre. See NITKE.—Powder made of impure and greafy petre, hath but a weak emission, and gives but a faint report. Brown .- The veffel was first well nealed to prevent cracking, and covered to prevent the falling in of any thing, that might unleasonably kindle the fetre. Boyle.—Nitre, when it is in its native state, is called petre-falt, when refined falt-petre. Woodward.

(2.) PETRE, or SALTPETRE, in chemistry. See

CHEMISTRY, Index, and NITRE.

PETREA, in botany, a genus of the angiotpermia order, belonging to the didynamia class of piants; and in the natural method ranking under The ealyx is quinthe 40th order; Personata. quepartite, very large, and coloured; the corolla rotaceous; the capfule bilocular, and fituated in the bottom of the calyx; the feeds folitary: There is only one species, a native of New Spain. It rises to 15 or 16 seet, with a woody stalk covered with grey bark, fending out several long branches. These have a whiter bark than the Rem, and are garnished with leaves at each joint, which, on the lower part of the branches, are placed by three round them; but higher up, they are rough, and have a rough furface. The flowers are produced at the ends of the branches, in loofe bunches 9 or 10 inches long, each flower ftanding on a slender flower-stalk about an inch long: the empalement of the flower is composed of 5 narrow obtuse leaves about an inch long, which are of a fine blue colour, and much more confpicuous than the petals which are white, and not more than half the length of the empalement. The plant is propagated by feeds procured from the places where they are natives, and of which very few are good. The feeds must be fown in a good hot-bed; and when the plants come up, they should all be planted in a separate small pot filled with light loamy earth, and plunged into a

hot-bed of tanners bark, where they should afterwards constantly remain.

PETREL, n. f. See PROCELLARIA, N° 1 and 2.

11 miles E. of Molife.

(2.) PETRELLA, a town of European Turkey, in Albania; 26 miles SE. of Durazzo.

\* PETRESCENT. adj. | petrefcens, Lat.] Growing stone; becoming stone.—A cave, from whose, arched roof there dropped down a petrefcent liquor. Boyle.

PETRI, a town of Africa, on the Ivory Coast. PETRICOW, a town of Bohemia, in Chrudim;

o miles S. of Chrudim.

PETRIDIA, in the old fystem of mineralogy, a genus of scrupi, of a plain, uniform texture; of no great variety of colours, and emulating the ex-

ternal form of pebbles.

(1.)\*PETRIFACTION. n. f. [from petrifio, Lat.]

3. The act of turning to stone; the state of being turned to stone.—Its concretive spirit has the feeds of petrifaction and gorgon within itself. Brown. 2. That which is made stone.—Beautiful shells, petrifactions, ores, minerals, stones, and other natural enginisties. Change

ther natural curiofities. Cheyne. (2.) PETRIFACTION, in physiology, denotes the conversion of wood, bones, and other substances, principally animal or vegetable, into stone. These bodies are more or less altered from their original flate, according to the different substances they have lain buried among in the earth; some of them having fuffered very little change, and others being so highly impregnated with crystalline, sparry, pyritical, or other extraneous matter, as to appear mere masses of stone, or lumps of the matter of the common pyrites; but they are generally of the external dimensions, and retain more or less of the internal figure, of the bodies into the pores of which this matter has made its way. The animal substances thus found petrified are chiefly fea-shells; the teeth, bony palates, and bones, of fish; the bones of land-animals, &c. These are found variously altered, by the infinuation of flony and mineral matter into their pores; and the fubstance of some of them is now wholly gone, there being only ftony, sparry, or other mi-

neral matter remaining in their shape and form. (3.) PETRIFACTION, DISCOVERIES RESPECT-Respecting the manner in which petrifaction is accomplished, we know little. It has been thought by many philosophers, that this was one of the rare processes of nature; and accordingly fuch places as afforded a view of it, have been looked upon as great curiofities. However, it is now discovered, that petrifaction is exceedingly common; and that every kind of water carries in it some earthy particles, which being precipitated from it, become stone of a greater or lesser degree of hardness; and this quality is most remarkable in those waters, which are much impregnated with selenitic matter. Of late, it has also been found by some observations of a petrifaction in East Lothian, that iron contributes greatly to the process: and this it may do by its precipitation of any aluminous earth which happens to be diffolved in the water by means of an acid; for iron has the property of precipitating this earth, though it cannot precipitate the calcareous

kind. The calcareous kinds of earth, however, by being foluble in water without any acid, must contribute very much to the process of petrifaction, as they are capable of a great degree of hardness by means of being joined with fixed air, on which depends the folidity of our common cement or mortar used in building houses. The name petrifaction belongs only to bodies of vegetable or animal origin; and to de termine their class and genus, or even species, it is necessary that their texture, their primitive form, and in fome measure their organization, be ftill discernible. Thus we ought not to place the flony kernels, moulded in the cavity of some shell or other organized body, in the rank of petrilat tions properly fo called.

(4.) Petrifaction, formation, causes a PROGRESS OF. Petrifactions of the vegetable by dom are almost all either gravelly or sliceous; are found in gullies, trenches, &c. Those wi strike fire with steel are principally found in ful fiffures; those which effervesce in acids are go rally of animal origin, and are found in the zontal beds of calcareous earth, and fometime beds of clay or gravel; in which case the nat of the petrifaction is different. As to the substantial ces which are found in gypfum, they feldom t dergo any alteration, either with respect to he or composition, and they are very rare. Orga zed bodies, in a state of petrifaction, general acquire a degree of folidity of which they not possessed before they were buried in the and some of them are often fully as hard as stones or matrices in which they are envelop When the stones are broken, the fragments petrifactions are eafily found, and eafily diftingu ed. There are some organized bodies, howe so changed by petrifaction, as to render it imp fible to discover their origin. That there is an ter more or lefs agitated, and adapted for p trating bodies, which crumbles and separates parts, draws them along with it, and dispe them here and there in the fluid which furrou them, is a fact of which nobody feems to co tain any doubt. Indeed we see almost every flance, whether folid or liquid, infensibly confu diminish in bulk, and at last, in the lapse of the vanish and disappear. A petrified substant frictly speaking, is nothing more than the ske ton, or perhaps image of a body which has of had life, either animal or vegetable, combin with some mineral. Thus petrified wood is in that state wood alone. One part of the co pound or mass of wood having been destroyed local causes, has been compensated by earthy fandy substances, diluted and extremely mind which the waters furrounding them had deposit These eart while they themselves evaporated. substances, being then moulded in the skelet will be more or lefs indurated, and will appea have its figure, its structure, its size, in a wd the same general characters, the same specific tributes, and the fame individual difference Farther, in petrified wood, no vestige of ligner matter appears to exist. We know that comme wood is a body in which the volume of folid per is greatly exceeded by that of the pores. Wh wood is buried in certain places, lapidific fluid

extremely divided and fometimes coloured, infiavate themselves into its pores and fill them up. These shuids are afterwards moulded and condenled. The folid part of the wood is decomposed and reduced into powder, which is expelled withon the mais by aqueous filtrations. In this manm, the places which were formerly occupied by hwood are now left empty in the form of pores. moperation of nature produces no apparent dirence either of the fize or of the shape; but focusions, both at the furface and in the infide, thange of substance, and the ligneous texture is boted; that is to fay, that which was pore in ratural wood, becomes folid in that which is bilied; and that which was folid or full in the fate, becomes porous in the second. In this his M. Mulard, petrified wood is much less inded in pores than folid parts, and at the same forms a body much more denfe and heavy the first. As the pores communicate from commerce to the centre, the petrifaction to begin at the centre, and end with the brence of the organic body subjected to of the lapidific fluids. Such is the oripetrifactions. They are organized bodies have undergone changes at the bottom of or the furface of the earth, and which been buried by various accidents at different ander the ground. To understand properdetail of the formation of petrified bodies, messary to be well acquainted with all their bent parts. Let us take wood for an ex-Wood is partly folid and partly porous. parts confift of a substance, hard, ligand compact, which forms the support of ptable; the porous parts confift of veffels mices which run vertically and horizontalthe ligneous fibres, and which serve for fling air, lymph, and other fluids. Among reffels, the trachize which rife in spiral forms, bich contain only air, are easily distinguish-The cylindric veffels, some of which contain and others the fuccus proprius, are full onme the life of the vegetable. After its death ecome vacant by the evaporation and abthe fluids with which they were formerly All these vessels, whether ascending or ding, unite with one another, and form cavities in the wood and in the bark. Ac-It to Malphigi and Duhamel, the ligneous are themselves tubular, and afford a paffage thin liquors; in short, the wood and bark temperied with utriculi of different shapes fice. The augmentation of the trunk in 🚾, according to Malphigi, is accomplished annual addition of a new exterior covering and of trachie. Others think that a wie layer of sap-wood is every year hardwhilf a new one is forming from the bark. Bon all fides agreed, that the concentric of wood are distinct from one another, beat the point of contact betwirt any two of the new veffels, as well as new fibres, are pparent and perceptible than they are in ther place.

Petrifactions, M. Bertrand's theo-THE CAUSES OF. In order, fays M. Berd, in his Dictionnaire des Fossiles, that a body should become petrified, it is necessary that it be-1. Capable of preservation under ground: 2. That it be sheltered from the air and running water (the ruins of Herculaneum prove that bodies which have no connection with free air, preserve them-felves untouched and entire). 3. That it be secured from corrofive exhalations. 4. That it be in a place where there are vapours or liquids, loaded either with metallic or stony particles in a flate of disfolution, and which, without deftroying the body, penetrate it, impregnate it, and unite with it, in proportion as its parts are dissipated

by evaporation.

(6.) PETRIFACTION, M. MONGEZ'S THEORY M. Mongez explains the petrifaction of vegetables as follows: In proportion to the tenderness and bad quality of wood, it imbibes the greater quantity of water; therefore this fort will unquestionably petrify more easily than that which is hard. It is thought that all the petrified wood fo often found in Hungary has been originally foft, fuch as firs or poplars. Suppose a piece of wood buried in the earth; if it be very dry, it will fuck up the moisture which surrounds it like a spunge. This moisture, by penetrating it, will dilate all the parts of which it is composed. The trachiæ, or air vessels will be filled first, and then the lymphatic vessels and those which contain the succus proprius, as they are likewise empty. The water which forms this moisture keeps in dissolution a greater or a less quantity of earth; and this earth, detached, and carried along in its course, is reduced to fuch an attenuated flate, that it escapes our eyes and keeps itself suspended, whether by the medium of fixed air or by the motion of the water. Such is the lapidific fluid. Upon evaporation, or the departure of the menstruum, this earth, fand, or metal, again appears in the form of precipitate or fediment in the cavities of the veffels, which by degrees are filled with it. This earth is there moulded with exactness: The lapse of time, the fimultaneous and partial attraction of the particles, make them adhere to one another; the lateral fuction of the furrounding fibres, the obstruction of the moulds, and the hardening of the moulded earth, become general; and there confifts nothing but an earthy fubstance which prevents the finking of the neighbouring parts. H the deposit is formed of a matter in general pretty pure, it preserves a whiter and clearer colour than the rest of the wood; and as the concentric layers are only perceptible and diffinct in the wood, because the vessels are there more apparent on account of their fize, the little earthy cylinders, in the state of petrified wood, must be there a little larger, and consequently must represent exactly the turnings and separations of these layers. At the places of the utriculi, globules are observed, of which the fhapes are as various as the moulds wherein they are formed. The analtomofes of the proper and lymphatic veffels, form befides points of support or reunion for this stony substance. With regard to holes formed by worms in any bits of wood, before they had been buried in the earth, the lapidific fluid, in penetrating these great cavities, deposits there as easily the earthy fediment, which is exactly moulded in them. These vermiform cylinders are somewhat

less in bulk than the holes in which they are found, which is owing to the retreat of the more refined earth, and to its drying up. Let any one represent to himself this collection of little cylinders, vertical, horizontal, inclined in different directions, the stony masses of utriculi and of analtomofes, and he will have an idea of the stony fubstance which forms the ground work of petrifaction. Hitherto not a fingle ligneous part is destroyed; they are all existing, but surrounded on every fide with earthy deposits; and that body which, during life, was composed of folid and of empty parts, is now entirely folid; its destruction and decomposition do not take place till after the formation of these little deposits. In proportion as the water abandons them, it penetrates the ligneous fubitance, and deftroys it by an infenfible fermentation. The woody fibres being decompofed, form in their turn voids and interffices, and there remains in the whole piece nothing but litthe stony cylinders. But in proportion as these woody fibres disappear, the surrounding moisture, loaded with earth in the state of dissolution, does not fail to penetrate the piece of wood, and to remain in its new cavities. The new deposit affumes exactly the form of the decomposed fibres; it envelopes in its turn the little cylinders which were formed in their cavities, and ends by incorporating with them. We may suppose here, that in proportion as it decomposes, there is a reaction of the ligneous part against the lapidisc sluid: from this reaction a colour arises which stains more or less the new deposit; and this colour will make it eafily distinguishable from that which has been laid in the infide of the vessels. In all petrified wood this shade is generally perceptible. We have then, fays M. Mongez, 4 distinct epochs in the process by which nature converts a piece of wood into stone, or, to speak more justly, by which she substitutes a stony deposit in its place: 1. Perfect vegetable wood, that is to fay, wood composed of solid and of empty parts, of ligneous fibres, and of veffels. 2. Wood having its veffels obstructed and choaked up by an earthy deposit, while its folid parts remain unaltered. 3. The folid parts attacked and decomposed, forming new cavities betwixt the stony cylinders, which remain in the same state, and which support the whole mass. 4. These new cavities filled with new deposits, which incorporate with the cylinders, and compose nothing else but one general earthy mais representing exactly the piece of wood. Among the petrifactions of vegetables called dendrolites, are found parts of thrubs, flems, roots, portions of the trunk, some fruits, &c. We must not, however, confound the impressions of mosses, ferns, and leaves, nor incrustations, with petrifactions. Among the petrifactions of animals, we find shells, crustaceous animals, polyparii, some worms, the bony parts of fishes and of amphibious animals, few or no real infects, rarely birds and quadrupeds, together with the bony portions of the human body. The cornua ammonis are petrified ferpents; and with regard to figured and accidental bodies, these are lusus natura.

(7.) PETRIFACTION, NATURE'S PERIODS OF ACCOMPLISHING. It is a question of great im-

portance among naturalists, to know the the which Nature employs in petrifying bodies of a ordinary fize.—It was the wish of the late emp ror, that some means should be taken for den mining this question. M. le Chevalier de Bail director of the cabinet of natural history of his i perial majefty, and fome other naturalits, is several years ago, the idea of making a reisi which might throw some light upon it. His i perial majesty being informed by the waning observations of modern historians and geograph that certain pillars which are actually feen in Danube in Gervia, near Belgrade, are remain the bridge which Trajan conftructed over that ver, prefumed that these pillars having been ferved for so many ages, behaved to be public and that they would furnish some information with regard to the time which nature empire changing wood into Rone. The emperor t ing this hope well founded, and wishing to his curiofity, ordered his ambassador at the of Constantinople to ask permission to take up the Danube one of the pillars of Trajan's br The petition was granted, and one of the was accordingly taken up ; from which it an ed that the petrifaction had only advanced fourths of an inch in the space of 1500 There are, however, certain waters in which transmutation is more readily accomplished trifactions appear to be formed more flow earths that are porous and in a flight degree ! than in water itself. When the foundation the city of Quebec in Canada were dug uptrified fatage was found among the last bil which they proceeded. Although there idea of the time at which this man had been under the ruins, it is however true, that his ver and arrows were still well preserved. ging a lead mine in Derbyshire in 1744, a skeleton was found among stags horns. It possible to say how many ages this carcal lain there. In 1695 the entire skeleton of phant was dug up near Tonna in Thu Some time before this epoch the petrified ton of a crocodile was found in the mines country. We might cite another fact equal rious, which happened at the beginning last century. John Munte, curate of Size Scania, and several of his parishioners, will procure furf from a drained marthy foil, fome feet below ground, an entire cart wit skeletons of the horses and carter. It is prethat there had formerly been a lake in that and the carter attempting to pais over on the had by that means probably perished. In fine partly fossil and partly coaly has been foun great depth, in the ciay of which tile was for the Abbey of Pontenay. It is but very that fossil wood was discovered at the dq 75 feet in a well betwirt Ish and Vauvre Paris. This wood was in fand betwixt a clay and pyrites, and water was found for lower than the pyrites. M. de Laumont, tor general of the mines, fays ( Yournal de Pl Mai 1736), that in the lead-mine at Pontpen Rennes, is a fiffure, perhaps the only one kind. In that fiffure, fea-shells, rounded pe

and an entire beech, have been found 240 feet dep. This beech was laid horizontally in the finction of the fiffure. Its bank was converted no pyrites, the sap-wood into jet, and the cenminto coal. Many pieces of petrified wood are ed in different departments of France, and icularly in that of Mont Blanc, the ci-de-Savoy. In Cobourg in Saxony, and in the stains of Milinia, trees of a confiderable hisels have been taken from the earth, which entirely changed into a very fine agate, their branches and their roots. In fawthen, the annual circles of their growth ben dilinguished. Pieces have been taken so which it was distinctly seen that they had mawed by worms; others bear vitible marks tatchet. In fine, pieces have been found were petrified at one end, while the other mained in the state of wood fit for being L lt appears then that petrified wood is a deal less rare in nature than is community i-

PETRIFACTION, OBSERVATIONS L CRONSTEDT AND KIRWAN RESPECT-Cronstedt has excluded petrifactions from in the body of his fystem of mineralogy, to notice of them in his appendix. He difhes them by the name of Mineralia Larvadefines them to be "mineral bodies in the mineral bodies in the mineral bodies in the most reobservations concerning them, accord-Mr Kirwan, who differs in some parti-tion Mongez, are as follow. 1. Those are found on or near the furface of the those of fish deeper; and those of beper ftill. Shelle in fubstance are found quantities, and at confiderable depths. 4. bhances most susceptible of petrifaction ble which most resist the putrefactive ; of which kind are shells, the harder of wood, &c.; while the fofter parts of which easily putrefy, are feldom met a petrified state. 3. They are most by found in strata of marl, chalk, limeclay; seldom in sandstone, still more mgyplum; and never in gneifs, granite, or schoerl. Sometimes they are found in, and ores of iron, copper, and filver; g almost always of that kind of earth or teral which furrounds them; fometimes 4 agate, or cornelian. 4. They are found where the animals themselves could re existed. 5. Those found in slate or r compressed and flattened.

PITALIFACTIONS, CRONSTEDT'S ARRANGEOF. The different species of petrifactions,
ing to Cronstedt, are, I. Terre Larvate;
cous bodies changed into a limy substance,
arrous changes. These are, I. Loose or
2. Indurated. The former are of a
nature, in form of vegetables or animals;
cond filled with solid limestone in the same
Some are found entirely changed into a
mus spar. All of them are sound in France,
and other countries in great plenty. On
petrifactions Cronstedt observes, that shells
torals are composed of limy matter even
a full inhabited by their animals, but they are

classed among the petrifactions as foon as the calcarous particles have obtained a new arrange-ment; for example, when they have become sparry; filled with calcareous earth either hardened or loofe, or when they lie in the strata of the earth. "These, says he, form the greatest part of the fossil collections which are so industriously made, often without any regard to the principal and only use they can be of, viz. that of enriching zoology. Mineralogists are fatisfied with feeing the possibility of the changes the limestone undergoes in regard to its particles; and also with receiving some infight into the alteration which the earth has been subject to, from the state of the strata which are now found in it." The calcined shells, where the petrifactions are of a limy or chalky nature, answer extremely well as a manure: but the indurated kind ferve only for making grottoes. Gypicous petrifactions are extremely xare; however, Chardin informs us, that he had feen a lizard inclosed in a stone of that kind in Perfia. II. Larme, or bodies changed into a flinty substance. These are all indurated, and are of the following species: 1. Cornelians in form of thells from the river Tomm in Siberia. 2. Agate in form of wood; a piece of which is faid to be in the collection of the Count de Teffin. 3. Coralloids of white flint (Millepera) found in Sweden. 4. Wood of yellow flint found in Italy, in Turkey near Adrianople, and produced by the waters of Lough-neagh in Ireland. III. Larve Argillaceæ; where the bodies appear to be changed into clay. These are found either loose and friable, or indurated. Of the former kind is a piece of porcelain clay, met with in a certain collection, with all the marks of the root of a tree upon it. Of the latter kind is the ofteocolla; which is faid to be the roots of the poplar tree changed, and not to confift of any calcareous fubstance. A fort of fossile ivory, with all the properties of clay, is faid likewife to be found in some places. IV. Larva Infalita; where the subflances are impregnated with great quantities of falts. Human bodies have been twice found impregnated with vitriol of iron in the mine of Fahlun, in the province of Dalarne in Sweden. One of them was kept for feveral years in a glass-case, but at last began to moulder and fall to pieces. Turf and roots of trees are likewise found in water strongly impregnated with vitriol. They do not flame, but look like a coal in a ftrong fire; neither do they decay in the air. V. Bodies penetrated by mineral inflammable fubstances. By pit-coal, fuch as wood; whence fome have imagined coal to have been originally produced from wood. Some of these substances are fully saturated with the coaly matter; others not. Among the former Cronstedt reckons jet; among the latter the substance called mumia vegetabilis, which is of a loofe texture, refembling amber, and may be used as such. 2. Those penetrated by as-The only example of these phaltum or rock-oil. given by our author is a kind of turf in the pro-vince of Skone in Sweden. The Egyptian mummies, he observes, cannot have any place among this species, as they are impregnated artificially with asphaltum, in a manner similar to what happens naturally with the wood and coaly matter in the last species. 3. Those impregnated with sulphur which has dissolved iron, or with parites. Human bodies, bivalve and univalve shells and insects, have been all found in this state; and the last are found in the alum state at Andrarum, in the province of Skone in Sweden. VI. Larvæ metalliferæ; where the bodies are impregnated with metals. These are, 1. Covered with native filver; which is found on the furface of shells in England. 2. Where the metal is mineralized with copper and fulphur. Of this kind is the Fahietz, or grey filver ore, in the shape of ears of corn, and suppose ed to be vegetables, found in argillaceous flate at Frankenberg and Tahlitteren in Hesse. 3. Larve cuprifera, where the bodies are impregnated with copper. To this species principally belong the Turquoise or Turkey Rones, improperly so called; being ivory and bones of the elephant or other animals impregnated with copper. See Tur-QUOISE. At Simore in the ci-devant Languedoc, there are bones of animals dug up, which, during calcination, assume a blue colour: but according to Cronstedt it is not probable that these owe their colour to copper. 3. With mineralifed copper. Of these our author gives two examples. One is where the copper is mineralised with sulphur and iron, forming a yellow marcalitical ore. With this fome shells are impregnated which lie upon a bed of loadstone in Norway. Other petrifactions of this kind are found in the form of fish in different parts of Germany. The other kind is where the copper is impregnated with fulphur and filver. Of this kind is the grey filver ore, like ears of corn, found in the flate quarries at Hesse. 4. Larve ferrifere, with iron in form of a calk, which has affumed the place or shape of extraneous hodies. These are either loose or indurated. Of the loofe kind are some roots of crees found at the lake Algelma in Finland. indurated kinds are exemplified in some wood found at Orbiffan in Bohemia. 5. Where the iron is mineralized, as in the pyritaceous larva! VII. Where the bodies are tending to decomposition, or in a way of destruction. Among these, our author enumerates Mould and Turf, which See: also CEMENT, MORTAR, ROCK, SAND, SE-LENITÆ, STONE, and WATER. See likewise Fossil, and Mountain.

(10.) PETRIFACTION, SINGULAR ANIMAL. The Abbé De Sauvages, celebrated for his refined tafte and knowledge in natural history, in a tour through Languedoc, between A air and Uzes, met with a narrow vein of no more than two toifes wide, which croffes the road, and is bordered on one fide by a grey dirty foil, and on the other by a dry fandy earth, each of a vaft extent, and on a level with the narrow vein which feparates them. In this narrow vein only are contained petrified shells, cemented together by a whitish marl. They are in prodigious plenty; among which there is one species which the Abbé does not remember to have anywhere described. This thell has the shape of a horn, somewhat incurvated towards the base. (See fig. 9. plate CCLXXIII.) It feems composed of several cups, let into each other, which are fometimes found teparate. have all deep channels, which extend, as in many other shells, from the base to the aperture; the projecting ribs which form these channels at mostly worn away, being rarely to be found et edtire. Sometimes several are grouped together and as a proof that they are not a fortuitous a femblage caused by the petrifaction, they are fi ed together through their whole length, in for fort, that their base and aperture are regularly to ned the fame way. The Abbé should have resi red this to the genus which Linnæus and the Ma quis d'Argenville named dentalis, had they n been let into each other. He found some of the whose aperture or hollow was not stopped up the petrifaction, and feemed as cones adapted one another (fig. 10.), forming a row of name cells, separated by a very thin partition: this occupied not more than one half of the cavity the shell.—Fossil bones are very common in I They are of various kinds, and in matia. nature apparently very extraordinary; but have found no tolerable account or probabled jecture of their origin. Vitaliano Donati of dua, in his Saggio fopra la ftorie naturale del driatico, was the first who took notice of the and Fortis, in his travels into Dalmatia, has gi a copious account of them. They are most of mon in the islands of Cherso and Osero. Fortis's Travels into Dalmatia, page 440-1 and VITALIANO.

\* PETRIFACTIVE. adj. [from petrifacio,]
Having the power to form stone.—There are not be found, which are but the lapidescence petrifactive mutation of bodies. Brown.

\* PETRIFICATION. n. f. [petrification from petrify.] A body formed by changing matter to stone.—In these strange petrifications hardening of the bodies seems to be effected cipally, if not only, by altering the disposition their parts. Boyle.

\* PETRIFICK. adj. [petrificus, Lat.] B

the power to change to stone.-

Winter's breath,
A nitrous blaft that strikes petrifick death. Sa
Death with his mace petrifick, cold and
As with a trident, smote.

Milt. Park

(1.) PETRIFIED, part. adj. changed into (2.) PETRIFIED CITY. The story of a pol city is well known all over Africa, and has believed by many confiderable persons even rope. Lewis XIV. was fo fully perfuaded a reality, that he ordered his ambasiador to pro the body of a man petrified from it at any p Dr Shaw's account of this affair is decilive, the all a cheat and imposition; that M. Le Mairq French conful at Tripoli, about 1720, made inquiries into the truth of the report; but, the he detected the cheat, complied with the of the district of RAS SEM so far, as to three way 1000 dollars for a mutilated image of C which the pretended fearchers brought to h they faid, from Ras Sem, at the risk of their but which, he learned afterwards, they had among the ruins of Leptis, and to conceal the ceit, had broken off the quiver, wings, and characteristics of the deity. However, there remarkable circumstance relating to Ras Sem deserves to be recorded. When the winds blown away the billows of fand which freque cover and conceal these petrifications, they do

ter, in some of the lower and more depressed places of this diffrict, feveral little pools of water, stach is usually of so ponderous a nature, that, upon drinking it, it paties through the body like quickfilver. This perhaps may be that petrifying fact which has all along contributed to the conwhom of the palm-trees and the echini into stone. (L) To PETRIFY. v. a. [petrifier, Fr. petra and

PETROBRUSSIANS, a religious &cc, which had its rife in France and the Netherlands about A. D. 1110. The name is derived from Peter Bruys, a Provençal, who attempted to reform the abuses of the church. His followers were numerous; and for 20 years he laboured in the ministry with He was, however, burnt in 1130, by great zeal. an enraged populate fet ou by the clergy. The chief of Bruys's followers was a monk named Henry; from whom the Petrobruffians were also called Henricians. They held, z. That children before the age of reason cannot be justified by bapfifm. 2. That no churches should be built, but that those that already are should be pulled 3. That the cross ought to be pulled down. down and burnt, because we ought to abhor the instruments of our Sa our's passion. 4. That the real body and blood or Christ are not exhibited in the cucharift, but merely represented by their figures and fymbols. 5 That facrifices, aims, prayers, &c. do not avail the dead.

PLTROCORIL, the ancient inhabitants of that part of Gaul, which was called PERIGORD before

the revolution. Caf. de Bell. Gall. vii. c. 75. PETROJOANNITES, followers of Peter John, or Peter Joannes, i. e. Peter the fon of John, who flourished in the 12th century. His doctrine was not known till after his death, when his body was taken out of his grave and burnt. His opinions were, that he alone had the knowledge of the true fense wherein the apostles preached the gospel; that the reasonable soul is not the form of man; that there is no grace infused by baptisin; and that Jesus Christ was pierced with a lance on the cross before he expired.

(1.) \* PETROL. (n. f. [petrole, Fr.] Per (1.) \* PETROLEUM. (tral or petroleum is 2 liquid bitumen, black, floating on the water of

Iprings. Woodward.

(2.) Petroleum, or Rock oil; a thick oily substance exuding out of the earth, and collected on the furface of wells in many parts of the world. See CHEMISTRY, Index; and MINERALOGY, Pury II, Chap. VI, Gen. III, Sp. 2. It is found in fome wells in Italy, and in a deferted mine in the province of Dalarne in Sweden. In this last place it is collected in small hollows of lime-stone, like refin in the pine-tree. It is found trickling from the rocks, or iffuing from the earth, in many parts of the late Modenese, and in various parts of France, Switzerland, Germany, and Scotland, as well as in Afia. It is also found mixed with earth and fand, from whence it may be separated by infusion in water. It is of a pungent and acrid tafte, and finells like the oil of amber, but more agreeably. It is very light and very pellucid; but, though equally bright and clear under ail circumstances, it is liable to a very great variety in its It is naturally almost colouriets, and colour. greatly resembles the purest oil of turpentine: this is called subite petroleum, though it is as colourless as water. It is sometimes tinged of brown A, reddish, yellowish, or faint greenish colour; but its most frequent colour is a mixture of readish

and blackish, in such a degree that it looks black when viewed behind the light, but purple when placed between the eye and the light. It is rendered thinner by distillation with water, and leaves a refinous refiduum; when distilled with a volatile alkali, the latter acquires the properties of fuccinated ammoniac, and contains the acid of amber. It is the most frequent of all the liquid bitumens, and is perhaps the most valuable of them all in medicine. It is to be chosen the purest, lightest, and most pellucid that can be had; of the most penetrating fmell and most inflammable. Monnet fays that some kinds of it are of the density of nut-It is infoluble in spirit of wine; which, though it be the great dissolvent of fulphur, has no effect upon petroleum, not even with ever fo long a digestion. It will not take fire with the dephlegmated acid spirits; and in distillation, either by balneum marize or in fand, it will neither yield phiegm nor acid spirit; but the oil itself rises in its own form, leaving in the retort only a little matter, thick as honey, and of a brownish colour. The finer kinds resemble NAPHTHA. Mr Bouldoc made leveral experiments with the white petroleum of Modena; an account of which he gave to the Paris academy. It easily took fire on being brought near a candle, and that wi hout immediately touching the flame; and when heated in any vessel it will attract the flame of a candle, though placed at a great height above the vessel; and the vapour it fends up taking fire, the flame will be communicated to the vessel of heated liquor, and the whole will be confumed. Alonfo Barba, in his book of metals, gives a very melancholy instance of the power of petroleum of taking fire at a distance. A certain well, yielding petroleum on the furface of its water, being to be repaired, the workman took down into the well with him a lantern and a candle in it: there were some holes in the lantern; through which the petroleum at a confiderable distance sucked out the slame of the candle, and, taking fire, burft up with the noise of a cannon, and tore the man to pieces. It burns in the water, and when mixed with any liquor figims on the furface of it. even of the highest rectified spirit of wine, which is one 7th heavier than bufe petroleum. It readily mixes with all the eflential oils of vegetables, as oil of lavender, turpentine, &c. and feems very much of their na-ture. The diffinguishing characteristic of the petroleum is its thickness, resembling inspissated oil: when pure it is lighter than spirit of wine; but, though ever to well rectified, it becomes in time thick and black as before. Petroleim, when thaken, yields a few bubbles; but they fooner fubade than in almost any other liquor, and the liquor refumes its clear state again almost immedi-This feems owing to the air in this fluid being very equally distributed to all its parts, and the liquor being composed of particles very even-ly and nicely arranged. The extensibility of the oil is also amazing. A drop of it will spread over teveral feet of water, and in this condition it gives a great variety of colours; that is, the several parts of which this thin film is composed art as so many prisms. The most severe frost never con-teals petfoleum into see; and paper wetted with t becomes transparent as when wetted with oil;

but it does not continue for the paper becoming opaque again in a few minutes as the oil dries away. There are 3 varieties according to Mongez: 1. The yellow, found at Modena in Italy; very light and volatile. 2. The reddish, or yellowith red; fome of which is collected at Gabian in Languedoc and in Alface, 3. The heavy, black, or brown kind, which is the most common, and met with in England, France, Germany, and some of ther countries. It generally runs out either from chinks o gaps of rocks, or is mixed with the earth, and gushes out of it; or swims on the wa ter of fome fountains. According to Dr Lipper a kind of refin is produced by mixing petrolem with finoking nitrous acid. The taite of this let stance is very bitter, but the smell retembles the of musk. The vitriolic acid, according to I pert, produces a refin still more bitter, but w out any aromatic fmell. Cronftedt enumer the following species:

I. PETROLEUM BARBADENSE, Malthu, or B badoes tar, a thick fubstance refembling fuft ph See MINERALOGY, Part II, Chap. VI, Gen. III, 3, and 4. It is found in feveral parts of Eur and Afia; particularly Sweden, Germany, Switzerland; on the coast of the Dead Sea in leftine; in Persia, in the chinks of rocks, and strata of gyptum and limestone, or stoking u water. It is found also in America, and at O brookdale in England. It melts easily and be with much fmoke and foot, leaving eith rashe a flag according to the heterogeneous many contains. It contains a portion of the acid of ber. It gives a bitter falt with mineral alkali, difficult of folution than common falt, and with when treated with charcoal, does not yield

fulphur.
II. Petroleum Blasticum, Elastic Br men, or Mineral Caoutchouc. See Mine

LOGY, Part II, Chap. VI, Gen. III, Sp. 6. III. PETROLEUM INDURATUM, Hardened ail, or fossil pitch, an inslammable substance out of the ground in many parts of the world, known by the names of petroleum induration, montana, indenpech, berghariz, &c. two species. 1. The afphaltum or pure foffilp found on the shores of the Dead Sea and of Red Sea; also in Sweden, Germany, and Fran See ASPHALTUM. It is likewise found in g quantities, in a bituminous lake in the iffe of nidad. (See Trinidad.) It is a smooth, he brittle, inodorous fubstance, of a black or ho colour when looked at; but on holding it up twist the eye and the light, appears of a deep It fwims in water; breaks with a smooth thining furface; melts eafily and, when pure, by without leaving any affect; but, if impure, le ashes, or a flag. M. Monnet afferts that it tains fulphur, or at least the vitriolic acid. flightly and partially acted upon by spirit of and ether. Brunnich fays, the alphaltum co from Porto Principe in the island of Cuba in West Indies. It is likewise found, according Foureroy, in many parts of China; and is for a covering to ships by Arabs and Indians. The pix montana impura contains a great quant of earthy matter, which is left in the retort at distillation, of upon the charcoal if burnt in s

TROMA. See ELEUSINIA, and MYSTE-. 9 36.

TROMYZON, the Lamprey, in ichthyoegenus of fishes belonging to the class of bia nantes. It has seven spiracula at the the neck, no pills, a fiftula on the top of tad, and no breaft or belly tins. There are s, diftinguished by peculiarities in their

Petromyzon Bronchialis, or lampern, ectimes found of the length of 8 inches, and the thickness of a swan's quill; but they warrally much smaller. The body is marknumbers of transverse lines, that pass the fides from the back to the bottom of the which is divided from the mouth to the by a ftraight line. The back fin is not anguand thort at the end. They are frequent neers near Oxford, particularly the Ilis; per peculiar to that county, being found in English rivers, where, instead of conceating and are never observed to adhere to any like other lampreys.

PITROMYZON FLUVIATILIS, the river or lamprey, sometimes grows to the length of

The mouth is formed like that of the 10 inches. preceding. On the upper part is a large bifurcated tooth: on each fide are three rows of very minute ones: on the lower part are 7 teeth, the exterior of which on one lide is the largest. irides are yellow. As in all the other species, between the eyes on the top of the head is a small orifice, of great use to clear its mouth of the water that remains on a thering to the stones; for through that orifice it ejects the water in the same manner as cetaceous fish. On the lower part of the back is a narrow fin, beneath that rifes another, which at the beginning is high and angular, then grows narrow, furrounds the tail, and ends near the anus. The colour of the back is brown or dusky, fometimes mixed with blue; the whole underfide filvery. These are found in the Thames. Severn, and Dee 3 are potted with the larger kind a and are by fome preferred to it, as being milder tafted. Vaft quantities are taken about Mortlake. and fold to the Dutch for bait for their cod fifbery. Above 430,000 have been fold in a feafon at 40s. per 1000; and of late, about 100,000 have been fent to Harwich for the fame purpofe. It is faid that the Dutch have the fecret of preferring them till the turbot fishery.

3. PETROMYZON MARINUS, the fea lamprey, is fometimes found so large as to weigh A or g lb. It greatly resembles the cel in shape; but its body is larger, and its fnout longer, narrower, and sharper, at the termination. The opening of the throat is very wide; each jaw is furnished with a fingle row of very small teeth; in the middle of the palate are fituated one or two other teeth, which are longer, ftronger, and moveable. towards the infide of the throat; the inferior part of the palate prefents moreover a row of very fmall teeth, which reaches to the bottom of the throat, where are 4 long notched bones; two short fistulous processes are observable at the extremity of the front, and there are two others thicker but still shorter above the eyes. Willoughby suppotes that the latter are the organ of hearing, and the former the organ of smell. His opinion with regard to the auditory faculty of this fish is founded on what we read in ancient authors, that the fishermen attracted the lampreve by whiftling, and that Crassus had tamed one of them to such a degree that it knew his voice and obeyed his call. The eyes of the lamprey are small, and covered with a transparent light blue membrane; the pupil is bordered with a sircle of a colour refembling gold; near the gills, which are 4, there is a round hole on both fides, through which it discharges the water. The lamprey has no fins on his helly or breatt; on the back we obferve a fin, which begins pretty near the head, extends to the tail which it turns round, and is afterwards continued to the anus: this fin is covered by the skin of the body, to which it adheres but loofery; the skin is smooth, of a red blackish colour, and streaked with yellow; the lamprey advances in the water with winding motions, like those of a serpent, which is common to it, with all the anguilusorm sishes. The lamprey During the cold, it lies concealed lives on fish. in the crevices of fea rocks, and confequently is fished for only at certain feafons. It lives in a

Mate of hostility with the pourpe, a kind of sea polypos, which fluns the combat as long as it can; has when it finds the impollibility of escape, it endeavours to furround the lamprey with its long rms. The latter flips away, and the poulpe becomes its prey. The lobster, we are told, avenges the pourpe, and destroys the lamprey in its then. See Cancer, J IV. Nº 6. Rondelet fays, that the fishermen confider the bite of the lamprey as venomous and dangerous, and never touch h while alive but with pincers. They beat it on the jaws with a flick, and cut off its head. He adds, that its ashes are a cure for its bite, and for the king's evil. When any one has been bit by a lamprey, the most effectual method is to cut out the part affected. Lampreys are very dexterous in faving the nfelves; when taken with a hook, they cut the line with their teeth; and when they perceive themselves caught in a net, they attempt to pass through the methes. They fish for lampreys only on the pebbiy edges of fea rocks; some of these peobles are drawn together to make a pit as far as the water's edge, or a little broud Is thrown in, and the lamorey immediately puts sorth its head between two rocks. As foon as the hook, which is baited with crab or fome other fifth, is prefented to it, it fwallows greedily, and drags it into its hole. There is then occasion for great dexterity to pull it out fieldenly; for if it is allowed time to attach itself by the tail, the faw would be torn away before the fish could be taken. This shows that its strength relides in the end of its tail; for the great bone of this fish is reverted, to that the bones, which in all other fishes are bent towards the tail, are here turned In a contrary direction, and aftend towards the head. After the lamproy is taken out of the water, it is not killed without a great deal of trouble: the best way is to cut the end of its tail, or to crush it with repeated blows on the spine, to prevent it from leaping; as its animal life extends to the end of the spinal marrow. M. De Querhoent denies the supposed poison of the lamprey. This species, he says, abounds on the coasts of f Africa, at the Antilles, on the coast of Brazil, at Surinam, and in the East Indies. When taken with a hook, the filher must kill it before he takes it off, otherwife it darts upon him, and wounds him severely. Its wounds, however, are not venomous, M. de Querhoent having seen several failors who were bit by it, but experienced nodifagreeable confequences. Lampreys are likewife found in great abundance at Afcention Island, but particularly in the feas of Italy: their flesh when dried is excellent; and boiling gives to the vertebræ the colour of gridelin. The flesh of the lamprey is white, fat, foft, an I tender; it is pretty agreeable to the tafte, and almost as nourishing as that of the eel; those of a large fize are greatly superior to the small ones. Mr Pennant is of opinion, that the ancients were unacquainted with this fift.

The gun recoir'd, as well it might. Hufibrar. (2.) PETRONIUS, a renowned Roman fena-When governor of Egypt, he permitted He rod, king of the Jews, to purchase in Alexandria a large quantity of corn for the supply of his subjects, who were afflicted with a fevere famine When Tiberius died, Cains Caligula, who luc creded him, took from Viteliius the government of Syria, and gave it to Petronius, who discharg ed the duties of his office with dignity and he nour. From his favouring the Jews, he run th rith of roling the emperor's friendship and his own life; for when that prince gave orders to have hi statue deposited in the temple of Frusalem, Re tronius, finding that the Jews would rather tolk death than fee that facred place profaned, unwilling to have recourfe to violent mealing and therefore preferred moderation to eracl fures to enforce obedience. In his voyage to frica, of which country he had been appoint quæstor, the ship in which he sailed was talk by Scipio, who caused all the foldiers to be to the fword, and promifed to fave the quality life, provided he would renounce Cefar's put Petronius replied, that " Casfar's officers accustomed to grant life to others, and not to ceive it;" and, at the same time, he stabbed h felf with his own fword.

(2.) PETRONIUS ARBITER, Titus, a great tic and polite writer, the favourite of Nero, posed to be the same mentioned by Tacina his Annals, lib. xvi. He was proconful of nia, and afterwards conful, and appeared of ble of the greatest employments. He was on Nero's principal confidents, and the superin dant of his pleasures. The great favour find him drew upon him the envy of Figellinus, ther of Nero's favourites, who accused him being concerned in a conspiracy against the peror: on which Petronius was feized, and fentenced to die. He met death with a find indifference, and feems to have taked it near he had done his pleasures. He would some open a vein, and fometimes close it, conve with his friends in the meanwhile, not on the mortality of the foul, which was no part of creed, but on topics which pleased his fancy of love-verfes, agreeable and passionate airs. this disciple of Epicurus, Tacitus gives the lowing character: " He was," faye he, "nen a spendthrift nor a debauchee; but a refined luptuary, who devoted the day to fleep, and night to the duties of his office, and to pleafed He is much distinguished by a fatire which wrote, and fecretly conveyed to Nero; in w he ingeniously describes, under borrowed na the character of this prince. Peter Petit di vered at Traw in Dalmatia, in 1665, a confid ble fragment containing the fequel of Petron Trimalcion's Feaft. This fragment, which printed in 1666 at Padua and Paris, product While forme paper war among the learned. firmed that it was the work of Petronius, and thers denied it to be fo, Petit fent it to Ro The Prench critics, who had attacked its auth ticity, were filent after it was deposited in !

mal library. It is now generally attributed to Paranius. The public did not form the fame bivorable opinion of fome other fragments, which were extracted from a MS. found at Belprelein 1688, and printed at Paris by Nodot in its, though they are ascribed by the editor Carpentier, and other learned men, to Petroniw His genuine works are, 1. A Poem on the on war between Carfar and Pompey, translated oprofe by Marolles, and into French verse by White, 1737, in 4to. Petronius, difgusted with luch's flowery language, opposed a Pharfalia to n Piacfalia; but his work, though superior to ecui's in some respects, is not in the true Ryle spic poetry. 2. A Poem on the Education of e Roman Youth. 3. Two Treatifes upon the mution of Eloquence, and the Decay of Arts al Societies. 4. A Priem on Dreams. 5. The min Life: And, 7. Trimalcion's Banquet. is let performance is a description of the pleaof a corrupted court; and the painter is rain ingenious courtier, than a person whose the reform abuses. The hest editions of miss are those published at Venice, 1499, in i a Amsterdam, 1669, in 8vo, eum notis Var. Link Boschius's notes, 1677, in 24to; and n 1 vois in 14to. The edition variorum was nnted in 1743, in 2 vols 4to, with Peter Bur-recommentaries. (See Burman, No 3.) Pethen hed in 65 or 66.

Petronius Granius, a centurion in the gion, who ferved with reputation under Cz-

the Gallic war.

Petronius Maximus was born A.D. of an illustrious family, being at first a senaonful of Rome. He put on the imperial kin 45;, after having effected the affaffinaof Valentinian III. To establish himself upethrone, he married Eudoxia, the widow at prince; and, as the was ignorant of his y, he confessed to her, in a transport of that the strong desire he had of being her ad, had made him commit this atrocious

Whereupon Eudoxia privately applied meric, king of the Vandals, who coming taly with a very powerful army, entered where the usurper then was. Petronius fronted to escape; but the soldiers and peobraged at his cowardice, fell upon him, and theimed him with a shower of stones. His was dragged through the streets for 3 days; after every other mark of difgrace, thrown he Tiber, the xath of June 455. H- reign-777 days. Yet he had some good quali-He loved and cultivated the sciences. He redent in his councils, circumspect in his equitable in his judgments, a facetious nion, and steady friend. He had gained ections of every body, while be remained in te flation.

PETTEIA, in the ancient music, a term to which we have no one corresponding in our language. The melopæia, or the art of arranging founds in fuccession so as to make melody, is devided into three parts, which the Greeks call lepfis, mixis, and ebrefis; the Latins sumptio, mixtio, and usus; and the Italians presa, nesceiamento, and usa. The last of these is called by the Greeks wishing. and by the Italians pettia; which therefore me to the act of making a just differnment of all the

manners

manners of ranging or combining founds among themselves, so as they may produce their effect, i. e. may express the several passions intended to be raised. Thus it shows what sounds are to be used, and what not; how often they are severally to be repeated; with which to begin, and with which to end; whether with a grave found to rife, or an acute one to fall, &c. The petteia confitutes the manners of the music; chooses out this or that passion, this or that motion of the soul, to be awakened; and determines whether it be proper to excite it on this or that occasion. The petteia, therefore, is in music much what the manners are in poetry. It is not easy to discover whence the denomination should have been taken by the Greeks, unless from within, their game of chess; the musical pettera being a fort of combination and arrangement of founds, as chess is of

picces called reflee calculi, or chess-men.
PETTENAW, a town of Germany, in the Tirolese, near the Inn; 12 miles WSW. of Inspruck. PETTEREL, a river of Cumberland, which

runs into the Eden, near Carlisle.

\* PETTICOAT. n. f. [petit and coat.] The lower part of a woman's dreis.-Wilt thou make as many holes in an enemy's battle, as thou haft done in a woman's petticoat? Shakespeare .-

His feet beneath her petticoat,

Like little mice, stole in and out. Suckling. -It is a great compliment to the fex, that the virtues are generally shown in petticoats. Addison.

To fifty chosen sylphs, of special note,

We trust th' important charge, the petticoat. Pope's Rape of the Lock.

\* PETTIFOGGER. n. f. [corrupted from pettivoguer; petit and voguer, Fr.] A petty small-rate lawyer.—The worst conditioned and least cliented petivoguers get more plentiful profecution of actions. Carew's Survey of Cornwall.—
Your pettifoggers damn their fouls

To share with knaves in cheating fools. Hudibr. Confider, my dear, how indecent it is to abandon your shop and follow pettifoggers. Arbuthnot.

—Physicians are apt to despite empiries, lawyers, pettifoggers, merchants and pedlars. Swift.

(1.) PETTINAIN, a parith of Scotland, in Lanarkshire, 3 miles long and 2 broad; on the banks of the Clyde, of an irregular rectangular figure. About 1700 acres are arable; and about 1700 hilly and fit only for pasture. The air is cold. hilly and fit only for pasture. The foil is various; part moorish, part clayey till; and some parts rich loam. Wheat, barley, oats, peafe, beans, turnips, flax, and potatoes, are raifed. The population, in 1792, was 386; increase 56, fince 1755. The number of horses was 134; of theen. 460: and black cattle, 366. The house of sheep, 450; and black cattle, 366. PHAETON, n. 4 in mechanics, [from the et a kind of high open carriage for pleasure.

(IIL) PHARTON, in ornithology, a genus of birds belonging to the older of ansers; the characters of which are: The bill is sharp, straig't and pointed; the nostriis are obiong, and the hinder toe turned forward. There are two species, viz.

1. PHIETON ATHEREUS, the tropic bird, is a bout the fize of a partridge, and has very long wings. The bill is red, with an angle under the lower mandible. The eyes are encompatied with black, which ends in a point towards the back of the head. Three or four of the larger quill-feathers, towards their ends, are black, tipped with white; all the rest of the bird is white, except the back, which is variegated with curved lines of black. The legs and feet are of a vermilion red. The toes are webbed. The tail confilts of two long firaight narrow feathers, timest or equal breadth from their quills to their points. See #1. 273. "The name tropic bira (five Latham), given to this genus, arries from its being chiefly found within the tropic circles; but we are not to conclude, that they never firay voluntarily, or are dilven beyond them; for we have met with inflances to prove the contrary. There are feveral varieties: 1. One called by Latham the autite tropic bird. It is less than the preceding, and is found m as many places. The plumage is in general a filvery white. 2. The yellow tropic bird is another variety, the plumage being a yellowish white. These differences, Mr Latham thinks, arise merely from age, if they are not the diftinguishing mark of tex. 3. The black-billed tropic bird is smaller than any of the former. The bill is black; the plumage on the upper part of the body and wings is striated, partly black and partly white: before the eye there is a large creftent of black, behind it is a streak of the same; the forehead and all the under parts of the body are of a pure white colour; the quills and tail are marked as the upper parts, but the ends of the first are white, and most of the feathers of the last are marked with dusky black at the tips; the fides over the thighs afe striated with black and white; the legs are black, 4. The red tailed tro; ic bird is in length about two feet ten inches, of which the two tail feathers a-The bill is red; lone measure 1 foot 9 inches. the plumage white, tinged or an elegant pale rosecolour; the crescent over the eyes is somewhat abrupt in the middle; the ends of the scapulars are marked with black. This variety is diffinguished by two middle long tail feathers, which are of a beautiful deep red colour, except the finafts and base, which are black; the sides over the thighs are dufky; and the legs are black.

2. Phaeton demersus, the red-fo-ted pinguin, has a thick, arched, red bill; the head, back-part of the neck, and the back, of a dufky purplish hue, and breast and belly white; brown wings, with the tips of the feathers white; instead of a tail, a few black britles; and red legs. It is found on Pinguin isle, near the Cape of Good Hope, is common all over the South Seas, and is about the size of a goose.

PHAETONTIADES, the fifters of Phaeton. See Phaeton, No 1.

PHAETUSA. See Pharton, No I. PHÆUS, a town of Pelopoincfus.

\* PHAGEDENA. n. f. (payičana; from çaya,
O o a edo

eda, to eat.] An ulcer, where the sharpness of the clumsy and heavy than butterflies; their colour

hu nour eats away the flesh.

(1.) \* PHAGEDENICK. PHAGEDENOUS. adj. [phogedenique, Fr.] Eating; corroding.—Phogedenick medicines, are those which eat away fungous or proud sless. Dist.—A bubo, according to its malignancy, either proves easily curable, or terminates in a phagedenous ulcer with jagged lips. Wiseman.—When they are very putrid and corrosive, which circumstances give them the name of foul phagedenick ulcers, some spirits of wine should be added to the somentation. Sharp.

(2.) PHAGEDENIC MEDICINES, those used to eat off proud or fungous flesh; such as are all the

Caustics.

(3.) PHAGEDENIC WATER, in chemistry, denotes a water made from quickline and sublimate; and is very efficacious in the cure of pha-To prepare this water, put 2 lb. gedenic ulcers. of fresh quicklime in a large earthen pan, and pour upon it about so lb. of rain water; let them stand together for two days, stirring them frequently; at last leave the lime to settle well then pour off the water by inclination, filtrate it, and put it in a glass bottle, adding to it an ounce of correlive fublimate in powder: which from white becomes yellow, and finks to the bottom of the vessel. The water being settled, is fit for use in the cleanfing of wounds and uicers, and to eat off superfluous flesh, especially in gangrenes; in which case may be added to it one 3d or 4th part of spirit of wine.

PHAGESIA, an ancient festival among the Greeks, observed during the celebration of the Dionysta; so called from the payur, good eat-

ing, that then universally prevailed.

PHALACRINE, an ancient village of the Sa-

bines, where Vespasian was born. Suet.

(I.) PHALÆNA, the MOTH, in zoology, a genus of infects belonging to the order lepidopter. The feelers are cetaceous, and taper gradually towards the points; the wings are often The caterpillars of this genus bent backwards. vary much as to fize, and confiderably as to their shape and number of feet. It is remarkable, that caterpillars of almost every species of this genus are found with 10, 12, 14, and 16 feet. The last are the most common and the largest; (See No iv.) 44 All the caterpillars of phalænæ, (fays Barbut), after having feveral times cast their sough, spin r cod, in which they are transformed to chryfailds. But the texture of the cod, the fineness of the thread of which it is composed, and the different matters joined to the threads, are infinitely various. The chryfalids of phalana are genetally oblong ovals, not angulous as those of butterflies, nor fo foon transformed to perfect infects. They remain a much longer time within the cod, the greatest part not coming forth till the ensuing year. Some I have met with that remained in that flate during two or three years successively. Heat or cold contribute greatly to forward or put back their final metaniorphons; a fact which may be afcertained by procuring them a certain degree of moderate heat, by which means one may fee phalænæ brought forth upon one's mantle-piece in the depth of winter. The phalana or perfect infects sprung from those cods, are generally more

are likewise more brown, dim, and obscure, the there are some phalæiæ whose colours are ver lively and brilliant. Several of them fly only it the evening, keeping quiet and close under kare in the day-time, and this has induced some a thors to give them the name of night butterflie In fummer evenings they find their way in rooms, attracted by the lights round which the are feen to hover. And indeed a fure method catching a great number of phalana is to but them by night in a bower with a lantern. The all refort to the light of the lantern, about whi great numbers of them may be caught. As markable circumstance has been observed of the phalænæ, which is, that the females of some them are without wings. By their looks the never would be taken for phalænæ. They hi the appearance of a large, short, fix-legged, cre ing animal, while their male is winged and act Yet this heavy creature is a real phalzena, ex diftinguished by its antenne. It even has will but so short that they are no more than small g tuberances placed at the extremity of the thou and that appear quite useless. Those phase whose females are destitute of wings are general in the number of those whose antenna are pe The unwinged females have anteund milar to those of the males, but with shorter be only. Their body is also charged with scale characteristic of infects of this order."

(II.) PHALENE, FAMILIES OF. M. Barbus, vides this extensive genus into & families; viz. i. PHALENE ALUCITE. The wings if plit, or divided into branches almost to the control of the contr

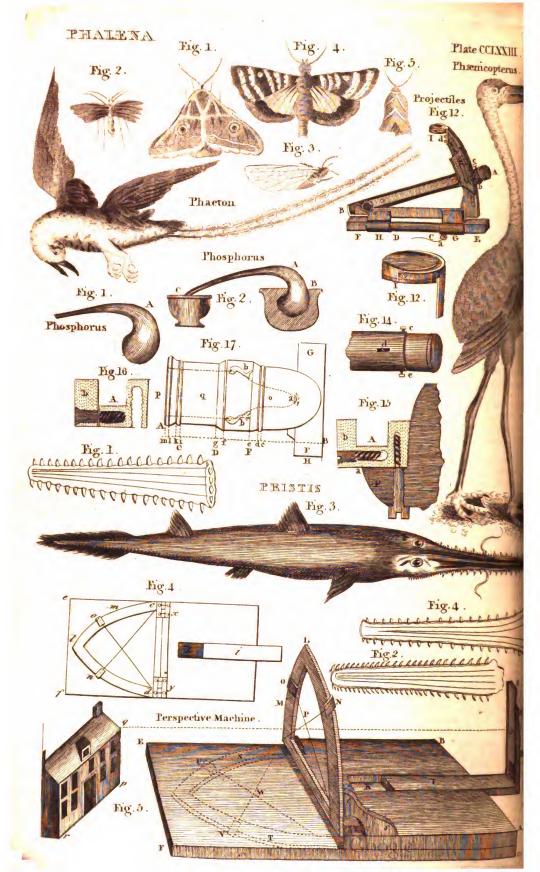

base.

ii. PHALENG ATTACE, whose wings and downwards and are spread open; they have tinated antennæ without a tongue, or pedia antennæ with a spiral tongue, or cetaceous

næ with a spiral tongue.

iii. PHALENÆ BOMBYCES, whose wings of the body in a position nearly horizontal, which have pectinated antennæ. They are elingues, which want the tongue, or have short as not to be manifestly spiral; their are either reversed or descreted; or spiritus which have a spiral tongue; and are either hwith smooth backs, or cristatæ dorso with a of creft or tutt of hair on the back.

iv. Phalana Geometra, whose wings at reft are extended horizontally: the ante in one subdivision of this section are pecting in another cetaceous; the under wings in each these divisions are either angulated, or round entire edges. " Amongst the geometre of piliars (fays Barbut) there are some very lar, whether for their colour, or the tuber which they bear, or lastly for the different their attitudes. Many refemble finall brand or bits of dry wood; and that refemblance be a means of faving many of those infects the voraciousness of birds, who do not so d discern them. Other caterpillars are very h while feveral are quite smooth; the latter ha cieanlier look, whereas the hairy ones have for thing hideous, and may even be hurtful w touched." They have so or sa feet.

e. Phalana Noctus, whose wings are incumbent as in the bombyces, from which they differ cheely in the formation of the antennæ, which are cetaceous. They are either elingues, vanting tongues, or fpirilingues, having spiral lineurs.

proof the wings in this fection are laid over the other; the wings themfelves decline a little towards the fides of the body, and in thape refinble a delta; they have confiderable palpi of affects forms.

va. Phalene Tince. The wings are wrapped up or forded round the body, so as to give the meet a cylindrical form; the forehead is areceed out or advanced forwards.

ms. Phalana Tortrices. The wings are seeding obtule, their exterior margin is curve, declines towards the tides of the body. They after the paipi.

HPHALENE, SPECIES OF. There are no than 460 species. To describe them all be impossible; but we shall mention a

That And Alucita Pentadactyla, (No body is of a pale yellow. The wings are black; body is of a pale yellow. The wings are frow but, and the infect keeps them firetched afundamenta at the fig. The fuperior are divided in a or rather appear composed of two stumps of edifications united at the base. The interior is are likewise divided into three threads or like, which are furnished on both sides with amongs. The exterpillar is of a green colour, and with black, and charged with a few hairs, seeds upon grass, changes to a chrysalia about other, and appears a moth in August, freening woods.

2. Phalena Attaca Pavonia minor. (See 2.) The wings of this infect, fays Barbut, are 3. undulated, and variegated, having fome 3. in the middle, and a margin one line broad; is colour yellowish grey. The under part has 5. of the grey cast, but the extremities of the before the margin have a broad band of

before the margin have a broad band of the A wings both above and beneath, reach a large eye, which eyes are black enterpolic with a dun-coloured circle, and above with with a temicircle of white, then another of indicated by a whole larke of black. Across the middle of the eye is frawn transversely a small whitish line. The carpular is green, has 16 feet with rose-colour turnous, charged with long hairs terminated by a malknoh; besides which, it has dun-colour or latent range. It is found upon fruit trees.

In this species the wings of the male are of a my white; of the semale yel owith, with streaks a deeper hue; the shoulders, abdomen, &c. in the seed, are deep yellow. The antennæ are stimated and shorter than the thorax. The campilar feed-upon the roots of burdock, hops, changes into a chrysalis in May, appears in winged state in June, frequenting low marshy rounds where hops grow.

4. PRALENA NOCTUA PRONUBA SPIRILINpeis, 89 4. The thorax, head, antenuz, feet,

and upper wings, are of a brown colour, more or less dark, sometimes so deep as to be nearly black, but often of a binish cast. The upper wings are moreover somewhat clouded, and have two black fpots, on the middle, the other towards the outward angle of the lower part of the wing. The under ones are of a beautiful orange colour, with a broad black band near the lower edge of the wing, of which it follows the direction. The caterpillar is imoot..; to be found on feveral plants, but particularly upon the thlaspi and some other cruciferous plants. It keeps in concealment during the day, and only feeds by night. Its metamorphofic is performed under ground, and fome varieties of colour are observable amongst these caterpillars; some being green, others brown; which latter yield males, the former females.

5. PHALENA TORTRIX PRASINANA. The fuperior wings of this fpecies are of a fine green colour, having two diagonal yellow bars on each, the body and inferior wings are whitish, shaded with yellowish green. The caterpillar is a pale yellowish green, ornamented with small brown specks or spots, the tail being forked and tipt with orange red colour; it feeds on the oak, changes to a chrysalis in September, and assumes the fly state

about May, frequenting woods.

PHALÆSIA, a town of Arcadia. Pauf. 8. PHALANGIUM, in zoology, a genus of infects belonging to the order of aptera. They have 8 teet, two eyes on the top of the head placed very near each other, and other two on the fides of the head: the feelers resemble legs, and the belly is round. There are 9 species: Mr Barbut

describes only one species, viz. PHALANGIUM OPILIS of Linnzus. " Its body is roundish, of a dusky brown on the back, with a duskier spot of a rhomboidal figure near the middle of it. The beily is whitish; the legs are extremely long and slender. On the back part of the head there stands a little eminence, which has on it a kind of double creft, formed as it were of a number of minute spines; the eyes are small and black, and are two in number. It is commonly called the Shepherd Spider. This species of spider multiplies fingularly. They are great spinners. In autumn the stubble is quite covered with the threads of these spiders, by means of which they travel with eafe, and enfnare their prey. However, those threads are thought rather to be the produce of a species of tick called autumnal weaver. A small degree of attention discovers an amazing multitude of those ticks almost imperceptible, and that is their work. The threads, when united, appear of a beautiful white, wave about in the air, and are known in the country by the name of virgin's threads. Some naturalists think, that those threads, floating in the air, ferve the infect as fails to waft it through the air, and as a net to entrap infects on the wing; for remnants of prey, fay they, are discoverable in them. As to those parcels in which nothing is seen, they are only essays rejected by those travelling insects. The analogy between the phaiangium and the crab, and the facility with which it parts with its legs to fave the rest of the body, has raised a prefumption that its legs might grow again as do those of the crabs and lubiters.

PHALAN

PHALANGOSIS, in furgery, a tumor and re-Exation of the eye-iids, often so great as to deform the eye, and confiderably to impede vision. Sometimes the eye-lid when in this flate subsides or finks down, occasioned perhaps either by a palfy of the mufeie which futtains and elevates the eye-lid, or eife from a relaxation of the cutis above, from various causes. Sometimes an cedematous or aqueous tumor is formed on the eyelids, so as almost entirely to exclude vision; but this last case should be distinguished from the other, and may be eafily remedied by the use of internal and topical medicines, fuch as purges and diaretics given inwardly, and a compress dipped in warm ipirit of wine and Inne water. But in the paralytic or relaxed case, the use of cordial and nervous medicines mint be propoted inter-nally; and outwardly, balfim of Peru and Hungary water are to be employed. If all these fail, the remaining method of cure is to extirpate a fufficient quantity of the relaxed cutis; and then, after healing up the wound, the remainder will be fufficiently fliortened.

PHALANNA, a town of Theffaly. Liv. 42.

Far otherwise th' inviolable faints,

In cubic phalanx firm, advanc'd entire. Milt The Grecian phalanx, moveless as a tow'r,

On ali sides batter'd, yet resists his pow'r.

Pape. (2.) PHALANK, in Grecian antiquity, a square battalion of foldiers, with their shields joined, and pikes croffing each other; so that it was next to impossible to break it. The Macedonian phalaux Is supposed by some to have had the advantage, in valour and firength, over the Roman legion. It confilted of 16,000 men, of whom 1000 marched abreaft, and thus was 16 men deep, each of whom carried a kind of pike 23 feet long. folders stood so close, that the pokes of the 5th trank reached their points beyond the front of the The hindermost ranks leaned their pikes battle. on the floulders of those who went before them, and, locking them faft, preffed brifkly against them when they made the charge; fo that the first five ranks had the impetus of the whole phalank, which was the reason why the shock was generally irrelished. But the word phalane was also used for a party of 28, and several other numbers; and even fometimes for the whole body of foot. See Legion.

(3.) PHALANK is applied, by anatomifts, to the three rows of small bones which form the fin-

gers.

(4.) PHALANK, in natural history, is a term which Dr Woodward and some other writers of sofills have used to express an arrangement of the columns of that fort of sofill coralloid body sound irequently in Wales, and called lithostro-

tion. In the great variety of specimens we find of this, some have the whole pharanx of columns cracked through, and others only a few of the external ones; but thele cracks never remain empty, but are found flied up with a white spar as the finalier cracks of ftone usually are. This is not wonderful, as there is much that in the composition of this fossil; and it is easily washed out of the general mais to fill up their cracks and is then always found pure, and therefore a its natural colour, white. The LITHOSTROTION or general congeries of thefe phalanges of co lumns, is commonly found immerfed in a gre frome, and found on the tops of the rocky cul about Milford in Wales. It is usually end though fomewhat inclining in fome specimen but never lies horizontal. It feems to have be all white at first, but to have been fince grade ly tractured with the matter of the Roue in wh it lies. The fingle columns, which form the phalanx, are ufually round or cylindric, thou fometimes flatted and bent; fome of them are fo naturally of an angular figure; there, hower are not regular in the number of their and fome confifting of 3 lides, fome of 5, and 14 of 7; fome are hexangular al.o, but thefet fearce. They are from 5 or 6 to 16 inches length; and the largest are near half an inch ver, the least about a quarter of an inch; greater number are very equal to one another fize; but the fides of the columns being uneq the same column measures of a different th ness when measured different ways; the pha ges or congeries of these are sometimes of a ! or more in diameter. The columns are of burst, as if they had been affected by care injuries; and it is evident that they were formed before several other of the extraneous fils; for there are found fometimes fiells fishes and entrochi immersed and bedded in bodies of the columns. It appears plainty hence, that when these bodies were washed of the fea, and tolled about in the waters then covered the tops of these cliffs, this cit fossil, together with the stony bed in which contained, were so fost, that those other bo found entrance into their very fubstance, and were formed as it were upon them. This takes an elegant polish, and makes in that a very be jutiful appearance, being of the hi nels of the common white marble, and carry the elegant structure visible in the smallest in ments.

(I.) PHALARIS, a remarkable tyrant, bor Crete, where his ambitious defigns occasioned banishment: he took refuge in Agrigentua free city of Socily, and there obtained the preme power by stratagem. What has che contributed to preserve his name is his crud in one act of which, however, he acted with juitice. Perilius, a brafs founder at Athens, keing his disposition, invented a new mode of ture. He made a brazen buli, hollow within ger then the life, with a door in the side to at the victims; who being shut up in it, a fire kindled under it, to rooss them to death; and throat was so contrived, that their dying groresembled the roaring of a buil. The artist brow

It to the tyrant, in hopes of a great reward. Phahas admired the invention, but ordered the inventor to be put into it, to make the first that The end of this detectable tyrant is diffrontly related; but it is very generally believal, with Cicero, that he fell by the hands of the ungentines; and, as fome suppose, at the infiiprion of Pythagoras. Ovid tells us, that his Princ was cut out; and that he was then put in the braz ii buil. He reigned, Eusebius fays, Myrars. See Bentley, & i, t.

(II) PHALARIS, CANARY GRASS, in botany, a ma of the trigguia order, belonging to the triandria class of plants. The calyx is bivaived, musted, and equal in length, containing the co-

markabie are,

(I.) PHALLUS, the morel, in botany, a ganus of the order of fungi, belonging to the crypt togamia class of plants. The fungus is reticulated above, and fmooth below. There are two spe-

1. PHALLUS ESCULENTUS, the esculent morel, is a native of Britain, growing in woods, groves, meadows, pattures, &c. The fubfiance, when recent, is wax-like and friable; the colour a whitith yellow, turning brownish in decay; the height of the whole fungue, about four or five inches. The stalk is thick and clumfy, fomewhat tuberous at the base, and hollow in the middle. The pileus is either round or conical; at a medium, about the fize of an egg, often much larger p bothow within; its base united to the stack; and its furface cellular, or latticed with irregulae fi-The magnified teeds are oval. It is much effeemed at table both recent and dried, being commonly used as an ingredient to heighten the flavour of ragouts. We are informed by cleditich, that morels are observed to grow in the woods of Germany in the greatest plenty in those places where charcoal has been made. Hence the good women who collect them to fell, receiving a hint how to encourage their growth, have been accustomed to make fires in certain places of the woods, with heath, broom, vaccinium, and other materials, in order to-obtain a more plentiful crop. This strange method of cuitivating morela being however fometimes attended with dreadful confequences, large woods having been fet on fire and destroyed by it, the magistrate thought fit to interpole his authority, and the practice is now interdicted.

2. PHALLUS IMPUDICUS, stinking morel, of stinkhorns, is also a native of Britain, and sound in woods and on banks. It arises from the earth under a veil or volva, thaped exactly like a hen's egg, and of the fame colour, having a long fibrous radicle at its base. This egg-like volva is comoofed of two coats or membranes, the space between which is full of a thick, viscid, transparent matter, which, where dry, glues the coats together, and flines like varnish. In the next stage of growth, the volva suddeniv bursts into several lacerated permanent segments, from the centre of which ariles an erect, white, centular, hollow stalk, about 5 or 6 inches high, and one thick, of a wast-like friable fubitance, and most fetid cadaverous smell, conical at each end, the base inserted in a white, concave, membranaceous turbinated cup, and the fummit capped with a hollow, conical pileus, an inch long, having a reticulated cellular furface, its bafe detached from the staik, and its suminit umbilicated, the umbilicus fometimes perforaced, and fomecim a clofed. The under fide of this pileus is covered with

a cicar.

a clear, viscid, gelatinous matter, similar to that found between the membranes of the volva; and under this viscid matter, concealed in reticulated receptacles, are found the feeds, which when magnified appear spherical. As soon as the volva burfts, the plant begins to diffuse its intolerable odours, which are so powerful and widery expanded, that the fungus may be readily discovered by the fcent only, before it appears to the fight. At this time, the viscid matter between the coats of the volva grows turbid and fuscous; and when the plant attains its full maturity, the clear viscid substance in the pileus becomes gradually discoloured, putrid, and extremely fetid, and foon afterwards turns blackish, and, together with the feeds and internal part of the pileus itself, melts away. The fetid smell then begins to remit, the fungus fades, and continues for a short time sapless and corraceous, and at last becomes the food of worms. The cadaverous fcent of this fungus greatly allures the flies; which, lighting upon the pileus, are entrapped in the viscid matter, and perish. We are informed by Gleditsch, that the people in Thuringia call the unopened volvæ by the ridiculous name of ghosts and demon's eggs; and that they collect and dry them either in the smoke or open air, and when reduced to powder, use them in a glass of spirits as an aphrodifiac.

(II.) PHALLUS, among the Egyptians, was the emblem of fecundity. It was very fervently worfhipped by women, especially by those who were barren. This custom was introduced among the Greeks, and festivals in honour of it were called PHALLICA, OF phaluca. See MYSTERIES, \$ 20-27. Among the Hindoos a fimilar emblem called lingam is used, and for similar purposes. See Hin-

DOOS.

PHALSBURG, a town of France, in the dep. of the Meurthe, fortified by Vauban; 41 miles ENE. of Sarreburg, and 41 W. of Savern.

PHALTI, or I fon of Laish. He married Mi-PHALTIEL, I chal, after Saul had taken her from David; but David afterwards took her away from Phalti. (1 Sam. xxv. 44. 2 Sam. iii. 15.) It appears from 2 Sam. xxi. 8. that Michal had children by Phalti, as it is certain she had none by David. See 2 Sam. vi. 23.

PHANÆUS, a promontory of Chios, famous

for its wines. Liv. 36. c. 43.

PHANAGARA, a town of Russia, in Caucafus, at the mouth of the Kuban, in the Black Sea; 60 miles E. of Theodolia.

PHANAGORIA, a beautiful little island of Asia, on the E. side of the Strait of Casta, between the Black Sea and the Sea of Asoph.

PHANARÆA, a town of Cappadocia. Strab. PHANATIC, n. f. or FANATIC, a vitionary; one who fancies he fees spectres, spirits, apparitions, or other imaginary objects, even when awake; and takes them to be real. See PHANTAsy and Panatic. Such are phrenetics, necromancers, hypochondriac perfons, lycanthropi, See PHRENETIC, HYPOCHONDRIAC, LY-CANTHROPI. Hence the word is also applied to enthufiafts, pretenders to revelation, new lights, prophecies, &c. See Enthusiast, and Second S:GHT.

PHANES, a native of Halicarnassus, who was commander of the Grecian auxiliaries, lent to alfift Amafis, K. of Egypt, whom he deferted. See EGYPT, § 10, 11.

PHANETA, a town of Epirus. Liv. xxxii. c.

28.

PHANOCLES, an ancient elegiac poet of Greece, who wrote a poem upon an unnatural crime, wherein he supposes that Or heus was the first who practifed it. Some fragments of his poems are extant.

PHANODEMUS, an ancient Grecian historian who wrote on the antiquities of Attica.

PHANTASIA, the daughter of Nicarchus of Memphis, in Egypt. It has been faid that the wrote a poem on the Trojan war, and another the return of Ulyflus to Ithaca, from which ca positions Homer copied the greatest part of Iliad and Odyssey, when he visited Memp where they were deposited.

(1.) \* PHANTASM. Phantasma. π. f. [[ Jasua, paviasia; phantasme, phantaste, Fr.] V and airy appearance; fornething appearing of

to imagination.-

Like a phantasma or a hideous dream. This armado is a Spaniard that keeps bere

court

A phanta/m, a monarcho. They believe, and they believe amiss, becau they be but phuntasms or apparitions. Raleigh If the great ones were in forwardness, the per were in fury, entertaining this airy body or s ta/m with incredible affection. Bacon.

In this infernal vale first met; thou call's Me father, and that phanta'm call'st my son

Assaying, by his devilish art, to reach The organs of her fancy, and with them is Illusions, as he last, phantajms and dreams.

(2.) PHANTASM is also fometimes used in nonymous fense with idea, or notion retained the mind, of an external object.

\* PHANTASTICAL. See FANTASTICAL \* PHANTASTICK.

(2.) PHANTASTICE IDEAS. See METAR

SICS, Part I. Sed. XXV.

PHANTASY, n. f. or Fancy, the Image tion; the second of the powers or faculties foul, by which the species of objects received the external organs of fense are retained, recall further examined, and either compounded or vided. See IMAGINATION, and METAPHYSP Part I. Sec. IX, X, and XXV. Others define pliantaly to be that internal fende or power, wh by the ideas of ablent things are formed, and prefented to the mind as if they were prefente melancholics and madmen, this faculty is ftrong, representing many extravagant and m ftroughthings, and framing its images as lively those of fentation: whence the visions and det tions those persons are hable to.

\* PHANTOM. n. s. [phantome, French.] A spectre; an apparition. - What this airy tom faid is not absolutely to be relied on. At

A constant vapour o'er the palace slies; Strange phantoms riting as the mists arise. P Afancied vision .- To try every overture of preourtake. Rogers .-

To cam the queen, the phantom fifter flies.

PHANUEL, of the tribe of Asher, the father Ethe prophetels, Anna. See Anna, No z. and Leke 11. 36 - 38.

PHAON, in fabulous history, a young man of Applene, in the island of Lesbos, who received from Venus an alabatter vafe fitted with an efince which had the virtue of conferring beauty. had no fooner anointed his body with it than became the most beautiful of men. The lae of Mythene fell desperately in love with him; Mithe celebrated Sappho threw herfeif down a empte, because he would not encourage her d who furprised him with his wife. Ovid, in \*Eylics, gives a letter from Suppho to Phaon, Mr Pope has translated into English

MPHARA, in ancient geography, a village Egypt and Arabia Petræa; or, according beny, at a promontory fituated between lous deroopolites and Etaniticus of the Red ; where Ismael is faid to have dwelt. In Hewais Paran, and in most interpreters; Phain the Septuagint and Vulgater

PHARA. See PHARE.

MRACYDES, a commander of the Spartan who assisted Dionysius, tyrant of Syracuse,

the Carchag nians. Polyan. 2.

MRÆ, in ancient geography, 3 towns, viz. lown of Achaia in Peloponnefus, on the Pino fladia from the sea, and 150 S. of Patra. Crete, (Pliny,) a colony from the Phara of mia (Stephanus.) 3. Phara, or Phera (Stra-Ptolemy,) or PHARA, (Polybius) a town of knia, on the Nedo, (St. abo.) on the N. side & Smus Meisenius, and NW. of Abea. Anread PHARIS in Homer, (Pausarias, Statithough now read PHARE.

HARAMOND, the first king of France. He 10 bave reigned at Treves, and over a part nance, about A. D. 420; and to have been kded by his fon Clodio. See France, § 4 5. The institution of the famous Salique law

serally attributed to him.

PHARAN, or PARAN, the name of the coess in the neighbourhood of Phara, ad-

of to Kadeih.

PHARAN, a town of Arabia Petræa, on the of Suez, formerly a bishop's see, but now decayed: 40 miles N. of Tor.

TARANITÆ, the natives of PHARE. Ptol. MARAOH, [ Heb. i. e. making bare.] a name of the kings of Egypt. Josephus that in the Egyptian language the word Phafignifies a king; and that those princes did alume this name till they afcended the throne, they quitted also their former name. There les monarchs of this name, mentioned in scrip-: VIZ.

1 PHARAOH, in whose time Abraham went on to Egipt, when Sarah, who palled only for

VOL XVII PART L

Abraham's fifter, was by the command of Pharack lest happiness, he hunts a phantom he can never brought to his palace to become his wife. See ABRAHAM and SARAH.

2. Pharaon, who reigned when Joseph arrived

in Egypt. See Joseph and JACOB.

3. PHARAOH, who perfectled the Israelites, and published a decree that all the male children born of Hebrew women should be thrown into the Nile.

4. Pharaoh, before whom Moses performed many miracies, and in whose fight Egypt was vis fited with ten dread ul plagues, Exod. vii -x. This Pharaoh having at last been compelled to fend a way the Hebrews, and to fuller them to go out of Egypt, repented of the leave he had given, and purfued them at the head of his army with his chariots. But he was drowned in the Red Sea, wherein he had rashly entered in the eagerness of his pursuit. (Exod. xiv.) Some historians give us the name of this Pharach; Appion calls him A-MASIS; Eusebius calls him Chenchris; Uther calls him Ameno bis.

5. PHARAUH, who gave protection to Hadad. son of the king of Edom, who gave him to wife the lifter of his own queen, enriched him with lands, and i rought up his fon Genubah in his own

court. I Kings xi, 17-22.

6. Рнаклой, who gave his daughter in marriage to Solomon; (1 Kings iii. 1.); having taken Gezer, fet it on fire, drove the Canaanites out of it, and gave it for a present to Solomon, in lieu of a

dowry for his daughter. 1 Kings ix. 16

7. PHARAOH, OF SHISHAR, who entertained Jeroboam i his dominions when he fled from Solomon. He alfo declared war against Rehoboams befieged and took Jerusalem, carried away the king's treatures, and those of the house of God. particularly the golden bucklers that Solomon had made. Some think he was the brother of Solomon's queen, and did this to avenge the neglect of his fifter by Solomon. See EGYPT, § 8; SHISHAK ; and x Kings, xiv, 25-29.

8. Pharaon, with whom Hezekish made a league against Sennacherib king of Asiyria, A. M. 3290. See Sennacherin. He is probably the fame whom Herodotus name Sethon, priest of Vulcan, who came to meet Sennacherib before Pelufium, and to whose affiftance Vulcan was believed to have fent an army of rats, which gnawed the bow-firings and the thongs of the bucklers of Sennacherib's foldiers. See EGYPT, § 9.

9. PHARAOH NECHO, or Nechos, fon of Pfammiticus, who made war with Joliah, and fubdued him. See 2. Chron. xxxv. 20-24. Herodotus alfo mentions this prince. See EGYPT, § 10; and

NECHO II.

10. PHARAON HOPHRAH, who entered into an alliance with Zedekiah K. of Judah, and attempted to assist him against Nebuchadnezzar king of Chaldea. Against this Pharaoh Ezekiel pronounced feveral of his prophecies. (see Ezek. xxix.-xxx.) He is called Apries in Herodotus, I. ii. c. 161. He is also mentioned in Habakkuk ii. 15, 16. See alfo Isaiah xix. 11. and Jeremiah xivi. 16, &c. See APRIES, and LGYPT, § 10.

PHARAON or FARO, is the name of a game of chance, the principal rules of which are: the banker bolds a pack confishing of 52 carder-lie draws

all the cards one after the other, and lays them down alternately at his right and left hand; then the ponte may at his pleasure set one or more stakes apon one or more cards, either before the banker has begun to draw the cards, or after he has drawn any number of couples. The banker wins the stake of the ponte when the card of the ponte comes out in an odd place on his right hand but loses as much to the ponte when it comes out in an even place on his left hand. The banker wins half the ponte's stake when it happens to be twice in one couple. When the card of the ponte being but once in the stock happens to be last, the ponte neither wins nor loses; and the card of the ponte being but twice in the stock, and the last couple containing his card twice, he then lofes his whole stake.

PHARAS. See Persia, § 2.

PHARE, n. f. [pharus, Lat. ocen, Gr.] A watch

tower; a light-house. Bailey. See PHAROS. PHAREZ, son of Judah and Tamar (Gen. xxxv ii. 27, 28, &c.) fo named, from the circumstance attending his birth, by his mother, Pharez, i. e. one braking forth. His fons are mentioned in Numb. xxvi. 20, 21. and his posterity down to Joseph and Mary, in Matt. i. and Luke, iii.

PHAREZITES, the descendants of PHAREZ.

(1.) PHARIS. See PHARE.

(2.) PHARIS, a town of Laconia. Paul. iii. c. 10. PHARISAICAL. adj. [from pharifee.] Ritual, externally religious, from the feet of the Pharifees, whose religion consisted almost wholly in ceremonies.—The causes of superstition are pleasing and Renfual rites, excess of outward and pharisaical holinefs. Bacon-Suffer us not to be deluded with pharitaical washings. King Charles.

PHARISAICALNESS, n. /. Acting hypocriti-

cally Bailey.

PHARISAISM, n. f. The profession or opinions of the Pharitees; also hypocrify. Bailey. Serrarius places the orign of Pharifaism about the time of Ezra; Maldonat makes it only to have arisen a short time before our Saviour's birth. thers, with more probability than either, refer it to the time of the Maccabees.

PHARISEES, a famous fect of the Jews, who diftinguished themselves by their zeal for the traditions of the elders, which, they pretended were delivered to Mofes from Mount Sinai, along with the law, and therefore both were of equal authority. From their rigorous observance of these traditions, they Tooked upon themselves as more holy than other men: and therefore separated themfelves from those whom they thought finners or profane, fo as not to eat or drink with them; and thence, from the Hebrew word pharis i. e. to feparate, they had the name of Pharilees or Separatifis. This feet was one of the most ancient and most confiderable among the Jews; but its original is not very well known. It was in great repute in the time of our Saviour, and must have had its original at the same time with the traditions; and they grew up together, till at length they had gained ground fo far, that the traditional law fivallowed up the written. They held a refurrection of the body, and supposed a certain bene to remain uncorrupted, to furnish the matter of which the refurrection body was to be formed.

They did not, however, believe that all man were to be raifed from the dead. A refured was the privilege of the children of Abraha lone, who were all to rife on Mount Zion: incorruptible bones, wherever they might be ried, being carried to that mountain belov furface of the earth. The state of future fer in which the Pharifees believed, was very g They imagined, that men in the next worl well as in the prefent, were to eat and drink enjoy the pleasures of love, each being rea to his former wife. Hence the objection ! by the Sadducees, which our Saviour so sat torily refuted. (See Matt. xxii, 23-33.) Pharifees feem to have had fome contufed no probably derived from the Chaldeans and Perespecting the pre-existence of souls; and Christ's disciples asked him concerning the man. (See John ix. 2.) With the Essenes, held absolute predefination; and with the ducees free-will: but how they reconciled feemingly incompatible doctrines is nowher plained. The fect of the Pharitees was not guished by the ruin of the Jewish common's The greatest part of the modern Jews are f this feet; being as much devoted to tradition the oral law as their ancestors were. See C LISTS, KARAITES, ESSENES, SADDUCEFS,

PHARITÆ, people of Pharis. See Pha PHARKIRCHEN, a town of Lower Ba 19 m. SW. of Dingelfingen, and 24 W. of Pa PHARKOVA, a town of Russia, in To

UNITIONS AND DIVISIONS OF PHAR-MACY.

PHARMACY. n. /. [from exemuses, a medicine; pharmacie, Fr.] The art or practof preparing medicines; the trade of an apo-

Each dose the goddess weighs with watchful

eye,

PHARMACY is also the art of preserving, and counding substances, for the purposes of meaning substances, for the purposes of meaning substances, for the purposes of meaning substances, called GALENICAL and CHEMICAL MACY. But for this division there is no lizion in nature: and accordingly processes pharmacopæia referred to the head of Chemical are in another referred to the head of Gall. There can be no doubt, that even the simple pharmaceutical preparations are to a extent chemical. Hence this division, and on prejudice, and supported merely by a maion for antiquity, is now banished from altery modern pharmacopæia.

Pharmacy has also been divided into Theotal and Practical; the first, consisting not my of speculative opinions, but of a knowledge that and principles, tending to explain the small of procedies; the latter, comprehending

In manual labour employed in processes. The former of these may therefore be justly scientific Pharmacy. And there can be no that an acquaintance with it is essentially stay to the physician as well as the apothesis without it he must often err in the forms presentions and compositions which he emply; and must be often deceived in the effects thing from compositions, when he infers their appries from the known powers of the ingredients in their separate state.

The theory of pharmacy therefore is the same with that of chemistry; as are also the operations, which remain to be discussed here only in as far as they are made subservient to the medicinal art,

distinct from that which is purely chemical. The objects of pharmacy, however, are much more limited than those of chemistry; the latter comprehending, in the utmost latitude of the word, almost every substance in nature; while pharmacy regards only such bodies in the vegetable, animal, and mineral kingdoms, as, by their effects on the human frame, tend to preserve health, or to restrore it when lost.

#### INTRODUCTION.

6. The ingenious Mr Murray, lecturer on Chemistry, Materia Medica, and Pharmacy, at Edinburgh, justly observes, in the preface to his Elements of Materia Medica and Pharmacy, lately published, that there is " no work adapted to convey just ideas on these branches of Medicine in their present state. With the exception of the new and valuable edition of the Edinburgh Diffenfatory by Dr Duncan, junior, published fince the greater part of this (Mr Murray's) treatife was written, there is no elementary work on Pharmacy, in which the discoveries of modern Chemistry are introduced: and former systems of Materia Medica, whatever may have been their merits, have in some measure become obsolete and deficient, in confequence of the changes that have taken place, within these 20 years, in the theory and practice of medicine, and in the sciences with which it is connected."

7. The first part of Mr Murray's excellent Treatise is allotted to the general principles of Pharmaceutic Chemistry. For this branch of the subject, which is most ably handled by Mr Murray, we must refer our readers to the article Chemistry, where the substance of these principles will be found; and shall here only add Mr

Murray's general definition.

8. "PHARMACEUTIC CHEMISTRY is that department of chemical Science, which investigates the composition and chemical relations of bodies, with a view to their medicinal properties; and explains those operations, by which they are fitted to act with more efficacy or fafety as remedies

Pp 2 against

gainst disease. It includes these tasts and principles which connect Materia Medica and Pharmacy, the enumeration of which forms the proper introduction to the fludy of these two branches of Medicine."

9. MATERIA MEDICA forms the 2d division of Mr Murray's ufeful work. For this too we must refer the reader to our article MATERIA MEDICA, as it is inspossible to make room for Mr Muray's clegant and extensive arrangement of the substances that come under this branch of medical Science, But as Mr Murray affures us, that he has adopted that arrangement, which, after mature deliberation, appears preferable to any other,that of claffing the different substances according to their medicinal powers," we shall give a geperal yiew of this new and advantageous arrange-"In the felection of the articles." (he adds) "I have been careful to exclude fuch as have been discarded from modern practice, and which an undue regard to antiquity has too long retained in publications on Materia Medica.

10. Mr Murray's arrangement of medicines, contifts of the following XXI classes: viz. 1." Narcotics: 2. Antispasinodics; 3. Tonics: 4. Aftringen: 5. Emetics: 6. Cathartics: 7. Emmenagogues; 8. Diuretics; 9. Diaphoretics: 10. Expectorants; 11. Sialagogues; 12. E rhines; 13. Epitpastics and Rubesacients; 14. Refrigerants; 15. Antacids: 16. Lithonfriptics: 17. Efcharotics: 18. Anthelmintics; 19 Demulcents: 20. Diluents: 21. Emollients." See these articles in their order. But we would advise the student of med cine and pharmacy, for full fatisfaction on this branch of the fubicct, to consult Mr Murray's

valuable work itself, vol. 1. II. The 3d part is devoted to PHARMACY, pro-" The Pharmacopaia of the Edinperly to earled burgh College." (fays Mr Muriay) "affording a felection of Pharmaceutical preparations, superior, perhaps, to any other, and using likewise the established language of chemistry and natural history, has been adopted as the basis of this part of the work. To a translation of its processes, I have added, under each preparation, its medicinal uses and dose, with the theory of the process, where his was requilite. The corresponding preparations of the London Pharmacopara are likewife noticed, as well as a few, which, though not inferted in either Pharmacopoxia, are occasionally used in practice.

12. " As there are some peculiarities with regard to the modes of preparing and administering the gases, I have not placed those of them, which may be medicinally employed, under their appropriate classes in the the Materia Medica, but have thrown them into an Appendix; to which also, for a similar reason, I have referred the consideration of ELECTRICITY and GALVANISM, as medica: agents. Luftly, as connected with these subjects, I have subjoined the heads of a lecture, which I have been accustomed to deliver on extemporangous prescriptions."

SECT. I. GENERAL REMARKS on the Preser-

vation, and Composition of Medicines. 13. PHARMACY, as above defined, is the art of PRESERVING, PREPARING and Compounding MEDICINES.

14. "The Preservation of medicines, ling Mr Murray,) is its least extensive part. I cludes principally the general rules for coliciti plants at certain feafons, or in particular flates maturity, and those by which they are died preferved from the injuries they would fullain exposure to light, air and moisture. It comp hends, in like manner, rules for the collections prefervation of animal and mineral substance For these rules, see MATERIA MEDICA, S.A. X

re. " That part of Pharmacy," (continues Murray,) " termed the PREPARATION of m cines, includes a variety of important operati The virtues of those remedies, which are defrom the vegetable kingdom, generally de on one or other of the proximate princip each substance; on its gum, its rein, essenti or some other. These different principles at folved by different agents, by water, alkohol and as they are often, as they exist in the vegetable, mixed with much inert matter, it advantage to extract the active principle means of its proper folvent, and to exhibit its pure and concentrated state. Hence han fen the various pharmaceutic preparations fußiens, decactions, tinctures, extracts, &c. being all processes by which the active mat any substance is separated from the inert with which it is naturally mixed, and di from each other only in the folvent employ in the form to which the folution is reduced

16. "Sometimes, also, the principles of Substances are extracted by other means, as an unctuous oil is obtained by expression, effential oil by heat. This oil may also be bined with water or alkohol, and thus d

waters or spirits are formed.

17. " By fuch processes, we extract only ciple previously existing in any particular sub we form no new remedy, but merely obta fame virtue in a different form. In other Pharmacy produces remedies altogether These are always the result of chemical they are either compounds; produced combination of two or more chemical age they are the products of chemical decomp In this manner are obtained the various fall metallic preparations. These preparations are often diffolved in various fluids, in ord they may be conveniently exhibited; prod naiogous to the infulions or tinctures of ve fubstances." See CHEMISTRY, Index.

18. "Composition", (fay-our ingenior thors) " is the last part of Pharmacy. no chemical combination is effected; but d medicines are merely mixed together, wi intention of promoting their efficacy, of ting their operation, of covering their t flavour, or of giving them a cammodious

19. " From this view of the objects of Pl cy, it is evident, that it is principally a part application of CHEMISTRY. Its operated either directly chemical, or require that the mical properties of the bodies operated on be accurately known.

SICT. IL. Of the PREPARATION of SIMPLE ME-DICINES.

10. " Carbonas calcis præparatus, olim Creta Præprote et Cancrorum Lapitli, vulgo Oculi Cancropm Preparati. Prepared carbonat of lime, for-Buty prepared chalk, and prepared crabs bec, commonly called crab's eyes.—Carbonat # Luc, whether the fofter variety commonly smed chaik, or the harder, called crab's stones and crause yes, after being rubbed to powder an iron mortar, and ievigated with a little rner on a porphyry stone, is to be put into a rege vessel. Water is to be poured upon it, is to be poured off, soaded with a fine powc. On the water remaining at rest, a subtile wder fublides, which is to be dried. k powder which the water could not suspend, be again levigated, and treated in the same

"Chaik is a native carbonat of lime, felspricely pure. The crabs from are concrebound in the stamoch of the river craw-fish, MER ASTACUS,) confishing of carbonat of with a portion of animal gelatin. By the process, both are reduced to a very fine

They are employed as antacids in a dose of corwo drachms," See CHALK.

"Red coral (Coralium Rubrum,) is orato be prepared in a fimilar manner in the home Pharmacopæia:" but as it has no quality that the formula of the property of the prop thole of carbonat of lime, Mr Murray "there is no necessity for retaining it."

n. "Carbonas ferri pra paratus, olim Rubigo i Preparata. Prepared carbonat of iron, forby prepared rust of iron .- " Purified fillings of arcto be frequently moistened with water, till [all into ruft, which is to be rubbed to a fine der." During exposure to air and moismon is oxydated, and this oxyd is found to ombined with carbonic acid, absorbed probrom the atmosphere. As a chalybeate it is lattive than the pure metal, and more mild the other fa ine combinations of iron. Its is from 10 to 20 grains.

"Carbonas zinci impurus præparatus ; olim La-Culaminaris Preparatus. Prepared impure car-M of zinc, formerly prepared calamine stone. impure carbonat of zinc, roasted by those who brais, is to be prepared in the same manner

5. "Calamine is an ore of zinc, in which cimes the metal is merely oxydated, and in varieties combined with carbonic acid. It dulled on the part, and as the balls of the mon bealing cerate. For these purposes, Paris to be very finely levigated.

na .- " A fieve being placed over the filings, let lagnet be applied, that the filings may be

In Lirough the fieve upwards."

Fer i oxidum nigrum purificatum, olim Fer-Purificate. Purified black oxyd of ifor nerry purified scales of iron.-" Let the en of black oxyd of iron, which are found at the anvils of the workman, be purified by the application of the magnet; for the magnet attracts only the more fmall and pure scales, leaving those which are larger and less pure."

28. " The scales of iron are the small fragments ftruck off from the metal when it is heated red-Passing through the atmosphere, at this temperature, they are oxydated, but so imperfeelly, as to admit of this mode of purification by the magnet. They are used only in making fome of the other chalybeate preparations.

29. "Oxidum zinci impurum præcuratum, olim Tutia Prueparata. Prepared impure oxyd of zinc, formerly prepared tutty.—" To be prepared as carbonat of Lime."

30. " Sulphas aluminæ exfectatus, olim alumen Usum. Dried sulphat of argil, formerly burn alum.-" Let sulphat of Argu be melted in an earthen or iron veffel, and expoted to the heat applied until it cease to bon."-By this process the alum lotes its water of crystallization, and becomes more active as an escharotic, for which purpose this preparation is used.

31. " Sulphur sublimatum lotum. Washed sublimed fulphur.-" Take of fublimed fulphur 1 lb. : water 4 lb.; boil the fulphur a little with the water, then pour off this water; by the affusion of cold water wash away all acid; lastly, dry the

fulphur.

32. " A small portion of sulphur in its sublimation fometimes fuffers, oxydation from the air of the chamber in which it is subiimed, and hence acquires a flight acidity, which the prefent procels is defigned to remove. This is fo rarely the case, however, that it is perhaps unnecessary.

33. "Sulphur pracipitatum. Pharm. Lond. Precipitated suiphur, "Take of sulphurated kail (fuiphurate of pot-ash), 6 oz.; distilled water, in lb. diluted vitriolic (fulphuric) acid, as much as is fufficient; boil the fulphurated kali in the distilled water until it is dissolved. Fitter the liquor through paper, and add to it the diluted vi-triolic acid. Wall the precipitated powder by repeated affulions of water until it become inlipid."

34. " In this process, sulphur is first combined with potash by fusion; and this compound, disfolved in water, is decomposed by sulphuric acid, which combines with the potash, and precipitates the fulphur. It might be supposed, therefore, to have no advantage. The sulphur, however, from its state of aggregation, is of a much whiter colour than it can be obtained be any other means, and is therefore preferable in forming an ointment for external application.

35. " Sulphuretum antimonii preparatum, olim antimonium praparatum. Prepared sulphurat of antimony, formerly prepared antimony.-Let fulphuret of antimony be prepared in the fame manner as carbonat of lime." As a remedy in chronic rheumatism it has been given in a dose of 5 or rogr.daily.

36." Melde pumatum. Clarified honey-" Liquefy honey by a water bath, and remove the fcuin."

37. "Herbarum et florum exficcatio. Drying of herbs and flowers.-" Herbs and flowers are to be dried with the gentle heat of a flove, or a common fire, in fuch a quantity that the drying may be done as quickly as possible; for thus their virtues are best preserved. The mark of this is their retaining completely

completely their native colour. The leaves of hemlock, and others containing a fubtile volatile matter, are, immediately after drying, to be rubbed to powder, and kept in glass vessels well stopt."

38. "By drying herbs and flowers, or expelling a great part of the water they contain, these chemical changes they would spontaneously suffer are prevented, and they are rendered capable of being preserved. The more quickly they are dried, they retain their virtues more completely." See MATERIA MEDICA, Sell. XIV.

39. "Scilla maritima exflicata. Dried sea squillar Cut the root of the sea squill, its outer covering having been removed, transversely into thin slices, and dry it by a gentle heat. The mark of its being properly dried is, that although rendered friable it retains its bitterness and acrimony." By drying, the squill loses sour 5ths of its weight, and with very little diminution of its virtues, if too much heat has not been applied. It is in this flate that squill is commonly employed in medi-

cine. Dose from 1 to 3 grains.

40. " Pulparum extractio. Extraction of pulps. - Boil those fruits which afford a pulp, if unripe, or if ripe and dry, with a little water, that they may become fost. Then express the pulp through a hair sieve, and boil it with a gentle heat in an earthen veffel, flirring it frequently that it may not burn, until it attain the confistence of honey. The pulp of cassia fistula is to be boiled from the bruiled pod; and by evaporating the water, to be reduced to the due confiftence. The pulps of ripe and fresh fruits are to be pressed through a fieve, without previous boiling."-"These directions are given principally for the preparation of the pulps of feveral fruits, which enter into the composition of the electuary of senna. Pulps are feldom otherwise medicinally employed, and cannot be long preferved unchanged.

41. "Under the chapter corresponding with this in title in the London Pharmacopæia, are feveral additional preparations, of which it may be

necessary to take notice.

A1. Ammoniaci purificatio. Purification of gum armoniac.—"If ammoniac feem not pure, boil it in water, until it foften; and by a press, force it through an hempen bag; then put it aside, that the resinous matter may subside. Evaporate the water, mixing towards the end of the evaporation the resinous with the gummy part. Assaction and other similar gum resins may be purified in the same manner. Any gum also, which melts easily, such as galbanum, may be purified by putting it into an ox-bladder, and keeping it in boiling water, till it become so fost, that it may be pressed through a strong linen cloth, and sreed from its impurities."

43. "By such processes, the qualities of the substances are always injured, and they are unnecessary, since these gums, when not sufficiently

pure, ought not to be used.

44. "Styracis purificatio. Purification of storax.

"Having disfolved storax in alkohol, strain the liquor, and distil it with a gentle heat to a proper consistence." This is equally unnecessary with the preceding.

4. "Cornu cervi uftio. Burning of hartshorn.—

Burn pieces of hartshorn till they become per-

feetly white, then rub them to a very fine powder."—"Animal bones confift of gelatin with phosphat of lime; by burning, the former is defined, the latter remains. It was confidered an antacid, but it cannot be referred to that class it is sometimes an ingredient in dentifrice competitions.

45. "Millebedæ præparatæ. Preparation of mi lipedes.—" Sufpend ttaters, inclosed in a thin nen bag, over proof-fririt, heated in a close vole that they may be killed by the vapour, and redered friable."—" It is fingular that this ablu preparation should have been so long retained

our Pharmacopœias as it has been.

47. "Spongie uftio. Burning of sponge.—" But sponge cut into small pieces, and, when in from stony matter, burn it in a close iron with until it become black and friable. Then reinto a fine powder."—" Burnt sponge conchessly of carbonaceous matter, with a small tion of carbonat of soda. It has been celebras a remedy in scrossula, in a dose of a scrupbalf a drachm."

## SECT. III. CONSERVA .- CONSERVES.

48. "In these preparations, vegetable maturised is mixed with about three times its we of sugar, and beat into an uniform pulpy of the was supposed that the sugar, by its antisquality, would prevent the decomposition of vegetable matter. This, however, is not the This form of preparation, therefore, is not plied to any active medicine, the few constitute are retained being employed merely at cles for other medicines, and for giving them venient forms.

49. "The conferves in the Edinburgh Phaeopœia are the following: 1. Conferva Certai terioris recentis fruttus Citra Aurantii, Rabbrafi: Conferve of the outer rind of the orafped by a grater. 2. Conferva Fruttus Rafnina maturi, a feminibus corunque pube folliuit gati: Conferve of the fruit of dog-hips care freed from the feeds and included down. 3. ferva Petalorum Rofa Gallica nondum explicitus Conferve of the unblown petals of the red In each of these, the vegetable substance is into a pulp, adding gradually, during the beat three times its weight of sugar.

50. "To these the London College add, 1. serva absinthii maritimi, Conserve of sea wood; 2. Conserva lujula, Conserve of wood rel; 3. Conserva ari, Conserve of arum; 4. Conserve of specific, Conserve of specific, Conserve of specific, Conserve of specific, Conserve of specific and particular notice. To the simple form of conserve is very ill adapted; and in last, the active matter of the squill cannot be

ferved long by this preparation."

#### SECT. IV. SUCCI.-JUICES.

fion. They confift of various proximate property ples of the plant, particularly of mucilage, can tive matter, tannin, fecula, and fome taline fitances diffolved or suspended in water, and we recent, may possess the medicinal virtues we belong to any of these principles. It is impossible to any of these principles.

however, to preferve vegetable matter in folution is water for any length of time without fuffering ecomposition; and hence juices are unfit for ofhim preparations. Only one is retained in the Edinburgh and London Pharmacopæias, and it nicht have been discarded.

11." Success cochl arie officinalis compositus. Comand juice of fourvy-grafs .- " Take of juice of kny-grafs, juice of water creffes expreshed from Ach-gathered herbs, juice of the fruit of the omege, of each two pounds; spirit of nutmeg half a wend: mix and put atide until the impurities have habled; then pour off the liquor." Since the powers of the citric acid have been fully afcertain-all is very feldom prescribed."

Act. V. Succi Spissati, vulgo Extracta. Isspissated Juices, commonly termed Ex-

\*WHERE the virtues of any vegetable reresprinciple which is contained in the juice and from it by expression, and where this is at the same time not volatile, inspissaby a moderate heat will contribute to its premion, as the fost mass obtained by this prois much less liable to chemical changes, than the reaction of constituent parts is favoured fution with water. The preparation, howis fill liable to difadvantages. By the heat yed in the inspissation, part of its active matgenerally diffipated, and another fource of s derived from the oxygenation which the is liable to fuffer, when thus heated in conth the atmospheric air; and the preparation hing still fost and humid, must gradually unchemical alterations. Hence, inspissated are generally variable in their medicinal qua-

The process for these preparations is dein the Edinburgh Pharmacopæia under the

"Sucus spissatus aconiti napelli. Inspissated of sconite, or wolfsbane.—" The fresh leaves exconite are to be bruifed, and being inclosed tempen bag, are to be preffed ftrongly, that may give out their juice, which is to be reby evaporation in open veilels, heated by water faturated with muriat of foda, to the there of thick honey. The mass, after it miled, is to be kept in glazed earthen veifels, moitened with alkohol."

"This insulfated juice is the form under wolfsbane has been usually administered. been given principally in obstinate chronic wifin, in a dote of half a grain night and and gradually increased to 5 or 6 grains. ime manner are prepared the following inand juices from the leaves of their respective

7. "Succu spissatus atropa belladonna. Inspis-di juice of deadly night-shade.—This has been immended in scirrhus and some convulsive afthou, in a dufe of one grain, gradually increa-

51. " Sucres spiffatus conii maeulati. Inspissated ice of hemlock .- Under this form, hemlock was mored by Storck in fairthus and cancer. sires is at first two grains, but it can be

303 largely increased, and has at length been taken to the extent of several drachms in the day.

59. " Succus spissatus byoscyami nigri. Inspissated juice of black henhane. This plant, resembling opium in its powers, has been employed frequent-ly as a substitute for it. The dose is one grain, which requires, if continued, to be increased.

60. " Succus spissatus lactucae virosae. Inspissated juice of strong-scented lettuce. This preparation was recommended as a remedy in dropfy by the German practitioners, in a dose of 4 or c grains, gradually increased to 1 or 2 drachms in 24 hours. It has been little used in this country.

61. " Succus spissatus sambuci nigrae, vulgo Rob Sambuci. Inspittated juice, or Rob of Elder .- The preparation of this is pecular. " Five pounds of the juice of elder berries, and one pound of fugar, are to be boiled with a gentle heat to the con-liftence of thick housy." In the Lond. Pharm. it

is merely inspitlated without sugar.

62. " Succus spissatus momordicae elaterii, vulgo Elaterium. Inspittated juice of wild cucumber, or Elaterium.—" Cut the ripe fruit of the wild cucumber, and pass through a very fine hair sieve the juice lightly expressed; boil it a little, and set it alide for some hours until the thicker parts subside. Pour off the thinner part which floats above, and separate the rest by straining. The thicker part which remains after the straining, being covered with a linen cloth, is to be dried by a gentle heat."

63. "This is a very violent cathartic. It has been used as a hydragogue in dropsy, and as a cathartic in obstinate constipation, where others have

failed. It is not often used.

64. "The additional preparations of this kind in the London Pharmacopæia are Succus spissatus ribis nigri, Inspitlated juice of black current, and Succus spiffatus lemonis, Inspissated juice of lemon, which require no particular observation."

## SECT. VI. OLEA FIXA.—FIXED OILS.

65. "THE chemical properties of these oils exift unmixed in the fruit and feeds of vegetables, and are obtained by expression, or decoction with water. The former is in general to be preferred; and to afford the oil pure it must be performed without heat, which, though it favours the feparation of the oil, communicates to it an unpleafant flavour. To preserve them from becoming rancid, they ought to be kept secluded from the

66. "A process in pharmacy somewhat diffcult is to mix these oils with any watery fluid, so that they may be conveniently exhibited. It is ufually done by mucilage, or an alkali. If triturated with mucilage, and a finall quantity of fugar, the oil is diffused through the water, and a milky liquor formed. A combination still more permaneut is effected, by adding a few drops of water of ammonia, or 2 or 3 grains of carbonat of potath. The directions for preparing these oils, in the Edinburgh Pharmacopoxia, are given under the next article.

67. "Oleum amygdalæ communis. Oil of almonds.-" Take of fresh almonds any quantity. Bruise them in a stone mortar, inclose them in a hempen bag, and express the oil by a press with-out heat." This is the purest of the expresses oils.

304 .68. " In the fame manner is to be expressed Okum lini ufitatissimi, Oil of lintseed, from the seeds of the plant. Being rather less pure, it is used

only as an external application.

69. " To these the London College add Oleum ricini, Caftor oil, and Oleum finapeos, Oil of mus-The former is usually prepared, however, in the West Indies by decoction, and is milder than when obtained by expression; and the latter is fearcely applied to any ufe. The olive oil, which of all the expressed oils is most largely employed, is imported from the South of Europe."

# SECT. VII. EMULSIONES .- EMULSIONS.

70. "EMULSIONS are preparations in which the expressed oil of seeds or kernels is suspended in water by the medium of the mucilage, and perhaps also of the fecula which the feeds contain. They are always opaque and milky: as the oil is merely diffused through the water, it gradually collects and rifes to the furface: and owing to the vegetable matter diffolved in the liquor, they are also liable to become four. They likewise suffer decomposition from vinous spirits or acids.

71. " Emulfio amygdala communis. Almond emullion.-" Take of iweet almonds 1 oz.; water 24 lb.; beat the blanched almonds carefully in a stone mortar, adding the water gradually, then ftrain." This is used merely as a demulcent in catarrh and gonorrhoea, or during the application

of a blifter, being drunk ad libitum.

72. " Emulfio gummi mimose nilotice, vulgo E-mussio Arabica. Arabic emultion.—" This is made in the fame manner, adding, while beating the almonds, 2 oz. of mucilage of gum Arabic." It is used in the same cases as the preceding, and is supposed to have a greater thare of demulcent power.

73. " Emulfio camphorata. Camphor emulsion. "Take of camphor one scruple; blanched sweet almonds 2 dr.; refined fugar 1 dr.; water 6 oz.: to be made in the same manner as the almond cmulfion." Camphor is less apt to induce nausea when given in a liquid than when in a folid form; and this is one of the best forms of preparation. Its dose is two ounces." See Camphor.

#### SECT. VIII. INFUSA.—INFUSIONS.

74. "Infusion is a term employed to denote that operation, in which water, on remaining for fome time on vegetable matter diffolves part of it; and also to express the preparation which results from that operation. It is obvious, that infusion, understood in this sense, can be applied with propriety only to those plants whose virtues depend on principles foluble in water. The strength of the infusion is considerably influenced by the temperature of the fluid, hot water diffolving more of the foluble matter than cold, while cold water, from this circumstance, frequently affords a preparation which, if weaker, is more grateful. From dried vegetables, the foluble matter is in general more callly obtained than from those which , are recent. Infutions are always extemporar cous preparations, and cannot be preserved in a found state for more than a few days.

.. 75. " Infufu n cinchone officinalis. Infulica

of Peruvian bark .- " Take of powdered Peru vian bark, one ounce; water, i ib. Macera them for 24 hours, and strain."—This prepar tion is used chiefly in dyspepsia, in a dose of 20 occasionally.

76. " Infusum digitalis purpurez. Infusion foxglove.-" Take of the dried leaves of io glove, one drachm; boiling water, 8 ounce spirit of cinnamon, one ounce. Macerate sur

hours, and strain."
77. " Infusion is the form under which Withering, who introduced the use of digitality dropfy, recommended it to be given. The d is half an ounce taken twice a-day, and grade ly increased till the effects of the remedy appear

78. " Infusum gentiana lutea compositum, v infusum Amaruni. Compound infusion of gen "Take of gentian root, half an ounce; dre range-peel, one drachm; coriander feeds, hi drachm; diluted alkohol, 4 ounces; water, First pour on the alkohol, and after 3 hours water; then macerate without heat for 12 be and strain."-This bitter infusion is empli in dyspepsia, and is much better adapted to tinued use than the tinetures. Its dose is a cafionally.

79. Infusion mimofæ catechu, vulgo Infusua ponicum. Infusion of catechu.-" Take of tract of catechu, two drachms and a half; of cinnamon, half a drachm; boiling was ounces; fimple fyrup, one ounce. Macerali extract and bark with the water in a closed for two hours, then strain, and add the fr The extract of catecha is completely fold water; and possesses all its virtues uning Cinnamon renders it more grateful. Its prid use is in diarrhoea. Its dose, one ounce evel or 4th hours

80. " Infusiom rhei palmati. Infusion of barb .- " Take of the root of rhubarb, ounce; boiling water, 8 oz.; spirit of cint Macerate the root with the water closed vessel for 12 hours, then adding the ftrain the liquor." It is used as a mild cath

Dofe, two ounces.

81. " Infujum rose gallice. Infusion rose.—" Take of the dried petals of the red 2 oz.; boiling water, 5 lb.; fulphuric aciddr.; refined fugar, 2 oz. Macerate the with the boiling water in an earthen veffel, is not glazed with lead, for 4 hours; then i poured on the acid, strain the liquor, and ad fugar."-This infusion is used principally moderately aftringent gargle, in flight calcal

82. " Infulum tamarindi indica cum callas Infusion of tamarind and senna.- " Take prepared fruit of the tamarind, one ounce; leaves, one drachm; coriander feeds, drachm; unrefined fugar, haif an ounce; water, eight ounces: Macerate them in earthen vessel, which is not glazed with shaking frequently, and after four hours straiguor. It may be made also with double of the quantity of fenna."

83. " This combination affords a very pl purgative, mild in its operation. The whole by may be taken at intervals as a dose. If we will a more powerful cathartic, it must be made

with an increased proportion of fenna.

84. "In the London Pharmacopæia are two timins, both of feana. The first, Infigim fenglisher, (prepared from senna, an ounce and this; ginger, one druchin; and boiling distilled ter, one pint; inacerated for an hour, and mad;) is given as a cathactic, in a dose to an autisticm 2 to 4 oz. The 1d, Infusum sennae targitum, is prepared, from senna, one ounce and bils; coriander seed bruised, half an ounce; idmust turinte of potassi, two drachins; and likel water, on: pint; the crystals of tartar bedilived in the water by boiling, and the hot in being poured on the senna and coriander: inaceration being continued for an hour, in a red vessel, and strained when cold. It is sintend the infinition of senna and tamarinds, ratio pleasant, but having the recommendation beinges. From the larger proportion of an is also more active. Dose from 2 to 4

Under the chapter entitled Infufa, in the upper Pharmacopæia, are several preparations amout properly be ranked as infusions. In its an example of a mixture.

"Potio carb natis calcis, olim potio cretacea.
potion.—" Take of prepared carbonat of
loss onnee; retined fugar, half an ounce;
loss onnee; retined fugar, half an ounce;
loss of gum arabic, two ounces. Rub them
cr, and add gr. dually of water two pounds
half; fpirit of cinnamon, two ounces."
that is this inixture is merely fufpended by
thage. It is used as an antacid, 1 or 2 oz.
taken occasionally. With this may be no1 tew mixtures which find a place in the
on Pharmacopoxia.

"Mistura campburata. Camphorated mix"Take or camphor, one drachm; rectiint of wine, a little; refined sugar, half an
; distilled water, one pint. Rub the caminth the spirit, afterwards with the sugar;
water gradually, and strain the mixture."
To as a stimulant, in the dose of one ounce
dor 3d hour, in sever accompanied with

"Missura mosebata. Musk mixture.—
k of musk, two teruples; powdered gum
refined sigar, of each one drachin; rose
boz. Rub the musk with the sugar, then
be gum, and add the rose water gradually."
bok is one ounce, or an ounce and a half.

"Lac ammoniaci. Milk of gum ammoniac.
tof gum ammoniac, two drachms; diffilled
half a pint: triturate the gum retin with
aler poured on gradually, until it bememulion." It is given as an expectorant
tok from half an onace to an ounce at a

Les affufoctidae.—This is prepared in the minute. In hysteria, it is given in a dose of monce or an ounce, frequently repeated the paroxysm.

Mucilage amyli. Starch mucilage. Phar.

"Take of starch, half an ounce; water, one
Rub the starch, adding gradually the
then boil them for a short time."

You XVIL Part I.

92. "Fecula, of which wheat-starch is a variety, is solution. This starch-mucilage is principally used as a vehicle for giving opium, or other remedies, under the form of enema.

93. "Mucilago ofragali tragacanthas. Mucilage of gum tragacanth.—" Take of gum tragacanth beat to powder, one ounce; boiling water 8 oz. Macerate for 24 hours, and rub the gum carefully, that it may be diffolved; then firm it through linen."

94. "Mucilago mimo ae niloticae. Mitcilage of gum arabic.—" Take of powdered gum arabic, one part; boiling water, two parts. Digest with frequent agitation until the gum be dissolved; then strain through linen." This is the mucilage that is usually employed for pharmaceutic purposes. It is also used as a demulcent.

95. "Mucilago feminum cydonii maii. Lond. Mucilage of quince feed.—"Take of quince feeds, one drachin; diffilled water, 8 oz. Boil with a gentle heat for ten minutes, and ftrain through

linen."

96. "Aqua calcis. Lime water." Take of lime recently prepared, half a pound: put it into an earthen veilel, and sprinkle it with 402. of water, keeping the vessel closed while the lime becomes hot, and falls into powder: then pour on 12 ib. of water, and mix the lime with it by agitation. After the lime has subsided, repeat the agitation; and do so about ten times, keeping the vessel always shut, that the free access of the air may be prevented. Let the water be strained through paper, interposing between the filter and the funnel glass rods, that the water may pass through as quickly as possible. Let it be kept in bottles well stopt."

97. "The caution to exclude the air in this process, arises from the supposition that the sime would combine rapidly with the carbonic acid of the atmosphere. After the solution is strained, it is at least necessary that it should be kept in vessels well stopt. A very small quantity only of lime is dissolved, about two grains to the ounce. The solution has a styptic taste. It is used as a tonic and astringent. Dose from one to two lb.

daily."

# SECT. IX. DECOCTA .- DECOCTIONS.

98. "By Boiling vegetable substances in water, their active matter is more abundantly dissolved than by simple intuition. The preparation thus obtained is termed a DECOCTION. In a number of cases, part of the matter dissolved by the affistance of the high temperature separates as the liquor cools, especially where it is of a relinous matter; in others, however, it is retained.

99. Though a larger portion of matter is diffolved by the water in this mode of preparation, yet it cannot be always advantageoully employed. Wherever the virtues of the fubstance subjected to it depend, in whole or in part, on any volatile principle, they are necessarily injured by this being distipated. At the temperature of 212°, humid extractive matter combines too with oxygen from the atmospheric air; and perhaps at the same temperature, some vegetable principles suffer decomposition from the re-action of their con-

N d

flituen

Mituent parts: hence many vegetables suffer infory from boiling, even where this cannot be aferibed to the diffication of their volatile parts. These circumstances limit considerably the application of this form of preparation. Decoctions are always extemporaneous preparations. In general, during the boiling the air should be excluded, and the liquor ought to be strained while hot.

100. "Decostum althex officina'is. Decostion of althexa." Take of dried althexa root, 4 02.; raifins freed from feeds, 2 02.; water, 7 lb. Boil to 5 lb.; put afide the strained liquor till the impurities have subsided, and pour off the ciear liquor." The gum of vegetables is not injured by decostion. As the virtues of the althexa depend on this principle, they are obtained entire in this preparation. It is used as a demulcent, being taken ad libitum.

101. "Decoction anthemidis notitis, vulgo decoction chameneli five commune. Decoction of Chamomile, or common decoction.—" Take of the dried flowers of chamomile, one ounce; carraway feeds, half an ounce; water, 5 lb. Boil for a quarter of an hour, and frain." This decoction is defigned to be used principally as an enema and formentation.

102. "Similar preparations are inferted in the London Pharmacoporia, under the names of Decodum pro enemate, and Decodum pro fomento.

103. "Decollum einebonæ officinalis, ansko decocsum corticis Peruviani. Decoction of Peruvian bark.— Take of Peruvian bark in powder, one ounce; water, one pound and a haif. Boil for ten minutes in a covered vessel, and strain the liquor while hos."

104. "As the active part of Pernvian bark is chiefly refine-extractive matter, part of it differed by the hot water is deposited as the liquor cools. Hence the necessity of straining it while hot. As the fame matter fusfers oxygenation during boiling, the propriety is obvious of continuing the boiling for a short time only, and in a close vessel. This decoction is given in general when bark in considerable doses is requisite, and where the powder does not remain on the stomach. The dose is 2 oz. repeated occasionally.

105. "Decottum daptnes mezerei. Decoction of mezereon.—"Take of the bank of the root of mezereon, two drachms; of liquorice root bruifed, half an onnee; water, 3 lb. Boil with a gentle heat to 2 lb. and frain." The decoction is given in a dose of 6 or 8 oz, three or four times a-day.

106. Decodum geoffrae inermis. Decoction of cabbage-tree bark.—" Fake of cabbage-tree bark in powder, one ownce; water, 2 lb. Boil with a gentle heat to one pound, and strain." It is given as an anthelmintic in a dose of 2 lb. to an addult.

107. "Decotium guajaci officinalis compositum, unlgo decotium lignorum. Compound decotion of guaiac.—"Take of guaiac wood shavings, 3 oz.; raisins, 2 oz.; fassars root, liquorice root, of each one ounce; water, 10 lb. Boil the water with the guaiac wood and raisins, on a gentle stre, to 5 lb. adding the roots towards the end of the boiling; then strain without expression?" Ua-

der this form guaiac wood is administered as remedy in cutaneous diseases, and sometimes is chronic rheumatism. It is taken to the extent a or 3 lb. daily.

108. "Decotum bordei diffichi. Decosion barley.—"Take of peari barley, 2 02.; water, lb. First wash off with cold water the flour a hering to the barley; then boil the barley find there with about half a pound of water, extract the colouring matter. This being reject, put the barley thus purified into 5 lb. of boing water. Boil this to one half, and frain This decoction is rased merely as a diluent in brile affectious.

109. "A fimilar formula, in which figs, raif and liquorice, are added to the barley, is infer in the London Pharmacopæia, under the title Decostum hordei compositum.

110. "Decotion polygake fenege. Decodifiencha.—" Take of seneka rout, one omeeter, 2 lb. Boil to 15 oz. and strain." The been used as a remedy in chronic rhemmand sometimes as an expectorant in pneumants dose is 2 or 3 oz. three or sour times and

tion of farsaparilla.—" Take of sarsaparilla. De tion of sarsaparilla.—" Take of sarsaparilla. cnt, 6 oz.; water, 8 lb. Digest for two hom; temperature of about 195°, then take out root and bruise it; put it again into the la and boil it with a gentle fire to 2 lb.; then cit, and strain." Under this form sarsaparilla been given in the secondary symptoms of sp It has been given also in dysuria.

the London Pharmacopæia remain to be not 113. "Decodium cornu cervi. Decodium that thorn.—" Take of burnt and prepared horn, 202.; gum arabic, fix drachms; dwater, 3 lb. Boil, firring contantly, to and firain." The burnt hartfhorn, con chiefly of phosphat of lime, is infoluble in Therefore, the gum arabic only is diffoluted.

114. "Decodium bellebori albi. Decodie white hellebore.—" Take of white hellebore in powder, one ounce; diftilled water, a reculied spirit of wine, 2 oz. Boil the water the root to one pint; when the liquor is strain, and add the spirit." This is used an ternal application, in some cutaneous disprincipally in psora.

pound decoction of farfaparilla. "Take of faparilla root, flit and brusfed, 6 oz.; bark of fafas root, flavings of Guaine wood, lique root brusfed, of each one ownee; mezeron, diffilled water, ten pints. Macerate with a tie heat for 6 hours; boil to 9 pints, adding mezereon towards the end of the builing; strain." This decoction is an improvement Libon diet-drink, once highly celebrated to moving fome of the fecondary fymptoms of firs, and promoting the action of mercury, dofe is 4 or 6 oz. 3 or 4 times a-day. From Russel's experiments, its efficacy appears to pend on the mezereon.

"Take of the bark of the Eim, fresh bruikt oz.; distilled water, four pints. Boil to 2 pl nd firain." This decoction has been recommendid as a remedy in cutaneous difeafes.

# SECT. X. SYRUPI .- SYRUPS.

117. "Syrups are folutions of fugar in water, adpure, or containing other fubfiances diffolt. They are feldom active medicines; but are implify defigned to render others pleafant. It proportion of fugar with which they are mally made is about two parts to one of

118. "Syrupus fingless, five communia. Simple tommon fyrup.—" Take of refined fugar to powder, 15 parts; water, 8 parts. Difficulty five five form a fyrup." This folution is used to communicate sweetness.

"Syrupu acidi acetofi. Syrup of vinegar. Take of acetous acid, 2½ lb.; refined fugar, 3½ lai so as to form a syrup." This acidulous being sufficiently pleasant, may enter into man which it cannot occasion any chemisposition.

Strupus alther officinalis. Syrup of al-Take of fresh althrea root cut, 1 lb.; 10 lb.; refined sugar, 4 lb. Boil the wanthe root to one half, and expressing it y, train. Put asside the strained liquor that purises may subside, and to the purised add the sugar; then boil it so as to form a The quantity of mucilage this syrup can is so trisling, that it cannot be considered mag from it any virtue.

Frapu amomi singiberis. Syrup of gin-Take of the root of ginger, beat, 3 oz.; water, 4 lb.; refined sugar, 74 lb. Mabe toot in the water, in a close vessel for n; and, to the strained liquor, add the sa, so as to make a syrup." The flavour sweet renders this syrup sufficiently plea-

"Syrupus citri Aurantii. Syrup of orange-Take of the fresh outer rind of the otor.; boiling water, 3 lb.; resined sugar, Macrate the rind in water for 12 hours; the strained liquor add the sugar beat to and, by the application of a gentle heat, syrup." This syrup, like the former, is ently on account of its grateful aromatic

"Syrupus citri medicæ, olim fyrupus limoprup of lemon.—" Take of the juice of trained after the impurities have subsided, refined sugar, 5 parts; dissolve the sugar form a syrup." This pleasant syrup is secten and acidulate mixtures, especialof the mucilaginous kind.

Syrup of colchici autumnalis. Syrup of con.— Take of the fresh root of colchicut into small pieces, 1 oz.; acetous acid, refined sugar, 26 oz. Macerate the root acid for two days, shaking the vessel occant; then expressing it gently, strain it; to ained laquor add the sugar, and boil a litate to form a syrup." Colchicum has been to this form as a diuretic in dropsy. The strain its form as a diuretic in dropsy. The

125. "Syrupus diænthi carpophylli. Syrup of clove July-flower.—" Take of the fresh petals of the clove July-flower freed from the heels, I ib.; of boiling water, 4 lb.; of resined sugar, 7 ib. Macerate the petals in the water for 12 hours; then to the strained signor add the beat sugar; which dissolve with a gentle heat, so as to form a syrup." This syrup is valued principally on account of its deep red colour. Its stavour also is pieasaut.

white poppy.—" Take of the dried capfules of the white poppy, freed from the feeds, 2 ib.; boiling water, 30 lb.; refined fugar, 4 lb. Macerate the fliced capfules in the water for 12 hours; then boil until a third part only of the liquor remain; and prefling it strongly, strain; boil down the strained liquor to one half, and again strain; lastly, the fugar being added, boil a little, so as to form a syrup." The capfules possess the narcotic power, (See Paparer, N. 1.) and the juice is soluble in water, by which it is extracted. The syrup is given as an anodyne to children. The Oublin College have substituted for it a syrup of opium.

127. "Syrupus rhamni cathartici. Syrup of buckthorn.—" Take of the clarified juice of ripe buckthorn berries, two parts; refined jugar, one part. Boil so as to form a syrup." This syrup is used as a cathartic; the dote to an adult is 1 oz. or 1½ oz.

128. "Strupus rose gallice. Syrup of red roses.

"Take of the dried petals of the red rose, 7 oz.; boiling water, 5 lb.; refined sugar, 6 lb. Macerate the petals in water for 12 hours; then boil them a little, and strain; to the strained liquor add the sugar, and again boil, so as to form a syrup."

129. "Syrupus rofe centifolie. Syrup of damask or pale rose.—" Take of the fresh petals of the damask rose, I lb.; boiling water, 4 lb.; refined sugar, 3 lb. Macerate the petals in water for 12 hours; then to the strained signor add the sugar, and boil, so as to form a syrup." This syrup is a very mild purgative, and is given to children in a dose of 2 or 3 tea spoonfuls.

130. "Syrupus scille maritime. Syrup of squiil.

"Take of the vinegar of squiil, 2 lb.; refined sugar, 3\frac{1}{2} lb. Dissolve the sugar with a gentle heat, so as to sorm a syrup. Dose, one or two drachms.

tal. "Syrupus toluiferae balfami, vulgo fyrupus balfamicus. Syrup of Toiu balfam.—" Take of common fyrup, 2 lb.; tincture of Tolu balfam, r oz. With the fyrup newly prepared, and removed from the fire, when it has nearly cooled, mix the tincture gradually with agitation."

132. "This fyrup according to the formula of the London College, is prepared by boiling the balfam of Tolu in water, and diffolying the fugar in this liquor. Prepared in either way, it can be valued only on account of its flavour.

133. "Syrupus wiolae odoratae. Syrup of violets.—Take of the fresh flowers of the sweet-scented violet, 1 lb.; boiling water, 4 lb.; refined sugar, 72 lb. Macerate the flowers in water for 24 Q q 2 hours

R hours in a covered glass or earthen vessel. Then finain, without expression, and to the strained liquor, add the beat fugar, fo as to form a fyrup." This fyrup is a very gentle laxative, and as fuch is given to infants in a dofe of one or two teaipoonfuls.

134. "The following fyrups have not a place

in the Edinburgh Pharmecopæia.

135. " Syrupus succi fructus mori. Syrup of mulberry juice.

136. " Syrupus succi fructûs rubi idaei. Syrup of

rafberry juice.

137. "Syrupus fucci frudûs ribis nigri. Syrup of black-currant juice.- The fyrups prepared from thefe fruits, inferted in the London Pharmacopæia, are pleafant and acidulous. Some of them, however, are fuperfluous.

138. " Syrupus croei. Syrup of faffron, Pharm. Lond. is admitted on account of its colour, as is also the Syrupus papaveris erratici. Syrup of red

poppy.

139. " MIDICATED HONEYS differ in little or nothing from fyrups, and are therefore rejected from the Edinburgh Pharmacopæia. In the London and Dublin Pharmacopæias, are retained, Mel acetation. Oxymel colchici. Mel rofae. Mel frillae. Oxymel feillae; which, as the corresponding fyrups have been noticed, it would be superfluous to give at length.

# SECT. XI. VINA .- WINES.

140. "WINE, from its composition, and especially from the alkohol and water it contains, is capable of diffolving the active matter of many regetables. Solutions of this kind are named Meaccated Wines. They are more liable to decompolition from keeping than tinctures. To obviate this, it is usual to add to them, when prepared, a portion of alkohol.

141. " Vinum alres focotorinae, vulgo t'ndura fa-Wine of focotorine aloes. Sacred Tincture.- " Take of focotonine aloes, reduced to towder, one oz.; letter cardamom feeds, ginger root, of each, beat, one dr.; Spanish white-wine, a lb. Digeft for 7 days, thaking frequently, and fram." This is a flimulating cathartic, producing its full effect in the dole of one oz. In a dole of r or 2 dr. it is given to excite the action of the

inteffines and neighbouring organs.

142. " l'inum gentianae compositum, vulgo vinum An arrow. Compound gentian wine .- " Take of gentian root, half an oz.; Peruvian bark, 1 oz. orange peel dried, 2 dr.; canella bark, 1 dr.; diluted alkohol, 4 oz.; Spanish white-wine, 21 lb. On the root and barks bruifed, pour first the diluted alkohol; and after 24 hours, add the wine. Then macerate for 7 days, and ftrain." is fix drachms.

143. " Vinum ibreacuanhae. Ipecacuan wine .--" Take of ipecacuan root bruifed, one ounce; Spanish white-wine, 15 oz. Macerate 7 days, and firain through paper. Dofe as an emetic, one

ounce to an adult.

144. " Vinum nicotianae tabaci. Tobacco wine. -" Take of the leaves of tobacco, 1 oz.; Spanish white-wine, 1 lb. Macerate for 7 days, and ftrain through paper." Under this form, tobacco has

been used as a diurctic in dropfy. Dose, 30 drops, gradually increased to 60 or 80 twice a-day.

145. " Vinum rhei palmati. Rhubarb wine .-" Take of the root of rhubarb, cut, 2 oz.; canella bark, I dr.; diluted alkohol, 2 oz.; Spanish white-wine, 15 oz. Macerate 7 days, and ftrain through paper." The dofe as a purgative is from haif an ounce to an ounce. The tracture of the barb is in general to be preferred.

# SECT. XII. ACETA. - VINEGARS.

146. "VINEGAR is capable of diffolying fereral of the principles of vegetables. It frequently, however, alters their powers, or does not concice with them in virtue. There are, therefore, for medicated vinegars in ufe.

147. " Acetum aromaticum. Aromatic vines -" Take of the dried tops of rolemary; the ed leaves of fage, of each 4 oz.; dried lavered flowers, 2 ez.; cloves, 2 dr.; diffiled acetous cid, 8 lb. Macerate 7 days, and strain the o preffed liquor through paper." This is chief

used as a perfume.

148. " Acidum acetofum camphoratum. Car phorated acctous acid .- " Take of the flrow acetous acid, 6 oz.; camphor, half an ound alkohol, as much as is necessary. Rub the phor with the alkohol into a powder, which into the acid, that it may be diffolved." preparation, fnuffed up the nofirils, is a power and grateful flimulant, to obviate nausea, or i lieve languor.

149. " Acetum scillæ maritimæ. Vinegar fquil .- " Take of fquil root dried, 2 cz.; diff ed acetous acid, 21 lb.; alkohol, 3 cz. Macon the fquill with the acetous acid for 7 days: o press the acid; add the alkohol; and who the impurities have fubfided, pour off the

quor."

150. "Vinegar is the proper menshum fquill; and this preparation possesses ali its pre ets, unimpaired. It is feldem given under form as a diuretic, but generally as an experant. The dofe is from one to two drachms.

# SECT. XIII. TINCTURA. TINCTURES.

151. "TINCTURES are folutions of vegetaling animal, and fometimes of mineral fubitances, foiritous liquors. The folvent may be either p alkohol, diluted alkohol, or alkohol impregnatwith ammonia or other. They generally contin the virtues of the subflances dissolved, in a co centrated state, though sometimes altered, or le in those of the menstruum. They are little lab to decomposition, and this gives them a superrity over those preparations in which the some power of water is employed.

152. " Alkohol is the foivent of a number the immediate principles of vegetables; of m camphor, effential oil, and extract; and hence capable of extracting the virtues of many important remedies. Tinctures made with it are general decomposed on the addition of watery b

quors.

153. "Diluted alkohol, or PROOF-SPIRIT, is ftill more general foivent; as the water it contain diffolves feveral principles which are not felible pure alkohol. It is therefore more generally employed.

154. " Alkohol, impregnated with ammonia or r, is employed in forming tinctures only of a w substances, whose operations are supposed to

promoted by these agents.

155. " Tindura aloes focotorine. Tincture of 5.- "Take of focotorine aloes in powder, an ounce; extract of liquorice, 11 oz.; alld, 4 oz.; water, 1 ib. Digest for 7 days with restle heat in a closed vessel, shaking the vessel squently; directions which, with regard to all scures, are to be observed."

156. "This is the only tincture in which the portion of water is superior to that of alkohol.

ble as a cathartic is one ounce.

"Tingura aloes etherea. Ethereal tincof aloes .- " Take of myrrh, focotorine aloes, th 1; oz.; English saffron, 1 oz.; spirit of incether, 1 lb. Digest the myrrh with the Hor 4 days in a closed phial; then add the and aloes. Digeft again for 4 days; and the impurities have fublided, pour off the

M. This is a flimulating purgative, in a dose

for two drachms. "Tindura aloes eum myrrba. Tincture of and myrrh .- " Take of myrrh powdered, ; alkohol, 11 1b.; water, half a pound. Mix hobbl with the water; then add the myrrh; for 4 days; and laftly, add of focotorine a-11 0z.; English saffrou, 1 oz. Digest again iys, and pour off the pure tincture." This principally externally, as an application ing wounds, and a llimulant to foul ul-

"Tindura amomi repentis. Tincture of m.- " Take of cardamom feeds, 4 oz.; ak hol, 24 lb. Digeft for two days, and though paper." This tincture is used for Inte aromatic flavour and pungency.

A compound tincture of cardamom, in unway, cinnamon, and raifine, are introhkewife inferted in the London Phar-Da, and is used for the same purpose.

"Tiefura ariffolochia ferpentaria. Tinc-foale-root.—" Take of Virginian finakenunces; cochineal, one drachm; diluth two pounds and a half. Digeft for 7 x fram through paper."

senting is feldom exhibited under As a grateful bitter, it may

> Tincture of all Take of a teleprotein, a con; although

166. "Tindura camphoræ; vulgo spiritus vino-fus camphoratus. Tincture of camphor.—" Take of camphor, one ounce; alkohol, I lb. Mix, fo as to diffolve the camphor. It may be also made with a double or triple proportion of Camphor." This folution is used externally as a stimulant and anodyne application in chronic rheumatifm, bruifes and strains. It is applied by friction to the

167. " Linimentum camphoræ compositum. Lond. -" Take of camphor two ounces; water of ammonia, 6 oz.; spirit of lavender, 16 oz. Mix the water of ammonia with the spirit, and distil 16 oz. from a glass retort with a gentle heat. Diffolve the camphor in the distilled liquor." This liniment is applied to the same uses as the preceding. From the addition of the ammonia it is

more powerful as a stimulant. 168. "Tinclura cassia fenna composita, olim elixir falutis. Tincture of senna.—" Take of the leaves of fenna, 2 oz.; root of Jalap, one oz.; coriander feeds, half an ounce; diluted alkohol, 34 lb. Digest for 7 days, and to the tincture strained through paper, add 4 oz. of refined fugar." This tincture is in very common use as a purgative. Its

dose is one ounce, or 11 oz.
169. "Tincture castorci. Tincture of Castor .--" Take of Ruffian caftor, one ounce and a half; alkohol, one pound. Digest for 7 days, and strain through paper."

170. " In the London, and likewise in the Dublin Pharmacopæia, this tincture is ordered to be prepared with diluted alkohol; but with pure alkohol it is more grateful. It is a feeble remedy, given fometimes as an antispasmodie, in a dose of from half a drachm to a drachm.

171. " Tinctura castorei composita. Compound tincture of caftor .- " Take of Russian castor, one ounce; affasætida, haif an ounce; ammoniated alkohol, one lb. Digest for 7 days, and strain through paper." This tincture is more active than the former; it is given in a fimilar dose.

172. " Tinaura cinchonæ efficinalis. Tinaure of Peruvian bark .- " Take of Peruvian bark in powder, 4 oz.; diluted alkohol, 21 lb. Digett for 7 days, and frain through paper." This is used in dyspepsia, occasionally, in a dose of two drachms.

173. " Tinaura cinchone, vulgo Corticis Peruniani, composita. Compound tincture of Peruvian bark. Lond .- "Take of Peruvian bark in povder, 2 oz.; dried orange peel, 11 oz.; Virginua fnake-root, 3 dr.; suffron, 1 dr.; cochineal powder, two scruples; proof spirit, 20 oz. Degest for 14 days, and strain." This has been less nown under the name of Huxbam's To

rk. It is more grateful than the Exper-, and is used like it in dyspeptic and

c of 2 or 3 drachms.

. " Tindara cinchone, raige Treina. Lond. Ammo -" Take of Peruvian bark and frint of ammonia.

tabel for 10 days, and " Tuske chale-

Take of the root of disted allegiol, 2

Digitized by

and firain through paper." This is used merely as a bitter tincture in dyspepsia, in a dose of 3 or 4 drachms.

176. "Tindura convolvuli jalapæ. Tincture of jalap.—" Take of the root of jalap in powder, 3 oz.; diluted alkohol, 15 oz. Digeft for 7 days, and ftrain through paper." The tincture may be given as a cathartic, in a dose of 4 or 6 drachms.

177. "Tindura croci. Tincture of faffron.—
"Take of English faffron, 1 oz.; diluted alkohol,
15 oz. Digest for 7 days, and strain through paper."

178. "Tinctura digitalis purpurea. Tincture of foxglove.—" Take of the dried leaves of foxglove, one ounce; diluted alkohol, 8 oz. Digeft

for 7 days, and strain through paper."

179. "Tinctura gentiance competia, vulço Elixir Stomachicum. Compound tincture of gentian.—"Take of gentian root, 2 oz.; dried otange peel, 1 oz.; canella bark, half an ounce; cochineal, half a darachm; diluted alkohol, 2½ lb. Digeft for 7 days, and ftrain through paper." This tincture is employed in dyspepsia, in a dose of 2 or 3 dr. given occasionally.

180. "Tindura guajaci. Tincture of guaiac.—
"Take of the refin of guaiac, 1 lb.; alkohol, 2\frac{1}{2}
lb. Digett for 7 days, and strain through paper."
This tincture is given in a dose of 2 or 3 dr.

181. "Tintlura guajaci ammoniata. Ammoniated tincture of guaiac.—"Take of the rean of guaiac, 4 oz.; ammoniated alkohol, 1½ lb. Digett for 7 days, and ftrain through paper." It is given in chronic rheumatifm, in a dofe from 1 to 2 a dr.

182. "Tindura bellebori nigri. Tincture of black hellebore.—"Take of black hellebore root, 4 oz.; cochineal, half a drachm; diluted alkohol, two pounds and a half. Digest for 7 days, and strain through paper." This tincture has been used as an emmenagogue, in a dose of one drachm.

183. "Tinctura byosciami nigri. Tincture of black benbane.—" Take of the dried leaves of black henbane, one ounce; diluted alkohol, eight ounces. Digeft for 7 days, and ftrain through

paper."

184. "Tindura kino. Tincture of kino.—"Take of kino, two ounces; diluted alkohol, one pound and a half." The dose is from half a drachm to a drachm.

185. "Tinstura lauri cinnamoni. Tinsture of cinnamon.—" Take of cinnamon bark, three ounces; diluted alkohol, two pounds and a half. Digest for 7 days, and strain through paper."

186. "Tindura lauri cinnamoni composita, olim Tindura aromatica. Compound tindure of cinnamon.—"Take of the bark of cinnamon, cardamom seeds, of each one ounce; long pepper, two drachms; diluted alkohol, two pounds and a haif. Digest for 7 days, and strain through paper."

187. "Tindura meloes vesticatorii, vulgo Tinduna cantharidum. Tindure of cantharides.— "Take of cantharides, one drachm; diluted alkohol, one pound. Digest for 7 days, and strain through paper." This tindure is used principaliv externally as a rubefacient; as an internal re-

medy, the dose in which it has been given is drops.

188. "Tindura mimofae catechu; olim tindis japonica. Tincture of catechu.—"Take of catechu, three ounces; bark of cinnamon, two of ces; diluted alkohol, two pounds and a higgeft for 7 days, and strain through pape This solution is given in a dose of one drachm

189. "Tindura myrrbae. Tindure of my —" Take of myrrh in powder, three ounces; kohol, twenty ounces; water, ten ounces. geft for ten days, and drain through paper." tindure is used principally as an external su

lant and antifeptic application.

190. "Tindura opii, five thebaica; vulga; danum liquidum. Tincture of opium.—"Ta opium, two ounces; diluted alkohol, two por Digeft for 7 days, and strain through par This tincture is the usual form under which um is administered. The usual dose is two five drops.

191. "Tindura vii ammoniata; olimelisi regoricum. Ammoniated tincture of opiu "Take of benzoic acid, English saffron, of three drachms; opium, two drachus; voi! of anife, half a drachm; ammoniated all sixteen onnees. Digest for 7 days in a shut and strain through paper." Its dose is from a drachm to a drachm, in catarrhal affection

of hard purified opium reduced to powder, ers of benzoin, of each one drachm; can two scruples; oil of anise, one drachm; fpirit, two pounds by measure. Digest sdays, and strain." This tincture is know the preceding one, by the name of Parego air. Its dose is 2 or 3 dr.

193. "Tinstura rbei palmati. Tincsured barb.—" Take of the root of rhubarb, throces; lesser cardamom seeds, half an ounce ted alkohol, two pounds and a half. Dig 7 days, and strain through paper." This contains all the virtues of rhubarb. Its from half an ounce to an ounce.

194. "Tintura rhei cum aloe; olim eli crum. Tincture of rhubarb with aloes.—" of the root of rhubarb, ten drachms; foce aloes, fix drachms; lesser cardamom seed an ounce; dijuted aikohol, two pounds half. Digest for 7 days, and strain throuper." This is tiequently employed as a lating cathartic, in a dose of fix drachms.

193. "Tindura rhei cum gentiana; olim. ra rhei amara. Tincture of rhubarb wit tian.—"Take of root of rhubarb, two of gentian root, half an ounce; diluted alkoh pounds and a half. Digett for 7 days, and through paper." The dole is from a to 4 dr chiefly used in dyspeptic cases.

196. "Tindura rhei composita. Lond. pound tincture of rhubarb.—" Take of ricut, two ounces; liquorice bruised, be ounce; ginger in powder, fassron, of ead drachms; distilled water, one pound; pro rit, twelve ounces. Digest for 14 days strain."

197. "Tinetura fatonis, vulgo linimentum fo

raceum. Tincture of loap .- " Take of loap, four ounces; camphor, two ounces; volatile oil of rolemary, baif an ounce; alkohol, two pounds. Diget the foap in the alkohol for 3 days; then add the camphor and oil to the Rraised liquor, graing it." This is a powerful stimulant used was external application in firains and rheuma-🛦 pains.

198. " Tindura saponis eum opio; olim, linimena modynum. Tincture of foap with opium.-\*This is made in the fame manner, and from the time ingredients, as the tincture of foap; only dding at first one ounce of opium." It is ased in the fame purposes as the preceding tincture,

nisa more powerful anodyne.

199. "Tridura tolviferae balfami; olim tindutelitana. Tincture of tolu balliam.-" Take kum of Tolu, one ounce and a half; alkohol, pound. Digest until the balfam is dissolved, than through paper." This tincture is scarceand but on account of its flavour, and for the fyrup of Tolu.

"Tindura veratri albi. Tincture of white if diluted alkohol, two pounds and a half. for 7 days, and strain through paper." bie of this tincture cannot exceed a few but it is so violent, it is seldom or never utemally.

". "The following are the tinctures pecu-

to the London Pharmacopæia. In each of the pound is by measure, or is equivalent to Tindura aurantii corticis. Tincture of

peel.—" Take of fresh orange peel, three proof-fpirit, two pounds. Digeft for 3 and strain.

3 "Tindura bal'ami Peruviani. Tincture ouian bal'am.—" Take of Peruvian bal'am, ounces; rectified spirit of wine, one pound.
until the balsam is dissolved."

"Tintura cascarillae. Tincture of casca-Take of cascarilla in powder, four ounproof-spirit, two pounds. Digest with a best for 8 days, and strain." It is seldom

"Tmflura galbani. Tincture of Galba-Take of galbanum cut into small pieces, aces; proof-spirit, two pounds. Digest gentie heat for 8 days, and strain." Tincgathanum has been used in hysteria, ffacand afthma, in a dose of from one to three ins.

Tindura fabinae composita. Compound of favin.-" Take of extract of favin, e; tincture of caftor, one pound; tincsyrrb, half a pound. Digest until the exfavin is diffolved, and ftrain." This tincbeen recommended as an emmenagogue, been recommended wice a-day.

" Tindura seillae. Tincture of fquill.the of squill recently dried, four ounces; forth, two pounds. Digest for 8 days, and of the liquor." Vinegar is generally used menfirmum. This tineture may be given

40k of from 20 to 60 drops.

H. "Tinding volcrings. Tinding of valc-Take of wind valerian in coarse powder,

four ounces; proof-spirit, two pounds. Digest with a gentle heat for 8 days, and strain.

209. Tindura vulerianae ammoniata. Ammoniated tincture of valerian .- " Take of wild valerian in coarfe powder, four ounces; compound fpirit of ammonia, two pounds. Digett for 8 days, and frain." Of these two tinctures, the latter is the more powerful, and is a remedy often employed in hysteric affections. Its dose is from one to two drachms.

210. " Tindura zingiberis. Tincture of ginger. "Take of ginger in powder, two ounces; proof-spirit, two pounds. Digest with a gentle heat for 8 days, and ftrain." This tincture may be used as an aromatic in combination with other

remedies

#### SECT. XIV. EXTRACTA.—EXTRACTS.

211. An EXTRACT is the concrete tenacious mass obtained by evaporation of the solvent, when vegetable matter is diffolved in water or alkohol. When prepared from an aqueous foliation, it is named a watery, when from one in alkohol pure or diluted, a spiritous extract. The former must consist chiefly of those proximate principles which water can eafily diffolve; mucilage, tannin, extractive, and faline matter: the latter of a portion of these with refin. In either preparation, the volatile principles must necessarily be dislipated; and in many cases, especially in the preparation of the watery extracts, decomposition or oxygenation of the more fixed parts take place. Hence there are few vegetables whose virtues are obtained uninjured in their extracts.

### I. Extracta per Aquam. Extracts by WATER.

222. The directions for preparing these are given in the Edinburgh Pharmacopæia, under the Extract of Gentian.

213. Extractum Gentiana lutea. Extract of Gentian .- " Take of gentian root, any quantity. Having cut and bruifed it, add 8 times its weight of distilled water. Boil to one half, and strain, expressing the liquor strongly. Reduce it immediately to the confishence of thick honey, by evaporation in a bath of boiling water, faturated with muriat of foda." It is intenfely bitter. In the fame manner are prepared the following extracts:

214. Extractum Radicis glycyrrbizze Glabræ. Extract of liquorice root.—It confifts chiefly of mucilage and faccharine matter, and is used in catarrh. When the common extract is purified by folution in water, straining and evaporation, it is named refined liquorice.

285. Extractum Radicis bellebori nigri. Extract of black hellebore root.—The spiritous extract of this root is extremely violent in its operation. The aqueous which is received in the Edinburgh Pharmacopæia is comparatively mild. Its dole is from 10 to 20 grains.

216. Extractum foliorum rutæ græveolentis. P.Ktract of rue. - As the virtues of rue refide chiefly, if not entirely, in its effential oil, this extract received in both Pharmacopæias must be regarded as an injudicious preparation.

217. Extractum Foliorum cassie senne. Extract of femz. - Senna has its activity much imprired 2 1 Ž

SECT. XV

by decoction. The extract, therefore, cannot be regarded as a proper preparation of it.

218. Extractum florum anthemidis nobilis. Extract of chamomile.—The unpleasant flavour of chamomile is entirely dislipated by decoction. The extract is a pure bitter.

219. "Extractum capitum papaveris fomniferi. Extract of poppy. This extract from the capfule retains its narcotic quality, but its strength is not

uniform.

220. "Extractum ligni bamatoxyli campechienfis. Extract of logwood.—In this extract, the aftringency is obtained entire. The dose is from

10 to 20 grains.
221. "The watery extracts in the London Pharmacopæia are the same with those in the Edinburgh, with the addition of extract of Broom, of

favin, and of Peruvian bark.

222. "Extractum cacuminis genifie. Extract of broom tops.—An infulion of broom tops has been used as a diurctic; but the extract can searcely be considered as possessing any power.

213. "Extraction fabina. Extract of favin.— This is liable to the same objection as the extract of rue; that its virtues residing in its essen-

tial oil must be dissipated in the process.

224. "Extraction cinchona, vulgo Corticis Peruriani. Extract of Peruvian bark.—"Take of Perruvian bark, in coarse powder, 1 lb.; distilled water, 12 lb. Boil for an hour or two, and pour off
the liquor, which, while hot, will be red and pellucid; but as it cools, becomes yellow and turpid. Pour on again the same quantity of water;
boil as formerly; and repeat the boiling, until
the liquor, when cold, remains limpid. Then reduce all these liquors, mixed together and strained, to a proper consistence, by evaporation.

225. "This extract ought to be prepared under two forms; one fost, fit to form pills; the other hard, so that it may be reduced to powder." The active matter of bark is resinous, which boiling water distoives, but operates a chemical change, by which change its effect is diminished. Its medium dose is so grains. See Peruvian Bark.

# II. EXTRACTA PER AQUAM ET ALKOHOL. EXTRACTS BY WATER AND ALKOHOL.

of Peruvian bark.—" Take Peruvian bark in powder 1 lb.; alkohol, 4 lb. Digeft for 4 days, and pour off the tincture. Boil the refiduum in 5 lb. of diftilled water for 15 min. and ftrain the decoction while hot through linen. epeat this boiling, and ftraining with an equal quantity of diftilled water, and reduce the liquor by evaporation to the confiftence of thin honey. Draw off the alkohol from the tincture by diffillation, until it is reduced to a finitiar confiftence. Then mix the liquors thus infpillated, and reduce to a proper confiftence by a bath of boiling water, faturated with muriat of foda."

227. "This preparation is undoubtedly preferable to the watery extract of bark. The dofe

is 10 grains.

228. " Extraction radicis convolvuli jalapae. Extract of jalap.—This is ordered to be prepared in the same manner as the extract of bark. It is a

cathartic capable of operating fully in a dole o

229. "Besides these two, there are some other spiritous extracts in the London Pharmacopeia

230. "Entractum cafearillae. Extract of ca carilla.—It may be regarded as bitter and toni Its dose is one scruple or half a drachm.

231. "ExtraBum colocynthidis compositum. Con pound extract of colocynth.—" Take the pith colocynth cut sinal, 6 drachms; socotorine aces powder, 1½ oz.; scammony in powder, has in ounce; lesier cardamom seeds freed from thusks, powdered, one drachm; proof spint, lb. Digest the colocynth in the spinit with gentle heat for 4 days. To the experted thust add the aloes and scammony. These being solved, draw off the spirit by distillation; the vaporate the water, adding the seeds toward end of the evaporation. Make an extract strong pills."

232. "This composition, formerly known."

the name of *cathartic extraC*, is a cathart much power, fometimes employed in obtaining the conflipation. Its dose is from 5 to 20 grains

233. "Opium purificatum. Purified opia "Take of opium cut into small pieces, sproof-spirit, 12 lb. Digest with a gentle has gitating frequently until the opium is different the tincture through paper, and dithus prepared to a proper consistence. Purification ought to be kept under two forms; so as to be fit to form pills; and hard, so as capable of being reduced to powder."

234. "A process similar to this had a platthe Edinburgh Pharmacopæia, but has probeen expunged.

# SECT. XV. AQUÆ STILLATITIÆ. DISTI WATERS.

235. "In most instances the water from vegetable substances, is impregnated their flavour and tafte. This is owing toth fential oil being volatilized at the temperat which water boils, and being diffolved in proportion by the water condensed. It is feldom that any important virtue of vere refides in that principle, and hence the distilled waters are more used as vehicles of remedies, than as being themselves active cines. It is evident that it is only those ables which contain a fenfible quantity of a tial oil, that can be subjected with advantal this process, and that any quality residing other principles of the vegetable will not be tained in the distilled water. To preserve the tilied waters from decomposition, to which are liable, from the finali quantity of vers matter they contain, a proportion of alkohe bout one fiftieth of their weight, may be add them; and they require to be kept feeluded the air.

236. "Aqua defillata. Diffilled water.—"
til water in clean vefiels until about two thave come over." By diffillation a periodity
water is obtained, which is not found in part

237. " Aqua corticis citri aurantii. Wateri range peel,-" Take of grange peel, 2 lb. 1

or these as much water, that when 10 lb. shall have been drawn off by distillation, a quantity fall remain sufficient to prevent empyreuma. After due maceration distil 10 lb."

438. " In the same manner are prepared the folring; which require no particular observaince they possess merely the odour, and e of them the tafte and pungency of the vegeis from which they are prepared: 10 lb. of her are to be drawn by distillation from the amities annexed to each:

aferted, " " Aqua anetbi. Dill-feed water. Fennel-feed w " Aqua foeniculi. Fennel-feed water. " iqua menthae fativae. Spearmint wa-

XVI. " Spiritus Stillatitii. Distil-LED SPIRITS.

"THE distillation of pure alkohol or diluchol from vegetable substances gives these. bil in its pure state seldom receives any senimpregnation; because, although it is capdifforung the effential oils of plants, there of few of them which it can bring over in tion; a higher temperature being necessary athlize them than the alkohol. But by emof diluted alkohol, a liquor is obtained odorous and pungent. When heated with getable, the alkohol first distils over, and ands the water with the effential oil, and lole, when condensed, forms a transparent These distilled spirits, like the distilled hare in general mere agreeable vehicles for abilition of other medicines, or grateful stists sometimes used to relieve nautea or fla-The directions for preparing them are in the Pharmacopæia, under the spirit of

"." Spiritus cari carvi. Spirit of caraway. ated alkohol, 9 lb. Macerate during two in a close vessel; then add a sufficient quand water to prevent empyreuma, and draw h. by dikination.

11. " In the fame manner are prepared the ring spirits, 9 lb. being drawn from the unes affixed to each:

3. " Spiritus corticis lauri cinnamomi. Bark of

lamon, 1 lb. 514. " Spiritus menthae piperitae florentis. Herb

freppermint, 11 lb.

" " XVII. Pant I.

255. "Spiritus nucis myristicae moschatae. meg, 2 oz.

256. " Spiritus frustûs myrti pimentae. Fruit of

pimento, half a pound. 257. " To these may be added from the London Pharmacopœia,

258. " Spiritus menthae sativae. Spirit of spear-

mint. 259. " Spiritus pulegii. Spirit of pennyroyal.

260. " Of compound spirits, the following have a place in the Pharmacopæias:

261. " Spiritus juniperi communis compositus.

Compound spirit of juniper. Pharm. Ed. 262. "Take of juniper berries bruifed, one pound; caraway feeds, fennel feeds, of each one ounce and a half; diluted alkohol, nine pounds. Macerate for two days; and, adding as much water as is sufficient to prevent empyreuma, draw off nine pounds by distillation." This has been used as a carminative and diuretic.

263. " Spiritus anisi compositus. Compound spirit of anise. Pharm. Lond .- " Take of anise seeds, angelica feeds, of each bruifed half a pound; proof-spirit, one gallon; water as much as is fufficient to prevent empyreuma. Diftil one galion." It is used also as a carminative.

264. " Spiritus raphani compositus. Spirit of horfe-radish. Pharm. Lond .- " Take of horses raddish root, dried orange peel, of each alb.; fresh garden scurvy-grass, 4 lb.; nutmegs bruised, x oz.; proof-spirit, two gallons; water, as much as is sufficient to prevent empyreuma. Distil two gallons." This was at one time recommended as an antiscorbutic. It has justly fallen into disuse.

265. " There remain, lastly, those distilled spi-

rits prepared with pure alkohol.

266. " Spiritus lavendulae spicae. Spirit of la render.-" Take of fresh lavender flowers, 2 lb. alkohol, 8 lb. Draw off 7 lb. by distiliation in a water-bath."

267. " Spiritus lavendulae spicae compositus. Compound spirit of lavender.-" Take of spirit of lavender, 3 lb.; spirit of rosemary, 1 lb.; cinnamon bark, 1 oz.; cloves, 2 dr.; nutmeg, half an ounce; red faunders wood, 3 dr.: macerate 7 days and ftrain." The dose is 30 or 40 drops.

268. " Spiritus rorismarini officinalis. Spirit of rosemary.-" Take of fresh rosemary tops, 2 lb. alkohol, 8 lb. Draw off 7 lb. by distillation in a water-bath."

269. " Alkahol. There is no process in the Edinburgh Pharmacopæia for the preparation of alkohol. The following is given by the London College:-" Take of rectified spirit of wine, one gallon; prepared kali (fub-carbonat of potash) hot, one pound and a half; pure kali (potash), one ounce. Mix the vinous spirit with the pure kali, and then add one pound of the prepared kali, while hot. Agitate and digeft for 24 hours. Pour off the spirit; add to it the remainder of the prepared kali, and distil from a water bath. Preferve the alkohol in a veffel well flopt. The prepared kali ought to be heated to 300°. The fpecific gravity of alkohol is to that of distilled water as 815 to 1000."

270. " The rectified spirit of wine, employed in this process, is prepared by distillation from the Rr

piritious liquors of commerce. It cousings of al-kohol with a portion of water. The potath employed in the prefent process abstracts the greater part of this water, by the strong attraction it exerts to it; and, by a careful distillation, the alkohol is obtained, if not entirely, at least nearly pure."

271. If The specific gravity required in the alkohol, employed in the processes of the Edinburgh Pharmacopæia, is . 11 835; and though at that standard, it must contain a portion of water, it is sufficiently strong for all pharmaceutical purpofes,"

SECT. XVII. OLEA VOLATILIA. olim OLEA STILLATINIA vel ESSENTIALIA. VOLATILE OILS, DISTILLED OF ESSENTIAL OILS.

272. "Essential oils differ fomewhat in their fensible qualities, but all of them are highly odorous and pungent; and, as medicines, they poffels a stimulating power. They are generally employed is corrigents, to improve the flavour and tafte of the medicines with which they are mixed, to obviate any unpleasant symptoms they may be apt to produce. As these oils frequently exist in distinct vesicles in the vegetable, some of them may be obtained by expression; but, in general, they are procured by distillation. The rules giyen in the Edinburgh Pharmacopæia are the fol-

lowing:
273. "These oils are to be prepared in the same manner as the diffilled waters, except that a smaller quantity of water is to be added. Seeds and roots are to be previously bruised or rasped, The oil accompanies the water, and is afterwards reparated from it, according as it is lighter or heawier, by swimming on the surface or falling to the bottom. With regard to the preparation of these distilled waters and oils, from the goodness of the substances, their texture, the season of the year, and fimilar circumstances, so many differences arise, that it is scarcely possible to give any certain and general rules which shall apply strictly to every example. Many things therefore are omitted, to be regulated according to the judgment of the operator, the most general precepts only being delivered."

274. " The qualities of these oils are consider, ably varied by a number of circumstances, more especially by elimate, soil, and season. They are likewise injured by too long keeping. Being high priced, they are also frequently adulterated by dilution with alkohol, by the addition of an expressed oil, or by intermixture with each other, the cheaper being used to adulterate the more va-The first is detected by the makiness produced and continuing for fome time; on dropping the adulterated oil on water; the second, by the sophisticated oil leaving a permanent greaty spot on paper; and the third may, in general, be difcovered by the smell of the coarser oil, rendering it more ardent if necessary, by the application of a gentle heat.

275. " It is not necessary to notice particularly the different effential oils, as they possess merely the aromatic quality of the vegetables from which they are prepared. The following are those in-Leited in the Edinburgh Pharmacopæia:

276. " Oleum berbae menukae, piperitae florenti Oil of peppermint.

277. "Olcum berbae juniperi fabinae. Oiloffain 278. "Oleum firmmitatum forentium vorifinari

officinalis. Oil of rolemary. . 279. " Oleum Spicarum florentium javendal

Spicie. Oil of lavender. 280. "Oleum seminum pimpinellae anisi. Oil

281. " Oleum baccarum juniperi communis. of juniper.

282. " Oleum radicis lauri sassufras. Oil of l

283. " Qleum fructus myrti pimentae. Oil d mento.

284. " The London College have also order Oleum essentiale carui. Oil of carraway. 285. Oleumimenthae sativae. Oil of spea

286. "Oleum origani. Oil of wild thyma 287. "Oleum fulegii. Oil of pennyroyal.

188. " Oleum juccini et acidum juccini. Ol acid of amber.-" Take of amber in por pure fand, equal parts. Put them mixed glass retort, of which they shall fill one-half." ving adapted a large receiver, diftil from a bath, with a fire gradually raised. First, tery liquor with a little of a yellow oil, wi til; then a yellow oil with an acid falt; wards, a reddish and black oil. Pour the out of the receiver, and let the oil be sept from the water. Let the acid falt, collected the neck of the retort, and the fides of there er, he pressed between folds of bibulous and freed from the adhering oil. Then pu by folution in hot water and crystalisation 289. "Amber is a bitumen which suffer composition by heat.

The acid which it is one fui generis; the oil approaches in it perties to the other empyreumatic oils. The is never used in medicine; the oil is sometim ployed externally as a flimulant, and inter an antispasmodic, but is also falling into A process is ordered in the Pharmacopound

purification.

290. " Qleum succini purissimum. Purified amber,-" Distil oil of amber mixed with fu its quantity of water, from a gials retort two thirds of the water have pailed into t ceiver. Then separate this purified volate from the water, and keep it in vessels well The oil thus purified, is at first nearly color but gradually acquires a brown tinge. Its o is extremely unpleasant, its tafte acrid. Its as an antispasmodic is ten drops.

291. " Oleum serevinthinae wolatile puis Rectified oil of turpentine .- " Take of w oil of turpentine, 1 lb.; water, 4 lb. distil at as any oil comes over." This process seem necessary, as distilled oil of turpentine is in go

pure enough.

292. " Two other empyreumatic oils are

ed in the London Pharmacopæia.

293. " Oleum animale. Animal oil.-" Ta oil of hartihorn, 1 ib. Diftil three times." The is formed by the decomposition of bones by It was once celebrated for its antispalmodic er, but has long been little used.

294. " Oleum pet: glei. Oil of petroleum, or

PHARMACY

teral tar.—" Diffil petroleum in a fand-bath." This has been used principally as an external stimulating application.

Sect XIX.

ACT. XVIII. OLEOSA .- OILY PREPARATIONS.

ng. "Olean ammoniatum, vollgo Linimentum hale Ammoniated oit, commonly called volument.—" Take of olive oil, 202.; was of ammonia, two drachms. Mix them."

of announce, two dractins. Fix them. 106. A much stronger preparation is ordered in Leedon Pharmacopæia. Linimentum ammonice un, confissing of water of pure ammonia, one oc; olive oil, 2 oz. Another is inserted under title Linimentum ammoniae, composed of water ammonia, (or rather carbonat of ammoniabilian ounce; olive oil, an onnee and a half, is, both from the nature and proportion of predients, is milder. They are all tised as faints; and; for this purpose, the liniment is Elinburgh College forms best adapted.

"Oleum lini tum calce. Linfeed oil with Take of infeed oil, lime water, of each tes. Mix them." This is used as an apto burns.

Oleun tampboratum. Camphorated oil. the of olive oil, 202.; camphor, half an Mix them, so as that the camphor may bired." This is a form under which camfredently applied externally as a stimulationally.

"Olem supporatum. Sulphurated oil.—
of olive oil, 8 oz.; sublimed sulphur, Boil with a gentle fire, in a large from pot, constantly until they unite." This soliusing ur in oil was once recommended as account, in a dose of twenty or thirty and was used in athma and phthiss, but altogether discarded from practice.

In the London Pharmacopoia, there is deed to be prepared in the fame manner, on of oil in petroleum, Petroleum sulting. Its qualities are the fame.

XIX. SALES et SALINA.—SALTS and SA-

To give a precife definition of the term Salt It was formerly supposed to denote minently sapid, soluble in water, crystal-soffole, and uninstammable. But these this are not possessed by many bodies suppose to the class of salts, and they to others which are arranged under other of chemical agents.

The definition of falts, in the language of themistry, seems rather to be taken from apposition, than from their properties. It indentions to be applied to the substances by the name of acids, to those entitled alast to all the compounds formed by the nations of acids with alkalies, earths, and coxyds. The acids and alkalies are terminary, the other Secondary or neutral salts."

The general chemical qualities of the acids, and neutral salts, and there new coments, see Chemistry, Index. The first saline nations in the Pnarmacopoeia are those of ted.

4 " Acidum acetosum destillatum. Distilled

acetous acid.—" Distil 8 lb. of acetous acid in glass vessels, with a gentle fire. The two pounds that first come over are to be rejected as too wastery; the all b. which follow are the distilled acetous acid. The residuum affords a still stronger acid, but too much burnt."

, 304. "Vinegar, as it is produced by fermentation, confifs of acetous acid, largely diluted with water, and mixed with a number of other fubflances,—tartarous acid, extractive, muchaginous, and faccharine matter. From these it is purified by distillation, but it is still largely diluted with water, as the pure acid is not even so volatile as water; and, in general, it receives from the distillation somewhat of an empyreumatic odour. The process should be conducted in glass vessels, as directed in the Pharmacopoeia; as, from metallic ones, the acid would receive an impregnation that might prove noxious. Distilled acetous acid is chiefly employed as a solvent of some vegetable substances, and in making some of the salts.

30s. "Acidim acetofum forte. Strong acetous acid.—" Take of dried fuithat of iron, one pound; accetite of lead, 10 oz. Ruh them together. Put them into a retort, and diffil from find with a moderate fire, as long as any acid comes over."

306. "Acidum acetofum. Acetous acid. Pharma Lond.—" Take of verdigrife, in coarse powders two pounds. Dry it perfectly in a bath of waters saturated with sea falt. Then distil in a sandabath, and distil the liquor a second time. Its specific gravity is, to that of distilled water, as 1050 to 1000."

307. "These two processes furnish a powerful acid; but the result of chemical researches on this subject is such; that it is uncertain whether these two concentrated acids differ essentially from each other, and whether they differ except in strength from the diluted acetous acid.

308. "In the first process, that of the Edinaburgh Pharmacopæia, the sulphuric acid of the dried sulphat of iron combines with the oxyd of lead of the acetite of lead, and discourages the acetous acid, which, with a portion of water of crystallization, distils over. Its odour is pungent, its taste acrid, and its acid powers confiderable, it seems most probable that it is merely the concentrated acetous acid.

309. " In the 2d process, the acid contained in the verdigrife is experted by the action of the heat from the oxyd of copper, with which in that substance it is combined. But it has been generally supposed, that at the same time it suffers a chemical change. According to a former opinion, it receives a portion of oxygen from the oxyd of copper. The experiments of Chaptal appears ed afterwards to prove, that it was rather deprived of a portion of its carbon, which femained mixed or united with the oxyd of coppers while Adet, and ftill more lately Darracq, have concluded from experiments, that no difference exists between those acids but in strength, the acetous acid being more diluted than the other, and, according to Darracq, containing a portion The conof mucijazinous and extractive matter. centrated acid from verdigrife is the acetic acid of the new nomenclature, the radical vinegar of the older chemists.

Rra

310. "These strong acids are principally used as powerful stimulants, applied to the nostrils in languor and asobyxia. Their odour is pungent and grateful. They are capable also of acting as powerful rubefacients.

311. "Acidum benzoicum. Bezoic acid.—"Take of benzoin in powder, any quantity. Put it into an earthen pot, to the mouth of which there has been previously adapted a paper cone; apply a gentle fire, that the acid may be substituted. If it be contaminated with oil, let it be purished by solution in bot water, and crystallization." (Or, according to the direction of the London College, its purishcation may be effected by mixing it with white clay, and again subliming it.) This acid exists ready formed in benzoin, and all the balsams, and, as it is volatile, is easi-

ly fublimed by heat.

312. Another process, supposed to be more economical, by M. Scheele, is as follows, in the Prussan Pharmacopaia:—"Take of powdered benzoin, 24 oz.; carbonat of soda, 8 oz. Mix them, and boil in 16 lb. of water, stirring constantly for half an hour. Strain. To the remaining benzoin add 6 lb. of water. Boil them together, and strain. Mix both liquors, and evaporate to 2 lb. Filter the liquor, and add to it diluted sulphuric acid to saturation. The benzoic acid, precipitated under the form of a light greyish powder, is to be dissolved in boiling water; and the solution strained, while hot, through linen, is to be set aside to crystallize. The crystals are to be washed with cold water and dried."

3x3. "Benzoic acid has been supposed to possess fome expectorant power, and, on this supposition, enters into the composition of the paregoric elix-

irs of the Pharmacopæias.

: 314: "Acidum muriaticum. Muriatic acid.— "Take of inuvat of foda, 2 lb.; fulphuric acid, 16 0z.; water, 1 lb.; first expose the muriat of soda in a pot to a red heat for a short time; when cold, put it into a retort. Then pour the acid, mixed with the water, and cold, on the muriat of foda. Distil from a sand-bath with a moderate sire, as long as any acid comes over. Its specific gravity is to that of distilled water as 1170 to 1000."

315. "This process is an example of single affinity. The sulphuric acid combines with the so-da of the muriat of soda, and the muriatic acid is disengaged. It combines with the watery vapour, and is thus easily condensed. It has generally a yellowish tinge, from the presence of a small quantity of iron, from which it can be freed by a second distillation. The principal use of this acid is for pharmaceutical purposes. It can scarcely be said to be employed as a medicine.

316. "Acidum oxy-muriaticum. Oxy-muriatic acid.—" Though no process is inferted in any Pharmacopœia for the preparation of this acid, it is applied, both in its pure state and in its combinations, to medicinal uses. Uncombined it has been employed to destroy contagion, and is perhaps the most effectual of any of the agents that have been used for this purpose." (See Oxy-MURIATIC ACID.) The vapours are dissured through the place where the contagion is to be destroyed.

317. "Combined with potath, it forms a falt employed as an anti-venereal remedy. To pre-

pare this falt, 16 oz. of sub-carbonat of potal are diffolved in 4 lb. of water, and the folution i repeatedly agitated with 8 oz. of lime, to abstract the carbonic acid. The folution of pure potat is to be poured into the bottles of Woulfe's appl ratus, connected with a retort, containing 3 lb. muriat of foda, 1 lb. of black oxyd of manganed and 2 lb. of fulphuric acid, previously diluted wit one pound and a half of water. On applying moderate heat to the retort by a fand-bath, t oxy-muriatic acid is difengaged, and palles throu the folution of potash. Instead of combining rectly, however, with the potath, it fuffers dem position: one part of it returns to the state muriatic acid, the other becomes, what is prop ly speaking, a super-oxygenated acid. Both rate themselves with potash; and the two safeparated, from their different degrees of safe ty: the common muriat remains diffolved fuper-oxygenated muriat crystallizes. The tals are washed with a small quantity of cold ter. They are in finall plates of a filvery we colour." This method of preparing the or riat of potalli is fomewhat different from that feribed by Dr Thomson. See Oxy-MURIAT, 3. "This falt is given in fyphilis in a dofe of grains three or four times a-day.

318. "Acidum nitrofum. Nitrous acid.—"I of pure nitrat of potalh, beat to powder, a sulphuric acid, 16 oz. The nitrat of potalh put into a glass retort, pour upon it the sulphuric acid, and distil from a fand-bath with a fire dually raised, until the iron is of an obscure heat. The specific gravity of this acid is to

of distilled water as 1550 to 1000."

319. "In this process the sulphuric acid bines with the potash, and disengages the acid. The satter acid, however, partly from heat employed in the distillation, and parth haps from the exertion of a disposing affinite fers a slight decomposition; a small portion loses part of its oxygen, and a quantity of a gas is formed; this is absorbed by the nitro and forms the nitrous, which is more or is loured and fuming, according to the deptheat employed in the distillation. The resis sulphat of potash, with an excess of sulphacid.

a pharmaceutic agent: from the facility with a pharmaceutic agent: from the facility with a it parts with oxygen, it is one of the most intant. In the state of vapour, it has been emped under the form of sumigation to destroy of gion; and has this advantage that it can be plied without requiring the removal of the same

32x. "Acidum nitrofum dilutum. Diluted nit acid.—"Take of nitrous acid, water, equal walkix, avoiding the noxious vapour."

of nitrous acid, any quantity. Put it into a tort, and a receiver being adapted, apply a gentle heat until the reddest part shall have pover, and the acid which remains in the methall have become nitrie." By the heat, the trous gas is the nitrous acid, which gives it yellow colour, and the fuming quality is expel and condenses in the receiver, with a little a

The nitric acid remains colourless. Their medi-

cital powers are equal.

'Spiritus aetheris nitrofi. Spirit of nitrous etter.—" Take of alkohol, 3 lb.; nitrous acid, 1 b. Pour the alkohol into a large phial, placed in a reflel full of cold water, and add the acid graeally, with conftant agitation. Close the phial thtly, and let it aside for 7 days in a cool place; the diffil the liquor with the heat of boiling wate, into a receiver kept cool with water or fnow, slong 28 2ny spirit comes over."

314. "This answers perhaps all the purposes which could be derived from pure nitrous ether, thich is very dangerous in the preparation.

315. "The theory of the action of acids on aldo, and of the formation of ethers, is, notwithhousether is very imperfectly elucidated. It is totaited, however, that during its production, tions of oxalic and acetous acids are formed; the experiments of Bayen have clearly proved, story confiderable portion of the nitric acid possible or combined in such a manner with the of the alkohol, that it is no longer capfaturating an alkali. Perhaps it may be inthat the acid, by parting with oxygen to dements of the alkohol, causes the formation e oxalic and acetous acids, and that the reing elements of the alkohol unite to form the s. It appears to contain more carbon than

"The spirit of nitrous ether contains a n of acid, from which it may be freed by a fallation, with magnefia or potash. It is nt, acidulous, very volatile and inflammable, in alkohol and water. It is employed as gerant and diuretic, sometimes as an antiixic. Its dose is from 30 to 50 drops.

Acidum felphuricum dil tun. Diluted bric acid, or diluted vitriolic acid.-" Take hiphuric acid, one part; water, 7 parts (in London Pharmacopœia 8 parts). Mix them." buric acid is obtained by burning fulphur with from one eighth to one tenth of nitrat tash, in large leaden chambers. By the oxyon of the fulphur, the acid is formed, and wheel by water placed in the bottom of the This liquor, when sufficiently aciduis concentrated by boiling in glass retorts, acid obtained thick and uncluous in its apbace, colourless and transparent, having a of gravity of 1850.

4. "Sulphuric acid thus prepared is never may pure. It contains a quantity of fulphat mah, and fornetimes a fmall portion of fullead. From these it is in a great measure by dilution with water, the diluted acid incapable of holding them diffolved. Its bried acid. As an aftringent it is taken to the

and of 30 drops.

49. "Acidum fulphuricum aromaticum. Aroic fulphuric acid.—" Take of alkohol, 2 lb.;
hure acid, 6 oz. Drop the acid gradually

Dieeft the mixture with a very the alkohol. Digest the mixture with a very the heat in a close vessel for three days, then of bark of cinnamon, one ounce and a half, guger, one ounce. Digest again in a close

vessel for fix days; then strain through paper placed in a glass funnel." Doze 30 drops.

330. " Ætber sulphuricus. Sulphuric ether, formerly vitriolic æther .- " Take of sulphuric acidalkohol, of each 32 oz. Pour the alkohol into a glass retort, capable of bearing a sudden heat. Then pour on the acid in an uninterrupted stream. Mix them gradually by frequent and gentle agitation; then immediately diffil from a fand-bath. previoully heated for this purpose, into a receiver kept cool with water or fnow. But regulate the heat in fuch a manner that the liquor may be made to boil as foon as possible, and continue to boil until 16 oz. have distilled over; then remove the retort from the fand. To the distilled liquor add two drachms of potath, then diftil again from a high-necked retort, with a very gentle heat, into a receiver kept cool, until 10 oz. have paffed over. If to the acid remaining in the retort after the first distillation, 16 oz. of alkohol be added, and the distillation repeated, ether will again be produced. And this may be often repeated."

331. " In the formation of fulphuric ether, it is found by experiment that the alkohol fuffers decomposition; a portion of its carbon is separated in a sensible form, and renders the residual liquor thick and dark coloured; a quantity of water is formed, and the remaining elements of the alkohol unite to form the ether. Ether differs from alkohol in containing less carbon, or rather more hydrogen; and this difference is established, not only by the facts with regard to its formation, but likewife by the comparative products of their com-

buftion.

332. "With regard to the agency of the fulphuric acid, by which these changes are effected in the composition of the alkohol, two opinions are at present maintained by chemists. According to the older doctrine, part of the sulphuric acid is decomposed; its oxygen combines with a portion of the hydrogen of the alkohol, and forms water; the balance of attractions among the elements of the alkohol being broken, carbon is depolited, and ether formed from a new combina-

tion of these remaining elements.

333. " Fourcroy and Vauquelin have denied that any decomposition of the acid is necessary for the formation of ether. They suppose that it acts folely by a disposing affinity cauting part of the oxygen and part of the hydrogen of the alkohol to enter into a binary combination to form water; whence refults the exertion of new affinities, by which carbon is separated, and ether formed. The experiments from which this latter opinion Has been deduced, are not unexceptionable; and the facts, that no acid which does not part with oxygen can form ether, while acids, which part with that principle readily, form it with facility, favour the supposition that the sulphuric acid occafions the formation of ether, by yielding part of its oxygen to the hydrogen of the alkohol.

334. " The principle, in conducting this procels, is to stop it at the proper period; that is, when the formation of ether ceases, and sulphurous acid begins to be disengaged. This is best known by the neck of the retort being obscured with white fumes: when thefe appear, the fire must be immediately lowered or removed, as otherwise the liquor in the retort would swell up and pass over into the receiver. The ether obtained by the first distillation is impure. It is diluted with water and alkohol, and impregnated generally with sulphurous acid. It is rectified by distilling it a ad time with a very gentle heat, with the addition of potash, which attracts the sulphurous acid; or, what succeeds better, with the addition of black oxyd of manganese, which converts that acid into sulphuric.

335. "Ether, properly prepared, has a penetrating diffusive odour, and a very pungent taste. It is highly volatile, evaporating rapidly at the common temperature of the atmosphere. It is soluble in ten parts of water, and combines with alkohol in every proportion. It is narcotic and antispasmodic. Its dose is half a drachm.

336. "Æther fulphuricus cum alcohole. Sulphuric ether with alkohol, formerly named spirit of vitriolic æther.—The London college order a compound spirit of vitriolic æther to be prepared by mixing 2 lb. of unrectified ether with 3 drachms of oil of wine. "Take of sulphuric ether, one part; alkohol, two parts. Mix them."

337. "Ather fulphuricus cum alcohole aromaticus. Aromatic sulphuric ether with alkohol.—This is made from the same materials, and in the same manner as the compound tincture of cinnamon, unless that sulphuric ether with alkohol is used in place of diluted alkohol.

338. "Carbonas ammoniae: olim ammonia praeparata. Carbonat of ammonia.—" Take of muriat of ammonia, I lb. carbonat of lime, commonly called chalk, dried 2 lb. Each being separately reduced to powder, mix them and sublime from a retort into a receiver kept cold."

339. This is an example of double elective attraction. The muriatic acid of the muriat of ammonia combines with the lime of the carbonat of lime; and the carbonic acid of the latter unites with the ammonia of the former. The carbonat of ammonia which is formed is fublimed and obtained in a crystalline cake. It is used as a stimulant to the nostriis in fainting, and as a stimulant and diaphoretic, taken internally in a dose of from 5 to 15 grains.

340. "Aqua carbonatis ammoniae; olim aqua ammoniae. Water of carbonat of ammonia.—" Take of muriat of ammonia, carbonat of potash, of each 16 oz.; water, 2 lb. To the salts, mixed and put into a glass retort, add the water; then distil from a sand-bath with a tire gradually raised, to dryness."

341. "Liquor volatilis, fal, et oleum cornu cervi. Volatile liquor, falt, and oil of hartshorn. Pharm. Lond.—"Take of hartshorn, 10 lb. Distil, increasing the fire gradually. A volatile liquor, falt, and oil, come over. The oil and the falt being separated, distil the liquor three times. To the falt add an equal weight of prepared chalk, and sublime three times, or until it become white. The fame volatile liquor, falt, and oil, may be obtained from any of the parts of animals except fat."

342. "Though this at one time was supposed to be possessed of some peculiar virtues, it is now justly rejected from practice; and the carbonat of ammona, obtained pure by the preceding processes, is preferred.

343. "Aqua ammoniae: olim aqua ammonia causticae. Water of ammonia.—"Take of muria of ammonia, 16 oz.; lime, fresh prepared, 2 lb. water, 6 lb. To one pound of water in an 1700 or earthen vessel, add the lime broken down, and alose the vessel for 24 hours; until the lime fall it to a fine powder, which put into a retort. This add the inuriat of ammonia, disloved in 3 l of water, and, shutting the mouth of the retor mix them by agitation. Lastly, distil with a ce for moderate, that the operator can easily app his hand to the retort, into a receiver kept ou until 20 oz. have distilled over. In this distill tion the vessels are to be so luted as to considerectually the penetrating vapours."

344. "The folution has a strong pungent set a very acrimonious taste, and inflames the at it is used in medicine as a powerful stimulant diaphoretic; internally, in a dose of 20 drops; ternally, as a stimulant and rubefacient."

ternally, as a stimulant and rubefacient:

345. "Alcohol ammoniatum, five spiritu and
niae. Ammoniated alkohol.—"Take of dilutely
kohol, 4 lb.; muriat of ammonia, 4 oz.; early
of potath, 6 oz. Mix, and draw off by diffition with a gentle fire, a lb." This has the p
gent ammoniacal smell. It is used principally
the menstruum of some vegetables, with which
monia coincides in medicinal operation.

346. "Alcohol ammoniatum aromaticum, f fpiritus ammoniae aromaticus. Aromatic ammated alkohol.—"Take of ipirit of ammonia, sa volatile oil of rosemary, one drachm and a volatile oil of lemon, x dr. Mix so as to diffi the oils." In the London Pharmacopeia, al cloves is ordered in place of oil of rosemary. I dose is 15 to 30 drops.

347. "Alcohol ammoniatum foetidum, free tus ammoniae foetidus. Foetid ammoniaed hol.—"Take of fpirit of ammonia, 8 oz. alfat guin-refin, half an ounce. Let them diget close veilel for 12 hours; then diftil 8 oz. heat of a water-bath." In hysteria the doct drops.

348. "Spiritus ammoniae fuecinatus" Pha Lond. Succinated spirit of ammonia.—"Tak alkohol, one ounce; water of pure ammonio oz.; rectissed oil of amber, one scruple; to gr. Digest the soap and the oil of ambet the alkohol, until they are dissolved. Then the water of pure ammonia, and mix by again." This is an imperfect formula for the paration of Eau de Luce.

349. "Garbonas potassae. Carbonat of potassae." Let impure carbonat of potassa, (which in list is named pearl-assaes) be put into a crucia and brought to a red heat, that the oily imputes, if any are present, may be burnt out; it rubbing it with an equal weight of water, them thoroughly by agitation. The liquor, ter the impurities have substituted, being poured into a clean iron pot, is to be boiled to dry stirring the salt constantly towards the end of b iling, that it may not adhere to the vessel."

350. "The PEARL-ASHES of commerce are tained by the incineration of the wood of land getables. They confift of sub-carbonat of pota with sulphat and muriat of potash, filiceous est and metallic matter from which they are put

fed by this process. The falt is a sub-carbonat of potalls. It is in white grains and is deliquescent.

351. " Carbonas potassue purissimus, olim sal tarturn. Pure carbonat of potalli, formerly falt of tutar.-" Take of impure super-tartrite or potash, my quantity. Having wrapped it up in moist bibeous paper, or put it into a crucible, burn it is a black mass, by placing it among live coals, thing reduced it to powder, subject it to a moderate heat, in an open crucible, until it become white, or at least of an ash-grey colour, care bewarm water, strain the liquor through linen, and suporate it in a clean iron vessel, stirring the mata confantly towards the end of the evaporation, path an iron spoon, that it may not adhere to the ottom of the veffel. A very white falt will remin, which is to be left a little longer on the fire, the bottom of the veilel is nearly at a red When cold, it is to be kept in glass yessels, topt."

the fuper-tartrite of potash to heat.

If it is carbon and oxygen unite and form car
acid, which is attracted by the potash, and

tarbonaceous matter is burnt out. A salt is

med, which is a subcarbonat of potash. This

is used as an antacid and diuretic. 333. " Aqua potassae, vulgo lixivium carssicum. aro potass.—" Take of newly prepared lime, carbonat of potash, 6 oz. Put the lime innion or earthen veilel, with 28 oz. of warm The ebullition being finished, immediatethe falt; and the whole being well mixed, the last; and the whole being well mixed, the vessel till they become cold. Let the materials, previously well agitated, be poura glass funnel, the throat of which is oba giais runner, the thought of the upper oriof the funnel, while the neck of it is inferted mother glass vessel, that the water of potash padually drop through the linen into the m ressel. When it sirst ceases to drop, pour the funnel some ounces of water, but cautih so that it may swim above the matter. The of potash will again begin to drop. In this the affusion of water is to be repeated, unhave filtered, which will be in 2 or 3 days. upper parts of the liquor are to be mixed the lower by agitation, and it is to be kept la reffel well ftopt."

114. "Lime, having a stronger attraction to bonic acid, than potash has, attracts that acid in the sub-carbonat, and leaves the potash pure. In used in medicine as a lithoutriptic and ant-

235. "Aqua super-carbonatis patassee. Water of potash.—" Take of water 10 lb. in carbonat of potash, one ounce. Distolve, incarbonat of potash, one ounce. Distolve, incarbonat of potash, one ounces of carbonic gas, which arrise from three ounces of sulphuric id, and three pounds of water gradually and whoully mixed. The chemical apparatus insted by Nooth is well adapted to this preparate. But, if a larger quantity of the solution is quired, the apparatus of Woulse is preferable, he colder the air is, and the greater the pres-

fure, the better will be the liquor. It ought to be kept in veilels well ftopt."

356. Potalb, when used as a lithontriptic irritates the stomach and bladder so much that it cannot be long continued. But when thus superfaturated with carbonic acid it is pleasant and safe, It is taken to the extent of r or 2 lb. in the day. When properly prepared, it is pungent and acidulous, and sparkles when poured into a glass.

357. "Carbonas fodae, olim fal alkalinus fixua foffelis purificatus, Carbonat of foda.—"Take of inpure carbonat of foda, any quantity. Bruife it, and boil in water, until all the falt is diffolved. Strain the folution through paper, and evaporate it in an iron veffel, that after it has cooled crystals may form." The crystals are rhomboidal and contain a large quantity of water of crystallization. This salt is used as a lithontriptic under the form of a watery solution superfaturated with carbonic acid.

358. "Aqua super-carbonatis sodae. Water of super-carbonat of soda.—" This is prepared from solb of water, and 2 oz. of carbonat o soda, in the same manner as the water of super-carbonat of potash." This is also used as a lithontriptic, and preferred to the above as more pleasant.

359. "Aqua acetitis ammeniae, vulgo spiritus Mindereri. Water of acetite of ammonia. —"Take of carponat of ammonia, any quantity. Pour on it as much difilled acetous acid as may be necessary to saturate exactly the ammonia." It is given as a diaphoretic, in divided doses of one ounce.

360. " Acetis potassae. Acetite of potash.-Take of pure carbonat of potash, any quantity. Boil it with a gentle heat in 4 or 5 times its weight of diffilled acetous acid, and add more acid at different times, until, on the watery part of the former portion being nearly diffipated by evaporation, the acid newly added excite no effervescence: this will happen when about 20 parts of acid have been confumed. Then let it be flowly dried. Let the remaining impure falt be liquefied with a gentle heat, for a short time; then dissolved in water, and strained through paper. If the melting has been properly done, the strained liquor will be limpid; if not, of a brown colour. Afterwards evaporate with a very gentle heat this liquor, in a shallow glass vessel, stirring the salt while it concretes, that it may more quickly be brought to dryness. Lastly, the acetite of potash ought to be kept in a glass vessel, well closed, that it may not liquefy by the action of the air.'

361. "In this process the acctous acid combines with the potash, disengaging the carbonic acid. The acetite of potash obtained by the evaporation is brownish. This salt was at one time celebrated as a diuretic, in a dose of one or two drachms; but it has now nearly fallen into distuse.

362. "Patassa, olim causticum commune acerrimum. Potassa.—" Take of water of potassa, any quantity. Evaporate it in a covered clean iron vessel, until, when the ebullition is sinished, the faline matter flow smoothly like oil, which will happen before the vessel is at a red heat. Then pour it on a clean iron plate; cut it into small masses before it hardens, and immediately put them into a phial well ftopt." Potash in this form is used as a caustie; it quickly erodes animal matter, and, mixed with soap, has been used

to open an ulcer.

363. "Potassa cum calce, olim causticum commune mitius. Potash with lime.—" Take of water of potash, any quantity. Evaporate it to one third in a covered iron veisel; then mix with it as much newly slaked time as may be sufficient to give it the consistence of a solid paste, which is to be kept in a stopt vessel." As a caustic, this is milder than the former, and is also less deliquescent.

364. "Salphas potassae: olim tartarum vitriolatum. Sulphat of potash.—" Take of sulphuric
acid, diluted with fix times its weight of water,
any quantity. Put it into a large glass vessel, and
gradually drop into it, of carbonat of potash distolved in fix times its weight of water, as much
as may be necessary to the perfect saturation of the
acid. The effervescence being over, strain the liquor through paper; and, after due exhalation,
put it aside, that crystals may form. Sulphat of
potash may also be conveniently made, by dissolving the residuum of the distillation of nitrous acid in warm water, and saturating it with carbonat of potash."

365. "In the former of these processes, the sulphuric acid unites with the potash of the carbonat of potash, and expels the carbonic acid with effervelocnce. In the latter, which is the one generally followed, the excess of sulphuric acid attached to the sulphat of potash, which remains after the distillation of nitrous acid, is saturated by the addition of a sufficient quantity of potash. The salt forms an irregular crystalline mass; it has a very bitter taste, and is sparingly soluble in water. Its virtues are those of a cathartic; its dose half

an ounce.

366. "Sulphas potaffae cum fulphure, olim fai polych-efus. Sulphat of potash with sulphur.—
"Take of nitrat of potash in powder, sublimed sulphur, equal weights. Throw them well mixed, in small quantities at a time, into a red-hot crucible. The deslagration being sinished, let the salt cool, and keep it in a glass phial, well stopt." The nitrat of potash, being decomposed by the red heat, affords oxygen to the sulphur, in such proportions as to convert it into sulphuric and sulphurous acids. Both acids are attracted by the potash. In its medicinal qualities, this saline compound does not appear to differ from the sulphat of potash; and it is soon converted into it, by exposure to the air.

367. "Tartris potassae, elim tartarum solubile. Tartrite of potash.—"Take of carbonat of potash, 1 lb. super-tartrite of potash, 3 lb. or as much as may be necessary; boiling water, 15 lb. To the carbonat of potash dissolved in the water, add, by small quantities, the super-tartrite of potash rubbed to a fine powder, as long as it excites effervescence, which generally ceases before three times the weight of the carbonat of potash have been thrown in. Then strain the liquor, when cold, through paper; and, after due exhalation,

put it aside that crystals may form."

368. "The excess of tartarous acid in the fupertartrite of potash, is saturated by the potash of the carbonat of potash, and the proper neutral falt formed. It is not eafily cryftallized. In it preparation, therefore, the folution is usually evaporated to dryncfs. This falt has a bitter take it is very foluble in water, requiring only for parts of cold water for its folution. As a purgative, it is given in the dose of one ounce.

369. "Tartaris cotassa et sodae, climial rue lensis. Tartrite o: potassa and soda.—"This ipp pared from carbonat of soda and super-tarinte potassa, in the same manner as tartrite of potassa. The excess of tartarous acid in the acidulou trite of potassa, being saturated in this preparativith soda, a triple salt is formed. It crystalis in rhomboidal prisms; is soluble in six particular as the properties as a bitter faline taste. It is ployed as a cathartic, in the dose of one of and is often preferred, as being less disagn

than other Taline cathartics.

370. " Phosphas sodae. Phosphat of for "Take of bones, burnt to whiteness and real to powder, so lb.; fulphuric acid, 6 lb.; 9 lb. Mix the powder in an earthen vellet the fulphusic acid; then add the water, and mix. Keep the veilel in a water-bath for it at the end of which, dilute the matter, by other nine pounds of boiling water, and through a strong linen cloth, pouring over dually, boiling water, until the whole acid is ed out. Put afide the strained liquor, the impurities may subside, from which pour and, by evaporation, reduce it to nine po To this liquor, again poured off from the purities, and heated in an earthen veilel, ad bonat of foda diffolved in warm water, und effervescence cease. Then strain, and put that crystals may form. These being rea add, if necessary, to the liquor, a little ca of foda, that the phosphoric acid may be faturated; and prepare it by evaporation to form crystals, as long as these can be pr Laftly, let the cryftals be kept in a ver

371. " The white refiduum of burnt bone fifts chiefly of phosphat of lime. The ful acid decomposes it, by combining with the the phosphoric acid, which is difengaged, di however, a portion of undecomposed proof lime, forming a foluble compound. carbonat of foda is added to the acidulous obtained by wathing the materials, the fods bines with the free phosphoric acid; the " phosphat of lime, which was combined with acid, is precipitated, and the phosphat of crystallizes on evaporation of the strained I Its crystals are rhomboidal, efflorescent, quire for folution only four parts of cold They confift, according to Thenard, of 19 Its t da, 15 of acid, and 66 of water. purely faline, without any bitterness; it is cathartic, and, from being less nauteous taste than the other falts, it is entitled to rence. Its dose is one ounce.

372. "Sulphas fodge: oliva, fal glaubri, phat of foda; Glauber's falt.—"Diffolve the lous falt remaining after the distillation of the acid, in water; and add to it chalk, to re the fuperfluous acid. Put it aside until the purities have subsided; then, having pour

the liquor, and strained it through paper, reduce it by evaporation, that crystals may be formed." In the decomposition of muriat of soda by sulphune acid, to prepare muriatic acid, more subtracted than is barely sufficient; and since the necessity of saturating this excess by the stinion of chalk or carbonat of lime. The neural sulphat of soda crystallizes in hexahedral sims; they are offlorescent and soluble in rather is than three parts of cold water. This salt has the solution in sa a cathartic, and its value is ontested by its nauseous taste. Its dose is an account a half.

373. " Sulpburetion Potaffa: olim Hepar Sulpburis. Take of carbonat of potash, sublimed sulphur, ach 8 oz. Having rubbed them together, put into a large coated crucible; and a cover adapted to it, apply the fire to it cautiously, they melt. The crucible, after it has coolbeing broken, remove the fulphuret, and preit in a phial well stopt." During the fusion two substances, the sulphur and potash , and the carbonic acid is difengaged. spound is easily fusible, and is of a brown and inodorous. It is immediately partialmposed by water, and portions of sulphat th and fulphurated hydrogen formed. The which it has been proposed to be given, is to to 20 grains three or four times a-day. d, in some cases of cancer, to have increased facy of cicuta as a palliative, in doses of ains.

"Hydro-fulphuretum ammoniae. Hydrod of ammonia.—" Take of water of am-40z. Expose it in a chemical apparatus fram of gas, which arises from sulphuret 40z.; muriatic acid, 8 0z. previously dith 2½ of water. The sulphuret of iron purpose is conveniently prepared from 3 punised iron silings, and one part of subliphur, mixed together, and exposed in a d cucible, to a moderate heat, until they

"The sulphurated hydrogen is produced in ors by the muri-tic acid dispassing the iron spose part of the water. The hydrogen ed immediately combines with a portion liphur present, and this compound escaptive state of gas, is passed through the warmonia, with which it unites, and forms of a dark green colour, and very sectid only depressing the actions of the stomach real system, and has been used, principalishetes, in a dose of 3 or 4 drops, 3 or 4

Murias barytae. Muriat of barytes.—

rof sulphar of barytes, 2 lb.; wood charpowder, 4 oz. Roast the sulphat, that it
the more easily reduced to a sine powder,
thich is to be mixed the powdered charcoal.

matter into a crucible, to which a cover

Put the matter well rubbed into 6 lb. of
water, in a closed glass or earthen vessel,
in them by agitation, preventing, as much
libie, the access of the air. Let the vessel
in a water bath, until the part not dissolved
ou. XVII. PART L

has subsided; then pour off the liquor. Pour off the residuum 4 lb. of boiling water, which, after agitation and subsidence, add to the sormer liquor. While it is yet hot, or, if it has cooled, after it has been heated, drop into it muriatic acid as long as effervescence is excited. Then strain it and evaporate, that it may crystallize."

377. Sulphat of barytes may be decomposed by carbonat of potash by double affinity, and perhaps this is the least troublesome process; but when done with a view to the medicinal application of the barytes, it has been supposed defective, as it does not separate the metallic substances with which the native fulphat is so frequently intermix. The process of decomposing it, therefore, by charcoal, has been deemed preferable. carbonaceous matter attracts the oxygen of the fulphuric acid; the fulphur remains united with the barytes. This fulphuret of barytes, as well as a portion of hydro-fulphuret formed during the folution, are foluble in water; on dropping in muriatic acid, it combines with the barytes, the fulphur is precipitated, and the fulphurated hydrogen disengaged. By straining and evaporating the liquor, the muriat of barytes is obtained crystallized. It is used under the form of solution, for which also a formula is given :

378. "Solutio muriatis baryte. Solution of muriat of barytes.—" Take of muriat of barytes, one part. Distilled water, 3 parts. Dissolve." The saturated solution of muriat of barytes was introduced by Dr Crawford, as a remedy in scrofulous affections, and has been regarded as a tonic of considerable power. It is by no means inert, and the dose requires to be regulated with some care Five drops are given twice a day, and gradually increased to 20 or more.

379. " Solutio muriatis calels. Solution of muriat of lime.—" Take of pure carbonat of lime (namely white marble), in small pieces 9 oz.; muriatic acid, 16 oz.; water, 8 oz. Mix the acid with the water, and add gradually the pieces of carbonat of lime. The effervescence being finished, digest for an hour. Pour off the liquor, and reduce it by evaporation to drynefs. Dissolve the refiduum in its weight and a half of water, and The muriatic acid combines with the lime, and difengages the carbonic acid. The for lution of muriat of lime has been strongly recommended as a tonic, fimilar, and not inferior to the muriat of barytes. The dole is from 15 to 20 gra of the dried falt, or 30 drops of the faturated for lution.

380. "Carbonai magnefia: plim Magnefia alba: Carbonat of magnefia.—" Take of sulphat of magnefia, carbonat of magnefia, of each equal weights. Let them be disloved feparately in twice their weight of warm water, and either strained or outherwise freed from impurities: Then mix them, and immediately add 8 times their weight of boils ing water. Boil the liquor a little, stirring it at the same time; then allow it to remain at rest, unstill the heat be diminished a little, and strain it through linen, on which the carbonat of magnesia will remain. Wath it with pure water, until it be perfectly tasteless."

381. This is an example of double affinity, the fulphuric acid of the fulphat of magnetia combin-

ing with the potath of the carbonat of potath, and the carbonic acid uniting with the magnefia. The boiling water, and boiling the liquor, are, partly to dissolve the sulphat of potash, which is a falt sparingly soluble, and partly to give the carbonat of magnetia a fmoothness which it has not when this precaution is not observed. Carbonat of magnesia, however, is generally prepared on a large scale from the Bittern, or liquor remaining after the crystallization of muriat of soda from seawater, which is principally a folution of muriat. of magnetia: and there are fome niceties of manipulation requifite to give it the lightness and smoothness which are valued as marks of its goodness. Carbonat of magnesia, properly prepared, is nearly inlipid; it is extremely light, white, and smooth to the touch; is infoluble in water. It is given as an antacid in a dose from a scruple to a drachm; and the magnefia, by combining with acid in the stomach, forms a falt which acts as a laxative.

382. "Magnefia: olim Magnefia Ufla. Magnefia. —"Let carbonat of magnefia be exposed in a crucible, to a red heat, for two hours. Then preferve it in glass phials well stopt." By a red heat, the carbonic acid of the carbonat is expelled, and the pure magnefia remains. It loses about half its weight. A smaller quantity, therefore, of the pure magnefia, will produce the same effect as a larger of the carbonat. It is preferred to the latter, where, from the abundant acidity on the stomach, slatulence is occasioned by the disengagement of carbonic acid when the carbonat is employed.

# SECT. XX. METALLICA.—METALLIC PREPARATIONS.

383. The following metals are employed in medical practice: Silver, quickfilver, copper, iron, tin, had, zinc, antimony, and arfenic. Metals, in their pure state, do not appear to exert any action on the living system; their combinations only

pollels medicinal virtues.

bination of their oxydation of metals, and the combination of their oxyds with acids, are the chemical changes which communicate to them activity. In general they are more active, in proportion as they are more highly oxydated, and are ftill more fo when combined with acids. Oxygen is not, however, to be regarded, according to a modern hypothesis, as the source of their activity: each metal possesses powers, which, though increased or diminished according to the degree of oxydation, are peculiar to itself, and remain in all its preparations.

# Argentum .- Silver.

- 385. "Nitras Argenti: olim Caussium Lunare. Nitrat of filver.—" Take of the purest filver, extended in plates and cut, 4 oz.; diluted nitrous acid, 8 oz.; diffilled water, 4 oz. Dissolve the filver in a phial with a gentle heat, and evaporate the solution to dryness. Then put the mass into a large crucible, which is to be put on the file, which must be at first centle, and gradually increased until the mass flow like oil. Then pour it into iron pipes, warmed and rubbed with grease.

Lastly, keep it in a glass vessel well stopt." The filter in this process is oxydated and disolved be the nitrous acid. By the suspensed, for that this is rather a fub-nitrat, is a strong caustic, and being easily applied, is very general use.

#### ANTIMONIUM.—ANTIMONY.

386. "Sulphuretum antimonii praparatum: sk Antimonium praparatum. Prepared antimony. "Let fulphuret of antimony be prepared in t fame manner as carbonat of lime." See § 20.

387. " Oxidum Antinonii cum Sulphure Vitt catum: olim, Vitrum Antimonii. Vitrified sul rated oxyd of antimony .- " Strew fulphund antimony, rubbed to a coarse powder like on a fhailow unglazed earthen veilel, and to it a gentle fire, that the fulphuret of and may be flowly heated; at the fame time constantly the powder, that it may not run White vapours, fmeiling of fulphur arife from it. When thefe, while the fame of heat is kept up, ceafe, increase the heat a that vapours may again exhale; and proce this manner, until the powder, raifed at lea a red heat, exhales no vapours. This powd ing put into a crucible, is to be melted ftrong fire, until it assume the appearance of glass; then pour it upon a heated brass plat

383. "In the first stage of this process greater part of the sulphur of the sulphures timony is distincted, and the antimony is feetly oxydated. This oxyd is then wish the more intense heat applied. According to nard, it contains 16 of oxygen in the 100; is farther combined, according to Proust, portion of sulphuret of antimony; and, in experiments of Vauquelin, it appears also tain from 9 to 10 parts in the 100 of searth, derived probably from the crucibles it is prepared. It is violent and at the funcertain in its operation, and is not used preparing some of the other antimonials.

389. "Oxidum Antimonii Vitrificatum costolim, Vitrum Antimonii Ceratum. Vitrificatum of antimony with wax.—" Take of yellor one part; vitrified fulphurated oxyd of anticipation of antimony and rubbed to powder, and rush with a gentle fire, for a quarter of an houring constantly with a spatula; then pour of matter, which, when it is cold, rub to powder, and rush once highly recommended in dyst this may be regarded as an obtolete remedy.

dofe was from 5 to 15 grains.

390. "Oxidum Antimonii cum Phoiphate olim, Pulvis Antimonialis. Oxyd of an with phosphat of lime.—" Take of sulpha antimony, rubbed to a coarfe powder, has shavings, of each equal parts. Mix and them into a wide iron pot, red hot, and strongtantly until they are burnt into a matter ash colour, which remove from the first powder, and put into a coated crucible. It this crucible another inverted, in the bott which a small hole is drilled; apply the which is to be gradually raised to a white

and kept at this increased heat for two hours. Laftly, rub the matter, when cold, into a very fice powder."

361. " This has been introduced into the Pharnewpeils, as affording a preparation fimilar to a clebrated empirical remedy, James's Pocuder." James's Powder.

192. "Mr Chenevix has proposed another meof obtaining this preparation. It confifts in folying equal weights of the white powder, prestated by water, from muriat of antimony, and pue phosphat of lime, in as much muriatic aa may be necessary, with the assistance of a kerate heat, and pouring this folution into amaddited with diffilled water. The ammonia the with the muriatic acid, and the oxyd of many and phosphat of lime are thrown down

ately mixed.

"James's powder has been long celebrated remedy in febrile affections. It acts as a very prial evacuant, by fweating, purging, and vo-Its dole is 5 or 6 grains, repeated every 6 k is better adapted to fevers of an inflamwature than to those of the typhoid kind.

"Sulphuretum antimoni praecipitatum Predulphuret of antimony.—" Take of water 1, 4 lb.; water, 3 lb.; prepared sulphuret of 1, a lb. Boil them in a covered iron pot, patie fire, for 3 hours, stirring frequently iron spatula, and adding water as it may Strain the hot liquor through a linen cloth, and to this strained liquor add diluted fulphuric acid as may be necessaprecipitate the fulphuret, which is to be washed with warm water."

From the analytis of this compound by it appears to be composed of 68:3 of the coloured oxyd of antiinony, (which con-18 of oxygen, and 82 of antimony), 17'8 burated hydrogen, and 11 or 12 of fulphur. the fulphuret of antimony with the potphuret of potasis is formed, which, deing part of the water, hydro-fulphuret is pluced, the antimony being oxydated.

"When the liquor obtained by boiling the of potath on the fulphuret of antimony is and allowed to cool, it deposites a redpowder, which has been known by the KERMES MINERAL, and has been much the continent. From Thenard's analysis to be a compound of brown oxyd of anand fulphurated hydrogen, with a fmall of fulphur. The dose of the precipitated ed of antimony, or, as it should rather be the Hydro-fulphurated Oxyd of Antimony, is

Oxidum antimonii cum fulphure, per nitrawith fulphur, by nitrat of potash.—" Take buret of antimony, nitrat of potash, of qual weights. Triturate them separately, having mixed them well together, throw into a crucible red hot. The deflagration over, separate the reddish matter from the crust, and rub it to a powder, which is to quently washed with war n water, until it n infipid."

308. " During deflagration the nitrie-acid of the nitrat of potash is decomposed; its oxygen is attracted by the fulphur and the antimony. fulphurous acid is diffipated: part of the fulphuret of antimony escapes and unites with the oxyd, The preparation is therefore an imperfect oxyd of antimony. As an antimonial, this preparation is fo uncertain in its operation, that it is never preferibed; it is used in making some of the other preparations of this metal.

Y.

399. " Murias antimonii. Muriat of antimony. -" Take of oxyd of antimony with Sulphur by nitrat of potash, sulphuric acid, of each 1 lb.; dried muriat of Soda, 2 lb. Pour the sulphuric acid into a retort, adding gradually the muriat of foda and the oxyd of antimony, previously mixed, Then distil from warm sand. Expose the distilled ma ter for fome days to the air, that it may deliquefce; then pour the liquid part from the impurities."

400. "In this operation the muriat of foda is decomposed by the fulphuric acid combining with the foda; the muriatic acid difengaged, unites with the oxyd of antimony and the compound is volatilized. This preparation is unfit for internal use; externally it has sometimes been used as a caustic. Decomposed by potash, it affords an oxyd which has been used in preparing the tartrite of antimony.

401. " Tartris antimonii: olim, Tartarus Emeticus. Tartrite of antimony .- " Take of oxyd of antimony with fulphur by nitrat of potasi, three parts; fuper-tartrite of potato, four parts; diftilled water, 32 parts. Boil them in a glass vessel for a quarter of an hour. Strain through paper, and put afide the strained liquor, that crystals may

402. " As this is the most important of the antimonial preparations, the proceders for obtaining it have been often varied, principally in the felection of the oxyd of antimony employed. The object is to obtain an oxyd, not too expensive in its preparation, and which shall combine with facili-ty with the tartarous acid. The vitrified oxyd is

the most unexceptionable.

403. " Tartrite of antimony and potash crystallizes in fmall triedral pyramids, which are efflorescent. It is very susceptible of decomposition, from acids, alkalies, earths, neutral falts, vegetable infusions and decoctions, &c. This preparation, however, is undoubtedly superior to the other antimonials, in the certainty of its operation; and, from its folubility, is more manageable with regard to dofe. It is given as an emetic in a dofe of from 1 to 3 gr. dissolved in water; and, in smaller doles, as an expectorant and diaphoretic.

404. Vinum tartritis antimonii: olim, vinum antimoniale. Wine of tartrite of antimony. - " Take of tartrite of antimony, 24 grains; white wine, r lb. Mix, fo that the tartrite of antimony may be diffolved." This fait is best preserved in wine. It is given as an emetic in the dofe of one ounce a as a diaphoretic, in a much smaller dose.

405. "Vinum antimonii tartarifidi. Pharm. Lond. Wine of tartarifed antimony.-" Take of " Vinum antimonii tartarifuti. tartarifed antimony, a feruples; boiling diffilled water by measure, a oz. Spanish white wine by meafure, \$ 02. Dissolve the tartarised antimony in the boiling distilled water, and add the wine." It is to he regretted, that preparations to fimilar in name as these two wines, should differ materially in strength; this containing 4 grains of tartrite of antimony in the ounce, the other only two grains. The dose of this wine as an emetic, is half an ounce.

406. " Vinum antimonii. Antimonial wine. Pharm. Land .- " Take of vitrified antimony, in powder, one ounce; Spanish white wine, pound and a half. Digest for 12 days with frequent agitation, and strain through paper."

407. " Antimpnium calcinatum. Calcined anti-White oxyd of antimomony. Pharm. Lond. hy.-" Take of antimony (sulphuret of antimony) in powder, 8 oz. Nitre in powder, 2 lb. Mix them, and throw the mixture gradually into à red hot crucible. Burn the matter remaining after the deflagration, for half an hour, and, when cold rub it to powder; then wash it with distilled water."

408. "This preparation is of little activity; it was supposed to be diaphoretic, and was given in a dose from 5 to 10 grains, as a substitute for James's powder; but it is now seldom employed."

## CUPRUM .- COPPER.

409. " Ammoniaretum cupri; olim, cuprum ammoniacum. Ammoniuret of copper.-" Take of pure fulphat of copper, two parts; carbonat of ammonia, three parts. Rub them thoroughly in a glass motar, until all effervescence is finished, and they unite uniformly into a violet-coloured mass, which being wrapt in bibulous paper, is to be dried, first on a chalk stone, and afterwards with a gentle heat. It is to be kept in a glass phial well ftopt.! The sulphat of copper is decompoie by the carbonat of ammonia; one part of ammonia combines with the fulphuric acid; another with the oxyd of copper; and the violet-coloured mais, which is formed, is a mixture of the two refulting compounds.

410. A compound fomewhat fimilar is obtained, according to a formula inferted in feveral of the foreign pharmacopæias, in which a furated folution of fulphat of copper is decomposed by ammonia, the ammonia being added in excess, so as to re-diffoly; the oxyd of copper; to this folution alkahol is added, by which the ammoniuret of copper is precipitated in small crystals. The p elent preparation has been chiefly employed as a remedy in epilepfy. It is given in a dole of at arrit half a grain twice 4-day, which is gradually and slowly increased to two or three grains, and continued for fome time.

411. " Solutio fulphatis cupri composita: olim, iqua strptica. Compound solution of sulphat of copper.—" Take of sulphat of copper, sulphat of slum, of each 3 oz.; water 2 ib.; sulphuric acid one ounce and a half. Boil the sulphats in water, that they may be distolved; then to the liquor trained through paper add the acid." This has been applied topically to check hamorrhage, and largely diluted with water, as a wash in purulent ophthalmia.

415. Aqua cupri ammoniasi. Water of ammoni-

ated copper. Pharm. Lond .- " Take of fal am moniac (muriat of ammonia), one drachm; lim water, 1 lb. Allow them to remain in a copp. veffel until the ammonia is faturated with copper. This has been applied, diluted with an equal pa of water, as a gentle escharotic, to remove spec from the cornea. A fimilar preparation had fo merly a place in the Edinburgh Pharmacopa under the name of Aqua aeruginis ammoniata.

#### FERRUM .- IRON.

413. " Perri limatura purificata. Purified filis of iron.-" Having placed a fieve over the flin apply a magnet, that they may be drawn three the fieve upwards."

414. " Carbonas ferri; olim, ferri rubigo. bonat of iron -" Let purified filings of in frequently moistened with water, that there fall into a rust, which is to be rubbed to a powder." See § 23,

415. " Carbonus ferri praecipitatus. Puo ted carbonat of iron.-" Take of sulphat of 4 oz.; carbonat of Soda, 5 oz.; water, 1 Diffolve the fulphat of iron in the water; then the carbonat of foda, previously dissolved much water as may be necessary, and mix s well. Let the carbonat of iron, which is pre tated, be washed with warm water, and wards dried." Carbonat of iron is a mild not inactive preparation. It is given as a to a dose of 5 or 10 grains. The formula Griffiths, which has been highly celebrated chalybeate, is an extemporaneous preparati this kind.

416. " Ferri oxidum nigrum purificatum? ferri squamae purificatae. Purified black of -" Let the scales of iron, gathered at t vils of the workman, be purified, by apply magnet. The magnet attracts only the and purer scales, leaving the larger and less

417. " Sulphas ferri. Sulphat of iron.of purified filings of iron 6 oz.; sulphure 8 oz.; water, two pounds and a half. Mix and the effervescence being over, digest for time in a fand-bath; then strain the liquorth paper, and, after due evaporation, put it that crystale may form." Sulphat of iron of the mest active preparations of the metal medium dose is from 3 to 5 grains.

418. " Sulphas ferri exficeatus. Dried fol of iron.-" Take of fulphat of iron, any qua Heat it in an unglazed earthen veilel, on a g fire, until it become white and perfectly

419. " Oxidum ferri rubrum. Red oxyd of " Let dried fulphat of iron exposed to a " heat, until it is converted into a red-coloured ter."

420. "Tindura muriatis ferri. Tincture of riat of iron.—" Take of the purified black of iron, in powder, 3 oz.; muriatic acid, 1 10 oz.; Digest with a gentle heat, and, who powder is diffolved, add as much alkohol 20 there shall be of the whole liquor two pounds a half." This is a very active preparation, a given in the diseases in which iron is employed a dose of 10 or 15 drops.

421. " Murias ammenie et ferri: elim

nartisks. Muriat of ammonia and iron.—" Take of red oxyd of iron, washed and again dried, munic of ammonia, of each equal weights. Mix then well together, and sublime." It is not used.

412. "Tindura ferri ammoniacalis. Pharm. Ind.—"Take of ammonical iron, four ounces; poof spirit, by measure, one pound. Digest and am."

13. "Ferrum tartorifatum. Tartarifed iron. tarm. Lond.—" Take of filings of iron, 1 lb.; ytals of tartar (super-tartrite of pot-ash), powered, 2 lb.; distilled water, 1 lb. Mix them, despose the mixture to the air in an open glass seltors 8 days; then rub the matter, dried by a cloth, into a very fine powder." This medicals is mider in its operation than some of the ortaine preparations of the metal. Its dose is a 5 to 15 grains. It is very soluble in water.

144. "Finum ferri. Wine of iron. Pharm.—" Take of filings of iron, 4 oz.; Spanish wine, 4 lb. Digest with frequent agitation amonth, and strain." Dose 1 or 2 dr.

# HYDRARGYRUS-QUICKSILVER.

". "Hydrargerus purificatus. Purified quickfil-Take of quickfilver, four parts; iron fione part. Rub them together and distil an iron vessel."

at. "Acetis bydrargyri. Acetite of quickfil"Take of purified quickfilver, 3 oz.; diluitious acid, 4½ oz. or a little more than may
quibte to diffolve the quickfilver; acetite of
3 oz.; boiling water, 8 ib. Mix the
affiver with the diluted nitrous acid; and tothe end of the effervescence, digest with a
theat, until the quickfilver be entirely disal. Then diffolve the acetite of potash in
water, and immediately on this solution,
hot, pour the other, and mix them both by
thom. Then put aside, that crystals may be
ad. These being placed in a sunnel, wash
with cold distilled water; and, lastly, dry
with a very gentle heat. In preparing the
to quicklyer, it is necessary that all the vesdefine

"As an antifyphilitic remedy, acetite of my is very mild in its operation; but its efact not confidered as fufficiently permate allow of it being relied on in effecting calcure. Its dose is a grain, night and morths is foluble in hot water; not in cold.

Murias bydrargyri: olim, mercurius fibmorrefries. Muriat of mercury, or corrofive
ane.—" Take of purified quicksilver, 2 ib.;
inc acid, two lb. and a halt; muriat of soda,
4.4b. Boil the sulphuric acid with the quickin a glass vessel placed in a sand-bath, until
stater become dry. Mix the cold matter in
its vessel with the muriat of soda; then suit in a glass cucurbit with a heat gradually
id. Separate the sublimed matter from the
siz." The process, formerly used, was, to mix
mitrat of mercury, muriat of soda, and dried
at of iron, and expose the mixture to a heat
cient to sublime the muriat of mercury: And
think, notwithstanding the expense of the
size acid, that it more certainly affords the

whole mercury in the form of corrolive muriat, than the one now adopted.

429. "According to the analysis of muriat of mercury by M. Chenevix, it consists of 82 of oxyd of mercury (this oxyd being composed of 83 of mercury and 15 of oxygen), and 18 of muriatic acid; or, its ultimate constituents are, quicksilver 69.7, oxygen, 12.3, and muriatic acid, 18. By slow sublimation, it is obtained crystallized in slender prisms; by a more hasty sublimation, in a compact crystalline mass. It is easily soluble in water, requiring 20 parts at 60° for its solution, and 2 parts at 212°. It is likewise soluble in alkohoi. Its taste is acrid and metallic. It turns to a green several vegetable colours; is decomposed by the alkalies and earths, and by a number of compound salts, and likewise by vegetable insusions.

430. " It is the most powerful of the mercurial preparations. Its dofe cannot fafely exceed the 4th of a grain, nor can more than one grain be given in 24 hours. As an antisyphilitic remedy it has long been established in practice, and it posselses some advantages. It acts speedily, and its action is more general on the fystem, or less determined to particular parts; but these are more than counterbalanced by the occasional violence of its operation, and by the circumstance which feems now admitted, that it cannot be fo much relied on in establishing a permanent cure. It is given in the form of folution in water or alkohol, the dose being increased from the 6th to the 4th of a grain, night and morning, and mucilaginous diluents being freely taken, with the occasional use of opium. As the solution has a very disagreeable tafte, it is fometimes made into pills with crumb of bread. In other diseases besides lues venerea, it is occasionally exhibited, particularly in cutaneous affections. Externally, its solution is employed as an efcharotic in chancre and venereal ulcers of the mouth; and a very dilute folution of it has been used as an injection, to excite inflammation in obstinate gleet.

431. "Sub-murias hydrargyri: olim, Calomelas. Sub-muriat of quickfilver.—" Take of muriat of quickfilver, rubbed to powder in a glass mortar, 4 oz.; purified quickfilver, 3 oz. Rub them together in a glass mortar, with a little water, that the operator may be guarded against the acrid powder which would otherwise arise, until the quickfilver is extinguished. Put the dried powder into an oblong phial, of which it shall fill only one 3d, and let it be sublimed in a sand-bath. The sublimation being sinished, and the phial broken, the red powder at the bottom and the white one about the neck of it are equally to be rejected; the remaining mass is to be again sublimed, and rubbed into a fine powder, which is lastly to be washed with boiling distilled water."

432. "In this process an additional quantity of quickfilver is brought into chemical union with the conftituent principles of muriat of mercury. The proportions of the ingredients in the sub-muriat are, muriatic acid, 11'5, oxyd of mercury, 88'5, (this oxyd being composed of quickfilver, 89'3, and oxygen 16'7.) So that the ultimate constituent part of sub-muriat of mercury, are, quickfilver, 79, oxygen, 9'5, muriatic acid, 11'5.

433. The names which have been chosen to distin-

distinguish these two muriats of mercury, Mr Murray thinks, are not the best that might have been selected. The epithets correspond and mild discriminate them more clearly, and, as systematic names, are preserable.

434. "This preparation of mercury differs from the former, in being perfectly infipid, and infoluble in water or alkohol. By submation it may be obtained in small short prisms, but it is usually in the form of a mass somewhat ductile, semitransparent and very heavy. It is decomposed by the alkalies, earths, and various compound salts.

435. " Sub-muriat, or mild muriat of mercury, is one of the most useful preparations of the metal. As an anti-venereal, it is given in the dose of a grain night and morning, its usual determination to the intestines being prevented, if necessary, by opium. It is the preparation which is, perhaps, most nsually given in the other diseases in which mercury is employed, as in affections of the liver or neighbouring organs, in cutaneous diseases, chronic rheumatisin, tetanus, hydrophobia, hydrocephalus, and febrile affections, especially those of warm climates. It is employed as a cathartic alone, or to promote the operation of other purgatives. Its anthelmintic power is justly celebrated; and it is perhaps superior to the other mercurials, in affifting the operation of diuretics in dropfy. From its great specific gravity, it ought always to be given in the form of holus or pill.

436. " Sub-murias bydrargy i praecipitatus. Precipitated sub-muriat of mercury .- " Take of diluted nitrous acid, purified quickfilver, of each 8 oz.; muriat of foda, 4½ oz.; Boiling water, 8 lb. Mix the quickfilver with the diluted nitrous acid; and, towards the end of the effervescence, digest with a gentle heat, shaking the vessel frequently. It is necessary, however, that more quicksilver should be mixed with the acid than this can diffolve, that the folution may be obtained fully faturated. Diffolve at the same time the muriat of foda in the boiling water: pour the other folution on this while warm, and mix them quickly together. After the precipitate subsides, pour off the faline liquor, and wash the sub-muriat of mercury, by frequently adding warm water, pouring it off after each time the precipitate subsides, until it come off tasteless."

437. "In the original process of Scheele, the nitrous acid was directed to be boiled on the mercury, to saturate it more fully with the metal, that, by adding a large proportion of mercury to nitrous acid, and promoting the solution by heat, the combination might be obtained in which the metal is imperfectly oxydated. It is found, however, that this is not the case.

438. Mild muriat of mercury, prepared in this mode, is precifely the fame in its chemical composition as when formed by the former process of sublimation. It has been supposed, however, that it differs somewhat in its operation, and is more liable to produce purging. If such a difference exist, it is owing to the presence of the sub-nitrat, mixed with the mild assurat. If the latter is pure, its operation must be the same as that of the muriat prepared by sublimation, as it differs from it only in being in a much siner powder, and this is supposed to give it some superiority.

439. "Oxidum bydrargyri cinercum. Atheoloured oxyd of quickfilver.—" Take of purified quickfilver, 4 parts; diffuled nitrous acid, 5 parts; diffulled water, 15 parts; water of carbouat of ammonia, q. 3. Diffolve the quickfilver in the acid. Add gradually the diffilled water. The pour on as much of the water of carbonat of ammonia as may be fufficient to precipitate the oxyd of quickfilver, which is to be afterward washed with pure water and dried."

440. "Ash-coloured oxyd of mercury is refimilar in its operation to the preparations which quickfilver is oxydated by trituration, is given as an anti-venereal in the dose of or grain night and morning, generally in the for

of pill:

441. "Oxidum hydrargyri rubrum per acimit icum: olim, mercurius praecipitatus ruber. I oxyd of quickliver by nitric acid.—"Take purified quickliver, 1 lb.; diluted nitrous at 16 oz. Let the quicklilver be diffolved. Eurate the folution with a gentle fire to a white mass, which, being reduced to powder, is to put into a glass cucurbit, a thick glass pate by put over its surface. Then a capital being at ted, and the vessel placed in sand, apply to sire gradually raised, until it pass into very small scales." This is too acrid for intendant is principally used externally as an electic.

442. "Sub-fulphas bydrargyri flavus: olim, petbum minerale. Yellow fub-fulphat of quilver.—"Take of purified quickfiver, 4 fulphuric acid, 6 oz. Put them into a cucurbit, and boil in a fand-bath to dry. The white matter remaining at the bottom of welfel being powdered, is to be thrown into ing water. It will thus be converted into a low powder, which must be frequently wa with warm water."

administered internally. Sometimes it has given as a powerful emetic, in a dose of sprin cases of swelled testicle. It is a violent end and has been employed as such mixed with

mild vegetable powder.

444. "Sulphuretum bydrarg yri nigrum:
Ætbiops Mineralis. Black fuiphuret of quiever.—"Take of purified quickfilver, fublifulphur, of each equal weights. Rub them gether in a glass mortar with a glass pettle, in the globules of quickfilver entirely disappear. this trituration a chemical combination appear be efficied between the quickfilver and sulph It is in the form of a very black powder. It is most inactive, perhaps, of the mercurial pupitions. As an anthelmintic it is sometimes in a dose of 5 or 10 gr. according to the age.

445. "Some additional preparations of met ry have a place in the London Pharmacopoia;

are used in practice.

446. "Hydrargyrus fulphuratus ruber. Red phurated quickfilver. Cinnabar.—" Take of rified quickfilver, 40 oz.; fulphur, 8 oz. Mixt quickfilver with the melted fulphur. If the uture inflame, extinguish it by covering the venture inflame, principally under the form

funigation, to check the progress of venereal ul-

417. "Hydrargyrus cum ereta. Quickfilver with chalk.—" Take of purnied quickfilver, 3 oz.; prepared chalk, 5 oz. Rub them together until the globules difappear." This is very little used.

413. "Hydrargyrus calcinatus. Calcined quick-lee: Red oxyd of quickfilver.—" Take of puried nickfilver, 1 lb. Expose the quickfilver in teal cucurbit, having a flat bottom, in a sand-lee a heat of 600°, until it concretes into a lee weer." The high price of this preparation the ents it from being employed in common practa. It has been regarded as one of the most actof the mercurials, and, at the same time, one the most permanent in its effects, and has been commended in confirmed lues, where other prezions have failed. Its dose is half a grain or rise.

m. "Calx bidrargeri alba. White calx of fuller.—" Take of muriated quickfilver, falmiac (Muriat of ammonia), water of preparation, of each half a pound. Diffolve first the moniac, and then the muriated quickfilver, lied water, to which add the water of pretail. Wash the powder until it is taster. This preparation, formerly known by the of white precipitate of mercury, is used only maily in the form of ointment, as an application for cutaneous affections.

#### PLUMBUM .- LEAD.

a "Acetis plumbi: olim, faccharum faturni, rufa acetata. Acetite of lead.—" Take of oxyd of lead, any quantity. Put it into a bit, and pour upon it twice its weight of ed acetous acid. Let the mixture stand on and until the acid become sweet; then at off, and add a fresh quantity as often as say, until it cease to acquire sweetness, craporate the whole liquor, freed from imper, in a glass vessel, to the consistence of boney, and put it aside in a cool place, that is may concrete, which are to be dried in adc. Evaporate the remaining liquor, that may be a new formation of crystals, and relie evaporation until no more are formed." Incipally employed externally as an assimption are collyrium in ophthalmia; an injection corrhoz; and a wash in superficial instam-

itharge. Pharm. Lond.—" Take of litharge, 40z.; distilled vinegar, one gallon. Mix and boil to 6 lb. stirring constantly; then the liquor. After the impurities have the square the name of Goulard's extract of h is merely a solution of acetite of lead in with an excess of acid, and must be always the m strength. It is applied to the same of sa the acetite of lead.

# ZINCUM.-ZINC.

32. "Oxidum zinci. Oxyd of zinc.—" Let a crucible be placed in a furnace filled with mog fuel, so that it shall be somewhat inclined is mouth; and, when the bottom of the cru-

cible is at a moderate red heat, throw in pieces of zine, about the weight, each of them, of one drachm. The zine foon inflames, and is converted into white flocculi, which are to be removed, from time to time, from the furface of the metal, with an iron fpatula, that the combustion may proceed more perfectly; and, when the inflammation ceales, remove the oxyd of zine from the crucible. Another piece of zine being thrown in, the operation is to be renewed and repeated as often as may be necessary. Lastly, let the oxyd of zine be prepared in the same manner as carbonat of lime." This is employed principally as an antifpasmodic in epilepsy and chorea. Its dose is from 2 to 5 gr. twice a-day, gradually increased.

from 2 to 5 gr. twice 2-day, gradually increased.
453. "Sulphas zinci: olim, vitriolum album.
Sulphat of zinc, or white vitriol.—"Take of zinc, cut into small pieces, 3 oz.; sulphuric acid. 5 oz.;
Water, 20 oz. Mix them, and the effervescence being finished, digest for some time on warm sand. Then strain the liquor through paper; and, after due exhalation, put it aside that crystals may be formed." Sulphat of zinc is used principally as an astringent, in the form of solution,—as an injection in gonorrhœa, and a collyrium in ophthalmia.

454. "Solutio sulphatus zinci. Solution of fulphat of zinc.—" Take of sulphat of zinc, 16 gr.; water, 8 oz.; diluted sulphuric acid, 16 drops. dissolve the sulphat of zinc in water; then the acid being added, strain through paper." It is chiefly used as a collyrium in ophthalmia.

455. "Aqua zinci vitriolati cum campbora. Water of vitriolated zinc with camphor. Pharm. Lond.— 'Take of vitriolated zinc, half an ounce; camphorated spirit, half an ounce by measure; boiling water, by measure, 2 lb. Mix them, and strain through paper." This also is used as a local application in ophthalmia, diluted with water.

456. "Solutio acetitis zinci. Solution of acetite of zinc.—" Take of fulphat of zinc, one drachm; diftilled water, 10 oz. Diffolve it. Take also of acetite of lead, four scruples; diftilled water, 10 oz. Diffolve it. Mix the solutions. Let the liquor remain at rest a little; then strain it." This solution is used as an injection in gonorshea; it is more aftringent than the acetite of lead, and less irritating than the sulphat of zinc.

#### SECT. XXI. PULVERES .- POWDERS.

457. "This is the fimplest form of composition of medicines, the different articles being merely reduced to powder, and mixed together. It is adapted to the exhibition of such remedies as are not ungrateful, and such as are not liable to lose their virtues by keeping. The powder, when it is to be taken, is mixed with any convenient vehicle.

458. "Pulvis aromaticus. Aromatic powder.—" Take of bark of cinnamon, smaller cardamom seeds, ginger root, of each equal parts. Rub them into a very fine powder, which is to be kept in a glass phial well stopt." In the London Pharmacopæia the proportion of cinnamon is larger, and I part of long pepper is likewise added. It is usefed merely to give fragrance to other compositions.

459. " Pulvis afari Europaei compositus. Com-

panad

bound powder of asarabacca.-" Take of the leaves of asarabacca, three parts; the leaves of marjoram, flowers of lavender, of each one part. Rub them together to a powder." This is used as a mild errhine, and, when a few grains are inuffed, occasions sneezing.

460. " Pulvis carbonatis calcis compositus: olim, pulvis cretaceus.—" Take of prepared carbonat of lime, 4 oz.; bark of cinnamon, one drachm and a half; nutmeg, half a drachm. Rub them to-

gether to powder.

461. "Pulvis cretae compositus. Compound powder of chaik. Pharm. Lond .- " Take of prepared chalk, half a pound; bark of cinnamon, 4 oz.; tormentil, gum arabic, of each 3 oz.; long pepper, half an ounce. Reduce them separately to powder, and mix them." These powders are defigned as antacids, and are used principally in diarrhoea. The tormentil of the London Pharmacopæia must render it more astringent. dose of either is from a scruple to a drachm.

462. " Pulvis cretae compositus cum opio. Compound powder of chalk with opium. Pharm. Lond.—" Take of compound powder of chalk, 8 oz.; hard purified opium, rubbed to powder, one drachm and a half. Mix them." The addition of opium to aftringents and antacids in diarrhoea, is a common practice, and this formula affords a convenient composition of this kind. Its dose is one scruple or half a drachm. Two scruples contain very nearly one grain of opium.

463. " Pulvis chelurum cancri compositus. Compound powder of crabs claws. Pharm. Lond.— Take of prepared crabs claws, 1 lb.; prepared chalk, prepared red coral, of each 3 oz. Mix them." These different articles being merely car-

bonats of lime, more or less pure, the mixing of them together must be entirely superfluous.

404. "Pulvis jalapae compositus. Compound powder of jalap.—" Take of the powder of the root of jalap, one part; super-tartrite of potash, two parts. Rub them together into a very fine powder." By this addition of the acidulous tartrite of potash to jalap, the operation of the latter is supposed to be rendered less irritating and more refrigerant. It is an excellent cathartic, operating freely, in a dose of a drachm and a half.

465. " Pulvis ipecacuanhae et opii: olim, pulvis Doveri. Powder of ipecacuanha and opium.-"Take of the powder of the root of ipecacuanha, opium, of each one part; suiphat of potash, 8 parts. Rub them together into a fine powder." In this composition we have an example of the power which one medicine has of modifying the action of another, the ipecacuan rendering the operation of the opium, as a fudorific, much more certain than it otherwise would be, and appearing aifo to diminish its narcotic effect. This powder is the most certain sudorific we possess, and as such is established in practice. The medium dose is 15 grains; the operation of which is to be affifted by the fweating regimen; and frequently it is necessary to give additional smaller doles at intervals, to produce sweat. Its principal use is in rheumatism.

466. " Pulvis opiatus. Opiate powder.-" Take of opium, one part; prepared carbonat of lime, M A C Y. nine parts. Rub them together to a fine pow

467. " Pulvis opiatus. Opiate powder. Pharm Lond.—" Take of hard purified opium, rubber to powder, one drachm; prepared burnt hand horn, 9 drachms. Mix them." In these powder the opium is merely divided by the substance mis ed with it. Ten grains contain one grain of pium.

468. " Pulvis scammonii compositus. Compoun powder of scammony,-" Take of scammony, s per-tartrite of potash, of each equal parts. Re them together into a very fine powder." The purgative operation of the scammony is suppose to be rendered milder by the super-tartrite of ash. Its dose is from 10 to 20 grains.

469. " Pulvis scammonii compositus. Compa powder of feammony. Pharm. Lond.-" Take scammony, extract of jalap, of each 2 oz.; git half an ounce. Rub them separately to port and mix them." This composition is of a state of the second seco different nature from the preceding; the flim ting operation of the scammony not being con ed, but rather increased by the extract of ja and the ginger. It is a strong cathartic. ltd. is ten grains.

470. "Pulvis scammonii compositus cum Compound powder of fearmony with Pharm. Lond .- " Take of fcammony, fix drad extract of jalap, focotorine aloes, of each on and a half; ginger, half an ounce. Rub the parately to powder, and mix them." The tion of the aloes cannot alter very materially operation of the other ingredients. As a find ting cathartic it may be given in a dose from to 15 grains.

471. " Pulvis scammonii cum calomelane. der of feammony with calomel. Pharm. La "Take of scammony, half an ounce; cale refined fugar, of each two drachms. Rub separately to powder, and mix them." It fed both as a cathartic and anthelmintic. It is from ten grains to one scruple.

472. " Pulvis sulphatis aluminae composit lim, Pulvis stypticus. Styptic powder, now pound powder of fulphat of argil.-" Take phat of argil, four parts; kino, one part them into a fine powder. This has been a times used internally in menorrhagia, in repo doles of 10 or 15 grains, and externally as a tic to bleeding wounds.

473. " Pulvis aloes cum canella. Powder o loes with canella. Pharm. Lond .- " Take of & torine aloes, I lb.; white canella, 3 02them separately to powder; then mix the The canella covers the unpleafant flavour of aloes; and this combination is sometimes use a warm stimulating cathartic. It is gene made into a tincture, by infufing it in spirit.

474. " Pulvis aloes cum guaiaco. Powder loes with guaiac. Pharm. Lond .- " Take of torine aloes, one ounce and a half; guaiac resin, one ounce; aromatic powder, haif an ou Rub the aloes and guaiac feparately into pow then mix them with the aromatic powder. combination is feldom used. As a stimulating perient, it may be given in a dose of 15 or 20

475. " Pulvis aloes cum ferro. Powder of aloes with iron. Pharm. Lond .- " Take of focotorine aloes, one ounce and a half; myrrh, two ounces; dried extract of gentian, fulphat of iron, of each one ounce. Rub them separately to powder, and my them." This combination affords a remedy of confiderable power in amenorrhoea. Its dose from 10 to 14 grains at bed-time.

476. " Pulvis ceruffae compositus. Compound powder of cerute. Pharm. Lond .- " Take of cepic, five ounces; farcocolla, one ounce and a air; tragacanth, half an ounce. Rub them tothe into a powder." This is used as an exterapplication to superficial inflammation, diffudin water, and formetimes as a collyrium, or an edion in conorrhœa.

417. " Pulvis contravervae compositus. Comand powder of contrayerva. Pharm. Lond .-Take of contrayerva, rubbed to powder, five en; compound powder of crabs claws, one and and a haif." There feems little necessity combining contrayerva with carbonat of lime, dean add nothing to its virtues. The dose the half a drachm, or two feruples.

" Pulvis myrrbae com; fitus. Compound der of myrrh. Pharm. Lond .- " Take of m, dried favin, dried rue, Russian castor, of one ounce. Rub them together to a pow-This is a combination of fome of the rpowerful emmenagogues. It may be given in fortæa in the dose of one scruple, or half a Àm.

" Pulvis fennae compositus. Compound of senua. Pharm. Lond.—" Take of sen-That's of Tartar, of each two ounces; scamhalf an ounce; ginger, two drachms. Rub cammony feparately, the others together, inpowder, and mix them." It may be used as native, in a dole of from half a drachm to a

o. " Pulvis tragacanthae compositus. Compowder of tragacanth. Pharm. Lond .te of tragacanth, rubbed to powder, gum tarch, of each one ounce and a half; relogar, three ounces. Rub them together powder." This combination of mucilagi-labstances may be employed as demulcents, tdole of a drachm, or more, frequently re-

#### kt. XXII. ELECTUARIA.—ELECTUARIES.

#1. "ELECTUARIES are compositions of the acoce nearly of honey, and are generally by adding to any powder a fufficient proof fyrup or mucilage. It is a form adaptthe exhibition of fuch medicines as are not Meful in taste or slavour. The ingredients proportioned, that the dole shall not be than a tea spoonful, and not more than twice ice that quantity, at a time.

L. " Eleduarium aromaticum. Aromatic e-Take of aromatic powder, one part; well together." This is a grateful aromatic pration, frequently combined with other meires or made the balis of cordial mixtures.

43. " Bleduarium castiae sylulae. Electuaty of True cassia.—" Take of the pulp of cassia in

VOL. XVIL PART 1.

pods, four parts; pulp of tamarind, manna, of each one part; fyrup of pale role, four parts. Dissolve the manna beat in a mortar, with a gentle heat, in the fyrup; then add the pulps, and by a continued heat, reduce the mixture to a proper confistence." This is scarcely ever used. It is a mild laxative in the dole of an ounce.

484. " Electuarium cassiae sennae : olim, electuarium lenitivum. Electuary of fenna.-" Take of the leaves of fenna, eight ounces; coriander feeds, four ounces; liquorice root, three ounces # figs, one pound; pulp of tamarind, pulp of cassia, puip of prunes, of each half a pound; refined fu-gar, two pounds and a half. Ruly the fenna with the coriander feeds, and Teparate by passing thro a sieve ten ounces of the mixed powder. Boil the refiduum with the figs and the liquorice, in four pounds of water to one half; then express and strain. Reduce the strained liquor, by evaporation, to about one pound and a half. Afterwards add the fugar, fo as to make a fyrup. Add this fyrup gradually to the pulps; and, laftly, mix in the powder." This electuary is in very common use as a mild and pleafant purgative. Its dose is lix drachms, or an ounce.

485. " Electuarium catechu: olim, confectio ja-Electuary of catechu.-" Take of extract of catechu, four onnces; kino, three ounces; bark of cinnamon, nutmeg, of each one ounce; opium, diffused in a sufficient quantity of Spanish white wine, one drachm and a half; fyrup of red rofe, boiled to the confistence of honcy, two pounds and a quarter. Reduce the for lid ingredients to powder, and, mixing with them the opium and fyrup, form an electuary." This is a combination of the more powerful aftringents, rendered grateful by aromatics, and having its efficacy, as a remedy in diarrhoea, increase ed by the opium. It is the basis of the common extemporaneous aftringent mixture. One grain of opium is contained in rather more than three drachms.

486. " Elestuarium opiatum: olim, elestuarium thebaicum. Opjate electuary.-" Take of aromatic powder, fix ounces; Virginian fnake-root, rubbed to a fine powder, three ounces; opinma diffused in a sufficient quantity of Spanish white wine, half an ounce; fyrno of ginger, one pound. Mix, so as to form an electuary." This has kept its place in the Pharmacoppeias as a substitute for the inithridate and theriaca Audromachi; preparations once highly celebrated, but now discarded. Each drachm contains a grain and a half of opium; and rather more in that prepared by the prescription of the London College.

487. " Electuarium feammonii. Electuary of feammony. Pharin. Lond.—" Take of feammony, rubbed to powder, one ounce and a half a cloves, ginger, of each fix drachms; oil of caraway, half a drachm; fyrup of rofes, q. s. Mus the aromatics, rubbed together into a powder, with the fyrup; then add the feammony, and, laftly, the oil of caraway." This is a fumplating cathartic; its dose is one drachm.

## SECT. XXIII. PILULE -- PILLS.

488. "Pills are formed from a mals fufficiently fliff and adhenve to preferve the round form

form which is given to them; this due confiftence being obtained by adding to powders a fufficient quantity of fyrup, mucilage, or conferve. It is a form adapted to the exhibition of fuch medicines as are nauleous in taffe or flavour, and fuch as operate in a small-dose. A pill ought not to exceed five grains in weight, or 12 may be formed from a drachm of the mass.

489. " Pilulae alacticae. Aloctic pills.-" Take of focotorine aloes, in powder, foap, of each equal parts. Beat them with simple syrup, so as

to make a mals fit for forming pills."

490. " Pilulae albes compositae. Compound aloes pills. Pharm. Lond .- " Take of focotorine aloes, in powder, one nunce; extract of gentian, half an ounce; oil of caraway, two feruples; fyrup of ginger, q. s. Beat them together." der either of these simple forms, aloes is very commonly exhibited as a cathartic. Two pills are a medium dole.

491. " Pilulae aloes cum affa foetida. Pills cf aloes with affafoetida.-" Take of focotorine aloes, affafætida, foap, of each equal parts. Beat them into a mass with mucilage of gum arabic." These pills have been given in dyspepsia and amenorrhæa, two or three being taken at bed-time

occafionally.

492. " Pilulae aloes cum colocynthide. Pills of aloes with colocynth.-" Take of focotorine aloes, fearmony, of each eight parts; colocynth, four parts; furthat of potath with furthur, oil of cloves, of each one part. Let the aloes and feammony be reduced, with the falt, to powder: then let the colocynth, rubbed into a fine powder, and the oil, be added. Laftly, heat them with mucilage of gum arabic into a mass." This is a more powerful cathartic than the simple aloetic pill, and is used in constipation, or to obviate habitual costiveness. Two puls are a common dose.

493. " Pilulae aloes cum myrrha. Pilis of aloes with myrrh.- "Take of focotorine aloes, four parts; myrrh, two parts; faffron, one part. Beat them into a mass with simple syrup." This composition has long been in use as a stimulating aperient. Two or three pills are taken at bedtime.

494. " Pilulac assae foetidae compositae. Compound affafætida pills .- " Take of affafætida, galbanum, myrrh, of each eight parts; reclified oil of amber, one part. Beat them into a mass with simple syrup." These pills are used in hysteria and amenorrhoea, two or three of them being taken at bed-time.

495. " Pilulae galbani compositae. Compound pills of galbanum. Pharm. Lond .- " Take of galbanum, opoponax, myrrh, fagapenum, of each one ounce; affafœtida, half an ounce; fyiup of faffron, q. s. Beat them together." These piles are similar to the preceding; are used in the same

cases, and in the same dose.

496. " Pilulae ammoniareti cupri. Pills of ammoniuret of copper.-" Take of ammoniuret of copper, fixteen grains; crumb of bread, four fcrupies; water of carbonat of ammonia, as much as may be sufficient. Beat them into a mass, which divide into 32 equal pills." Under this form, ammoniuret of copper is given in epilepfy, and the other spalmodie diseases in which it has been

employed. Haif a grain of it is contained in each pill. One pill is given at first, night and morning and the dose is gradually increased.

497. " Pilulae bydrargyri. Mercurial pill-"Take of purified quickfilver, conferre of rerofes, of each one ounce; starch, two ounces Rub the quickfilver with the conferve, in a gal mortar, until the giobules entirely disappear, ad ding, as there may be occasion, a little mucing of gum arabic; then add the flarch, and ha with a little water, into a mass, which is to b immediately divided into 480 pilis." This is the preparation of mercury that is most general employed for internal ufe; and, while it is more milder in its operation than fome others, it is p haps capable of answering every purpole wh the remedy can serve. The common dole, p with the view of inducing the ufual mercurial tion, is two prils at bed-time, and one in them ing, which, in particular cases and habits, requi to be increased. Four or fix pells given at a generally excite purging.

498. " Pilulae opiatae: olim, pilulae thetal tract of liquorice, seven parts; Jamaica per two parts. Mix the opium and the extract rately, foftened with diluted aikohol, and them irto a pulp; then add the Jamaica po rubbed to powder, and, heating them well, duce them to a mass." This affords a femi der which the exhibition of opium may becealed from the patient. Two pills contain grain of opium. In the formula of the Lor Coilege, the aromatic is omitted, and the pro tion of opium increased; so that each pill cost

one grain.

499. " Pilulae rhei compositae. Compound of rhubarb.-" Take of the root of rhubard ource; focotorine aloes, fix drachms; half an ounce; oil of peppermint, half a dra Beat them into a mass with syrup of peel." This is a moderate laxative mud ployed, especially in dyspeptic affections to viate costiveness, and simulate gently the Two pilis are take mach and intestines. bed-time.

500. " Pilulae scilliticae. Squill pills .- " of the dried root of iquill, rubbed to a fine! der, one scrupie; gum ammoniae, smalleres mom feeds, in powder, extract of liquorical each one drachm. Beat them with fimple in into a mass." Under this form squill is often ven as an expectorant in althma and chronic tarrh. Two pilis are taken twice a-day.

# SECT. XXIV. TROCHISCI.-TROCHES.

501. "TROCHES, or lozenges, confift of p ders brought to a folid form by the addition muciliage. When moift, they form a foft patt which state they are cut into small square or ro pieces, and these are hardened by drying. It form adapted principally to fuch medicines as defigned to diffoive flowly in the mouth; hence they are always rendered pleasant by addition of a large proportion of fugar. They feldom active remedics.

502. "Trochisci carbonatis calcis. Troches carbonat of lime.-" Take of prepared carbon of lime, four ounces; gum arabic, one ounce; nutmeg, one drachm; refined fugar, 6 ounces. Rib thefe to powder, and make it into a mafs with water, fit for forming troches." This is a persuat form under which carbonat of lime may be given as an antacid. The London College, their formula, order cinnamon inflead of nut-

Teke or extract or riquorice, gum arabic, of arb one part; refined dugar, two parts. Let them be differed in warm water, and firained. Then evaporate the folution, with a gentle heat, to a mais, which form into troches." Thefe, to make the demucent quality, may be used to always outhing, in catarrh; but the simple extract them is equally effectual, and they are usely ever used.

sta. "Trochifei glycyrrhizae cum opio. Liquotuoches with opium.—" Take of opium, two achm; tincture of tolu ballam, haif an ounce; perfyruo, eight ounces; extract of liquotice, med with warm water, gum arabic, in powof each five ounces. First, rub the opium the tincture; then add gradually the fyrup the extract; afterwards sprinkle in the powofgum arabic; and, lastly, dry the mass, that the formed into troches, each weighing ten see the tickling cough frequently attending and. The opium is the active ingredient; others cover its taste and slavour, and render composition pleasant, adding at the same time mulcent quality. One drachm, or fix troches, the one grain of opium; and from 6 to 12 be taken in 24 hours.

to "Trochifei gummofi. Gum troches. ke of gum arabic, four parts; flarch, one prefined fugar, twelve parts. These being deed, are to be formed into a mass, with water, fit for forming troches." This comtion is designed as a demulcent, but is not in gum arabic, when pure, answering the same the comally well.

of equally well.

"Trochici nitratis potassae. "Troches of of potash.—" Take of nitrat of potash, one refined sugar, three parts. Beat them to m, and, with mucilage of gum tragacanth, them into a mass proper for forning ka." Under this form, nitrat of potash is times used as a refrigerant in angina tontillated to allay the sense of heat attending sali-

Trochifei amyli. Starch troches. Pharm.

"Take of ftarch, one onnce and a half;
ac, fix drachms; florentine orris, half an
; refined fugar, one pound and a half. Rub
to powder, and, with mucilage of tragaform troches. They may be made withthe orris." These troches may exert some
likent power in catarrh; but they are little

"Trochisei magnessae. Magnessa troches. m. Lond.—" Take of burnt magnessa, four et; refined sugar, two ounces; ginger, in der, one scruple. Rub them together, and, mg muchage of guin arabic, form them into

troches." This is a pleafant form for giving maguelia as an antacid.

sog. "Trochifci sulphuris. Sulphur troches.—Pharm. Lond.—"Take of washed flowers of sulphur, two ounces; refined sugar, four ounces; mucilage of quince seeds, q. s. Rub them togéther, and form troches." This is an agreeable form for the exhibition of sulphur.

SECT. XXV. LINIMENTA, UNGUENTA, et Cr-RATA.—LINIMENTS, OINTMENTS, and CE-RATES.

510. "THESE are fimilar forms, confifting of unctious matters, and differing merely in the degree of confiftence. A liniment is of the confiftence of thin honey; an ointment is tirmer; and a cerate ftill harder. Oil or lard is their common basis; the due confistence is given by wax or spermaceti, and to the composition may be added any substance which is to be used under this form. The following general directions are given in the Edinburgh Pharmacopæia for their preparation: "In making these compositions, fat and refinous substances are to be melted with a gentle heat, stirring them constantly, sprinkling in, at the same time, dry ingredients, if there are any, in fine powder, until the mixture, by cooling, become stiff."

511. "Linimentum fimplex. Simple liniment.
—"Take of olive oil, four parts; white wax, one part."

512. "Unguentum simplex. Simple ointment.—" Take of olive oil, five parts; white wax, two parts."

513. "Ceratum fimplex. Simple cerate.—
"Take of olive oil, fix parts; white wax, three parts; fpermaceti, one part." These compositions differ merely in confinence. They are applied fpread on linen, as usual dressings to slight wounds and exceptations.

514. "Ungueptum adipis suillae. Ointment of hog's lard. Pharm. Lond.—"Take of prepared hogs lard, two pounds; rose water, three ounces. Beat the lard with the rose water until they are mixed; then liquefy with a gentle heat, and put it aside, that the water may subside. Asterwards pour off the ointment, stirring it constantly until it has cooled." This is similar to the preceding, and is used for the same purposes. It is perhaps more liable to become rancid.

515. "Unguentum refundum. Refinous ointment.—"Take of hogs lard, eight parts; white refin, five parts; yeilow wax, two parts." This is more frimulating than the preceding, and is ufed as a dreffing where the object is to promote suppuration.

516. "Unguentum pulveris meloes veficatorii; olim, unguentum epifpaficum fortius. Ontment of the powder of cantharides.—" Take of refinous ointment, 7 parts; powder of cantharides, one part." This is the ointment commonly employed to establish a purulent discharge, or form an issue in the part to which a blister has been applied; which it does from the aerid and stimulating quality of the cantharides.

517. "Unguentum infusi meloes resicatorii: olim, unguentum epis assicum mitius. Outtment of infu-T t 2

son of cantharides .- "Take of cantharides, white refin, yellow wax, of each one part; Venice turpentine, hog- lard, of each two parts; boiling water, four parts. Macerate the cantharides in the water for a night, and strain the liquor, preffing it frongly; having added the lard, boil the liquor till the water is evaporated; then add the wax and refin. These being melted and removed from the fire, add the turpentine." The ointment with the powder of cantharides sometimes occasions too much pain and irritation. In such cases, the ointment from the infusion of cantharides being milder, is employed, and is still sufficiently stimulating to keep up the purulent dif-

518. "Unguentum sub-acetitis eupri; olim, unquentum aeruginis. Ointment of sub-acetite of copper, or verdigris,-" Take of refinous ointment, fifteen parts; sub acetite of copper, one part." This ointment is used as an escharotic, pplied to foul ulcers. It in general requires to be mixed with an additional proportion of refin-

ous or simple cintment.

519. "Unguentum bydrargyri: vulgo, unguentum caruleum. Ointment of quickfilver .- " Take of quickfilver, mutton fuet, of each one part; hogs lard, three parts. Rub them carefully in a mortar, until the giobules of quickfilver difappear. It may be made also with a double or triple proportion of quickfilver."

520. "Unguentum bydrargyri fortius. Stronger bintment of quickfilver. Pharm Lond." Take of purified quickfilver, two pounds; prepared hogs lard, 23 ounces; prepared tallow, /x ounce. Rub first the quickfilver with the tallow and a little lard, until the globules disappear; then add the remaining lard, so as to form an oint-

ment."

521. "Unguentum bydrargyri mitius. Milder ointment of quickfilver. Pharm. Lond .- " Take of the stronger ointment of quickfilver, one part; prepared hoge lard, two parts. Mix them."

522. Mercurial ointment is the form under which mercury is introduced into the fystem by external friction. One drachin of the firong ointment, (that containing equal parts of mercury and lard), is introduced by friction in the evening, and frequently alks in the morning, until the lystem is an eted. The weaker ointments ought not to be employed, as they merely give unneceffary trouble, by the necessity of rubbing in so much lard.

523. "Unguentum oxidi bydrargyri cinerei. Oint-ment of grey oxyd of quickfiyer.—" Take of grey oxyd of quickfilver, one part; hogs lard, three parts." This is deligned as a substitute for the mercurial ointment, and, as the quickfilver is fully oxydated, it has been supposed that it will

prove more active.

524. " Unguentum oxi si bydrargyri rubri. Ointment of red oxyd of quickfilver .- " Take of red oxyd of quickfilver by nitric acid, one part; hogs lard, 8 parts." This is applied as a mild escharotic to remove the diseased surface of ulcers, and is a ftimulant to promote supporation.

525. " Unque itum calcis bydrargy i albae. Ointment of white calk of quickfilver. Pharm. Lond. -" Take of while oxyd of quickfilver, one

drachm; ointment of hogs lard, one ounce and a half. Mix them to as to form an ointment." This ointment is fometimes used as an application in pfora, and other cutaneous affections.

526. "Unguentum nitratis hydrargyri fortius vulgo, unquentum citrinum. Stronger ointment of nitrat of quiekfilver .- " Take of purified quick filver, one part; nitrous acid, two parts; hog lard, twelve parts. Digest the quickfiver will the nitrons acid, in a fand-bath, until a folution is obtained, which, while it is hot, is to be mixe with the hogs lard melted and beginning to col Beat the mixture thoroughly in a gias's mortant as to form an ointment." This is an excellent plication to certain cutaneous affections, a in quantity being rubbed on the part.

527. "Unguentum nitratis bydrargyri mi Milder ointment of nitrat of quickfiver.-" is made in the same manner as the precedi with a triple proportion of lard." It is of co a much milder application, and is defigned to also of a softer consistence; but, to obtain latter convenience, it is better to reduce firong ointment with the requifite proportion

lard.

528. "Unguentum acidi nitrofi. Ointmen nitrous acid.-" Take of hogs lard, one pot nitrous acid, fix drachms. Mix the acid gri ally, with the melted lard, and heat the mut thoroughly while it cools." In this prepara part of the acid is decomposed, and part combined with the lard. It is defigned as an plication in cutaneous affections, and is fi in its effects to the preceding.

529. "Unquentum oxidi plumbi albi. Oint of white oxyd of lead.—" Take of simple ment, five parts; oxyd of lead, one part," has been used principally as an applicate burns and superficial inflammation.

530. "Unguentum acetitis plumbi; vulgo guentum faturninum. Ointment of acetite of Take of timple ointment, 20 parts; aceti lead, one part." This ointment is applied to fame purposes as the preceding, and is more

quently used.

531. "Ceratum litharggri acetati compa Compound cerate of acetated litharge. Pa Lond .- " Take of water of acetated litharge, ounces and a half; yellow wax, four ounces live oil, nine ounces; camphor, half a drad Rub the camphor with a little of the oil. the wax with the remaining oil, and as food the mixture begins to become thick, pour on dually the water of acetated litharge and thir fantly until the mixture has cooled; then with it the camphor rubbed with the oil." ointment, usually named Goulard's Cerate, di little from the preceding, and is applied to fin ules.

532. " Ceratum earbonatis zinci impuri: ceratum lapidis calaminaris. "Cerate of mp carbonat of zinc .- " Take of fimple cerate, parts; prepared impure carbonat of zinc, part. This is the common healing cerate ap ed to flight wounds, exceriations, &c.; and a dreffing to ulcers. The carbonat of zinc fel to give it merely a fliffer confiftence.

333. " Unguentum oxidi zinci impuri; diz. gwet

puntum totiae. Ointment of tutty .- " Take of finple liniment, five parts; prepared impure oxyd c' 2:0c, one part." This has been used principally as an application in thro ic ophthalmia.

134. "Unguentum oxidi zinci. Ointment of and of zinc.—" Take of fimple liniment, fix jes; oxyd of zinc, one part." Ointment of ters, and fornetimes as an ai plication in oph-

335. " Unguentum picis. Ointment of tar.-Take of tar, five parts; yellow wax, two parts." timulating ointment is fometimes applied four ulcers, and has been also used with advanin tinca capitis.

136. "Unguentum Sulpburis. Ointment of fulr.- "Take of hogs lard, four parts; fublimblohur, one part. To each pound of this ointadd of effential oil of lemon, or effential wender, half a drachm." Under this form, her is applied, by friction, as a remedy in

"Unquentum elemi compositum. Compound at of elemi. Pharm. Lond .- " Take of eone pound; common turpentine, ten r; prepared fuet, two pounds; olive oil, ounces. Melt the elemi with the fuct, and removed it from the fire, mix it immediwith the turpentine and oil; then strain the This ointment is moderately stimu-

"Unguentum bellebori albi. Ointment of beilebore. Pharm. Lond .- " Take of white me, rubbed to powder, one ounce; ointof hogs lard, four ounces; effence of lehif a scruple. Mix them, so as to form an rent." Hellehore is used, under this form, application to plora. It is fometimes effecand is less disagreeable than the sulphur

"Unguentum fambuci. Ointment of elder. Lord -" Take of the flowers of elder, prepared mutton suct, 3 lb.; olive oil, 1 lb. the flowers of elder with the fuet and the al until they become friable; then press build, and strain it." The elder slowers micate nothing to the unctuous matter, neh green colour.

"Ceratum saponis. Cerate of soap Pharm. "Take of foap, 8 oz.; yellow wax, 10 Inharge, in powder, 1 lb.; olive oil, 1 lb.; one gallon. Boil the vinegar with the lion a gentle fire, stirring constantly until mure become uniform and thick; then mix the other ingredients, so as to form a ce-

This composition must derive its efficacy paily from the acetite of lead, formed by the of the vinegar on the litharge.

# ECT. XXVI. EMPLASTRA.—PLASTERS.

4. " PLASTER'S differ from ointments in their firmer confissence, which is such that they ot adhere to the hand, and require to be kd in order to be spread. They owe this connce, in general, to a larger proportion of x, or fometimes to the addition of certain methe culds, particularly those of lead, which unite chemically with the unctuous matter. The fame rules are to be observed in their preparation, as in that of ointments.

542. " Emplastrum simplex: olim, emplastrum cereum. Simple plaster .- " Take of yellow wax, three parts; mutton suet and resin, of each two parts." The principal use of this plaster is as a dreffing, when spread thin on linen, to the part to which a blifter has been applied.

543. " Emplastrum oxidi plumbi semi-vitrei: olim, emplastrum commune.-" Take of the semivitreous oxyd of lead, one part; olive oil, two parts. Having added water, boil them, stirring constantly, until the oil and the oxyd unite into a This is a chemical combination of the plaster." oil with the oxyd of lead, and is of a confistence fufficiently hard to form a plaster. It is use ', spread on leather or linen, as an application to excoriations, or flight wounds.

544. " Emplastrum resinosum: olim, emplastrum adhacsivum. Refinous platter .- " Take of platter of femi-vitreous oxyd of lead, five parts; re-fin, one part." The plaster of litharge is rendered more adhelive, and somewhat stimulating, by

this intermixture of refin.

545. " Emplastrum oxidi ferri rubri : olim, emplastrum roborans. Strengthening plaster. " Take of plafter of femi-vitreous oxyd of lead, 24 parts; refin, fix parts; yellow wax, olive oil, of each three parts; red oxyd of iron, 8 parts. Rub the red oxyd of iron with the oil, and add it to the other ingredients melted." This, spread on leather, is sometimes used as an application in slight cases of lumhago, and feems to prove useful, merely by af-fording a mechanical support.

546. " Emplastrum affae foetidae. Affafortida platter .- " Take of platter of femi-vitreous oxyd of lead, affafœtida, galbanum, yellow wax, of each one part." This plaster is fomtimes applied to the breaft or fide, as a remedy in hysteric af-

547. " Emblastrum gummosium. Gum plaster. "Take of plaster of semi-vitreous oxyd of lead, 8 parts; ammoniac, galbanum, yellow wax, of each one part." This plaster has been used as an application to indolent tumours, and fometimes to promote suppuration.

548. " Emplastrum bydrargyri. Quickfilver plafter.-" Take olive oil, refin, of each one part; quickfilver, three parts; platter of femi-vitreous oxyd of lead, fix parts. Rub the quickfilver with the oil and refin melted together, and then cooled, until the globules disappear; then add, gradually, the plaster of semi-vitreous oxyd of lead, melted, and mix the whole carefully." This plaster is ap-

plied as a discutient to indolent tumours. 549. " Emplastrum saponaceum. Soap plafter. "Take of plaster of semi-vitreous oxyd of lead, 4 parts; gum plaster, two parts; foap sliced, one part. Mix the foap with the plafters melted together; then boil a little, so as to form a plaster."
This is much inferior to the mercurial plaster, and

is scarcely ever used.

550. " Emplast-um meloes vesicatorii : olim, emplastrum vesicatorium. Piaster of cantharides. Bliftering plaster .- " Take of mutton suet, yellow wax, refin, cantharides, of each equal weights. Mix the cantharides, rubbed into a fine powder, with the other ingredients, meited together, and removed from the fire." This is the plaster usually employed to raife a blifter. It is of a fofter -confiftence than the other plasters, that it may admit of being spread without the assistance of heat, which would impair the acrid quality of the cantharides. It requires to be applied 12 hours to produce a perfect biifter: it is then removed; the vehicle is cut, and the inflamed furface dreffed with simple cerate or plaster.

551. " Emplastrum meloes vesicatorii compositum. Compound piaster of cantharides .- " Take of Burgundy pitch, turpentine, cantharides, of each 12 parts; yellow was four parts; fub-acetite of copper, two parts; mustard seed, black pepper, of each one part. To the Burgundy pitch and wax melted, add the turpentine. When this is melted, and while the fluid is still warm, add the other ingredients mixed and rubbed to a fine powder, flirring conftantly, so as to form a platter." It occasionally happens, that the common platter of cantharides is insufficient to excite a blifter, even when its furface has been sprinkled over with powdered cantharides. In such cases, or even in others, where it is necessary that a blister should be quickly raised, this powerful composizion may be employed. Its operation is accompanied with a very pungent fensation of heat.

552. " Emplastrum ammoniaci cum hydragyro. Piaster of Ammoniac with quickfilver. Pharm. Lond .- " Take of strained ammoniac, 1 lb. Purified quickfilver, 3 oz.; fulphurated oil, one drachm, or q. s. Rub the quickfilver with the fulphurated oil, until the globules disappear; then add gradually the melted ammoniae, and mix them." This is fimilar in its powers to the fimple mercurial plaster, and is applied to the fame

gourpofes.

553. " Emplastrum eumini. Cumin plaster. Pharm. Lond.-" Take of cumin, caraway, bay berries, of each 3 oz.; Burgundy pitch, 3 lb.; yellow wax, 3 oz. With the pitch and wax melted, mix the other ingredients rubbed to powder." This has been applied to the region of the stomach as a moderate stimulant with no

great effect.

554. " Emplastrum ladani compositum. Compound plaster of ladanin. Pharm. Lond .- " Take of ladanum, 3 oz.; frankincente, one ounce; cinmamon in powder, expressed oil of nutmeg, of each half an ounce; oil of spearmint, one drachm. To the melted frankincense add first the ladanum softened by heat, then the expressed oil of nutmeg; afterwards mix these and the cinnamon with the oil of spearmint, and beat them in a warm mortar. Keep the plaster in a close vessel." This piaster has been applied, like the former, to relieve a naufea and flatulence, and is undoubtedly a more powerful stimulant.

555. " Emplastrum lithargyri compositum. Compound litharge plaster. Pharm. Lond .- " Take of litharge plaster, 3 lb.; strained galbanum, 8 oz. Mix the frankincense, rubbed to powder, with the galbanum and turp-ntine melted, and add the litharge plafter, melted with a flow fire." This is similar in its qualities to the gum plaster, and is used, like it, as a discutient, and to promote

Suppuration.

C Y. 556. " Emplastrum picis Burgundicas comt fitu Compound Burgundy pitch piafter. Phaim. Les "Take of Burgundy pitch, 2 lb.; lacunu 11 b.; yellow refin, yellow wax, of each 4 of expressed oil of nutmeg, 1 oz. To the pitch, fin and wax, melted together, add first the is num, then the oil of nut-meg." Burgundy put with the addition of a little wax to give it m tenacity, is in common use as a rubcfacient, der the form of plaster. The addition of the ther ingredients of this compound piaster, a render it rather more filmulating.

557. " Emplastrum thuris compositum. O pound frankincente plaster. Pharm. Lond .- "I of frankincense, half a pound; dragons blow 07.; litharge plafter, 2 lb. To the litharge ter, add the others rubbed to powder." The mi'ar to the plafter of red oxyd of iron of the Pharmacopoxia, and is applied to the famel

# SECT. XXVII. CATAPLASMATA. CATAPLA

558. " CATAPLASMA ALUMINIS. Aum plafin. Phorm. Lond .- " Take the whites of eggs: agitate them with a piece of alem, I coagulum is formed." This is fometime ployed as an aftringent application in forme of ophthalmia.

559. " Cataplasma cumini. Cumin catan Pharm. Lond.—" Take of cumin, 1 lb.; ba ries, dried foordium, Virginian Inake rook, o 3 oz.; cloves, 1 oz. Rub them all together powder; and having added three times weight of honey, form a cataplaim."-Th been used as a stimulating cataplasm to thewing a disposition to gangrene.

560. " Cataplasma sinapeos. Mustard cata Pharm. Lond .- " Take of mustard in po crimb of bread, of each half a pound; warm, as much as is sufficient. Mix so make a cataplasm." This is the common ism which is applied with advantage, as a p ful flimulant, to the foles of the feet, in ! where there is a determination to the head in comatose affections."

561. Having thus laid before our reader fubitance of Mr Murray's ingenious Treat Pharmacy, we shall conclude with a few from his two appendixes; wherein he treats GASES, ELECTRICITY, and GALVANISM; Medical Prescriptions.

# APPENDIX.

# SECT. I. Of the GASES employed as REMED

562. "Substances existing in the aërial for (fays our author,) " might a priori be fund capable of producing important effects on U tem, as by respiration they are brought to rectly on the mass of blood, and induce chemical changes. And they actually occur immediate and firiking alterations in the tions of life.

563. " Though the expectations that we one time formed, with regard to their med efficacy, have not been realized, and the them has now been nearly reinquished; yet I they are capable of producing important chal in the state of the functions, and of the gen item, and fince the proposition must be admited, that every substance possessed of such
owers may be capable of acting as a powerful
midy, they eight not to be entirely lost sight of,
the distance from the materia medica. In the
mil hingdom, we have actually the two extremes
bimulant and sedative power.

timulant and sedative power.

164. "The modes of preparing these gases are, is great measure, peculiar to each of them. It is many be breathed from a jar placed there; but this is difficult, from the effort reduct softs may be partly remedied, by poising farin water, or, more completely, by breatherm the gazometer. But the easiest mode is, depatent to breathe the gas from a filk bag, both a tube with a stop-cock is affixed. In fing and expiring the gas, the nostrils require cooled.

"The gases that have been employed in me, may be considered under the divisions which excite, and those which depress the most life. To the former order belong, anygenium. Oxygen gas.

ox sydum nitrofum. Nitrous oxyd gas. "Oxygen gas is procured from black oxyd ganele by heat." (See Oxygen, § 2.) dicinal purposes the gas is transmitted to water, and is allowed to stand over it for

pours before it is breathed. As oxygen is so immediately necessary apport of life, it might be supposed, that suided in a more pure and concentrated that in which we breathe it in atme air, it would prove a falutary agent of miderable power. To this interference, n independent of any experience, an objecrurs, founded on some experiments made after, and repeated by Davy, which prove, en animals are supplied with pure oxywith oxygen mixed with a portion of atme air, fill lefs of it is confumed than in respiration. But though this fact should ed, the greater activity of pure exygen system is undoubted. It is shewn by which refult from its inspiration, and forcibiy by the fact ascertained by Priestwher, and Davy, that animals confined with an increased proportion of oxygen, be it is exhausted, and even while the air they breathe contains more oxygen than ar, and can enable another animal to

Oxygen, when respired, acts partly by caung a stimulating quality to the blood, the left side of the heart and the arterial are excited to action. The phenomena paid from its abstraction, prove that it exerts some other operation more immediately in the state of th

The diseases in which oxygen gas has ministered, are principally those of chrothy, chiorofis, askhma, serofula, dropsy, and some cutaneous affections. It related be diluted with from 10 to 20 or more almospheric air, increasing the propor-

tion of oxygen according to the effects proc'head. From one to two quarts of oxygen are given, by, breathing it in its diluted state, at intervals, in the course of the day. It generally increases the force and velocity of the puise.

570. "Nitrous oxyd gas. This gas, a compound of oxygen and azot, in the proportion of 37 of the former to 63 of the latter, is most economically obtained, and in greatest purity, from the decomposition of nitrat of ammonia by heat. When this salt is exposed to a temperature, about 400° Fahrenheit's scale, its principles re-act on each other, and enter into new combinations. The hydrogen of the ammonia attracts part of the oxygen of the nitric acid to form water; and the remaining oxygen combining with the azot both of the acid and of the ammonia, forms this particular compound, nitrous oxyd, which is disengaged in the gaseous form. It requires to stand some hours to deposit a small portion of saline matter, before it is sit to be breathed.

571. "The effects of nitrous oxyet gas on the lyftem, when it is respired, are scarcely analogous to those of any other agent. The excitement which it produces is extended to the functions of body and mind with more rapidity and force than that arising from the action of the most powerful stimulants. It is accompanied with fenfations as various as they are peculiar; and, what flill more marks the fingularity of its operation, this high excitement of the functions of life and exhiiaration of mind are not followed by proportional langour or debility; the state of the system gradually returns to the healthy standard, without any apparent wafte of power. A substance capable of acting in such a manner, we might suppofe, would prove one of our most valuable remedies. The transient nature of its operation must undoubtedly limit its medicinal efficacy; but still, in diseases of extreme debility, we seem justified in expecting from its administration the most beneficial effects. It has not, however, been very extensively employed. In paralysis it has been used with advantage. In diseases of increased senfibility, it may prove hurtful; and when breathed by delicate females, it has, in more than one instance, induced hysteric affections. The dole which is requisite to produce its peculiar effects varies from four to nine quarts, which may be breathed pure or diluted with an equal part of atmospheric air. It cannot be breathed undiluted for more than four minutes and a half, infeufibility being induced.

572. "Nothing fatisfactory can be faid as to its mode of action, fince we know so little of the connection which subsides between the phenomena of life and the chemical changes which go on in the styftem. We can only mark the diffimilarity of its operation to that of any other physical agent.

573. "Under the fecond sub-division of the Gases,—those which depress the functions of life, might probably be placed all the substances existing in the aerial form, oxygen and nitrous oxydexcepted. The following are those which have been medicinally employed:

"Gas hydrogenium. Hydrogen gas.

" Gas azoticum. Azotic gas.

دندج ۳

"Gas acidum carbonicum., Carbonic acid gas.
"Gas hydrogenium carbonatum. Carbonated

hydrogen gas.

574. "Hydrogen gas, when it is to be breathed, is to be procured by passing water in vapour over pure iron heated to the temperature of ignition. The iron attracts the oxygen of the water, and the hydrogen affumes the aerial form." (See CHEMIST-RY, Index.) "Hydrogen gas received into the lungs does not appear to exert any politive deleterious power: all its effects feem referable merely to the exclusion of oxygen. In a pure state, if the lungs have been previously emptied as much as possible of atmospheric air, it cannot be breathed above three quarters of a minute. It quickly occafions a giddiness and sense of suffocation; the countenance becomes livid, and the pulse finks rapidly; but, when diluted with two thirds or an equal part of atmospheric air, it can be fafely breathed; nor does it appear to produce any very important effect. It occasions some diminution of muscular power and sensibility, and a reduction of the force of the circulation. It has been used in catarrh, hæmoptysis, and phthisis, but its powers feem merely those of a palliative.

applies likewife to azot. It feems to exert no pofitive action on the fystem, but to produce its effects by excluding oxygen. As it is not so easily obtained pure as hydrogen, it has been less em-

ployed.

576. "Carbonic acid gas.—To obtain this gas in a proper flate of purity for breathing, carbonat of lime (chalk or white marbie), is exposed to a ftrong red heat in an iron tube. The carbonic acid which is difengaged is collected over water, as it is not immediately largely absorbed by that

fluid." See CHEMISTRY, Index.

577. "This acid gas, when it is infpired, proves more speedily fatal than azot or hydrogen. It appears to excite spasinodic contraction of the epiglottis, so as very speedily to induce suffication; and it has this effect, even when diluted with nearly an equal part of atmospheric air. The respiration of carbonic acid gas was employed at an earlier period than that of the other gases. It was eclebrated as a remedy in phthiss. In the many cases however in which it has been trick, though it might lessen the expectoration, diminish the hectic sever, and act as an anodyne, there is little evidence of its having ultimately effected a cure. It is given diluted with four or fix parts of atmospheric air.

578. "Carbonic acid has likewife been employed as a local application to cancer and paintul ulceration, and has at least been serviceable as a palliative. A stream of it is directed on the part by means of a flexible tube. A cataplasin, formed of substances in a state of sermentation has, in

fome measure, a similar effect.

\$79. "Carbonated hydrogen gas.—The gas which has been used in medicine under this name, is obtained by patting the vapour of water over charcoal at the temperature of ignition, in an iron tube. The oxygen of the water unites with one part of the charcoal, forming carbonic acid; the hydrogen combines with another part of it, and forms this species of carbonated hydrogen. The

carbonic acid is abstracted by agitating the gas is lime-water. This is the most active of those gas, which operate by depretsing the functions of like and is perhaps the most powerful agent of the kind. Even when largely diluted with atmosphera air, it occasions immediate vertigo, sickness, disanution of the force and velocity of the pulle, a duction of muscular vigour, and in general ever symptom of diminished power. It can fearely breathed in an undiluted state. Mr Davy four that at the third inspiration, total insensibility induced, and symptoms of extreme debility of tinued for a considerable time.

580. " As a medicinal agent, it is the gas which the evidence in favour of its efficacy is great est. In phthisis, in many cases, it unequivoc relieved the fymptoms, and at least arrested progrefs of the difeafe. Much caution is requi with regard to the dofe. At first, one pint of carbonated hydrogen gas, diluted with two parts of atmospheric air, may be respired: quantity may be flowly increafed, and with dilution, taking care to avoid the production great vertigo or muscular debility. Not m than from two to four quarts can be taken in day, even when the patient has been accusto to it for fome time. It is always more power when recently prepared, than when it has in kept for fome days.

# SECT. II. Of ELECTRICITY.

may be referred to its stimulant power. Its duces forcible contractions in the irritable secretes therefore to action, if duly applied; when in excess, immediately exhausts irritable It possesses the important advantages of being filly brought to act locally, and of being coal to the part to which it is applied, while it can be employed in every degree of force.

582. "Electricity is applied to the body the form of a stream or continued discharge fluid, under that of fparks, and under that shock; the first being the most gentle, these being more active, and the laft being much powerful than either of the others. The he applied by connecting a pointed piece of wood a metal wire, with the prime conductor of the lectrical machine, and holding it by a glass let one or two inches diftant from the part to a it is to be directed. A very moderate stimu operation is thus excited, which is better adm to some particular cases than the more pour spark or shock. The spark is drawn by place the patient on the infulated flool connected the prime conductor, and, while the machine worked, bringing a metal knob within a thore tance of the part from which the fpark is tole ken. A fentition formewhat pungent is exand flight mufcular contractions may be prod thefe effects being greater or lefs, according to diftance at which the knob is held, if the man be fufficiently powerful. The shock is given discharging the Leyden phial, making the part the body through which it is intended to be to mitted, part of the circuit. The fenfation it cites is unpleasant, and the muscular contract confiderable, if the shock is moderately from 583.

583. " At the first introduction of electricity as -arenedy, it was very highly celebrated for its effeacy in a number of difeases;" (See ELECTRICI-TY, Part IV.) " Its use is now confined to a few. In paralytis it is very generally had recourse to, excite muscular contraction, and perhaps with me advantage. It is usually applied under the m of sparks, the application of it requiring to continued daily for a confiderable time. Someke moderate shocks are also employed; but the pricty of this practice is formewhat doubtful. acted, in some measure, in the vessels which affeded, advantage may be derived from elecby; and it is occasionally used, both under form of sparks taken from the pelvis, and that mile and fome other varieties of inflammation, ben removed by the electric fiream; it has bmetimes flicceeded in discussing tumours, micring pain. The general rule for the me-employment of electricity, is to apply it at oder the milder forms, and gradually to if necessary, to the more powerful.

# SECT. III. Of GALVANISM.

"THE peculiar power which is generated two metals moistened are in contact, at first d dnimal Electricity, fince Galvanism, has recently applied as a remedy in various morections. Its effects on the animal system are warrant this application. Its activity is by its exciting strong sensations in sensible and powerful contractions in parts endowirritability." See ELECTRICITY, Part V. "Between galvanism and electricity there many points of refemblance, that they have besidered as ultimately the same power, or same subtile matter in different states. or this opinion be just or not, the effects of on living matter are different from those dricky. The fenfation which the former though formewhat analogous to that proby the latter, is still dissimilar; the action mim is more extended, both to the nermulcular systems, than that of electriciis more local in its action. The galva-ation produces fendations and contractions which, from disease, are not sensible to impressions; and the stimulant power both exert, appears in galvanism, to be in proportion to its intenfity than in elecor the fenfations and museular contracwhich the galvanic discharge excites, are proportioned to its power of producing phenomena.

The difeases in which galvanish has histen employed, are principally those of the kind. In paralysis, it has been affirmed reflored the capability of muscular constitutions, and confequently the power of motion. Chorea, tetanus, and some other spasmoschious, have been related, in which persort accomplished by its application. It in several instances, to have relieved particularly that species of it arising toppe of the auditory nerve; and it has speciful in discussing indolent tumours.

587. "Galvanism is applied by connecting two metallic wires with the two extremities of a galvanic battery, and bringing them in contact with the part affected, so that it shall form part of the circuit of the galvanic discharge: the one wire is kent in contact with the part it touches; the other is alternately applied for a moment and removed. If the skin is moistened, the galvanid insuence is communicated more readily and effectually; and still more so if a small piece of metallic lear be laid on the parts to which the wires are applied. Sometimes even the cuticle has been previously removed by a blister, but the application of the galvanism is then attended with pain."

# SECT. IV. Of Medical Prescriptions.

588. "The principal objects deligned to be attained by the composition of medicines, are, to communicate an agreeable taste or flavour; to give a convenient form; to correct the operation of the principal medicine, or obviate some unpleasant symptom it is liable to produce; to promote its action, by the additional article exerting one of a similar kind; to obtain the joint operation of two remedies, having different powers; or to alter their usual effects, by the power which one may have of modifying the action of another.

58g. "A prescription has been usually divided into four parts, which compose it,—the basis, or principal article; the adjuvans, or that designed to promote the action of the former; the corrigens, or that which is intended to correct its operation, or obviate any unpleasant symptom which it may be apt to produce; and the constituens, or that which gives to other ingredients consistence or form. These are not necessarily present in every formula; nor is the division of much importance, except as perhaps associated the best principle for regulating the order in which the ingredients of a prescription should be enumerated.

590. "The following are the principal circum-

sys. It following are the principal circumstances to be attended to in forming a prescription.

591. "1/1, Simplicity should be attained, as far as is consistent with the object of the prescription. Nothing ought to enter into the composition which does not add to its virtue, render it less ungrateful, give it a convenient form, or which is not necessary to conceal any particular ingredient; and, in general the practice of accumulating a

number of articles in one prescription is to be a-voided.

592. "2dlr, Substances, it is evident, ought not to be mixed together, which are capable of entering into chemical combination, or of decomposing each other, unless it be with the view of obtaining the product of the combination, or decomposition, as a remedy.

593. "3dly, Those mixtures are also to be avoided, in which one medicine, by its peculiar action on the stomach or general system, modifies and changes the action usually exerted by another, unless where the object is to obtain the effects of

that modified operation.

594. "4thly, The error of contra-indication is to be guarded against, or those medicines ought not to be combined, the virtues of which are not merely different, but are, in some measure, opposed to each other.

595. " 5thly, The ingredients which are to be mixed, must be fuch as will mix properly together, fo that the form in which the remedy is defigned to be exhibited, may be callly obtained and preferved.

596. " Lafly, The form under which a medicine is prescribed, must be adapted to certain circumftances; principally to the nature of the difeafe, the nature of the remedy itself, and, as far as may be possible, to the taste of the patient.

597. "The dofes of medicines are not reducible to any general rules, from their general fimilarity of operation, or any other circumstance. The principal circumstances by which they are influenced are, age, fex, temperament, idiofyncrafy, habit, and difeafe.

598. " Age. - From infancy to manhood, a larger dose of any medicine is requisite to produce its effect, in proportion to the advance in life. From manhood to old age, there is a fimilar gradation with regard to diminution of dole, though in a much less proportion than that which regulates the increase. The following table has been supposed to shew these proportions.

599. " TABLE. Let the dose for a perion of middle age be 1 or 🗶 drachm.

For one from xiv to xxi years, it will be

or 2 feruples. - vii to xiv, 4 or half a dr. f or 1 fcruple. - iv to vii, of iv years of age, or 15 grains. d or 15 grains. d or half a fer. - iii -- ii · 4 or 8 grains. T or s grains.

600, "Sex .- Women, in general, require smaller doses of any medicine than men, a difference probably owing to their greater sensibility from their habits of life.

601. " Temperament. Those of the fanguine temperament are supposed to be more affected by medicines, and therefore to require smaller doses than those of the phlegmatic or melancholic; but in what has been faid on this fubject, there is fo much uncertainty, that little reliance can be placed on it.

602. " Idiofyncracy.-This denotes that disposition in individuals to be affected by certain causes, in a manner different from the generality of mankind. Such idiofyncrafies are observed with regard to medicines, as well as to other agents; and, where they are known, require to be attended to by the prescriber.

603. 4 Habit.—This has an important influence on the operation of medicines. In general, they lofe fome of their power by having been long con-This is particularly the case with all frong stimulants and narcotics, and is even observed, to a certain extent, in some of the other classes of the materia medica. In a few instances, the reverse has been supposed to hold true.

604. " Difeafe. - This has an influence on the doles of medicines not less important; the susceptibility to external impressions, and to action, being much varied in morbid affections, and the operations of remedies of course being modified by fuch variations. The state of susceptibility being

7. C in general apparent, when it varies much from the healthy standard, the doses of the neucones ad ministered are cafily regulated."

# SECT. V. Of PHARMACEUTICAL OPERATIONS

605. We cannot conclude without mentioning that there are a number of Pharmaceutical OPERATIONS, with which the student of plan macy ought to be well acquainted. The phan mena, upon which there depend, and which if the object of Pharmaceutic Chemistry to inve gate, arife principally from the exertion of the power, possessed by the particles of different his of matter, by which they tend to unite or of bine with each other, and form one home-good fubstance, in which the particles of either of longer be discovered.

606. The power, whence this combination ceeds, is termed Chemical Attraction, or A (See Affinity, Attraction, and Chemis Index.) It is exerted only between minute par of different kinds of matter, and between the ly at infentible diftances. The fubfiances it combines never separate spontaneously; they capable of being separated by any med cal means; and they form a compound me lefs different from those of their component This change of properties from combination one of the most remarkable phanomena, ing chemical attraction.

. 607. "The Operations of Pharmaceutic mistry (says Mr Murray) are entirely depo on chemical attraction, or on the action of a They are merely particular airangements cumitances, by which the exertion of the tion is promoted, and the products of the nations or decompositions, which take place obtained.

608. "There are feveral preliminary open not directly chemical, but employed either your the exertion of chemical attraction, of cilitate the medicinal operation of the fub fubjected. They are those operations, by bodies are reduced to a flate of extreme me cal division. The principal are Pulvenius or reducing bodies to powder by beating: T RATION, in which the same effect is obtain rubbing; and Levication, in which the is reduced to a great degree of fineness, fro rubbing being continued longer, and being tated by the addition of any fluid, which det act chemically on the substance subjected to operation. These are performed in morta glass, earthen ware, or metal. As the past into which the substance is reduced by these means must necessarily be of unequal the coarfer are separated from the finer by ING, or passing the powder over a fieve. ING or ELUTRATION is an operation in which same end is attained."

609. " Of the Chemical Operations, the important are those, by which that fluidity t tained, which is in general requilite for the tion of Chemical Attraction. SOLUTION principal operation of this kind." See that a and CHEMISTRY, Index. See also CALCINAT COMBUSTION, CRYSTALLIZATION, DECOCT Diflagration, Digestion, Distillation, Evaporation, Extraction, Lixiviation, Ma-CELATION, PRECIPITATION, SUBLIMATION, &c.

is their order, and under CHEMISTRY.

610. An omittion of feveral lines having acci-Intally taken place, in § 342; whereby Mr Muaur's meaning is milrepretented, it is necessary to infert the whole paragraph, as it stands in Murray's ingenious Treatife, immediately folwag the paragraph we have marked § 341. m. " By exposing bones to heat, the gelatin ercontain fuffers decomposition; its principles

enter into new combinations, forming chiefly carbonat of ammonia and empyreumatic oil. Thefe are the products of the above process; the carbonat of an monia being partly diffolved by the water which diffils over, and obtained partly in a concrete state. It is scarcely possible, however, to free it entirely from the empyreumatic oil, which renders it naufeous; and though at one time it was supposed to be possessed of some peculiar virtues, it is now justly rejected from practice; and the carbonat of ammonia, obtained pure by the preceding processes, is preferred."
